TO THE MURDERED PEOPLES

By ROMAIN ROLLAND

(Translated)

THE horrors of war perpetrated during these last thirty months * have rudely shaken the minds of thoughtful persons in the West. The martyrdom of Belgium, Serbia, Poland — of all the miserable countries of Eastern Europe trodden down by invasion can no longer be forgotten. But if these iniquities revolt us because we are their victims what of the fifty years and more during which the civilisation of Europe has practised the same evils or allowed others to practise them around her?

* Who can say what price the Red Sultan of Turkey paid to his mutes of the European Press and of the Embassies for the blood of two hundred thousand Armenians slaughtered during the first massacre of 1894—1895? Who has ever raised his voice against the sufferings of the people delivered over as a prey to the rapine and plunder of colonial expeditions? Who when a single corner of the veil is lifted up from this or that part of the field of misery — Damirland or Congo — has been able to endure the sight without horror? What civilised man can recall without a blush the massacres of Manchuria and of the China expedition of 1900—1901 when the Emperor of Germany gave Attila to his soldiers for an example and the united armies of civilisation ravalled one another in acts of vandalism against a culture more ancient and lofty than their own?

What help has Western Europe given to the persecuted races of Eastern Europe?

* The article was written by Romain Rolland in November 1916 (C.F.A.)

What help to Jews, Finns, Poles? What help to Turkey, Egypt, China in the day of their struggle towards self-regeneration?

For sixty years China poisoned by the opium of India longed to deliver herself from the bondage of the evil which was killing her. She found after two wars and a humiliating treaty the opium poison (which had brought 21 000 000 000 francs into the coffers of the East India Company) forcibly imposed upon her by England. And even after China today has completed the heroic task of ridding herself in ten years of her deadly disease she has needed all the pressure of indignant public opinion brought upon European States to compel the most civilised of them to renounce the profits which the poisoning of a whole people brought into their banks. Yet what wonder is there in this when Western Governments have not yet renounced the income they obtain by poisoning with alcohol their own people?

On one occasion writes M. Arnold Porret a missionary of the Gold Coast of Africa told me how the negroes explained the way in which Europeans had become white. The God of all the world asked the Europeans sternly —

What have you done with your brother?

They became pale

Western civilisation today has the odour of a dead body. It has called in the grave diggers. Asia is on the watch.

The civilisation of Europe said the great Hindu Rishabdrinath Tagore last

shapeless and deformed mystical exhalations of the soul drunk with the Infinite seeking an unhealthy gluttony of joy by suffering self-inflicted and inflicted on others unsanely conceived tyrannies of the reason when it claims to impose the unity that it does not possess but only desires inflamed vagaries of the imagination lighting up the remembrance of the past, learned phantasmagoria of historic records that have received official sanction patriotic history or history written in such a way as to brandish woe to the conquered or glory to the conquered according to requirement. And then surging upon the tide of passions all the secret demons which Society casts up as the tide ebbs in times of peace and order. Each one of us finds himself enlaced in the arms of this Octopus. Each one finds in himself the same confusion of good and evil forces bound and entangled together in an inextricable skein.

From all this comes the feeling of fatalism which crushes down mankind in the presence of such a crisis. Yet it is only discouragement before the magnitude of the task which stands in the way of deliverance. If each one did what he could and nothing more there would be no fatalism at all. The fatalism from which we suffer is made up of each man's weak surrender. In giving in each one becomes responsible for the weakness of others.

But the shares of responsibility are not equal. Honour to whom honour is due. In the media of European politics today the biggest factor is Money. The hand that holds the chain binding the body social is Wealth—Wealth and his band of satellites. Wealth is the true master the true head of the State. Wealth is responsible for the back-doors of our Chambers of Commerce and for our shady business transactions. Not that we can make

* Read the series of illuminating public articles during the last ten years by Francis Delais—for example that of January 1 1907 in *Pages Libres* on External Affairs of 1906 (the Algerias year). One can see there a good example of what I call Indutrialised Diplomacy. As a supplement to this read the financial article of the *Revue* (Nov. December 1906) on the Lys and the commentary on it by Paul G. R.

this or that group this or that individual responsible for the evils from which we suffer. We are not such simpletons as all that! No let us have done with scapegoats! They are too comfortably convenient!

When we read the history of the great German capitalists who purchased mines in Normandy and between the years 1908-1913 had become owners of one-fifth part of the mineral sub-soil of France and then used this ore in their own great steel factories to make the cannon which the German armies are now firing then we can get some idea of the lengths to which moneyed men will go till they become indifferent to anything else—like Midas of old who turned into gold everything he touched. Do not however attribute to them vast designs and dark. They do not look so far ahead. They only seek to amass quickly as big a heap as possible. That which finds its climax in them is that anti-social selfishness which is the plague of our present age. These wealth-seekers are merely representative men in an age enslaved to money. The learned men the Press the politicians—yes the heads of the different States those puppets of a tragic peep-show all these whether they like it or not are the instruments of the money-makers who use them for a screen. And oh the stupidity of the peoples—their fatal submissiveness their mysterious depths of ancestral savagery,

CHARLES in *Pages Libres* January 19 1907. The power of financial oligarchies collective and independent of all control has appeared clearly in the government of the States of Europe—republics and monarchies alike.

* Let me quote so me lines from Manoris who is so loud when he does not give himself over as a prey to his own fixed idea—The Money State is now the Minister in charge gilding and decorating with titles the intellect while it puzzles it and sends it to sleep. It can when it likes prevent the intellect from knowing a single point of evil truth and if it sees the truth from speaking about it and if it speaks about it from being listened to and heard. How can a country know its own need if those who know them can be put under the constraint of silence, how or on what?

What a true picture of the present time!

rices—the most to blame side by side with the least to blame—brothers in blood and suffering brothers in a common misfortune now be brothers in pardon and resurrection!

Forget your spite and hate which will ruin you altogether. Wear the black robes of your common sorrows, they unite all the great family of mankind. In your common grief in the common slaughter of millions of your brothers you have obtained already a sense of your deep unity. After the War this unity must bring down to the ground the barriers which shameless interest will wish to build up stronger than ever.

If this unity is not accomplished—if this war has not for its first fruits a social renewal of all the nations—then farewell Europe Queen of Thought Guide of Mankind! You have lost your way you tread a cemetery—your place is there. Lie there sleep there! Let others lead the world.

All Souls Day 1916

(This translation has aimed at giving the spirit of the original. It is not strictly literal. C.F.A.)

Illustrative Passages

[The above pamphlet was written by Roman Rollin I as the first part of the booklet which he published. The second part is taken up with the following illustrative passages from the Poet Rabin Isaac Nathan Targore's lecture entitled—*India's message to Japan*.]

When things stood still like this and we in Asia hypnotised ourselves into the belief that it could never by any possibility be otherwise Japan rose from her dreams and in giant strides left centuries of inaction behind overtaking the present time in its foremost achievement.

One morning the whole world looked up in surprise when Japan broke through her walls of old habits in a night and came out triumphant.

Japan the child of the Ancient East, has also fearlessly claimed all the gifts of the modern age for herself. She has shown her bold spirit in breaking through the confinements of habits, useless accumulations of the busy mind seeking safety in its thrift and its locks and keys. Thus she has come

in contact with the living time and has accepted with eagerness and aptitude the responsibilities of modern civilization.

This it is which has given heart to the rest of Asia. We have seen that the life and the strength are there in us only the dead crust has to be removed. We have seen that taking shelter in the dead is death itself and only taking all the risk of life to the fullest extent is living.

Japan has imported her food from the West but not her vital nature. Japan can not altogether lose and merge herself in the scientific paraphernalia she has acquired from the West and be turned into a mere borrowed machine. She has her own soul which must assert itself over all her requirements.

The whole world waits to see what this great Eastern nation is going to do with the opportunities and responsibilities she has accepted from the hands of the modern time. If it be a mere reproduction of the West then the great expectation she has raised will remain unfulfilled. For there are grave questions that the Western civilization has presented before the world but not completely answered. The conflict between the individual and the state, labour and capital, the man and the woman, the conflict between the greed of material gain and the spiritual life of man, the organised selfishness of nations and the higher ideals of humanity, the conflict between all the ugly complexities inseparable from grant organisations of commerce and state and the natural instincts of man crying for simplicity and beauty and fulness of leisure—all these have to be brought to a harmony in a manner not yet dreamt of.

Therefore you cannot with a light heart accept the modern civilization with all its tendencies, methods and structures and dream that they are inevitable. You must apply your Eastern mind, your spiritual strength, your love of simplicity, your recognition of social obligation in order to cut out a new path for this great unwieldy car of progress shrieking out its loud discords as it runs. You must minimise the

that shattered itself to pieces against the eternal

The East with her ideals in whose bosom are stored the ages of sunlight and silence of stars can patiently wait till the West hurrying after the expedient loses breath and stops Europe while busily speeding to her engagements disdainfully casts her glance from her carriage window to the reaper reaping his harvest in the field and in her intoxication of speed can not but think him as slow and ever receding backwards But the speed comes to its end the engagement loses its meaning and the hungry heart clamours for food till at last she comes to the lowly reaper reaping his harvest in the sun For if the office can not wait or the buying and selling or the craving for excitement love waits and beauty and the wisdom of suffering and the fruits of patient devotion and reverent meekness of simple faith And thus shall wait the East till her time comes

Eastern Asia has been pursuing its own path evolving its own civilization which was not political but social not predatory and mechanically efficient but spiritual and based upon all the varied and deeper relations of humanity The solutions of the life problems of peoples were thought out in seclusion and carried out behind the

security of aloofness where all the dynastic changes and foreign invasions hardly touched them But now we are overtaken by the outside world our seclusion is lost for ever Yet this we must not regret as a plant should never regret when the obscurity of its seed time is broken Now the time has come when we must make the world problem our own problem we must bring the spirit of our civilization into harmony with the history of all nations of the earth we must not in foolish pride still keep ourselves fast within the shell of the seed and the crust of the earth which protected and nourished our ideals for these the shell and the crust were meant to be broken so that life may spring up in all its vigour and beauty bringing its offerings to the world in open light

In this task of breaking the barrier and facing the world Japan has come out the first in the East She has infused hope in the heart of all Asia This hope provides the hidden fire which is needed for all works of creation Asia now feels that she must prove her life by producing living work she must not be passively dormant or feebly imitate the West in the imitation of fear or flattery For this we offer our thanks to this land of the rising sun and solemnly ask her to remember that she has the mission of the East to fulfil

SOME THOUGHTS ON THE YELLOW PERIL

SOME weeks ago Field Marshall Sir Douglas Haig in the course of a discussion of the political problems of the future and its perils expressed his conviction that certain changes were necessary in order that the British Empire might successfully weather the impending storms One point in his address was of especial interest to India He contended that a new spirit of comradeship must be infused into the relations of its various parts and pointed out with soldierly directness that

the only means of accomplishing this was by securing to every nation under the Imperial Aegis equal rights privileges and responsibilities

As far as one is able to appreciate his position from the summary available it would appear to be this—The British Empire both because of its geographical diffusion and the wide racial diversities which exist within it has only one hope of successfully solving the problems which will face it in the coming age This hope

He shaped it out of cloud and clay
 He touch'd it finely till the seed
 Possessed the flower from heart and brain
 He fed it with large thoughts humane
 To help a People's need
 He brought it out into the sun—
 Oh blessed it to his free
 'Oh great pure Deed that first un lone
 So many bad and base
 Oh generous Deed heroic Deed
 Come forth! Be perfected Succeed
 Deliver by God's grace
 Then Sovereigns Statesmen north and south
 Rose up in wrath and fear
 An I cried protesting by one mouth
 What monster have we here
 A great Deed at this hour of day
 A great just Deed—and not for pay
 Absurd—or insincere

There is no use to complete the above
 Times have changed since the lines were
 written and we trust and believe that
 Mr Montagu's great deed will not be
 too great for the age in which we live
 If it is then alas for the age

As this paper has been headed *Some
 Thoughts on the Yellow Peril* it will
 probably occur to the reader to question
 what relation the foregoing bears to that
 subject. In the writer's opinion a very
 intimate connection exists

In the course of his speech Sir Douglas
 Haig expressed his fear of an eruption of
 the yellow races as a possibility of the
 future. He also spoke of other Oriental
 races as presenting potential perils if the
 discontent arising from unfair treatment
 and racial discrimination were allowed to
 grow. An Anglican Bishop also has recently
 been expressing himself in England upon
 this so-called Yellow Peril and in
 America its possibilities have been long a
 subject of discussion. In the opinion of
 the writer of the article the peril is a very
 real one. Given certain circumstances it
 would appear highly probable that the
 next hundred years may witness a struggle
 before the magnitude of which the recent
 war will assume insignificant proportions.

Yet it is hardly fair to call it the
 Yellow Peril. Thousands of years have
 elapsed without any attempt upon the
 part of the Far East to encroach upon the
 West. History furnishes no indications
 that military aggressiveness has been a
 part of the genius of China—or even of

Japan until she came under the influence
 of the Western Spirit.

No if such a catastrophe ever takes
 place it will be because the views of such
 bodies as for example the Indo British
 Association succeed in gaining sufficient
 power to mould the view point and policy
 of Europe and America.

We are convinced that they never will—
 that they are the manifestations of a
 dying school of thought (or thoughtless-
 ness) and that a nobler broader concep-
 tion of national responsibility and obliga-
 tion is even now displacing it. But they
 are for all that the expression of a mental
 attitude which has largely influenced the
 political attitude and actions of Europe
 in the past. Of this there can be no
 doubt. We might go even further and
 assert that even at this moment those in
 the West upon whom the broader and
 juster vision has dawned are a micro-
 scopic minority howbeit an influential and
 growing one.

Let us examine as far as we may the
 mental attitude of the average Western
 and see if what we find does not have a
 vital bearing upon the question of the so
 called Yellow Peril. In order to do so
 it will be needful for us to glance very
 briefly at the relations which existed
 between Europe and the Orient in ancient
 times.

In the days of Greek and later of
 Roman ascendancy in the West the great
 nations of the Orient—especially India—
 were treated as equals. The learning of
 the Brahmins and Gymnosophists was
 highly spoken of and in the days of Pliny
 India's trade with Europe brought her in
 nearly fifty million sesterces in coin per
 annum. Embassies were exchanged upon
 several occasions between Rome and
 various Indian potentates and the Emperor
 Trajan is reported by Dion Cassius to
 have entertained one such embassy with
 great magnificence and to have given its
 members senators seats at the theatre.
 There is also ample evidence that at one
 time there were Roman soldiers serving in
 the bodyguards of Indian kings. The
 writings of Clement of Alexandria
 contain allusions to India based upon

conviction will be apparent that there is no true civilization but his own. If the reader will consider for a moment he will perceive how fully this accounts for the attitude of the average Western to the people he comes in contact with in the East.

With the earlier phases of modern Western mental development it is not our purpose to deal in this paper. The later ones are much in evidence in these days and most enlightening. In sets more than in words the West has claimed the right to subordinate the wishes and aspirations of the rest of the world to the exigencies of that form of civilization which she has evolved for herself. There can be no doubt of this. In spite of the fact that she even now staggers torn and bleeding as a result of the peculiarities of her system her confidence in it appears little shaken. What other conclusion can be drawn from the new system of mindatories she has just evolved? Does it not imply the conviction that she considers it her duty to guide the destinies of other races—races that do not appear likely to conform of themselves to the system she has evolved? Indeed one hears much loose talk about her duty to them and the various aspects of the white man's burden are receiving a good deal of honest attention yet down at the root of the matter is not the position of most people crudely this? We the enlightened nations have evolved a superior form of civilization based upon an orderly system of barter and trade. Our programme includes the use of your raw materials which we consider vital to our welfare. We propose in exchange to sell you our manufactures and if you are not yet sufficiently civilized to appreciate and desire them we shall take steps to make you so. If you consent to this and take no measures to protect your own industries at the expense of ours we shall permit you to govern yourselves provided always that no political exigency arises which would make it necessary for us to annex you. If this should ever become necessary we shall of course confer upon you the blessings of education and what little share in the management of your own affairs your natural

lack of ability and incapacity makes possible.

This seems to the writer to express the average view point of the West at its best until comparatively recently. At its worst it was merely a scramble to plant the flag of one's country upon the shore of any island or continent where the flag of no other powerful European country had been previously set up and quite irrespective of the wishes of its inhabitants claim it as belonging to one's king.

During the early part of last century however a new spirit began to evince itself. Men began to understand that these many arbitrary acquisitions brought with them responsibilities to consider the welfare of the people upon whom they had forced their rule. At first there were only a few solitary voices raised on behalf of this new ideal but with the years the vision grew until at the time of this writing the Imperial Government not only admits the right of the people of India to a present real share in the administration of their country but also acknowledges that the time must come before long when Indians shall govern India within the Empire.

Yet here arises a difficulty. To admit a right is one thing to have the courage to grant it quite another. Not only as regards India but also as regards the whole question of the relations of the present dominant races to the rest of the world two schools of thought are fighting desperately—the old and the new. One represents the conviction of innate superiority involving the right to acquire and exploit without any reference to the desires and feelings of the exploited. The other—and so far as India is concerned Mr. Montagu seems to be its champion—represents the new spirit and the one upon which the future welfare of the world must depend. It embodies the recognition of the right—not merely of every Western nation—but of every nation to what the late German Kaiser used to call a place in the sun. It represents the honest attempt to make realities of the cant phrases and partly catch words of the last century and as it grows and develops it will

come to include the recognition of the right of every race whether great or small, to follow along orderly lines of progress its own destiny in accordance with its own desires and propensities. At present it has its limitations but it carries within it the germ of mankind's political and social salvation, because its conceptions are deep-rooted upon the eternal bed rock of justice.

The great question is—Will it triumph at this juncture? Or is it to be submerged by the older, grosser more selfish conception? If it is, let the world beware. If the West decides to reject the new light—to still uphold its ancient claim of a right to annex, control and exploit the rest of mankind, irrespective of their wishes and feelings, a time will come when the nations of Europe and America will have to face, not only a yellow peril, but the peril of all the races whose feelings and rights they have outraged through the centuries. It will not be in our day it may not even be in the days of our grandchildren but it will surely come. The rest of mankind will rise in indignation and with a might which justice gives the wronged, and ask 'By what authority do you arrogate to yourselves the right to parcel us among yourselves, to force us into treaties against our wills drawn up to your gain and our loss? You have denied us the right of entry into your own countries while claiming the right of entire freedom to do what you like in ours. Not only have you refused in your own lands any of the privileges you have claimed for yourselves in ours but even in the lands of

our birth you have denied us the rights which are ours by every moral law. In what lies your justification when you force us to destroy our own systems of life and social economy so that we may adopt ourselves to your needs? We do not admit your right, we refuse in future to live at your dictation. Be gone! We will have no more of you."

We do not believe that such a situation will arise. We cannot believe that the old dark point of view will conquer. But if it does, and if as a result the world is plunged into such a sea of devastation and distress as it has never seen before, upon whom will the guilt lie? Surely not upon those races who after suffering coercion and wrong for a long period of years, rise to defend themselves and to win that freedom which every true Englishman and American values more than life.

No, there is no "Yellow Peril," and if the West be true to its highest ideals, earnestly endeavouring to give the less powerful nations those rights and opportunities which it values for itself, such a peril will never arise.

But if the counsels of the reactionaries prevail, this Peril must always be taken into consideration and recognised as a potent factor of the future. Yet in justice it should be called—not the "Yellow Peril," but the "White Peril," for those who inflict the wrong must be held responsible for the result.

SAMUEL EVANS STOKES

NATIONAL EDUCATION IN INDIA THE BUSINESS OF THE STATE

By JAGAT RAI

In my last educational article I have given long extracts from Mr Fisher's speeches because in my judgment they embody the fundamental principles of

national education, accepted by all competent authorities the world over. The schemes in force in different countries vary in detail but the principles underlying them

are the same. To us in India Mr Fisher's words are of greater significance than those of others equally well placed of other countries because of our political connection with England. Here is the chief educational authority of the Empire laying down certain principles and expounding truths which are according to him of general application in all self-respecting progressively minded communities. We the Indians in India are not yet free to determine our educational policy. Even with the promise of educational autonomy to provinces the last word will practically remain with the Imperial Government. The progress of popular education in India must for a long time depend on the good will of the British officials in charge of policies and vested with powers over revenues and funds. The words of a British minister of Education will be more to us in our discussions of educational policies and schemes than those of any other authority in any other part of the world. In the region of policy the example of Great Britain is the best for our purposes and I cannot sufficiently urge upon my countrymen the importance of using the British system as a fulcrum for the raising of educational standards in India.

This does not involve a blind imitation of British methods of education nor does it mean that we should neglect to profit from what is being done by the other great nations of the world especially the United States and Japan in this department of their national life. But on the whole Britain can teach us much in this line.

In adopting Britain as our model how ever we are not bound to pass through the same processes of experiment and wastage through which she has passed in her educational evolution. It is the height of stupidity and ignorance to argue that the evolution of any nation must proceed on the same lines as has that of those that are now in the vanguard of progress in the world. Why should not the younger marcher profit from the mistakes of those that have gone ahead? Why should he not avoid the wastage involved in the failures and blunders of others? Of what use is history if its warnings cannot be heeded by those

to whom they are available? Let us therefore be on our guard against the fallacious argument that we must grow through the same mistakes of which the others have been guilty in their growth towards freedom.

Nor does this mean that we can neglect the various stages of development through which we must pass before we can come up to the level of those who started long ago. What we require is a rational and comprehensive scheme taking note of the general principles which have come to be universally accepted all the world over with special emphasis on our special needs and with due consideration of the stage of social evolution in which we are and also of our resources.

Now we may assume that the following general principles of national education are accepted all over the civilized world.

1. That national education being the surest and the most profitable national investment for gain as well as the best and the most effectual insurance against loss is necessary for national safety as the military provision for its physical defence.

Among the lessons of this Great War the most important in my judgment is the value of education to a fighter from a military point of view. Personal bravery and courage must as ever continue to be an important element in war. But even more than that the fate and safety of nations have come to depend on the intelligence and efficiency of its fighting units. Wars are now virtually fought in schools. The numbers matter a great deal but even much more than the numbers matter intelligence, skill, efficiency and discipline. Then again the efficiency of a nation does not mean merely military efficiency; the latter is so much wound up with its economic and industrial efficiency.

Economic and industrial efficiency does not mean the mere possession of gold and silver but the brains and capacity of the whole nation to turn the gold and silver and other raw materials into modern arms and ammunitions—ships, submarines, aeroplanes, guns and bullets are only the concrete completed forms containing numerous other parts the manufacture of

each of which requires technical skill of the highest order—and, last but not least, food and hospital necessities. Assuming, therefore, that security from without is the first duty of a State, popular, universal education alone can make it possible under modern conditions.

The war has conclusively established the fact that the idea of a mercenary standing army, consisting mostly of illiterate units, is an obsolete one, also that India cannot be defended by British people alone, nor can India depend upon Great Britain for its supply of the sinews of war, be they arms and ammunitions or the numerous other things found vital in modern warfare. If the British had foreseen this and equipped India for the inevitable struggle, they could have crushed their enemy in comparatively less time, and with greater facility. Universal education of the best modern type is therefore, an absolute necessity for the future security of India and for all that, for the best interests of the Empire, which require that the human resources of the Indian Empire should be economized to the fullest extent. It is a crime to let them be wasted so flagrantly as they have been until now.

Universal popular education must be provided by the State and should be the first charge on State revenues. Any attempt to provide for national education by private agencies and private funds is futile and to attempt it is to attempt the impossible. Moreover it diverts public attention from the State.

A national system of education must be provided for, enforced, financed and controlled by the nation and in performing that function the nation must be represented by the State. It may be pointed out, as has in fact been done by Mr. B. G. Tilak, in his views on national education that in India the nation, not being represented by the State, that function must devolve, at least for some time, on private national agencies. The remedy, in my judgment, lies in concentrating our energies on the task of converting the State into a national agency. Along with that, we can use what powers we have or are conceded to us under the new scheme for

insisting on the State providing for universal national education befitting the needs of the nation and guaranteeing in war, as well as in peace, the fullest use and development of our human and industrial resources.

National education must be provided by the nation, and whether the State is representative of the nation or not, it must be made to provide for it. The nation should be made conscious of this.

2 The old idea that the State was only concerned with making provision for elementary education, is also gone. All over the world it is recognized that the duty of the State does not end with elementary education. The economic and industrial efficiency of the nation depends upon technical and industrial education, and that also must be provided by the State. Nor can the State ignore the necessity of higher education, for intelligent and efficient leadership depends on that.

3 Education does not consist in imparting certain amounts of book knowledge and teaching the three R's. It includes the provision for the physical development of the young. It embraces a provision for the general health of the child, including feeding if necessary, to such an extent as to ensure the fullest benefit to the child from the provision for his education made by the State.

4 In short the duty of bringing up and educating the child with a view to make him an efficient intelligent and prudent citizen lies on the State, and the State must be made to fulfil it. It no longer depends on the capacity or willingness of the parents.

Some great thinkers and educationalists such as Spinoza have maintained that the Government will if it controls the education of the nation, "aim to restrain, rather than develop the energies of men." Kant remarked the same differently.

The function of education, in the eyes of a dominant class is to produce skilled but obedient men as distinguished from self thinking and self reliant men. This theory presupposes the predominance of a particular class in the Governance of the nation. Democratic ideals of government bar any such assumptions. The Imperial British Government has pledged itself to the deve

lopment of responsible Government on democratic lines in India. Our own ideal is the same. It may be that so long as we do not get full responsible government national education will more or less be under the thumb of the dominant class but then the remedy lies in our own hands. Constant vigilance constant agitation constant education of the public mind will be our duty so long as the goal is not reached and when the goal is reached our policy will be completely in our hands. Then there will be no danger of the control of education falling into hands other than those of the future Fishers of India.

At no time can or will private efforts to further education be dispensed with. Pending the development of full national Government private effort must do a great deal of what the Government fails to do. In short private efforts should supplement the efforts of the Government without any pretence of supplanting it or doing what it is the latter's duty to do and what it can under the circumstances be forced to do.

Private efforts therefore should be directed to fill up the gap left by State education and also to supply the particular needs of particular classes with a view to bring up every class in the nation to the level of general national efficiency. It seems that education is one of the subjects under the new scheme (which at the time of writing I have not seen) regarding which full responsibility is going to be thrown on Provincial Legislatures. Provincial Legislatures are already legislating in some provinces at least giving the local bodies power to declare it compulsory and to provide for it. Now sitting at such a distance I am unable to say much about these moves. As at present advised I am inclined to think that this may be the provincial vicious circle in which things move in India.

We have seen from Mr Fisher's speeches that in England the policy is laid down by the national Government and the bulk of funds are provided by them. For every 17 millions sterling provided by the local rates the national purse has been giving 16 millions and the present Government in spite of the awful strain of the war on its

finances has sanctioned the additional grant of another four millions from the national purse thus making the national contribution twenty millions as against the 17 millions realized from local rates.

What is going to happen in India I don't know but of one thing I am certain in my mind that the general outline of a scheme of national education in India must be laid down by an All India agency leaving the actual working out of the details to the Provincial and local bodies. Thus all India agencies must have a majority of Indians on its personnel and the policy laid down by them must be accepted by the Government subject to the limitation of funds. What is needed is a national policy a national scheme and a maximum grant of national funds for the purpose to be supplemented by Provincial taxes and local rates. Of course the first need of the nation is more schools and more teachers. The second is good schools and good contented teachers. The third is vocational schools including schools for instruction in commerce and foreign languages. The fourth is technological institutes. The fifth is continuation schools. The sixth is more high schools and more universities.

I do not suggest that all this should not be done simultaneously. But I believe that the bulk of the available funds must be reserved for some time to come for more schools and more teachers to give instruction to the children of the nation on national lines.

In my judgment the first ten years of our national effort should be mainly devoted to (a) the increase of literacy (b) the production of literate skilled labour conscious of its rights as human beings and conscious of its rights as members of the body politic (c) multiplication and training of the teachers with as great an increase in their remuneration as may be possible under the circumstances. It should be the duty of the State to provide higher technological and agricultural institutes in selected localities in sufficient numbers to enable the nation to develop its mineral agricultural and industrial resources. It should be the aim of the State to fill up these institutes with Indian expert talent which if not

forthcoming at once, should be gradually but steadily introduced as competent men, trained in foreign countries as Government scholars or otherwise, return.

If Mr Fisher was right, as undoubtedly he was, in saying that national education is not only an investment, but an insurance as well, I see no reason why education in India should not be provided for, pushed and furthered wherever necessary by supplementing the amounts made available for the purpose, from the taxes and the rates, by raising additional national debt. If it was legitimate to raise money by loans for railways and for defence and for contribution to the Imperial War Fund, why is it not legitimate to raise funds for national education and the development of essential national industries by the same means?

At this stage I may as well give another passage from one of Mr Fisher's speeches. When addressing the manufacturers and business men of Bradford he asked them if it does 'not often happen in the management of a business that you find yourself compelled to face an additional outlay in order to get full value from the outlay that you have already made? And what is true of individual business is true of national business.

In order to get full value for the outlay which India has made on railways, canals and the frontier defences it is necessary to develop the intelligence the productive power and capacity of the nation (its defensive and offensive capacity) as well as its capacity to compete with other nations on equal terms in industries and manufacture. The raising of the nation's intelligence and skill the improvement of its physique and the development of its earning capacity is as important, if not more, as railways canals and forts. Sometimes it seems to me that in India the cart has been put before the horse.

My argument is that there are certain things which can only be done by the State and must be done by the State, that the State should do these things even by incurring financial obligations in the nature of public debts, if the current finances are not sufficient or adequate to do them on any decent scale, and that universal elementary education and a widespread provision for the training of teachers, and an equally widespread provision for vocational and technical education, both of the lower and higher order, are among those things which cannot be postponed without risk of serious danger to the political safety of the nation.

These things, being provided for by the State on a scale commensurate with the needs of the nation, private effort should be unsparing to contribute to the rest. All privately endowed colleges and academies should be allowed to develop into universities, conducting their own examinations, giving their own diplomas and conferring their own degrees. All research work in classical language, in history and philosophy in logic and mental and moral sciences as well as in social sciences may be left to them. The State maintained colleges and the State universities should mainly concern themselves with scientific education scientific development and research and with the natural development of the country. Not that the State and the nation have no interest in the former. Oh! no, the nation is interested in everything that develops and aids efficiency in the individual as well as in the classes, and more so in leadership, but for the time being the above-mentioned division of labor between the State and private enterprise in education may be the best way of collaboration to economise our resources and get the best possible results from them.

THE LIFE OF AN INDIAN MILL LABOURER

THE time has fully come when those who have the welfare of the Indian poor deeply at heart should study closely and carefully the condition of the labourers working in the Mills at our great industrial centres. Nothing is more disappointing in the long Report of the Industrial Commission than to note the scanty attention that has been paid to this subject and the inconclusive results which have been reached by the Commissioners. The Report from beginning to end has been written from the capitalist's point of view and labour is treated in a cursory and hazardous way.

I cannot pretend to any elaborate or detailed study of the Indian problem of labour nevertheless I will venture to put down in as simple and untechnical a manner as possible some of the experiences I have gained from living for a short time among the mill labourers in Madras and the difficulties that have thus been brought before me. The first-hand information which I received by actual residence has seriously set me thinking and I have a hope that if I relate some of these thoughts while they are still fresh in my mind it may help others who are working at the same problem to take courage in their work and press forward. For the cause is a great one.

Nowhere in the world except in Japan and China are cotton mills worked at such long hours and under such exhausting climatic conditions as in India. The Indian Factory Act allows a working day of twelve hours full work the only stipulation being that there must be an interval of half an hour in the course of the day's work during which the machines are not to be used. The Mill may therefore run from 6-30 a.m. in the morning to 7 p.m. at night, with only an interval of half an hour in the middle of the day for food and

rest. When we compare such a day with that common in English or American mills we find that the Indian mills are kept running between twenty-four and thirty hours longer each week than those in the industrial West. The Indian mills run for 72 hours per week the mills in England and America run between 42 and 48 hours per week.

Now let us consider how this actually tells upon an average working man's life. I will take a record from the notes which I made while living near the Buckingham and Carnatic Mills in Madras. The man I questioned told me that he had nearly five miles to walk every day before he got to the Mill. In order therefore to be punctual without any danger of a lock-out he had to get up before half past four—because he needed some coffee and a little food before starting and he allowed a margin of ten minutes in order to be on the safe side. When he reached his work he would have to stand at the loom from six o'clock to twelve o'clock with hardly any pause or break. Then at twelve o'clock he would have forty minutes allowed him in which to get his food which consisted mainly of coffee and a little currie. He had to get back to his loom punctually at twenty minutes to one and to go on standing at his loom working until six o'clock in the evening. He told me that he usually reached home some time after half past seven and then he would obtain his first properly cooked meal. He went on to describe to me how when he reached home he was so tired that he usually after taking his food went straight off to bed. He hardly saw his children at all except on Sundays.

The man who gave me these details was a respectable working man drawing good pay and it will be noticed that these Mills in Madras do not work up to the maximum limit of the Factory Regulations. They gave forty minutes interval

for food instead of thirty minutes, and work 11½ hours instead of twelve.

But what a life to have to lead all the year round! What drudgery, what monotony! There is scarcely a break in it, except the weekly Sunday, and a very scanty list of religious festivals,—six or seven days in all besides Sundays, in the course of the year. One has to take into account the heat and noise and dust inside the mills, the strain of standing for such long hours without a break, the practical certainty, sooner or later, of digestive troubles owing to badly-cooked or fermented food, the discomfort of the rainy season walking through the mud, arriving wet through often contracting chest and lung diseases, which are aggravated by the cotton fluff that is always flying about and getting into the throat. It must be remembered that there are no workmen's compensation or sick insurance acts in India, as in the West,—no fund to draw from in case of illness. What a life!

I asked this man whether he had to work the whole six hours *standing*. He said that the men were allowed to go out for a short time in turns to the latrines by getting a pass, and some men smoked there to smoke. But the work was piece work and the managers would speed up one man against another and besides this there were overseers who were ready to come down on any man if he was away too long.

Another question I asked him was about the housing of the workmen.

"Why," I questioned him, "do you live so far away from your work?"

"It is difficult," he replied, "to get even a single room near at hand. They have all been taken up, and besides I don't like the people's habits near the Mill. I have a wife and children to bring up and I prefer to live some distance away."

He told me that a considerable number of the mill labourers did as he did, especially the more respectable ones. Some lived even further away still.

I have taken this example for one of the best managed Mills in India, where the Company has done a great deal to help the men. If notwithstanding all this, the con-

ditions of this workman's life were so exacting, what must be the case in those Mills where the Factory Act is always strained to its full limits and dirt and filth and foul atmosphere and insanitary latrines are the common daily experience? I have seen a Mill of this latter type, and there the labourer's lot must have been much harder than that which I have just depicted,—though, possibly, the slackness of oversight could give the workman a greater margin for slackness in his turn.

This brings me to a third type of Mill, which interested me greatly and made me study anew the question of the length of hours. Here the Mill was in no sense conducted on what might be called antiquated or slovenly lines. There were no filthy floors or badly built rooms, with foul air and stifling heat. Every thing was quite up-to-date. The owners prided themselves on this fact. The passages and gangways were kept perfectly clear, and the latrine arrangements were modern and sanitary. The rooms were well situated for light and air and space, and there was no foul atmosphere. But, because labour was difficult to retain, on account of competition from other Mills, the great object of the managing body was to make labourers feel quite at ease and so come to prefer this Mill to any other. This was effected by employing an overplus of workmen to run the machines, paying them good wages, and then permitting each labourer a margin of leisure to go out and smoke or sleep, while the labourer next to him kept an eye on his machine, which would be kept running while he was away. This relaxation would be allowed turn and turn about. The manager himself told me that very few men did more than eight hours solid work in the course of the day. I noticed that the morning meal was eaten within the Mill. When it was brought in the men would sit down in little groups and eat it, while their fellow workmen looked after the looms of the absentees. In this way the whole Mill had its breakfast, not in the interval but during actual working hours. The men under these conditions, were contented and the Mill was popular.

I asked the manager if it would not be possible to work the Mill more efficiently by having a shorter working day and less going out to have a rest. The manager stated his own opinion that this leisurely method of work was more suited to the Indian climate and the Indian labourers' habits. It was expensive for it meant a large overstock of workers but this was compensated—when compared with Lancashire—by the cheap cost of labour and also by the greater number of hours per week that the machines could be run.

There are thus clearly two or three different types of Mill in India not one kind only. There are the old badly constructed badly arranged and badly managed Mills working up to the very limits of the Factory Act and beyond those limits where it is safe to do so. These Mills are often the curse of the country. They sweat their working men in a disgraceful manner and do not impart to them any new ideas of order, method or cleanliness. Secondly there are the Mills which keep well within the hours prescribed by the Factory Act and are thoroughly up to date and modern but take the best ounce of labour out of the workmen by rewards as well as by punishments always dealing with the fear and cupidity of the labourer at the same time offering bonuses and prizes on the one hand and threatening with penalties on the other. These up to date Mills have usually a large staff of overseers and foremen who drive the men all through the day. There is a certain educational value in Mills of this kind; they drill the workmen into punctuality, order and business efficiency. But it is a hard process in which only the fittest survive. The waste product—the men thrown back as useless—is enormous. The race is indeed to the swift and the rewards are to the strong but the weak are cast out on to the rubbish heap and our pity goes out to them. And then last of all there is the type of Mill which I have just sketched wherein slackness of a certain type is allowed and the pace is made rather by the average man than by the strong man greedily for money. Here too the educational results are not slight while

at the same time there is much less wear and tear.

I have mentioned already the question of competition with Japan and it is likely to loom larger in the future. I have visited Japan and enquired into the condition of the cotton industry there. From all that I could gather I feel certain that the strain of the work especially upon the women is far greater than in India. The way the pace is forced appears to me to be quite unnatural and abnormal and a nemesis is certain to follow later on. Coming out direct from leisurely India to strenuous Japan I could see and almost personally feel the nervous tension. The labour also appeared to be sweated labour not organised for self protection as in America and England and yet drawn from a congested and needy population.

I have brought in this Japanese problem because it confronts us in India at every turn. It is the one final argument difficult to meet which seems to stand in the way of an immediate shortening of the factory hours. For instance the following argument was used when I talked the subject over with certain employers of labour in Madras—

We would be only too glad they said to me if we could have a shorter working day in our Mills. We have given evidence to that effect before the Factory Commission. But the shorter hours agreed upon must be the standard for all India not for Madras only.

Certainly I replied let us get to work and persuade the Bombay people to fall into line. For instance why not advocate a ten hours working day?

You will never they answered induce the Bombay people to agree till Japan comes into line as well and that won't happen in a day.

In this argument we are brought up at once face to face with the international problem of modern industry. We have seen recently how the labour representatives at the Peace Conference have argued that not only military war but also commercial war must cease and disarmament must begin on the commercial side of life as well as in the military sphere. There

is a poison gas whereby a neighbouring country is flooded with sweated goods just as there is that by which armies are stricken on the battle field Commerce itself may become another form of militarism no less ruthless than ordinary war

How far this argument concerning Japan holds good will come up for consideration in the concluding section of this paper

Shantimuketan

C I ANDRIS

MOVEMENTS IN INDIAN LITERATURE SINCE 1850

I

THE influence of England on India has been most marked and most beneficial in the department of thought and this result has been achieved without any pressure from the Government. The vernacular languages of India have been wonderfully developed and in some cases almost evolutionised by the example of English and the needs of the modern age. In one sense our literary language has become both simpler and harder. Though poetry was very highly developed in many of the vernaculars of India before the 13th century prose was in a crude and primitive condition everywhere. It wanted flexibility, variety of expression and naturalness of movement because the learned cared to write only in Sanskrit or Persian and if the vernacular was used at all by them it was used for writing poetry (letters and official papers were written in vernacular prose but they are not literature). The prose written in the early British period was overloaded with heavy Sanskrit and Arabic words and was as remote as possible from the spoken language of the home and the street.

Vernacular prose specially in Bengal and Bombay received a great impetus from the missionaries who published translations from the Bible, sermons and controversial treatises in it. But the style was stiff and foreign and hardly influenced our men of letters. A few vernacular prose works were also published under the patronage of the Government for the use of the officials

studying in the College of Fort William. The necessity of supplying such officers with text books was one incentive to the creation of a prose literature.

But a literature cannot be really developed except by literary geniuses. And such appeared in Bengal in the middle of the 19th century in the persons of Michael Madhusudan Dutta the poet and Pandit Ishwar Chandra Vidyaasagar the prose writer. Both of them greatly modernised the Bengali tongue and made it a proper vehicle for expressing the varied thoughts and feelings of modern life. Both followed the classical style i.e. used Sanskrit words by preference and avoided colloquial or homely expressions. But at the same time there was no stiffness, no pedantry, no obscurity in their style and their genius was shown in combining clearness, sweetness and beauty of expression with strength and purity of diction and a certain music of sound.

The Bengali newspapers of the time also employed a classical but flexible and fairly simple prose. In Urdu the old Muhammadan models continued to be followed for a generation after Vidyaasagar but within the past 30 years a new school of Urdu writers have risen who aim at a simpler, more vigorous and more flexible style in imitation of modern English prose. What Vidyaasagar had achieved in Bengali was achieved in Hindi 20 years after him by Harish Chandra who introduced a simple, varied but sweet and vigorous prose, rather less Sanskritised than that of Vidyaasagar. But the influence of Bengali on

Harish Chandra is unmistakable. A similar transformation of Marathi prose took place in the last quarter of the 19th century, and it is correct to say in general that to-day nearly in all the vernaculars of India literary prose has assumed a simple and natural structure, and the old rigid structures have been discarded, chiefly through the influence of the novels of Bankim Chandra Chatterji.

The Indian drama has been completely changed since the middle of the 19th century and is now really a close imitation of the modern English drama. The classical Sanskrit model of Kālidāsa's time has been entirely discarded. In style, plot, characterisation and scenery, the modern drama in Bengali, Urdu, Hindi and Marathi, is an open imitation of the English drama. Many English plays have been bodily translated, many have been adapted in a modified form, and only a few miracle plays of the mediæval Hindu type still survive to remind us of the old. In the earlier vernacular dramas of the British period a highly Sanskritised prose was spoken and there were long metrical speeches and outbursts as in the French drama before Victor Hugo. But very soon afterwards a colloquial prose was adopted which still holds the field. Thus the Indian drama was completely Anglicised, much more quickly than our literary prose.

Iswar Chandra Vidyasagar merely marks a transition stage in the development of Bengali prose. He improved it no doubt, but he did not proceed far enough in the direction of simplifying and modernising. Bankim Chandra Chatterji's novels indicate a long step in advance. The basis of his style is still the so-called "pure", i.e. Sanskrit vocabulary, but his sentences are shorter and simpler than those of Vidyasagar and he has a richer variety of expression and of feeling and far wider interests than the writings of Vidyasagar. He at first avoided colloquial expressions, but they got into his later novels. Long Sanskrit compounds are frequent in his earlier novels, but towards the close of his literary career his style became simpler and more easily intelligible to the common people. He, however, retained to the end

the literary or strictly grammatical structure of sentences, and did not adopt the prose that is actually spoken by the people in their daily life.

II

The third stage in the development of Bengali literature is represented by Rabindranath Tagore. We shall discuss only his prose here. More than forty years ago he and his fellow workers in the monthly magazine *Bharati* deliberately avoided Bankim's Sanskritised vocabulary and used a simpler and more colloquial style without absolutely reproducing the language of the man in the street. The conservative critics raised a hue and cry that the purity of the language was being destroyed by these innovators. But this simple prose went to the hearts of millions of readers who were ignorant of Sanskrit and could understand very little of formal literary Bengali. The success of the new style was also indicated by the rise of a large number of imitators, and it is now the prevailing prose style except with a few pundits and writers on abstruse philosophical subjects.

Another solvent on Bengali prose style has been the growth of public oratory, both religious and political, and the almost phenomenal progress of the Bengali newspapers intended for the vast lower middle class. These orators and journalists have naturally adopted a style that is most readily understood by the millions, because they want to make converts to their views. (This simplification of Bengali prose has its parallel in the simple English style that Addison introduced after England became a democracy as the result of the Revolution of 1688.) The most popular literature of to-day, namely novels and dramas are written in very much easier and shorter sentences than those of even Bankim, though they often lack the vigour, grandeur and variety of Bankim's style.

For the last ten years an acute controversy has been going on in Bengal about introducing into books the exact grammatical structure and pronunciation of the language of the man in the street. At Calcutta Rabindranath has been experimenting in

provincial isolation and linguistic differences and risen to a sense of the oneness of us all. This awakened sense of nationality has added a manly and noble element to the Indian literature of our day. In plot, in treatment of subjects in the general characteristics of style, it approximates to the spirit of Europe, though retaining the

distinct features of our vernacular languages and contributing a peculiar Indian element to the storehouse of modern thought. Hence the best things in modern Indian literature do not appear utterly foreign or grotesque in the eyes of European readers.

JADUNATH SARKAR.

WILLIAM ARCHER'S 'INDIA AND THE FUTURE'

By LYPAT RAI

III

IN Chapters IV, V & VI Mr Archer discusses Hindu Spirituality, Caste and its concomitant and Manners. In the first article we have made some general observations on this part of Mr Archer's book. The object of his criticism in these chapters is explained thus:

Until Hindu patriotism is dissociated from irrational arrogance and associated with rational humility the advance of the mass of the people towards self-respecting intelligence must inevitably be slow.

I for one am in full sympathy with this object. But that does not imply that I admit the gratuitous assumption made by Mr Archer about Hindu arrogance. Barring a few utterances which may be rightly put down as rhetoric, no sensible Indian has ever been guilty of irrational arrogance. Arrogance is hardly ever rational unless Mr Archer desires to characterise his as such. Nor do we fully understand what he means by rational humility. But Mr Archer is an English writer of repute and I a foreigner should not presume to criticise his language.

The Indian masses have no arrogance at all. If they had they would not have submitted to foreign rule for so long. Nor can that charge be laid at the door of the old fashioned Pandits and Maulvis. They are rationally humble if we may use such an expression. Are the English educated classes then 'arrogant'? Decidedly not. Some of them have only recently started prying the white man in his own coin. There are some reactionaries who have been encouraged to justify and excuse every Hindu custom by their English masters as also to depreciate the adoption of European manners and European standards. So it is hardly fair to hurl this charge in such a sweeping fashion against us. The truth is that the English in India were so much accustomed to a display of irrational humility on the part of the

Indians that the new spirit of independence which sometimes starts extolling the Indian civilization to the detriment of the European calls their sense of pride and they call it arrogance. There is no arrogance however though occasionally there is an exhibition of false pride and a tendency to underestimate the difficulties of the situation. So far back as 1915 in one of the articles I contributed to the *Modern Review* I warned my countrymen against the dangers of over sanguineness. While pessimism is positively harmful as dispiriting and discouraging optimism may be misleading as tending to produce a frame of mind which is always sanguine prone to belittle difficulties and to neglect very necessary precautions***. The best and the safest course therefore will be to steer clear of extreme views to weigh the situation as accurately as may be possible in the light of our own history***. Practical wisdom lies in eschewing over estimating as well as under-estimating. While it is no good under-estimating our difficulties and over-estimating our capacities it is perhaps more harmful to have a very low opinion of ourselves and our people**. We have so long been in doubt about ourselves about the world and about the good in the world that it is time to exchange this latter attitude of mind for confidence in self confidence in our people and hope for a better future.

Now when I was a boy at school and later even when at college the atmosphere around me was one of extreme under-estimation and humility. For over three quarters of a century the educated Hindus had accepted the word of the missionary about their religion and their past. The missionaries had made even a much lower estimate of us our culture and our capacity than Mr Archer has now done. The study of Sanskrit was then at a discount. We knew almost nothing of our history except what was told us by our masters. Giving credit to our foreign censors for honesty truthful

the rest of the world including Europe and America (d) That since then while Europe and America have in certain respects lessened the volume of their insanity, credulity and barbarism though they have added to it in certain others India has been thanks to her political and economic conditions more or less stagnant (e) That India a future goal ought to be not an imitation of Europe's insanity, and barbarism, but an assimilation of its sanity and civilization

As regards the ridicule which Mr Archer heaps on the Vedas and the other literature of the Hindus all that I want to say in this place is that they have survived the attacks of greater men than himself and surely the evidence of their intrinsic worth is greater and more weighty both in the number of the witnesses and the character of their evidence than that to be found in this book. Mr Archer's witnesses are not generally of the best kind. They can be hardly considered disinterested and impartial. For example Mr Archer quotes a Missionary commentator of the Vedas as saying that the horizon of the Rishi is confined almost invariably to himself. He prays for happiness of neither wife nor child nor for the good of his village or his clan nor yet for his nation or people. He manifests no common joys any more than common sorrows. A more ludicrous statement than this is impossible to be conceived as the Vedas are quite full of prayers of the latter kind. In fact most of the prayers are in the plural number. In some places whole chapters are devoted to prayers for common good. Take for example Atharva III 30 or Yajur XII 88 or Rig V 191. Speaking of monstrous conceptions he quotes a hymn from the translation of Max Muller which has been times out of number explained by other scholars as symbolic and which only illustrates the danger of translating the Vedas literally and in utter disregard of the fact that the Vedic language is *laugika* and etymological and that the same word is often used in different senses. It is impossible for me to attempt to reply to Mr Archer's criticisms in detail (I was very nearly tempted to use Mr Archer's own language and call it his ravings) as that would involve the writing of another volume of the same or perhaps bigger size. I am sure I could fill a volume with quotations from European scholars of high repute and authority testifying to the spirituality of the Hindus and the high value of their philosophy and literature. Mr Archer has himself admitted that in places though very grudgingly and half heartedly which is rather inconsistent with his general sweeping denunciations

tion of it otherwise I think Hindu spirituality can well take care of itself. Hindu caste is disintegrating and so we need waste no time over it. As to Hindu manners I would not like to change them very materially. The practice of wearing nose rings and heavy ear rings by the women is disappearing because (a) there are not enough precious stones to go round Europe and America are consuming most of them (b) the vast bulk of the population cannot afford to invest any part of their miserable pittance of income in jewelry (c) the commercial spirit of the age is choking India by the throat.

I am not sorry for it. I do not like either the nose-rings or the ear-rings not even when the latter are worn by white women. But I may here add by way of explanation that manners are more or less matters of local custom and so is the idea of beauty. What is revolting to the Asiatic sense of decency is at times extremely beautiful to the European and vice versa. A European is crazy in admiring certain things which our Asiatic detests. I say this not because I admire the practice of wearing nose-rings and ear-rings but because to me the matter seems to be so trivial that Mr Archer's repeated references to it seems to me to be evidence of bad manners. Mr Archer was horrified at the sight of blood at the temple of Kali in Calcutta. The sight is no doubt horrible to any man of aesthetic sense but I will tell a story to Mr Archer of how I was shocked when I visited England the first time. The Headmaster of a famous College was showing me the two things for which his institution was famous—their kitchen and their organ. When he took me to the former the sight I saw shocked me beyond description. Reader can you imagine what I saw? Seventy carcasses being roasted at once. That was the thing of which my kindly host was proud. Of course I said nothing. But to me it was as bad as cannibalism. As to the habit of truthfulness I will advise Mr Archer to read the comedy of Nothing but the truth which Mr Collier has been presenting in American theatres. I hope Lord Curzon will also glance at it. The chancellories of Europe also will furnish much material on that subject. Let him consult Messrs Bertrand Russell, Lyones Dickinson Neilson and others who have written volumes on the causes of the war.

* The jewellery on the persons of American women in New York and in jewellery stores would exceed the whole of British India's wealth in cash or jewels.

AN INDIAN EDUCATIONAL COMMISSION TO AMERICA

It seems on this side of the Atlantic that Hindustan is living in the stone age of education. If she really wishes to take her rightful place among the great nations of the world India must have a more modern educational system. But where will she go to seek for the ideals of newer education?

In the past the Indian zone of observations has been chiefly confined to only one country in the West and that too admittedly backward in matters educational. Be that as it may this zone should now be pushed and widened to the United States. Here one can see at this moment better than at any other what reconstructional plans are engaging the thoughts of American leaders, what re-educational experiments are in progress for the disabled in war, what new departments are being added to colleges of science and agriculture.

A few years ago the English government in India sent a fish commission to this country to study American fisheries. Is it too much to expect that American colleges and universities will be considered as worthy of careful study as American fisheries? At all events the Indian leaders who are interested in the educational advancement of India should send a commission to America at an early date. The commission should be made up of the very best educational experts India can afford. The founders of the University of Mysore, Women's University of Poona, the Hindu University of Benares as well as the organizers of the proposed Muslim University at Aligarh and the Vizianagaram University in Hyderabad should be willing to co-operate in sending this mission to America. If the needed means and initiative fail to come from the government they should be furnished by the nation itself. For after all education is the most important piece of business in the Indian agenda just now.

It is interesting to note that several foreign countries including Japan and England have recently sent commissions of education to the United States to make an intensive study of the American educational system. Why should not India also go and do likewise?

An Indian educational commission to America is not at all an idle speculation; it is eminently practical. Many of the leading American educationists whom I have consulted on the subject have given it their unqualified approval and whole-hearted support. Dr. Walter A. Jessup, the President of the State University of Iowa with which I have the honor to be connected for the past few years wrote to me in part:

'Should the proposed Commission visit the

United States we would be pleased to have them make Iowa City and the State University of Iowa their headquarters while studying the schools, colleges and universities in the central part of United States. We believe that it would be to the advantage of such a commission to make this place their headquarters since in Iowa City there may be found typical public schools of all grades including the State University with its professional colleges of law, medicine, dentistry, pharmacy and engineering and its college of liberal arts, graduate college and college of education.

The College of Education of the State University of Iowa is equipped with an experimental school including both elementary and secondary grades and is used as a substation of the United States Bureau of Education.

In the event that the proposed Indian Commission should come to Iowa City the State University of Iowa would do everything in its power to facilitate their work.

I also bring encouraging words of greetings from no less a distinguished man in the world of education than the Honorable P. P. Claxton, the Commissioner of the United States Bureau of Education at Washington. Dr. Claxton whose position is very similar to that of the Minister of Education in the British Government sent me among others the following lines: I wish to assure you and others who are interested in the matter that it will give me great pleasure to lend whatever assistance I can to this Commission either personally or through the United States Bureau of Education.

Education in India has been more or less unsatisfactory. The time has come when the frozen decorative ideals of the past should be shattered and swept out of the halls of learning. There is now a great need of a co-ordinated and well-directed plan to build a new education for new India. And as a basis for such an educational reform a commission of expert investigators and trained educators should come to America and see first hand the creative work that is being done in commerce, industry, art, literature and science. The results of such an investigation are bound to give immense stimulus for reconstruction of educational life and make it quiver to the very soul of India.

It only remains for me now to add that if an educational commission should come Mr. R. K. Khemka, the very able President of the Hindustan Association of America which has for years been helping the newly arrived Indian students to choose right American colleges, will be delighted to place his services at the disposal of the

mission. Should it desire, both Mr Khemka and I would be willing to look after the preliminary details of its visit and pilot it through the country. Those who are interested in the plan or want information concerning American educational opportunities are invited

to communicate with the President of the Hindusthan Association, 116 West 39th Street, New York City

COMMENT AND CRITICISM

Condition of the Hindu University.

A correspondent signing himself *A Senator of the Hindu University* has attempted to reply to my article on the Hindu University published in the June Number. Along with much irrelevant matter, evasion of the main issues and replies to what I never said or suggested, he has contradicted several of my statements of facts. Now my membership of every academic and administrative body of the Hindu University has given me a more accurate and first hand knowledge of the present condition of the Hindu University and the causes thereof than a mere Senator can have.

I shall not weary the reader by refuting every one of Senator's contradictions. A few typical instances will suffice to convince him where truth lies. The sudden and capricious changing of the starting point of the college day given on p. 656 is based on the diary of a professor who kept an accurate record of these changes with dates. But Senator nonchalantly denies it, saying that the change was made from season to season. If the latter had been the case, there would have been only one change in the year and not six as was actually the case last year. The duration of the "period" was so uncertain that one day about midday no bell was rung though more than 48 minutes had passed. Two professors inquired at the office which professed helplessness in the absence of the Principal's special instructions on the subject as the periods were being changed so often.

Again, Senator writes: "It is plain untruth to say that Mr Gurtu is going away." This writer's notion of truth and untruth must be diametrically opposed to that of all honest men, seeing that Mr Gurtu openly declared the severance of his connection with the Hindu University at the 1st meeting of the committee for bringing out the results and repeated it on a later date when there was a council meeting. The reader can judge of the veracity of a writer who denies known facts in the hope that his defence of the rotten condition of the Hindu University will find credence with the innocent public outside Benares.

Similarly, a show of correction has been made

in some cases where the Senator's reply is utterly irrelevant to the issue. I said that Mr Chintamani and Dr Jha had resigned their seats on the Council and other bodies. The contradiction of Senator is that Mr Chintamani was never in the Senate.

Senator indulges in a long rhapsody on the service of Mr Malaviya to the University and his sacrifices in its cause. Now, in thanking Mr Malaviya for his exertions, his worshippers should not lose all sense of proportion nor take leave of common decency, unless they wish to make their master ridiculous. They have been steadily following the policy of effacing the memory of Sir Sundar Lal, but for whom the Hindu University would not have been allowed by Sir Sankaran Nair its independent existence with effect from 1st Oct 1917, as is well known at Simla. It is a bad school of ingratitude in which Mr Malaviya is training his admirers. Where will his memory be after his death, if we can judge from Sir Sundar Lal's posthumous reward at Benares?

When Sir Harcourt Butler was welcomed at the University in August 1918, Dr Ganesh Prasad publicly spoke of the Hindu University as the creation of Mr Malaviya. Sir Harcourt in his reply said, "This University represents the enthusiasm of the Hon'ble Pandit M N Malaviya and the unfailing wisdom, patriotic devotion and patient industry of your late Vice-Chancellor, Sir Sundar Lal. How much the country owed to him how much it has lost in his untimely death, I know as fully as any of you. If anything could deepen the infamy of the ingratitude to Sir Sundar Lal by the present rulers of the Hindu University, it was that their omission was corrected by a foreigner and outsider like the provincial governor."

In the same month Mr Malaviya addressed the students of the L H C after which Dr Ganesh Prasad exhorted them to shout three *Malaviya Mahary Ki Jai*. The gross sycophancy produced a titter among the audience, even the idol blushed at the praise offered to him and cried out "No, no, give three cheers for the Hindu Vrshtavidyalaya." The true value of a man's services to an institution is proportioned to the sacrifice he has made for it. That is the real

incidence of the tax he pays. Now it is well known that when University work made Sir Sankar Lal prolong his visit to Benares in the winter of 1917 by one day beyond his first engagement he lost for that single day Rs 5 000 in fees. It should also be borne in mind that if Mr Malaviya in collecting money for the Hindu University has impaired what professional practice he had he has on the other side of the account secured as the accredited agent of the Hindu University *entree* to high places which would have been closed to him as a stump-ordinator. The gain has been mutual.

But admitting for the sake of argument that Mr Malaviya has done for the B H U all that is claimed for him by his blind admirers we must realise what price we are being asked to pay for it. Money getting is only a means to an end. Are we to subordinate that end—the ideal the efficiency, the good name of the Hindu University—to the sole purpose of touring for subscriptions and making the travelling agent the absentee dictator of the University? All mathematicians who have not forgotten their algebra and simple arithmetic in the pursuit of higher research will admit the correctness of the formula that

if m = g
then m = g

ie If Madan Mohan Malaviya money getting machine then Malaviya must be governor general of the Hindu University.

With results for which see Baba Bhagwan Das's letter

INSIDE VIEW

The Benares Hindu University An outside View of an Inside Criticism

Every one Hindu or not who believes that Hindu culture and learning have particular contributions to make to the wellbeing of humanity must place great hopes upon the eventual achievements of the first Hindu University of recent times. But the greater one's insight into the nature of such an institution as a University and the more closely one has followed the course of the histories of other Universities the more patient one will be with regard especially to the efforts of the early years of a new University. It is perhaps before all things necessary to go slowly in circumstances of this kind. In the particular conditions of Indian Academic life which does not seem to train as yet very many prominent scholars, and in which when such

scholars are produced they are as long as possible retained in particular institutions and localities it is not possible to bring together in a short time the kind of staff which should be aimed at. It seems to us far better to wait than to appoint men about whom it is possible for people to say that their positions were gained by personal influence and not by evident merit. We have heard it said for example that one of the Professors was appointed chiefly through the influence of one about whose poetry he had written in flattering terms. For the sake of the Hindu University we shall be glad to find that such reports are radically false. In any case a good reason may be given for delay in filling University appointments until the type of man required is available. It should be regarded as the best in the circumstances to make some temporary appointments.

From what has been said—also from an inside source—there appears to be an absence of loyalty and co-operation amongst the members of the staff and it would seem from the attempt to make criticisms against the Principal that he is not treated as one has learned to expect. To us and we know Dr Ganesh Prasad neither directly nor indirectly the statements about his policy are really indefinite and not such as to give any support to the view that the University is in rapid dissolution. Had there been more efficient organisation at the beginning in the time of a certain Acting Principal of the Hindu College Dr Prasad's task might have been easier. No University can expect to do good and effective work, no Principal of a College can organise with credit to himself and the institution if there is a source of disaffection in the staff.

Perhaps it is sufficient to say here that when the Insider has worked as hard for the University as Pandit Malaviya he may have the right to write in the manner he does. We do not hold a brief for the policy which the Pandit pursues but we believe that he might give a good answer to much of what the critic says.

There is real ground for regret in the resignation of the Vice-Chancellorship by Sir P. Shiva swami Iyer. But such a man is able to state clearly any criticisms he may wish should be published for the good of the Hindu University. The last thing we can imagine is that he should wish an inside critic should present the matter as he does in a manner from which it is improbable that any good may come—except perhaps the unveiling of the Insider Critic himself.

OUTSIDE CRITIC

II The settlement of every question, whether of territory, of sovereignty, of economic arrangement, or of political relationship, upon the basis of the free acceptance of that settlement by the people immediately concerned, and not upon the basis of material advantage or interest of any other nation which may desire a different settlement for the sake of its own exterior influence or mastery

III The consent of all nations to be governed in their conduct towards each other by the same principles of honour that govern the individual citizens of all modern states in their relations with one another

IV The establishment of an organisation of peace which shall make it certain that the combined power of free nations will check every invasion of right

C THE FIVE REQUISITES

I The impartial justice meted out must involve no discrimination between those to whom we wish to be just and those to whom we do not wish to be just. It must be a justice that plays no favourites and knows no standards but the equal rights of the several peoples concerned

II No separate or special interest of any single nation, or any group of nations, can be made the basis of any part of the settlement which is not consistent with the common interest of all

III No leagues or alliances or special understandings, shall be made within the general and common family of nations

IV No special or selfish economic combinations, and no employment of economic boycott shall be made except when the power of such boycott is vested in the League of Nations for discipline or control

V All international agreements and treaties must be made known in their entirety to the rest of the world

D THE FIVE ISSUES

I Shall the military power of any nation, or any group of nations, be suffered to determine the fortunes of peoples, over whom they have no right to rule, except the right of force?

II Shall strong nations be free to

wrong weak nations and make them subject to their purpose and interest?

III Shall people be ruled and dominated, even in their own internal affairs, by arbitrary and irresponsible force, or by their own will and choice?

IV Shall there be a common standard of right and privilege for all peoples and nations or shall the strong do as they will and the weak suffer without redress?

V Shall the assertion of right be haphazard and by casual alliance, or shall there be a common concert to oblige the observance of common rights?

There are certain extremely important utterances of President Wilson, interpreting the Armistice position which were made during the days of the Peace Conference sessions. The following are the most important—

(a) *Speech to the Italian Deputies*

January 3, 1919

Our task at Paris is to organise the friendship of the world to see to it that all the moral forces that make for right and justice and liberty are united, and are given a vital organisation, to which the peoples of the world will gladly and readily respond.

(b) *Address to the Peace Conference*

January 25, 1919

We are here to see that the very foundations of this war are swept away. These foundations are the power of small bodies of men to wield their will and use mankind as pawns in their game. Nothing less than the emancipation of the world from these things will accomplish peace.

(c) *Speech in the Chamber of Deputies*

Feb 3, 1919

"We have come to work out a world which is fit to live in and in which all countries can enjoy the heritage of liberty for which France, America, England and Italy have paid so dear

(d) *Message to the American People*

Feb 24, 1919

"The men, who are in the Conference at Paris, realise that they are the servants of their own people, and that the spirit of their people has awakened to a new purpose

Treaty about guarantees of disarmament being given by the Allies. General Smuts confesses, in his statement of what happened, 'regret, that the abolition of militarism is confined to the enemy.'

What can be said about responsible people, who first solemnly pledge themselves that adequate guarantees of disarmament shall be *given and taken*, who then insist on the disarmament of the other side, and, last of all when the other side is disarmed, refuse to give any guarantee themselves?

There is a certain action sometimes tried by sharpers called the confidence trick. It is difficult not to call the action of the Allies by that name.

(iii) No single point was insisted on more often in the Armistice terms than that of the free self-determination of peoples that peoples should be governed according to their own choice and not merely used as pawns by the stronger nations. All the territorial articles, in the Fourteen Points keep this end in view. The principle is defined with great care and exactness in the second of the Four Factors and it is also implied in the first two of the Five Requisites and the first four of the Five Issues. Indeed it would hardly be too much to say that the War was determined by this issue. Yet in the Peace Treaty terms we know that the following four territorial changes *against the will of the peoples and by military force* have been decided:

(a) The Saar Valley, with its coal fields, which is German territory, is to be handed over to France with an international administrative control for fifteen years' exploitation after which a plebiscite is to be taken.—The disguise of this plebiscite is too thin to deceive any one.

(b) Territory bordering on Poland is to be handed over to Poland though the population is German.

(c) A part of the northern Adriatic coast is to be given to Italy even where the population is not Italian.

(d) The German rights in the Shantung Province of China are to be handed over to Japan even though China strongly and emphatically objects.

It is not unlikely that other breaches of the right of self-determination have actually been decided upon by the Council of Four, especially in Asia Minor, but, apart from this, those which have been publicly acknowledged appear to me incontestably to prove that the Armistice terms have been departed from in order to satisfy imperialistic aims. The terms have not been honourably kept.

B It is difficult to record concisely all the economic and financial exactions which have been levied upon Germany under the Peace Treaty. The following is a brief summary of the main points—

(a) Germany, an industrial country, depending on coal and iron, loses one third of her coal supply, and two thirds of her coal reserves.

(b) She loses one half of her iron supply, and three fourths of her iron reserves.

(c) She has agreed to grant freedom of transit through German territory to persons, goods, ships, carriages and mails from or to any of the allied or associated powers, without customs, transit duties, undue delays, restrictions, or discriminations.

(d) She restores all devastated regions, and makes good any coal deficiency. She also must give option to France, Belgium and Italy on 21,500,000 tons of coal annually (one seventh of Germany's pre-war production). For 3 years, she must deliver benzol, coal tar and ammonia to France. She forfeits 5000 railway engines, 5000 motor lorries, 160,000 railway cars.

(e) She forfeits all ocean ships of 1,600 gross tons and upwards, one half of those between 1,600 and 1,000 tons, and one quarter of her steam trawlers and fishing fleet. In addition, she is bound to build a million tons of ships for the Allies within five years.

(f) Abroad Germany is stripped literally of everything. On this account, she is practically deprived of all opportunity of taking immediate active part in industry and trade abroad—so far as the conquerors can dictate.

(g) She accepts in addition to all this, the responsibility for a war indemnity.

(called compensation) which is to be finally settled by an Inter Allied Commission not later than May 1st 1921. She pledges an initial indemnity of 20 000 000 000 marks within two years and to issue bonds for 40 000 000 000 marks assuring the full payment of these bonds within 30 years. The total discharge would require 160 000 000 000 marks. Staggering already under an enormous public debt driven out of the world markets and economically imprisoned within Germany's own markets with her economic equipment exhausted by the war each single German family will have to pay, for the next 30 years in addition to all other burdens 300 rupees out of its own scanty domestic income to the Allies.

It is this Peace Treaty which Mr Lloyd George declares must be fulfilled at the point of the sword and not allowed to become a scrap of paper. It is this Peace Treaty which he says can be guaranteed because the guarantees include the disarmament of Germany and the destruction of her arsenals.

It may be thus guaranteed but again we ask the question—Is this fair—is it just—is it humane—is it true to the Armistice proper? There is not the least doubt that Germany was inhumane in war but that is no reason why the Allies should not be humane in peace.

I place these economic terms side by side with President Wilson's own speech concerning the Fourteen Points—on the basis of which the Armistice was made. Here are his own words—

The day of conquest and aggrandisement is gone by. We have no jealousy of German greatness and here is nothing in this programme which impairs it. We do not wish to injure Germany or to block

in any way her legitimate influence or power. We wish her only to accept a place of equality among the peoples of the world—the new world in which we now live.

Then take the British Officers Official Report of conditions today in Germany—

We were shocked at the condition in the poor quarters. Spinach is brewed in the kitchens for babies of three weeks to three years old and the sight of babies sucking spinach soup out of their bottles in place of milk is distressing. Charts show that babies at the end of their third year do not weigh much more than at the end of their first year.

I have put side by side with very little comment of my own the professions and the practices of the Allied statesmen towards Germany.

The Treaty which has ended the war with Germany contains no true or lasting peace because it is based upon untruth. It will have to be undone.

Just as from every corner of the world the cry went up before against the inhumanity of the war methods employed by Germany which shocked the conscience of mankind so now from every corner of the world the cry will go up against the inhumanity of these peace methods of the Allies which as soon as they are fully known and understood will shock the conscience of mankind. Inevitably this will come to pass and the voice of thoughtful men everywhere will be clear and strong.

C. I. ANDREWS

THE WORKING OF THE HINDU UNIVERSITY

ABSENTEE ADMINISTRATION AND ITS RESULTS
IT has been shown in the June Number of this Review how as the result of preferring absentees to resident Univer-

sity teachers in elections to the Executive Council of the Hindu University in 1918 not a single meeting was attended by even half of its members and that most of the

FROM Dr R C Majumdar's learned work on *Corporate Life in Ancient India* which has been recently published, we learn that in the Vedic Age kings were sometimes elected by the *sabhas* and *samitis* which were a part of the constitution, that the only means by which rival claimants to the throne sought to gain over the assembly was supremacy in debate that after the death of King Dasaratha the *rajakartarah* (King makers) met together to select a King¹ that the King's Privy Council (called *mantriparishad* by Kautilya) was, according to the Mahabharata² to consist of 4 Brahmanas 8 Kshatriyas 21 Vaisyas, 3 Sudras and 1 Suta, that the whole of northern India immediately preceding the Christian era was studded with non monarchical or republican states known as *ganas* that even in the Deccan some states were republican and some monarchical in form³ that unity was the chief refuge of the *ganas*⁴ and that it was only from the fifth century A D onwards that they ceased to be important factors in Indian politics

As an instance of the custom of electing the king may be mentioned the Junagadh inscription of the Satrap Rudradaman who ruled in Ujjain about the middle of the second century A D where it is represented that men of all castes went to him and chose him as their lord for their protection.

The whole subject has been treated in

the book under reference with a wealth of detail which leaves no doubt in the mind of the reader that "institutions which we are accustomed to look upon as of western growth, had also flourished in India long, long ago" (p. 122) *

My object in writing this short article is to add a few more authorities which I have come across in the course of my reading on the duties of kings. In the *Mahabharata* we read,

The king who taking the sixth of the produce from his subjects fails to protect them is said to take upon himself the entire burden of their sins.

Similarly in the Bhagavata Purana⁸,

The protection of his subjects is the highest of royal virtues by which in after life the king robs them of a sixth of their merits otherwise by exacting taxes from his subjects and yet failing to protect them he is robbed by them of his merits and himself eats their sins.

But nowhere has this idea been more forcibly expressed than in the Markaadeya Purana, where the royal sixth has been

quoted at p 22 Dr Bhandarkar's Early History
of the Deccan (1884)

described as the king's *rakshan-betanam* or wages for protecting his subjects. Here a distinct contrast is implied between the king and the people over whom he reigns by virtue of which the right of the sovereign to exact tribute from his subjects is strictly limited by his obligation to render them adequate service in the shape of protection. The whole passage runs thus:

If the subjects after paying a sixth of the produce as tribute to the king have to be protected by others, the king is sure to go to hell; this tribute has been fixed by former jurists as the king's salary for protecting his subjects; if the king does not protect them in return he robs them and is guilty of theft.

The Code of Manu displays a high regard for the kingly position and says that the king is a great deity in human shape, and that the Lord created the king for the preservation of order on earth. Yet Manu declares that the king who through insatiation oppresses his own state soon loses his kingdom as well as his life with his whole family. Just as a man's vitality is undermined through physical suffering, so also the king's life is shortened by the oppression of his state. The Mahabharata¹⁰ even goes the length of saying that an unrighteous king deserves capital punishment.

Nowhere has the object of the tribute paid to the king been more beautifully expressed than in the well-known lines of the immortal Kalidasa, where he says that the king levies taxes on his subjects for their own welfare just as the sun draws up mois-

ture from the earth only to return it a thousandfold (in the shape of rain).¹¹

The proper manner of levying the tribute has been very happily illustrated in a passage in the Mahabharata¹² and the same idea is also to be found in the Manu samhita¹³ and the Garuda Purana.¹⁴

Says the Mahabharata:

The king should tap the resources of his kingdom as gently as the bee sucks honey from the flower, as men milk a cow without wounding her udder and starving the calf, as the leech drinks the blood as the tigress takes her cubs between her teeth and lifts them without inflicting pain as the mouse bites the sole of the feet imperceptibly with its sharp teeth from people in affluent circumstances the king should levy taxes on a gradually increasing scale.

In the Subharpava of the Mahabharata there is a long dialogue between Narada and Yudhishthira on the duties of kings from which the following extract¹⁵ is given. Narada asks Yudhishthira:

Is thy kingdom persecuted by thievish or covetous people by the imprudence of minors or the influence of women or thyself or not? In thy kingdom hast thou established large tanks and lakes full of water and hast thou distributed them in such a manner that all the lands have a proper share? Or hast thou left the agriculture of thy realm wholly dependent on the mercies of the gods? In thy kingdom do not the agriculturists feel the want of either seed, grain or food? And dost thou out of due consideration grant the tillers of thy realm loans at a small rate of interest? O child, are the departments of thy state dealing with the four professions of agriculture, trade, cattle-

Now mark the sequel. Since that Senate meeting eleven months have elapsed but no duly sanctioned selections have been made available. Towards the end of the academic year 1918-19, a brochure of 17 pages containing the hackneyed Chanakya *slokas* and some 180 couplets from the *Ramayana* was printed, but as the booklet has not yet been passed by the Board the Faculty and the Senate, it cannot be used in the classes. Thus our academic mountain, after having been in labour for 2 years and 2 months (May 1917-July 1919) has not even brought forth the proverbial mouse. An impasse was reached in Dec 1918 when an examiner in M A Sanskrit wrote to say that he could not possibly set his paper of the next examination as the selections from the Vedas had not yet been made. The Vice Chancellor had to use his *emergency powers* and prescribe certain books to save the situation,—thus justifying Mr Sheshadri's wisdom. But what time had the candidates to prepare these pieces which were announced on 19th January 1919, while the examination was to take place in April next?

This Sanskrit selection sub-committee was appointed on 5th May 1917 with five members. But its first meeting was held on 31st October 1918 (i.e. 1½ years afterwards) only one member attending. The 2nd and 3rd meetings were attended by the same number and the 4th and 5th by two members, out of five! And thus (or these) 'resolved' on behalf of the whole body. Happily there is no quorum in a sub-committee.

PROMISES AND PERFORMANCES

No private gentleman who has the least sense of responsibility will make any promise which cannot under normal circumstances be carried out. Caution in this

assurance given by Mr Malaviya I beg leave to withdraw the resolution. Mr Malaviya immediately insisted on the word *assurance* being changed into *explanation* so that no responsibility would lie on him when his assurances afterwards came to nothing as they have actually done.

* Later, the M A examination was put off to July, on account of the late epidemic.

which is expected to have a permanent impersonal existence, stretching beyond the lives of its founders. In raising subscriptions (or what comes to the same thing, attracting students) there is naturally a strong temptation to humour the audience and a practised orator is apt to let his tongue run away with him. But promises made on such occasions without due consideration of their practicability, have a disadvantage they come home to roost, as Mr Malaviya is now doing to the dismay of the officers of the University.

Mahatma Munshi Ram, the revered leader of the Gurukul educational scheme, recently remarked in addressing the C H C students —

It may be sedition to say so in this hall but none of the founders of this University realises what they mean when they speak of this institution reproducing the educational ideal of ancient Arjavartha. Such dazzling promises are made by your leaders when they find it necessary to induce a shower of silver from the audience. But in practice they have only added one more to the stereotyped Universities of modern India. You attend lectures lead free and easy lives cram at the end of the term and go through the grind of the examination here as elsewhere.

The orator and financial resource beggar of the Hindu University has been telling his audiences that it would harmonise the East and the West intellectually, that it would impart the highest modern or Western knowledge while reviving the devotion and morality of ancient India, and therefore all Hindus, all well wishers of India have a sacred duty to subscribe to it. "Easier said than done," one is tempted to reply in the language of Carlyle when criticising Scott's dying speech to Lockhart.

The synthesis of the East and the West can be effected only by divinely gifted geniuses who are born as the winds of Fate blow. You cannot create them to order, or by mechanically stamping men with the ball mark of Ph D and D Sc. In religion such a synthesis was effected by Rammoban Roy a century ago, and in literature by Rabindranath, three generations afterwards. In art we are still striving. It is still more obligatory on the leaders of an institution, like a University

THE DUTIES OF KINGS IN ANCIENT INDIA

FROM Dr R C Majumdar's learned work on *Corporate Life in Ancient India* which has been recently published we learn that in the Vedic Age kings were sometimes elected by the *sabhas* and *samitis* which were a part of the constitution that the only means by which rival claimants to the throne sought to gain over the assembly was supremacy in debate that after the death of King Dasaratha the *rajakartarah* (King makers) met together to select a King¹ that the King's Privy Council (called *mantriparishad* by Kautilya) was according to the *Mahabharata*² to consist of 4 Brahmanas 8 Kshatriyas 21 Vaisyas 3 Sudras and 1 Suta that the whole of northern India immediately preceding the Christian era was studded with non-monarchical or republican states known as *ganas* that even in the Deccan some states were republican and some monarchical in form that unity was the chief refuge of the *ganas*³ and that it was only from the fifth century A D onwards that they ceased to be important factors in Indian politics

As an instance of the custom of electing the king may be mentioned the Junagadh inscription of the Satrap Rudradaman who ruled in Ujjain about the middle of the second century A D where it is represented that men of all castes went to him and chose him as their lord for their protection⁴

The whole subject has been treated in

My object in writing this short article is to add a few more authorities which I have come across in the course of my reading on the duties of kings In the *Mahabharata* we read,

The king who taking the sixth of the produce from his subjects fails to protect them is said to take upon himself the entire burden of their sins

Similarly in the *Bhagavata Purana*⁶

The protection of his subjects is the highest of royal virtues by which in after life the king robs them of a sixth of their merits otherwise by exacting taxes from his subjects and yet failing to protect them he is robbed by them of his merits and himself eats their sins

But nowhere has this idea been more forcibly expressed than in the *Markandeya Purana*⁷ where the royal sixth has been

rearing and banking managed by honest officers. Upon these three depends the happiness of the people.

The happiness of the people should indeed be a prime consideration with good kings according to the ancient political theorists of India. Raja *prakritiranjana*—the word 'king' in Sanskrit is derived from a root which means to please (the people).¹⁹ Whether the banishment of Sita was morally justifiable or not, the fact remains that Rama knowing in his heart of hearts that his queen was chaste and honourable²⁰ did not scruple to exile her in her delicate state of health in order to please his people. In the Matsya Purana,²¹ we have the following pregnant advice:

Every king should consider what are the acts which please or offend the people in his state and he should take particular care to avoid the offensive acts. O moon of the solar dynasty, royal prosperity depends on the people being favourably disposed. Hence the best princes on earth should carefully act in such a way as to please the people.

In two passages in the Vmāna Purana²² and the Brahma Purana²³ we have it that where the king is virtuous and powerful and his officers are well disposed towards him, and the country is well governed, and where moreover the people live in unity

and follow the path of justice, are peaceful and without mutual jealousy, there one should fix his habitation, as it is pleasant to reside in such a country, whereas it is otherwise in a country under a bad king.

The seven deadly sins of a king are—(a) excessive fondness for hunting (b) gambling (c) excessive sexual indulgence (d) drunkenness (e) financial extravagance (f) habitual use of harsh language (g) fondness for severe punishments.²⁴ In the last lines of the same chapter we are referred, for details, to the treatises of Sukra and Vrihaspati, who are said to be the founders of the science of politics.

Ancient Indian authorities were not very favourably disposed towards bureaucracies. Manu lays down the following:

Since the servants of the king whom he has appointed guardians of districts are generally knaves who seize what belongs to other men from such knaves let him defend his people.²⁵

Kalki in his Rajatarangini every where bitterly complains against the Kayastha's or royal officers, who according to Sir Aurel Stein, were mostly Brahmins by caste and ridicules their sacrosanct pretensions. According to the *Sukraniti* the king should take the side not of his officers but of his subjects.²⁶ 'For who', says Sukracharya, does not get intoxicated by drinking the vanity of office?²⁷

Alluding to Hsien Tsang's description of the grand Parliament of Religions convened by Harshavardhan under the presidency of the celebrated Chinese Master of the Law, Mr. Havell says:

Another striking characteristic of Indian political life is the extraordinary deference shown by military rulers to the authorised exponents of national culture—the professional pandits.²⁸

The influence of philosophers was not the only factor in curbing royal despotism. The coronation oath which the king had to swear required him to consider always as God whatever is law and whatever is

28 The History of Aryan Rule in India Harrap London 1918 p 207

in accordance with ethics and whatever is not opposed to policy and to act according to that and never to act arbitrarily."

There was no struggle says Mr Havell for freedom of conscience or for the political rights of individuals because both were established by the unwritten law of the land confirmed by every monarch in his coronation oath.

Religion took the foremost place in the political history of India by a natural psychological process because when the preliminary steps in social evolution were passed—freedom of conscience and a sufficient measure of personal liberty to ensure the contentment and material prosperity of the community—all impediments to the attainment of the highest goal of intellectual effort—spiritual freedom—had been removed.²⁹

The Sukramiti lays down that the king must never act upon his own opinions³⁰ but upon the opinions of the majority.³¹ Public opinion is more powerful than the king as the rope made up of many fibres is strong enough to drag a lion.³²

In defining the limitations of monarchy the Hindu lawgiver is much more explicit and outspoken than the barons of England at Runnymede when they dictated Magna Carta.

Whoever the reputed author [of the *Sukramiti*] might have been he certainly was regarded as an exponent of an ancient popular tradition on which every king was bound to respect for these *Visvas* were the text books for the king's education. There are always kings who forget their lessons or learn them badly but the theory that India has never enjoyed a constitution according to modern ideas is an historical fiction on which does not bear careful examination.³³

Discussing the very remarkable evidence of genuine local self government and the management of village revenues and common lands tanks gardens and charitable endowments &c by different committees of the village *Sabbhas* and *Maha-Sabbhas* elected after regular voting by ballot on the most approved modern methods and the exercise of judicial powers extending not only to the imposition of fines but also to capital punishment by these assemblies full details of which have been brought to

light by recent archaeological research on South Indian temple inscriptions of the ninth to the twelfth centuries A.D. Mr Havell very justly concludes that

the common belief of Europe that Indian monarchy was always an irresponsible and arbitrary despotism is so far as concerns the pre-Muhammadan period only one of the many false conceptions of Indian history held by Europeans. Neither ancient nor modern history in Europe can show a system of local self government more scientifically planned nor one which provided more effective safeguards against abuses than that which was worked out by Aryan philosophers as the social and political basis of Indo-Aryan religion. The liberty of the Englishman was wrung from unwelcome rulers by bitter struggles and by civil war. India's Aryan constitution was a free gift of the intellectuals to the people it was designed not in the interest of one class but to secure for all classes as full a measure of liberty and of spiritual and material possessions as their respective capacities and consideration of the commonweal permitted.³⁴

Speaking of Southern India at the dawn of the Christian era Mr Vincent in his *Ancient India* (ch. IV) says

The rulers in those days held before them high ideals of government. Their absolute authority was limited by the five great assemblies as they were called of ministers priests generals heralds (*spees*) and ambassadors. There appears to have been a general permit for a learned Brahmin to speak his mind in any durbar and these often gave out their opinions most fearlessly. This privilege was similarly accorded also to men of learning.

The account of the Chola administration (A.D. 900 to 1300) in chapter VI reads like a romance though gathered from the most authoritative and unimpeachable sources and demonstrates that self government of a democratic type not surpassed by any country in the modern world formed the very basis of society in Southern India.

In a little book recently written by Mr Vincent A. Smith to prove the unsuitness of Indians for responsible government that most hostile of all writers was compelled to admit that

Both Hindus and Muhammadans recognised that the king had duties as well as rights and that if he was from one point of view the master he was from another the servant of the state. A

recent Hindu author justly observes that 'the conception of the king as servant of the state was one of the basic principles of political thought in Ancient India. The idea finds frequent expression in literature most emphatically, perhaps in the declarations of Asoka'."

Bhartrihari in the seventh century A D wrote as follows in his *Atisataka* or Century of Morals

O king if thou wouldst suck the Earth like the cow tend now thy subjects like a calf, for if they are so tended constantly and well, the Earth becomes as fruitful as the mythical Kalpa tree.

36 *Indian Constitutional Reform viewed in the light of history*—by V A Smith (Oxford 1919) p 20

37 राजन् दुष्टं च यदि क्षिप्रमुपेक्षति
तेनाय वत्समिव लोकमयु इष्याथ ।

The prosperity of the people under a good king was, in fact, a fundamental axiom of Hindu politics.

We shall conclude with two further extracts

'The king whose subjects are devoted, who is devoted to the protection of his subjects, and who has disciplined himself, enjoys great prosperity.' 'In the happiness of his subjects lies his happiness, in their welfare his welfare. Whatever pleases himself he shall not consider as good, but whatever pleases his subjects he shall consider as good'."

WHAT IS THE MATTER WITH CHINA ?

By Sir Nihal Singh

EVERY Oriental, no matter to what particular Eastern nation he may belong, is deeply interested in China's future, for so long as she remains a prey to chaos, the finger of Occidental scorn will be pointed towards her, to remind all Asiatics of their incompetence to manage their own affairs. I, therefore, took the opportunity of seeing His Excellency Cheng-tung T Wang one of the Chinese Peace Delegates, when he recently came to London on a brief visit and asked him to tell me just what the matter was with China, why the Republic was so unstable, why there was internecine conflict and why his people could not settle down to putting their house in order, and to assist in the world to create a new order.

I first met His Excellency in Shanghai fourteen or fifteen years ago, when I was engaged in journalism in the Far East when he was trying to learn all that he could of Western institutions from friendly Americans and Europeans. Shortly afterwards

we both travelled on the same steamer to Japan, where he had undertaken to work among the Chinese students, who at the time numbered something like 18,000 men and women, all eager to learn from Nippon the arts of peace and war which had enabled her to defeat Russia, and to become recognised as one of the great Powers of the world. Now that China is a Republic, it will do no harm for me to say that on board that steamer Mr Wang told me that China would have no chance whatever until the Manchus had been swept away and the way had been cleared for the younger men to come into power and set things right. More than once while in Japan he enlarged upon that theme in conversation with me.

After leaving Tokyo I lost sight of Mr Wang, until I met him the other day in London. During the intervening years he had gone to the United States, taken his M A degree from the Yale University, and returned to China just before the revolu-

tion began. Believing as he did that the Manchus should be driven out of power in the interests of Chinese progress Mr Wang threw himself heart and soul into the movement. He was at Wuchang when fighting was going on there but apparently he bore a charmed life and came out of it without a scratch. After the disappearance of the Manchus his intimate knowledge of Eastern and Western institutions and his great energy enabled him to force his way to the forefront of public life in his country and he was elected Vice President of the Chinese Senate and later was appointed Minister of Agriculture and Commerce. When Yuan Shih Kai usurped power Mr Wang remained true to the ideals of republicanism and stuck to the South. His inclusion among the Chinese Peace Delegates is for that reason significant.

For a man in the prime of life and full of energy His Excellency talks with great gravity. He told me that to understand the situation that exists in China to-day and to realise the problems that confront the Chinese patriots it is necessary to make a survey of recent Chinese history.

You may recall he said that in 1897 two German missionaries were accidentally murdered in the interior of Shantung. The Chinese murderers were apprehended and executed certain officials were punished for lax conduct indemnity was paid and two expiatory churches were erected. Nevertheless Germany refused to drop the matter and demanded that Kiaocho be leased to her for a period of 99 years. Since that demand was enforced by a German squadron under the command of the Prince Henry of Prussia the late Kaiser's brother China had to submit.

Other European nations were watching the German game in the Far East. None of them stopped Germany from robbing China but as soon as she had succeeded in wringing concessions out of China Russia demanded Port Arthur and Dalian Great Britain Wei Hui Wei and France Kwang Chai Wan in order to maintain the balance of power in Extreme Asia.

China was helpless in the matter. Everyone believed that she had no self

respect—no national pride and thus it would be impossible to hurt her self respect and her national pride. Greatly was the world surprised therefore when the Boxer Rebellion broke out in the beginning of the present century. Many explanations were given at the time and many have been given since but the only basis on which it is possible to explain why certain Chinese massacred foreigners and laid siege to the Legation in Peking is that they resented the humiliation that the foreigners had heaped upon their country. In other words the blow out was the result of mild resentment although it was expressed in a stupid way.

CHEUNG T. WANG

Late Vice-President of the Chinese Senate
Former Minister of Commerce and Industry
Peace Delegate of the Chinese Republic

Not long after the outbreak had been put down by the joint forces of the various Western powers and Japan an indemnity levied and other harsh terms imposed upon China things appeared to settle

down. But they really never did so. There was unrest under the surface. China still nursed her bruised national pride. Those of her sons who could think for themselves and who were filled with love for their country, found it difficult to hold their heads high. Severally and collectively they felt that the weak, effete Manchu Government which was unable to give China a sound progressive administration and which was no match for the foreign diplomatic, consular, financial and military agents was a stumbling block that must be removed at any cost and as speedily as possible.

Then came the Japanese war with Russia. That inverted values. Russia which the Chinese had looked upon as a giant, was beaten by our little neighbour from across the Chinn Sea—our little neighbour who got her religion, literature, and art from us and who still employed our ideographs. They said that Russia's heart was not in the fight, otherwise little Japan could not have beaten her. But explanation or no explanation we could see that Japan had hurled the Russian soldiers back from the seaboard, hundreds and hundreds of miles and that in their retreat, the Russians had lost large numbers of men and great quantities of material.

"That defeat—or whatever you may like to call it—galvanised China. Thousands of our young men who used to scoff at Japanese progress hurried across the sea and entered Japanese schools and colleges. Hundreds of other young men went to America and to various other countries in Europe to learn the art and science of the West. The progressive among the provincial governors aided many of these enthusiastic young Chinese to go on their pilgrimages to the students' Mecca of the world.

"The United States of America set a high moral example to the world. It refused to take any more Chinese money for the men who had been killed or maimed and the property that had been damaged during the Boxer Rebellion. That example was, alas! lost upon the other nations, but China was deeply moved. And I am glad

to say that our Government, in spite of its weakness and shortsightedness, rose to the occasion at that time. It told the authorities at Washington that China was ineffably moved by American generosity and that it wished to make arrangements so that the money that the United States was remitting would still be spent in America. She proposed to use it in educating her promising young men and women at American schools, colleges and universities.

"It is strange how even intelligent persons all over the world continue to cherish the notion that in remitting their share of the Boxer indemnity Americans made a bargain with the Chinese that that money must be spent in the United States of America. That is a libel upon American character. The arrangement was suggested by China.

"As the young men, and aye, the young women educated abroad—and especially in the United States—returned to China to find that the Government still went on in its sleepy reactionary way, the warm young blood coursing in their veins began to boil. Controversy over affairs in Manchuria was going on between China and Japan at the time. Chinese indignation at Japanese high-handedness led to the boycott of Japanese goods. Collision between the Chinese and the Japanese in China occurred for which China had to eat humble pie. That made the young Chinese men grit their teeth and hastened the revolution, which was precipitated on October 10 1911.

"I myself thought", said Mr. Wang, that the revolution broke out prematurely. But that could not be helped. It is not possible to control such a movement when it goes beyond a certain stage. Anyhow, premature or not it succeeded. The struggle was brief and not particularly sanguinary. The Manchus were advised to abdicate by Yuan Shih Kai. They did so. The way was thus made clear for the establishment of the new order.

"Time did not justify the placing of Yuan Shih Kai at the head of the Republic, but at the time that appeared to be the only thing to do. At any rate, in the circumstance, it was magnanimous of Dr.

Sun Yet-Sen the father of the revolution to offer the highest prize in the gift of a nation to another individual. Even though Yuan acted treacherously Dr Sun's abnegations did not go altogether unavailing. I believe it had a tremendous effect upon the world. It showed quite clearly more than anything else could possibly have done that Young China was not out merely for office and that you will concede was a great thing.

After the revolution had succeeded we found said His Excellency that our difficulties were greatly increased because the various Powers of the world—strange as it may sound—appeared to be huddled up with the reactionaries against the progressives. The reactionary elements in the country were strong numerically and extremely influential. With the backing that they received from various agents and especially the money that they were given by various nations they could defy the progressives. That I think is the real reason why the progressives have not been able to succeed any better than they have done—why during the short space of 7 years there have been 4 revolutions and two attempts to re-establish the Imperial regime.

When the War began and the liberal Powers of Europe ranged themselves against the autocratic Powers of Central Europe the progressive element in China hoped that a new chapter in Chinese history would begin. We heard for instance that Great Britain was going into the fight in defence of national rights and the freedom of small nations. We wanted nothing more than to be left alone to work out our own salvation and we believed that Britain and her Allies meant their formulas to apply as much to the Far East as to the Far West.

While Chinese Progressives felt thus the Chinese Government began to negotiate with Germany for taking over the unexpired lease of Kiaochow. But these negotiations were rudely interrupted by the ultimatum served by Japan upon Germany. When China offered to join forces with the Allies to co-operate in the reduction of that German outpost her offer was objected to by a certain Power.

Early in 1915 China renewed her offer to go into the war. But for some unspecified reason that same Power was opposed to her doing so. A friendly diplomat in China advised our Government not to press her demands. What could China do?

You will see therefore pointed out His Excellency that it was not China's fault that until 1917 she remained neutral and that her contribution to the war consisted merely in sending thousands of Chinese sailors to help to keep afloat Allied merchantmen engaged in bringing food to Britain and other lands and hundreds of thousands of Chinese labourers to work behind the lines and in munition factories in France, Mesopotamia and elsewhere and providing large quantities of provisions and raw materials for use in war and other industries. The entry of the United States of America into the war and her appeal to the neutrals to join the Powers associated together to crush the menace of militarism and to make the world safe for democracy paved the way for China to come in.

You may recall emphasised the Chinese statesman that no delay occurred on the part of China. Further she made it absolutely clear that she had gone into the fight from no sordid or ulterior motive. Her whole aim was to help to crush the peril to civilisation and to insure national rights and self-determination.

China's entry into the war profoundly affected the Far Eastern situation especially the situation in regard to Kiaochow. From that time onward the territory did not remain territory that had been acquired by an enemy from a nation that was neutral. With China fighting on the side of the Allies it became a territory that rightfully belonged to an Ally and that if the Allied formulas of national rights and self-determination had any meaning what ever must be handed back to China. But the Chinese delegates at Paris find that the fate of a territory which belongs to China one of the Allies is being settled on the basis of conquest. While the Allies have refused to make the territories in Africa which actually belonged to Germany the subject of barter with Germany it is proposed that the fate of Kiaochow will

was merely leased to the Germans shall be a matter to be settled by the victors with the vanquished China is to be treated in this matter as if she were not an Ally at all."

I reminded His Excellency that the Japanese had definitely promised to transfer to the Chinese the rights and privileges in the leased territory in Kiaochao that Germany was to transfer to them "Yes," said he,

I know all that But Japan has expressed the intention of retaining part of Tsingtao as a Japanese concession They want no more than twelve (12) square miles That is true But those twelve square miles contain the wharves, railway terminus and the business part of the town Besides the Japanese desire to have certain railway mining, and industrial rights in Shantung—including the joint management of the railways with Japanese guards stationed on them."

After a short pause the Chinese statesman added with great deliberation, as if he was weighing every word that he uttered 'If the Chinese were to consent to giving such rights to Japan which, unlike Germany, is China's next door neighbour, what becomes of China's territorial integrity and her sovereignty? That is the reason why my colleagues and I in Paris have adopted an uncompromising attitude over the Kiaochao question Since we are asking for nothing but the application of the principles for which the Allies fought so nobly, we fully expect that they will sympathise with our cause

Whatever the future may hold for Kiaochao it is to be hoped that alien imperialism and foreign financial interests will let us alone to work out our own salvation If the world will give us a chance it will find that we Chinese know our own minds Whatever the cost all the progressive elements in our country are united in their desire for the preservation of Chinese independence, and the Republican form of Government In face of tremendous difficulties we are doing all that we possibly can to improve and extend education sanitation and communications to revise and codify our laws and to re-organise our institutions so

that while retaining the essential Chinese characteristics, they will conform as far as possible to the most modern standards

'Our ideals and aims should appeal to every progressive person in the Allied countries, and should guarantee to us that sympathy and help without which, as matters stand at present, it is impossible for us to establish a new world order in China 'The spheres of influence' which menace our sovereignty and which prevent our commercial and industrial expansion, must go So must consular jurisdiction, which offends Chinese national self respect and often causes miscarriage of justice The postal and similar concessions wrung by the Powers from China must also disappear, for they are like grit in the Chinese eye, and they hamper Chinese progress The Powers must also withdraw the obligation imposed upon China to levy customs at the uniform rate of five per cent *ad valorem*, irrespective of whether they are necessities or luxuries—a clear case of injustice

'Besides all this negative help,' the liberal peoples of the Allied countries can render us much 'positive' assistance We need capital, not to carry on internecine warfare and to pursue Imperialistic and jingo politics, but to build railways and roads to develop natural resources and industries and to carry out other equally urgent measures of national amelioration We need not only capital, but also experts who will help us to reorganise our institutions whom we are willing to pay adequately, and who, in days to come, will be sure to be gratefully remembered by China But first last, and all the time, we desire to be left alone so that we may be able to carry on the work of regeneration undisturbed Foreigners must cease interfering with our internal affairs—aiding one party against the other That really is the root cause of the trouble The minute foreigners cease giving money and other help to Chinese factions, internecine warfare will receive its death warrant, and the reign of order and progress can be ushered in"

Let us hope that this appeal of the Chinese statesman and patriot will not fall upon deaf ears

INDIAN PERIODICALS

Rabindranath's Resignation

Everyman's Review (Madras) for June, 1919 in its Notes and Comments writes

Though the title of a knighthood is but a trifle for a man of Rabindranath's genius and celebrity, his resigning that conventional honour coveted by most men and only very sparingly conferred by the Government, and resigning it quite unprovoked and unincited by personal insults is an act of heroism and charity characteristic of the world-renowned poet. If we want to have a precedent to this we must go back to him alone, and his refusal to visit Canada and deliver lectures at the Canadian Universities because of the injustices done to the Indians settled in Canada is the only other example that can be compared to his resignation prompted by a simple and pure fellow feeling and regard for the mother-country. The letter written by the poet to His Excellency the Viceroy on the eve of his resignation will hereafter form a fine mark in the history of political and literary advancement of India. Dr. Johnson's letter to Lord Chesterfield is famous and epoch-making in the history of English Literature because of the courage with which it upholds the dignity of human nature and condemns the hypocrisy of all scheming tyrants posing themselves as patrons of Fine Arts. Rabindranath Tagore's letter is destined to take a place secondary if at all only to that of Dr. Johnson's celebrated epistle and future generations of Indians will read and reread it and feel inspired by the language of lofty moral indignation used by the poet against the wrongs done to his humble and beloved countrymen.

While we reproduce the above with approval, we fail to find any exact analogy between Dr. Johnson's famous letter to Lord Chesterfield and that of Dr. Rabindranath Tagore to Lord Chelmsford. Johnson wrote his letter actuated by the wrong, supposed or real, inflicted on him by Lord Chesterfield by neglecting his claims to recognition while he was in distress and then going forward to heap praises on him when he was no longer in need of any patronage. Rabindranath was never in distress arising from poverty and never sought any patronage from anybody, much less from the authorities represented by Lord Chelmsford. Thus while Johnson's letter was a protest against personal neglect Rabindranath's is nothing of the kind, being based solely on national grounds in that it contains his

resignation of all titles and honours conferred on him by a Government with which he ceases to see eye to eye as to the manner of the administration of the affairs of his country and people.

The Uplift of Indian Womanhood.

Mr. Abdul Hameed contributes a well-written article under the above heading in the June number of *East and West* now published from Simla. The article runs:

From the beginning of time Woman has occupied a very important position in Society. She has always been in a large measure the source of strength and inspiration and there are instances in the history of all nations where women have been the types of all the highest qualities. We have Saviiri, the ideal of perfect Love, who conquered Death; we have Sita, who is held in the highest reverence as the ideal of Indian womanhood. Women have always exerted a great influence on every race. Well has it been said, "The hand that rocks the cradle is the power that moves the world." It looks impossible that a nation can be great and free if its other half is held in bondage. That is a question with which we in the India of these changing times are confronted, and it looks as if in the path of our nation's destiny the words of the poet are truer than ever.

The woman's cause is man's; they rise or sink together, dwarfed or glorified, bond or free. In the main, we have forgotten the high ideals of the long ago, and Indian womanhood is not given the freedom and knowledge which men enjoy and that is why our national awakening is only half complete. Women are looked upon as slaves and they are considered to have no duty higher than doing the ordinary household work. They are denied the light and air of life. As for the state of their education it is very backward and one feels the position which they nowadays occupy when it is borne in mind that on education depends the realisation of the values of life, the social, moral and political issues, as well as as the knowledge of their duties in home and civic life.

It is the mothers who are the mainspring of all the activities of the race; the mothers who in their very laps arouse race-consciousness, that have been the builders and the ministry of empires. These are the mothers like the mother of the Giracchi, that made Rome what it was—the pride of the nations, and the wonder of subsequent ages. There is no greater duty, no nobler task for Young India than the one which can be so simply expressed: "Make women realise their Self," for only in self realisation lies the knowledge of God and the world. Let them feel that they are the inheritors of great ideals, and that the redemption

of their nation depends on them. Woman's position with man's is one of equality, and both complement one another in the labours of life. This idea must take deep root in us, and will give rise to a reverence towards women which is their due. Therefore the first duty that we owe to women as well as to ourselves is the proper realisation of the place of women in society. Having done that and felt how indispensable they are to national as well as individual well-being, how handicapped societies and individuals are without the help and guidance of womanhood, the next thing is to equip them so as to become of the greatest service. This can be achieved by a healthy and proper system of education commensurate with their needs. This must not degenerate into a fetish of instruction, that would be the greatest disservice we can do rather let it aim at developing their highest qualities. When we have succeeded there, we shall have solved one of our greatest national problems, and raised society to a nobler level where men and women still walk as comrades and the progress of the state also in every sphere will be assured.

Unless, therefore, a feeling of sacredness and reverence surrounds womanhood and the high ideals of a golden past where women were goddesses and partakers of life, and not mere jasmine flowers, there can be no real progress. The springtime of our regeneration will not come until our women hold forth the banner of a nation's freedom. For, as the Prophet of Araba has so exquisitely said, "Under the feet of the Mother lies Paradise."

यत्र नारींस्तु पूज्यते तत्र देवता —where women are honoured there the gods rejoice —is a Hindu saying

Religious Education

In the June number of *The Hindusthan Review* (of Allahabad) there appears an article under the above caption in the course of which the writer, Mr Doraiswamy Iyengar, B.A., says

The present system of English education in India which was established in the thirties of the last century has been found faulty in many respects and capable of much improvement. Of late it has become the fashion in India to decry this system without thought or moderation, and lay every evil in the land on its head. Among its suggested defects none has been subjected to so much criticism as the absence of religious instruction. This protest against pure secular education received articulate voice during the national awakening of the last decade and found concrete expression in the movement for the two denominational universities. Just now this question has drawn upon itself an unduly large portion of national attention.

The writer continues.

The problem of religious education, though apparently a simple one, really involves many issues. It is the most perplexing education problem of modern times all over the world, as it is attended with insurmountable difficulties, theoretical and practical.

The crux of it is that it raises some of the deepest controversies of the modern age which have irreconcilably divided people into hostile camps. A plea for religious education falls into three parts, a case has to be made out for the universal necessity of studying religion; next, it must be proved that religious education can be satisfactorily imparted only in public schools; lastly, an actual scheme must be devised meeting all the practical difficulties. The champions of religious education mostly devote themselves to the first of these and altogether ignore the second and the third, failing to perceive the possibility of opposing religious education on any one of the three grounds even if the other two are granted. They also ignore the difference either between religious education and religious instruction, or between religious education and moral education, and confounding all of them with one another commit serious fallacies.

Continuing the writer observes.

Several reasons are advanced to show the universal necessity for the study of religion, the most pet reason being that religion is the soundest basis for morality. On this supposition very many people have indulged in a good deal of 'cheap talk' about our present system of education. This education is described as sceptical, materialistic and debased in character, capable of producing only rank, agnostics and frivolous atheists without having any living faith for later life, and almost solely responsible for the moral degeneration in the country.

The writer further argues.

Leaving aside for the present the question of the difference between morality and religion, it can be seen that the summary condemnation of the present system of education as being by nature immoral and solely responsible for all the supposed moral degradation of our nation, is hardly fair. There is no doubt that the hold of traditional morality and conventional religion on the educated youth of to-day has been largely undermined, and some signs of a little moral confusion are visible in our national life to-day. But this is the result of many causes. All over the world the modern spirit is up in arms against customary morality of any sort and India has also witnessed within herself this upheaval in the world thought. The clash between the old and the new, the East and the West, is now violently raging amidst us and the commotion incidental to such a wholesale shaking of thought and life cannot be judged by the standard of a peaceful age. All our cherished standards of life, outlook on things and experience of the world have been thrown into confusion and under such conditions there is scope for some frivolous, if not positively immoral, living. Westernism has implanted within us the spirit on individualism which is the great solvent of all traditions and set forms. The Age of Authority and of unquestioning obedience to it is past and the individual is the master of himself and his opinions. Modernism is also the most formidable antagonist of all kinds of formalism. It wants to have the spirit, the inner meaning, and rejects all external forms. It is just possible that our youths have given up all the external and unessential forms of moral and religious observance, and drawn upon themselves the wrath of the large body of traditional formalists. The existing system of education is the undoubted cause of the

advent of these factors, that have shaken the hold of conventional morality but it is not inherently opposed to morality itself

Mr Iyengar goes on arguing

But is not this supposed moral depravity of our educated youths an exaggeration? Is the present system of education really so bad as is made out? It is atrocious on the part of our leaders to call the entire educated community of India by bad names, when that community has successfully acquitted itself in all the available fields of national activity and has been primarily responsible for the national progress so far attained. It is also an exaggeration to call the modern system of education as sceptical and atheistic. How many of the thousands of its products have led atheistic lives? Most of these are law-abiding men meek and pious. And besides even if the education is atheistic there ought to be no harm since the Hindu is said to be inherently the most religious of beings.

The writer continues

People say that the present system of education is essentially materialistic and as such imperfect as well as dangerous. A mere physical, external animal sort of life is no doubt bad and the present education is to some extent responsible for such a kind of life. But this does not arise from the secular character of the education. Education in Europe is mostly secular but still spiritual. If by spiritual we imply the notion of other worldliness, then the European and the Indian systems of education are both non-spiritual materialistic and secular. But how is this dangerous or low? Are we to say that Mill, Spencer, George Eliot, Leslie Stephen, John Morley, Bradlaugh and Heckel are

persons of no worth because they are not spiritual in the above sense? One of the greatest leaders of modern India the late G. K. Gokhale, was an agnostic who had adopted the intellectual creed of English Philosophical Radicalism. Was India any the worse off on account of this? A distinguished student of the material sciences like Sir J. C. Bose, who has grown up, so far as his public education went in a purely secular and materialistic environment, can prove to be a more spiritual and religious man than a Pandit who has grown up in a life-long study of religion, provided he has a tendency for introspection. Deep reflection on any thing may lead to the development of a philosophy of life eminently serviceable to its author throughout his life. Those who have read the thoughtful discourses of Sir J. C. Bose can know how he has been able to draw out an altogether original and independent philosophy of life from a deep reflection on the biologic processes of nature. The cant about the materialism of our education and its danger to the country has no foundation in fact.

It is not thus proper to condemn the present system of education in India as being responsible for all the moral evils of our national life. The environment and the character of our life are more to blame for this than the educational system.

The writer concludes

Without prejudice to these considerations the contention of Mr Justice Sheshagiri Iyer may be conceded, that if the mass of the people in a country demand religious education, it must be provided for. The best agency for it must always be outside the school.

FOREIGN PERIODICALS

The British Empire and The League of Nations

In the April number of the *Nineteenth Century and After* Bishop Frodsham, who is especially dubious about the operation of the mandatory system, writes about the League of Nations in the following manner:

It would be futile to imagine that all who are concerned with the formation of the League of Nations are friends of the British Empire. They may neither side with Germany nor be planning our undoing but none the less they do not consider themselves as custodians of our imperial foundations or superstructure. On the other hand there are some who believe that the British Empire will gain in some unexplained fashion, by the mandatory system. No greater mistake could be made. And even if the British were to gain much, they would lose far more, and the whole world would share their loss, if it meant purchasing a cumbersome political machine at the cost of the new-born spirit of unity and trust which has sprung up between America and the Allies—an ethical kinship which may yet prove to be the best positive product of the war.

This article has not been prompted by any prejudice against the main principle for which the League of Nations may be presumed to stand. The British Empire stands for the same principle, which is nothing less than making the world into a peaceful home for a united human family. The main difference between the League of Nations and the British Empire is that one is a theoretical venture, the other has the right to claim experimental value, the one plans from the circumference, the other works from the centre. The League of Nations is a glorious dream, but the British Empire is a solid reality. However drab in comparison with dreamland the British Empire may appear, it exists upon this much-enduring blood-stained earth as a preliminary sketch of what the whole world can become, that is, a community of all varieties of the human race bound together by ties light as air but strong as iron. The ink upon the charter of the League of Nations is barely dry, and already the draft may be pencilled over with innumerable amendments. The constitution of the British Empire has not yet been written. It is in the heart of the people—the same people who have shown their willingness to die for the Empire but who, it is complained, refuse even to be interested in the

League of Nations The British Empire is the product of gradual development and of three hundred years of practical experience It has neither outgrown its usefulness nor is it tottering to its fall It is by far the largest and most extensive part of the edifice of human society And no greater world disaster could be conceived than that the fabric of the Empire should be undermined in order to make room for an ambitious but imperfectly thought-out scheme for building a Palace of Peace, which may turn out to be only another castle in Spain

How self-righteous !

The Monroe Doctrine.

We are indebted to *The Review of Reviews* (London) for the following interesting extracts relating to the oft-quoted Monroe Doctrine :

The genesis of the famous political doctrine known as the Monroe Doctrine, says Mr J G R Marriott, in the April number of the *Edinburgh Review*, has been the subject of considerable dispute. The theory contains in its complete form two distinct formulae, first, abstention on the part of America from any intervention in European affairs, and, secondly, the exclusion of European influence from the American continent, and both formulae date long before the President who gave them their name The first was explicitly affirmed by Washington in his Farewell Address in 1795, and by Jefferson in his First Inaugural in 1801, and it was not long before the second and strictly correlative formula was added to it, for as early as 1803 Jefferson insisted that the object of the United States should be "to exclude all European influence from this hemisphere" The first enunciation of the Doctrine, by President Monroe, in 1823 was brought about by Canning's famous endeavour to "bring in the New World to redress the balance of the Old" Mr Marriott says —

By this message Canning was gravely perturbed He had got much more than he bargained for All that he desired was the co-operation of the United States in thwarting the supposed designs of the Holy Alliance, and in particular of France, upon the Spanish colonies What he got was a general intimation, *urbis et orbis*, that henceforward the American continent would be the exclusive preserve of the American peoples, and that no further acquisitions of American soil would be permitted to European or other States

From December 1823 to December 1918 the Monroe Doctrine has been the sheet-anchor of American diplomacy Primarily put forward in reference to the Russian claim upon the North West coast and to the crisis in Spanish South America, the principles enunciated by President Monroe were from the first, perceived to possess a far wider application Canning's chagrin was amply justified The message no more discriminated between Great Britain and the absolutist Powers of the Continent than did the propagandist Decrees issued by the French Republic in the autumn of 1792 It was, in pronouncement of a great democracy just arrived at aggressive self-consciousness Its underlying spirit was in very truth antagonism, so far as concerned

affairs of the Western hemisphere, to all monarchic Europe, Great Britain included

Japan and India—As Other See Us.

Under the above heading Mr. S Kami saka, Managing-Director, Japan Spinners' Union, who recently travelled in India on business, records his views about this country and its people in the pages of the *Journal of the Indo-Japanese Association*, No 24 (Tokyo), in the following words :

Rather closely connected as Japan and India are in respect of thought, they are, materially speaking, truly alienated from each other While Europe, which first came into touch with Indian thought about the mediæval age and which has even now but a very faint spiritual relation with India, has got ahead of Japan in entering into close material relations with India and succeeded, after exchanges of commodities, in obtaining territorial possession, Japan, to our great regret, still ranks in Indian trade among such minor European countries as have the least This is, needless to say, due to the general trend of modern civilization of the world Had our navigation been as active since the 17th century as that of Europe and our national resources as bountiful, India would have approached Japan before Europe, and Japan would have no doubt achieved as much at least as Europe did in India But our domestic conditions are too widely different from those of Europe, and our national resources too inferior to enable us to reap the same result in India It will not be, however, too exaggerated a statement to say that within twenty years hence Indo-Japanese relations will undergo a thorough change

The writer continues to observe under the sub-caption "Religious Caste a Drug upon Indians. —"

International relations depend a great deal, if not entirely, upon national feelings, for national feeling plays an important role in international friendship The Indians have entertained good feelings towards the Japanese, or, more properly, show a national tendency to approach Japan But this tendency is founded not as the result of the popular feeling, but upon the national faith, which is more deeply rooted than feeling For, the Indians are a unique religious people, and their thought is so fundamentally religious, that they can conceive nothing without religion, religion is the sum total of Indian thought And according to the religion which they embrace, the caste system, entirely peculiar to India, will never be changed as long as the world remains populated To the Indian eye, therefore, the protection of the caste means more than that of the state For man is born in caste, and there exists no human being outside of caste Violate

the usage of caste, and you are doomed entirely. Members of different castes never marry, have any sort of intercourse, or sit at table together. People of the same caste get intimate but those of different castes reject one another, at the pleasure of their gods. The fundamental principle of Indian thought is religion. Religion accounts for the existence of caste, which is most strictly adhered to as something sacred. The attitude of the Indians towards other people whether neighbours or strangers or aliens, is governed by this caste spirit. Once an intimate Indian friend called me a "Brahmin of Japan" meaning that among the Japanese people who are on the whole friendly, I was the most friendly to this particular Indian like one of the Brahmin caste of his country. This is enough to show how thoroughly the caste spirit permeates the thought of the Indians.

According to this Japanese gentleman, Indians are a lovable nation. Talking of the "attitude of Great Britain towards India" Mr Kamisaka observes:

Great Britain is far more disadvantageously situated than Japan in regard to an understanding of the psychology of the Indians. For something stands in the way of the union of the European and Indian minds. There were some hundred thousand British subjects in India in pre-war times, but how many of this large number truly understood the customs, manners and hearts of the people? Need I mention the still greater difficulty the British people at home experience in their study of India? Still be it said to the credit of Great Britain that the British colonial policy has been a successful one.

Apart from political and financial affairs, England never interferes with any Indian customs or practices pertaining to their religion but leaves such matters to the free judgment of the Indians. The British people never hint at the improvement of these practices. For they know full well that a careless interference with any religious question, which is the central thought of the Indians, might lead to serious trouble. And this fear is not imaginary or groundless for every trouble that Great Britain has experienced with Indians and every outburst of Indian rage have been directly or indirectly connected with religion. The Indians are comparatively indifferent in matters of politics, finance and other social questions. It is the Indian policy of Great Britain I believe, not to anglicize India from the foundation but to unify the internal administration, maintain order and peace in the country, increase Indian wealth and obtain as much profit herself as possible. And Great Britain has perfectly attained her object in the past, for under the British administration India has seen the most peaceful prosperity ever witnessed in Indian history and the Indians are perfectly satisfied with British government, showing no sign of discontent or complaint.

Even the anti-British feelings often reported lately, represent the views of but a small portion of the Indian people, having nothing to do with the general sentiments of the nation.

The writer, under the sub-caption "Indian Trade Prospects", concludes:

I have elsewhere stated what good feeling the Indian people entertain towards the Japanese, and good feelings often pave the way for peaceful business transactions. Besides, no other nation in the world is more influenced, either favorably or otherwise by social considerations. Their characteristic exclusiveness, by which they never let anything touched by one of another caste may be held to account for the distinctions they make in caste in race in religion, and every thing else. But this same trait may influence them in business transactions and also in the purchase of daily necessities. This is the natural tendency from which no Indian can free himself. If therefore the Japanese manage to harmonise themselves with the thought and feelings of the Indians, become truly intimate and friendly with them most confidently and confidently lead and guide them and at the same time improve and promote our industries to meet fully the Indian demands and exchange our industrial products for the inexhaustible natural resources of India for the mutual convenience and profit then we may safely expect to see Indo-Japanese relations most closely established within twenty years hence.

Multiplicity and the Social order

We take the following from an article under the above caption contributed to the April number of the *Harvard Theological Review* by Mr J Lowenberg:

The issues of philosophy are too grave for facile theories. So are the issues of the war. The war is a struggle of general ideas of which there are exponents in every nation and some of which come to predominate now in this, now in that country. Racial and national conflicts themselves may be interpreted in terms of a deeper opposition. There are after all but a few fundamental problems, towards which there are but a limited number of ultimate attitudes. One such problem, of which the war of nations is only one instance is the problem of multiplicity. And this problem is as general as it is fundamental. It is everywhere forced upon us. We have but to open our eyes to see it reflected in a thousand shapes. Nature with its manifoldness exhibits it, the inner life with its diversity of moods, passions and motives discloses it, the social order with its variety of institutions, forces, laws, interests and claims bares it, the world with its many kinds of races, nations, states, cultures and creeds displays it. The world is everywhere multiple and diverse. This is the universal

situation. And it is this situation which creates our significant problems, practical as well as theoretical. The problem of individual ethics is the problem of choice. In a world in which there is possible but one course of action, no moral perplexity can exist. There is a problem of social morality because there are many of us. Were there but one individual, no social questions would arise. And in a world made up of one nation only, there would be no international disputes. The problems of science have meaning because many and various and complex phenomena call for interpretation. Without a multiplicity and diversity of facts to reduce to law and order, science itself would evaporate. And philosophy—what is it but an effort to reconstruct the meaning of a world in which many antitheses and contradictions seem to prevail? The work of philosophy consists in formulating the many problems of life and of reality and in appraising the validity of opposed solutions.

Again—

Is the State logically prior to Law, or is Law logically prior to the State? Is the will of the State ultimate, or is there an authority, legal or moral, which ranks superior to the will of the State? Is or is not the State capable of criminal acts? These questions cannot be answered without determining the character and the reality of the State. As a mere collection of detached individuals it is irresponsible, as a mystic being existing as a sort of Platonic Idea, the State transcends the moral judgments which bind human individuals; as a 'fictitious' or 'symbolic' or 'hieroglyphic' personality which is and is not an individual the State again eludes responsibility. Truly romantic is the 'double evaluation' of the group. As *Persona ficta*, the State has all the privileges with none of the responsibilities of a person. But if the State is neither a collective name, nor a transcendent Idea nor a fiction or symbol, but a person in the ethical sense, or an organized individuality, as Plato conceived his Republic, then the State can sin as do individuals and is subject to the same moral restrictions as are its individual members.

What has Japan done in the War

Baron Makino writing in the *London Daily Telegraph* of London, an article on "Japan and China. An Official View," says

We ask nothing for Japan but those things which appear to us just and equitable, and of the justice and equity of which we may be able to convince not only the representatives of the nations in the Peace Conference, but the people of the countries they represent. We have no demands to make, we merely advance certain matters for the same consideration by other

nations as we have ourselves given to them in the light of our own position and the future of the Far East. It may be necessary to go back through the history of some years in order that we may arrive at what we regard as a fair and equitable conclusion.

After detailing in *extenso* all that has been done by the Japanese in helping in the maintenance of peace and order in central Asia and in the Far East since 1905 up to the end of the War just closed which began in 1914, the Baron concludes with the following words—

The question has been asked, 'What has Japan done in this war?' I answer only by saying that Japan has done her best. It is perhaps not unseemly to state that her fleets in the Pacific and Indian oceans and in the Mediterranean traversed over 1,200,000 miles in the work of protecting transports and merchant vessels from the submarines, and we escorted three quarters of a million men rushing to the aid of France and Britain. Japan's geographical position, her resources, and the fact that the Pacific Ocean was freed of the menace which has threatened the freedom of other seas, enabled us to provide considerable quantities of war supplies and materials to Russia, to England and to France, and including loans to Russia, the money expenditure has been a very considerable item in the budget of Japan. But these are small matters in comparison with the ungrudging sacrifices of our western allies. The government and the people of Japan have been the loyal allies of Great Britain and France and the friends of Russia and of the United States. It is not for me here to enter into a relation of what we have done in detail. It is sufficient to say that what has been given or spent and what has been lost in the cause for which the allies have fought and won have been contributed in a spirit of loyalty and sympathy, and that we are here now to assist in the work of building barricades against war and in forging links of friendship and understanding between the nations of the East and of the West.

The British View of Irish Nationalism.

Under the above caption there appears an article in the *London Spectator* in the course of which the writer observes

Everyone with a faculty for argumentation must have despaired sometimes when he found himself opposed in a discussion to a person on whom logic had no effect for whom syllogisms did not exist and in whose mind a rationally presented series of connecting links in argument inspired nothing but some new and fantastic irrelevance. The man with the rational mind in such circumstances recognizes at length that all his rationality is of no avail, that every point of learning and dialectic on which he prided himself might just as

well not have been uttered, for he has all the time been following the futile occupation of punching a feathered or kicking against a brick wall. Englishmen who read the reports of Irish debates in the House of Commons know something of that despair. We cannot go into the whole of the debate which took place in the House of Commons the other day, but let us, to illustrate our meaning, disentangle a few arguments from the mass. The Nationalists—and the same thing is true of what may be called the moderate Sinn Feiners, if there be such persons—base their claim for independence upon the rights of small nationalities, and upon what in the jargon of the day has come to be known as self-determination. Surely if these men had any glimmerings of statesmanship they would at once accept the offer that has been made to them over and over again that they may set up a Parliament in Ireland which will not control the Six Counties of Northeast Ulster where the population is predominantly Unionist and Protestant. Obviously, if the majority of the people in the South and West of Ireland have a right to determine their own political destiny, the local majority of the Six Counties have an exactly similar right. That is the merest logic. If the Dublin Parliament should succeed, there can be no doubt whatever that within three or four years the excluded part of Ulster would be begging and praying to come in. If we were Ulstermen, we should always be rubbing in the fact that the unwillingness of Irishmen in the South and West to set up a Parliament where they have a really homogeneous population is the most alarming fact in the situation. Within the area which is undoubtedly of their own way of thinking the Nationalists could carry on quite happily without being balked and tormented by all those tiresome Protestant or Unionist objectors from Ulster. We feel sure that if we were Home Rulers we should actually say, 'We would rather be without miserable anti-Irish Irishmen like you Northeast Ulster people. Directly the Nationalists began to talk in that strain, and especially if they began to make an obvious success of their affairs, Ulster Unionists and Protestants would begin to hesitate, to ask themselves questions, and to wonder if, after all, there was any need to hold out longer.'

The writer continues:

But the Nationalists seem to be by temperament or brain power quite incapable of appreciating this history for them tells its stories in vain. Suppose that during the *risorgimento* of Italy, Garibaldi, Mazzini, and Cavour had said, 'We will have all or nothing. There shall be no partition. If we cannot include in our new State some city where the population is thoroughly pro-Austrian and full of anti-Italian patriots, then we will not create a New Italy at all.' Yet, if we can imagine the creators of New Italy being so mad, their madness would not have exceeded what is solemnly and eloquently asserted by Irish Nationalist Members in the House of Commons. Mr Ronald Mac Neil in his excellent speech put the case extremely well. He pointed out that loyal Irishmen who had fought for the maintenance of the Union for generations were anxious not to be obstructive when war came, and they abandoned their insistence upon maintaining the Union. The answer of the Nationalists and Sinn Feiners to that was, as Mr MacNeil put it, that they wanted 'self-determination for Munster, Leinster, and Connaught, coupled with

'domination over' those who are outside their own borders.' That, he added, 'is the sort of self-determination which I do not think the Peace Conference is likely to support.'

Further runs the article:

This reference to the Peace Conference reminds us of the appeal which the Sinn Feiners have sent to Paris demanding independence for Ireland as being the right of a small nation. We do not ourselves think that there is any sense, justice, or safety in asking other nations to settle the affairs of our sovereign State, but as the Sinn Feiners, with their customary irresponsibility, have taken this action, it would surely be advisable for the Unionists of Ulster to deliver a counter-attack. Just as an admirable counterstatement was issued by the Ulster Unionists when the Lord Mayor of Dublin dispatched his glowing misstatement about Irish history to President Wilson so might Ulster Unionists now tell the truth to the Peace Conference. They might invite the Peace Conference to rule that if small nations have the right of self-determination, a similar right shall be extended to any tract of territory, in a new small State not to be separated from the country to which it previously belonged if a majority of the inhabitants express that desire. Such a right is surely co-ordinate with the right of self-determination. Could there be a proposition more opposed to the principle of self-determination than that a nation has a right to wrench away from the allegiance it professes and loves some such district as that of Northeast Ulster? It might be said that the Unionists and Protestants of Northeast Ulster are really secured by the pledges of the Prime Minister but it would be a fine thing, and a great thing, if, in spite of the fact that they felt reasonably secure, they asserted the right we have described for other small communities.

The following lines represent the penultimate paragraph of the article:

We wish we could do justice to Mr. Macpherson's speech, in which the contrast between the prosperity of Ireland and the intense cruelty of the shootings, persecutions, and oppressions being carried out by Sinn Feiners was sharply and ably drawn. But we must content ourselves with referring finally to the speech of Mr. Lynn—a maiden speech which was a real contribution to the debate. Mr. Lynn talked of the reputation by the Nationalist speakers of the 'ancient litany' of imaginary wrongs. Here he put his finger on one of the most ridiculous of Irish irrationalities. The argument that the British Government should now do something wrong and foolish in order to atone for the faults of Englishmen of past generations is a negation of all statesmanlike ideas. If the principle of such a demand is justifiable, why is it not applied to the Roman Church? If Protestant Englishmen must make amends for injustices or crimes said to have been committed generations ago, by what right do Roman Catholics demand to be free from the same obligation? On these terms the Roman Catholics owe reparation for the massacre of St. Bartholomew, and for the two Irish massacres of the seventeenth century, and for the terrible Irish rebellion of '98. Why should the poor English race be the only one to which is applied the law that 'the sins of the fathers must be visited on the children'? The argument, of course, does

not bear looking into Shakespeare is usual told the truth 'Crimes like land are not inherited

The article concludes —

We earnestly hope that Mr Lynn will press his demand for information about the relations, before and during the war, between the Sinn Feiners and Germany. He traced those relations back to 1911, and stated explicitly that during the war secret wireless installations were established, German submarines were supplied with petrol and other necessities, large quantities of German arms were landed, and elaborate arrangements were made for a German occupation. The British public wants to know exactly where the Sinn Feiners stand. What is the truth of all these matters? If a Parliament is set up in Dublin, it will, of course, be a Sinn Féin Parliament. It is really utterly indefensible for the government to say in effect 'We will not allow any information to be published about the character of these men to whom we may entrust the task of setting up a Parliament to rule the greater part of Ireland and who will have license to make any trouble they please at your very doors.' Mr Lynn has failed three times to get an answer, but we hope he will persist.

Immortality and Modern Science.

In the course of reviewing a book by Mr Edward Clodd—*A Brief History and Examination of Modern Spiritualism*—, which is the latest of the works on the subject, Dr Frank Ballard, D D, in the recent issue of the *London Quarterly*—quotes from Mr Fiske's *Destiny of Man*—

'The materialistic assumption that the life of the soul ends with the life of the body is perhaps the most colossal instance of baseless assumption that is known to the history of philosophy.

And then observes —

And we may say to day even more firmly than he did that although upon these conclusions we cannot directly base an argument sustaining man's immortality, we certainly remove the only serious objection that has ever been alleged against it. Personality is at once the most certain and the greatest reality in the universe. And physical death can no more touch that in humanity than a hammer can smash an idea, or the destruction of a violin necessitate the destruction of the player. Dr Thomson's volume just mentioned deserves much more notice than it has received, for therein he gives abundant warrant for his avowal that 'a great personality may possibly make a great brain—it is not always so—but no brain can make a great personality.' Hence it is far from enough to say that modern science just leaves unsolved the great question of human immortality. It does much more. It deliberately affirms that there is nothing, either in its efforts or its findings against the more hopeful answer to that question. In Dr Fiske's well-chosen words

When a man has canvassed all the standard objects to belief in personal permanence he finds science has discovered is concerned, immortality is as possible as it is significant."

Moreover, there is scientific proof, in undeniable facts—for all who are not wilfully blind,—of the possibility of ultra cerebral communing here, which points definitely in the direction of ultra cerebral continuity hereafter. In their scorn for telepathy Mr Clodd and his friends make much of Professor Sidgwick's attitude—almost indeed as if it was all decisive. Let us then note what he himself says concerning telepathy—

'It is for this reason that I feel that a part of my grounds for believing in telepathy, depending as it does on personal knowledge, cannot be communicated except in a weakened form, to the ordinary reader of the printed statements which represent the evidence that has convinced me. Indeed, I feel this so strongly that I have always made it my highest ambition as a Psychical Researcher, to produce evidence which will drive my opponents to doubt either my honesty or my veracity.

That should be strong enough, sceptical enough even for Professor Armstrong. And on his own terms it sets us free to accept and estimate the significance of telepathy, as being certainly a definite and pregnant 'advance in knowledge.'

It is no part of our task here even to summarise the scientific as well as religious reasons for cherishing the hope and maintaining the conviction that for human beings death does not end all. So far as Mr Clodd's book tends to check untrained credulity, we heartily welcome and endorse it. But it does not show that Sir Oliver Lodge and his co-workers are ignorant dupes nor that the S.P.R. is composed of credulous time wasters nor that modern science forecloses all psychical inquiry still less that it shuts the door of latest knowledge against our immortal hope. That which Mr. Clodd accomplishes counts for nothing against that which he ignores. The breadth and length, and depth, and height of human personality are not cribbed, cabined, and confined within a few cerebral cells. Our 'advance in knowledge' throws more widely open than ever heretofore, the door of permission to accept and appreciate all those other than scientific reasons for hope beyond the grave, which come along the lines of Christian Theism.

At least we may be thankful that amid the chaotic upheavals of our time, and with all the heavy pall of numberless bereavements on our hearts, modern science does not force upon us the miserably blind despair of the old Persian pessimist which seems so satisfactory to Mr Clodd. Rather does it leave the modern student free to say, with his eyes as wide open as his heart is full—

My own dim life should teach me this,

That life shall live forevermore,

Else earth is darkness at the core,

And dust and ashes all that is

Our real advance in knowledge, while not satisfying any more than the New Testament our curiosity as to the 'conditions of existence in any after life,' yet does not only permit but encourage us to turn to the God whom Jesus bids us ever think of as THE FATHER, with the humble yet confident trust—

Thou wilt not leave us in the dust,
Thou madest man, he knows not what
He thinks he was not made to die
And Thou hast made him —Thou art just

A Way Out in India.

To the July number of the *Asiatic Review* (London) Dr John Pollen contributes the following article under the above caption.—

"The progressive realisation of responsible Government in India as an integral part of the British Empire" This is the declared policy which underlies the Montagu-Chelmsford reforms—and which constitutes the basis of the Bill now before Parliament.

India is to remain an integral part of the British Empire but to have a responsible Government or rather responsible Governments of its own—and the means to effect the end desired are declared to be—

(i) The increasing association of Indians in every branch of the Administration and

(ii) The gradual development of responsible Self Government

This phrase—"responsible Self Government"—sounds well and has almost as blessed an expression as "Mesopotamia." 'Angle of Vision' 'attitude or 'gesture.' It may convey different meanings to different ears or none at all to the indifferent. But the meaning evidently intended is that Indians should be responsible for governing themselves without interference on the part of Great Britain. In other words, elected Indian Representatives should be in a position to declare the lines on which the electorates in the various provinces desire to be governed—and should have the right to dictate the policy to be adopted or carried out by the Executive. This means, (as Sir Francis Younghusband has pointed out), "The gradual transference of power from the people of Great Britain to the peoples of India"—and the result will be that India will be responsible for governing itself just as Australia is responsible for governing itself. This is indeed the policy which all true well wishers of India desire to see successful—and it can be made successful—and it is certainly the goal towards which faithful Administrators have been consciously or subconsciously working from the early days of the long ago. It was in this spirit that the late Mr J. A. Nairn, of the Bombay Civil Service wrote in the early seventies—

'Oh' men of the Western Islands last
Runged white with the yeasty spume,
Declare if the wit of your forbears lives
In the tongues that fret and fume
Look back on the years that be dead and gone,
Speed hence on the Wings of Time
When first your hand on the East was laid
Like the grip of the Gods' subsume!
And say, when the spirit of England rose
On the dust of a hundred thrones,
If her wings were clipped by a fool loud lipped
'Mid the hushings' cheers and groans!
Not so—and now ye have given a voice,
Where never was voice before
Ye have laboured to teach the strength of speech

From the springs of your Western lore—
Ye have made the eyes of the blind to see
And be it for life or death
Your ear must bend to the voice that speaks
By the fire of your English breath

Men of the Western Islands have long laboured to teach the Youth of India to use the political voice and to make repeated demand for self-government and we needs must listen now—for Reform is long overdue and (as Sir Bampfylde Fuller declares) 'a democracy cannot expect to permanently dominate an alien Empire. But the Montford proposals and the provisions in the Bill now before Parliament are so complicated so confusing, and so elaborate that it is to be feared that the existing administrative machinery in India will never be able to perfect them or use them within reasonable time or in a satisfactory manner.

Thus a deadlock—or undue delay—is most certain to arise. The question therefore, is—cannot some way out of the difficulty be found? Those who know Native States think it can and it seems clear 'The federal way adumbrated by the Aga Khan, is perhaps the best. His Highness has declared that 'the problem of a Free India within the Empire can only be solved by Federalism.

Now it is asserted that certain Indian principalities are admirably administered both to the satisfaction of the 'politically-minded classes and to the gratification of the masses of the people—and it is constantly proclaimed in the Native Press that the Rulers of these States have been able to give their subjects all the reform they desire—and many Rulers, like the Thakur Sahib of Limbdi, have protested that they are quite prepared to adopt in their States the particular changes and reforms proposed by Mr Montagu and Lord Chelmsford for British India. Why not then extend the system of Indian Principalities throughout India* and permit Indian Administrators to carry out the proposed reforms on Indian lines in their own way? Why not, in short, establish 'limited Monarchies' on Montford principles in the various Provinces of India?

It may be recalled that the Aga Khan has proposed that India should be divided into eight Major Provinces roughly equal in area—and each capable of developing a National Government and that Indians should preside over these Provinces side by side with Englishmen and that in certain cases Ruling Princes of proved administrative ability should be invited to leave their own territory for five years for the greater field of a provincial administration.

His Highness very justly holds that no Federal scheme for India would be complete which did not take into account Native States, for it is not too much to say that "the Indian Princes are the bulwarks of the Imperial connection—and of late years some of the best known Princes have been cherishing the ideal of a constitutional and parliamentary basis for their administrations." These things being so—why not simply and facilitate the introduction of the desired reforms into India by converting the Major Provinces into Indian Principalities under the control of Constitutional Chiefs? The Bill now before Parliament should certainly contain a clause or clauses enacting this to be. Such a change would be well by the Indian populations out of

life the dulness and sombreness of British administration and English unsympathetic restrictions have taken so much of the light and colour and pomp and pageantry which the souls love.

It is all very well to say a riddle—"the day of Autocracy or Benevolent Absolutism is dead." This is certainly not true in the East—but even if it were it is not proposed to raise the dead or revive the dust. All that is proposed is to set up Limited Monarchies in India—and allow the peoples to work out their own salvation in their own way and so shift the white man's burden which has certainly grown too heavy for the white staff in the India of to-day. A system of Provincial Parliaments in the Principalities with a Federal Parliament at Delhi would probably work satisfactorily.

It has been held that some of the leading Cities in India could not well be included in Provincial Principalities and that they like Hamburg and some other great continental cities should be allowed to manage their own affairs. There is much truth in this contention and such Cities could easily be

constituted 'Free Cities'—and ultimately a League of such Cities might be established from Baghdad to Rangoon and included in the 'Southern Asiatic Federation' foreseen by the Aga Khan. In the Peace Treaty now under discussion at Paris the constitution of 'Free Cities' is being recognised and provided for—and in resettling India on Indian lines no great difficulty need be experienced in providing that great Indian Cities like Bombay etc should manage their own affairs independently of outside control very much as they practically do now.

At any rate the proposal to create Indian Principalities pledged to the adoption of the Montford reforms—and the suggested recognition of Free Cities wherever advisable may be taken as indicating a possible way out of the dreadful labyrinthine maze in which Moderates and Extremists and well-wishers of India find themselves more or less lost and bewildered at the present moment.

Comments on the above would be quite superfluous!

THE KEEPSAKE

IT was not yet dawn, the eastern sky was just beginning to take on a greyish tint.

The back door of the house of Shambhucharan opened slowly and a young girl came out with quick light steps. She took the road to the river ghat, which was quite near. Her face and figure could not be clearly discerned in that half light, her white widow's dress and a mass of dark wavy hair alone being visible.

The river ghat was as yet entirely deserted. She sat down on one of the lower steps with her feet in the water. There was no sound to break the trend of her sad thoughts. The girl was named Uma and was the only daughter of Shambhucharan, one of the influential Brahmin residents of the village. She had been given in marriage to a man of fifty when she herself was nine. But she became a widow, the very year she was married. She had been living in her father's house ever since.

The eastern sky gradually changed from grey to rosy red. The old *Bauragee** of the village appeared on the lonely road, chanting his old songs. Uma got up

hurriedly and, after a few hasty dips in the river, she filled her brass pitcher and started homewards with it.

The inmates of the house seemed to be still asleep. Uma set down the pitcher in the kitchen, then went out and hung up her wet cloth in the yard. Then she began her cooking. She was in sole charge of this department, as her father was very strict as to the duties of Hindu widows. Uma had no opportunity of failing in any of those duties which the shastras have prescribed. She performed all the household duties and her small leisure was spent in listening to her father reading the scriptures or holding forth on the duties and conduct of a Hindu widow.

Bishan, the younger brother of Uma, had planted a sheehi tree in front of the kitchen. It was now a mass of white-and-red flowers. The morning breeze caused the dew-laden flowers to drop down and cover the ground with a glorious carpet. Uma came out of the kitchen and began to gather the flowers in the end of her cloth.

A door opened with a harsh grating noise and a stout lady appeared in the doorway. She was looking about for some

* Mendicant

Biswanath's mother took to bewailing her hard lot as soon as she heard of it. His uncle was quite upset at the mere thought of one of his relations actually working for a living. The other inmates of the great house could only gape and stare.

Biswanath was thoroughly disgusted with them all. He collected a large number of poor children, mostly belonging to the lowest castes and took them to his own room where he began to teach them to read and write. This had the desired effect. His uncle at once consented to his going out on service. Just at this juncture a vacancy occurred in the Palnshpur village school. With his uncle's help Biswanath at once secured the post and started for his future place of residence.

His uncle had arranged about his lodgings too. Shambhucharan was only too glad to oblige his influential patron.

Biswanath soon grew accustomed to his new surroundings. He liked them much more than his former ones. He began to live for the first time in his life.

Bishnu went nearly mad over the new schoolmaster. His admiration and enthusiasm knew no bounds. Shambhucharan was no less delighted though he held himself in check. Biswanath's uncle knew well the value of services done. Even the dignified mistress of the house condescended to speak kindly to the new inmate of their house.

Uma was at first indifferent, but Biswanath was so totally different from the other young men of the village that she could not help gradually becoming interested. He seemed like a dweller of another world. Uma scarcely knew any young man, but she had seen many, and what she had seen of them had not called forth any feeling of admiration. They never seemed to have any higher ambition than to part their hair correctly and smoke cheap cigars and they scarcely talked anything except scandal. But this stranger seemed to belong to another kind. From what she could see and hear of him, he appeared to spend his leisure reading or during the sports of his young pupils.

She saw Biswanath every day as he came in for his meals. Uma noticed the

fact that he paid but scant attention to his food. This neglect hurt Uma. She used to feel humiliated. She tried by every means in her power to make the meals more attractive, but without much success.

But suddenly one day Biswanath became conscious of her efforts and smiled in grateful acknowledgement. "It is very kind of you," he muttered shyly.

This was the first time he had spoken to her. Uma blushed all over and escaped to the kitchen. What a man he is," she thought, he should not have smiled so directly at me. As if it matters anything to me whether he eats much or less."

But the next day she did not relax her efforts. She wanted to make his exile from home as comfortable as possible. But her power was limited and what could she do but cook her best for him?

But now she had the joy of noticing that her efforts had met with grateful recognition.

In this unpoetic way they came to know each other. Shambhucharan had got entangled in a tiresome lawsuit, which left him no time to superintend his daughter's upbringing and manner of life. So after the male members of the house had gone out after their multifarious duties and her stepmother had begun her afternoon nap, she sat close by the open window with the old Ramayan on her knees. Not that she had any special liking for the epic, but because this happened to be the only book in her possession. Thus passed her afternoon.

But one day Bishnu smuggled in a novel. It was like a godsend to Uma. So engrossed had she become that nothing but the threatening voice of her stepmother served to rouse her.

The book belonged to Biswanath. He was searching for it when Bishnu came and said, "I have given it to sister." After this the old Ramayan had to retire permanently and somehow the whole collection of Biswanath's Bengali books found their way to the girl widow's room.

Biswanath was absent minded by nature, but in some curious way he suddenly became fully conscious of the presence of one

and take the dust of the feet of this man. But a guess held her back and she stepped aside out of the way to let him pass. But he did not pass; he came and stood by her and asked, "Why have you come out so early? You certainly have not broken your fast yet?"

Your meals must be ready before school time, answered Uma evasively.

I am not in the habit of killing people for my own convenience, said Biswanath sharply as he walked off. Besides I am feeling a bit feverish. I don't think I shall take anything to-day.

Uma returned home quickly. She understood well this sudden fever of Biswanath.

Sorrow brought them together; joy would have kept them apart.

(2)

Do you hear, Uma, you must be pleased to be a bit quicker to-day with your work as my brother and sister are coming. I hope they will be able to have some refreshments when they arrive.

Uma was sitting lost in a reverie in her own room. Her stepmother's voice brought her back to the earth. She rose and went to attend to her duties.

Biswanath on his return from the school was rather astonished to see a man sitting on his bed and calmly smoking. His fashionable dress and carefully arranged hair clearly denoted a beau of the town. Biswanath went out after a casual glance. The young man asked Bisnu, "Is this your new schoolmaster? Seems rather high and mighty for his position. Didn't condescend more than one glance at my direction. This person was named Suresh. He was the younger brother of the mistress of the house."

He was in the habit of returning home very late for various reasons. His visit made no change in his manner of life. After the children had their supper, Uma was ordered to put the supper of the guest in his sister's bedroom and retire. After a thought, her stepmother added, "Biswanath's supper too; you can keep here. I think they would like each other's company."

Uma did as she was told, and then sat

down to her own frugal meal of puffed rice and treacle. It was nearing eleven when Suresh came back and after a stealthy glance around he approached the open door of Uma's room. Uma looked up startled whereupon the fashionable young man advanced with a broad grin and said, "My dear you don't seem to recognise me. Please be a little kind."

Uma's eyes blazed. Without a word she got up and shut the door to his face with a bang. The discomfited gallant was obliged to retire though with a very bad grace. He was not long in retaliating. He found every fault imaginable with his supper and began to complain loudly of his own ill health and the scant attention paid towards his comforts by his own family. The widowed sister who had accompanied him loyally backed him.

The mistress of the house was rather to a fix. It was too late to prepare anything new, but her darling brother refused to be content with what had been prepared. She was feeling a bit ashamed too of the ill manners of her own people in her husband's house and before the eyes of Biswanath who was an aristocrat born.

But Suresh was not the person to give up. The contest ended in calling Uma out and scolding her heartily for her neglect of her duties. She should have seen that a guest of the house had what he wanted. Suresh smiled in triumph as Uma went to prepare new dishes for him at that hour of the night with her own supper unfinished.

What a temper she seems to be in! Widows should not put on such airs. We too have to work from morning till night, but nobody can say that of us, remarked the widowed sister.

Biswanath had been hitherto sitting in unmarked silence at this display of good breeding. He had been asked to take supper with Suresh and had found no way out of it. He had scarcely taken anything. Suddenly he got up and quickly went out. Suresh finished his supper alone.

Biswanath spent a sleepless night tossing from side to side. Then getting up he went out. It was already beginning to clear so he took the road to the river. He

had hoped to find the river ghāt deserted but somebody was already there sitting on the steps. The keen breeze of the early dawn was shaking the folds of her white dress and a mass of black hair sweeping over the stone steps. Biswanath approached silently then called out Uma.

Uma had been sitting there like a statue carved of stone but at his call she broke down utterly and flung herself down shaking with inarticulate sobs. Biswanath sat silently by her; he knew no words with which to comfort her. But Uma felt his tears on her loose hair.

After a while he called again. Uma. But still no answer. Suddenly a shiver went through Uma's whole frame. Whose touch was this on her hair? An electric wave seemed to sweep over her.

Biswanath did not remove his hand; he kept it where it was and said, Uma, this torture cannot go on. It is beyond me to sit still and witness it. Come with me. I am not rich but as my wife you may find something greater than riches.

For one instant Uma's senses seemed to desert her; next moment she sprang up and with a panic-stricken glance at Biswanath she vanished like a streak of lightning. She reached her room and fell down in a swoon.

She recovered after a while. A withering sense of shame and guilt seemed to choke her. Shame on her, the wayward and false woman, to what had she brought herself? Was this then the result of all the austerities which her father had made her practise ever since her widowhood? So weak was she so palpably weak that a man could propose marriage to her. To her the daughter of a Brahmin and the widow of a Brahmin to her, to whom even the thought of marriage should have been an abomination. Why had not she died before she heard such words? And what was he who can insult her so shamefully?

Uma called up all her anger and detestation to her aid and tried to harden her heart against that transgressor. But alas for the insulted conventional ideal of a woman! Whom was she trying to judge and punish? She knew well that she had no power to punish him even in her heart.

however much he might sin. How could she turn her heart away from the only person whose eyes had shed tears for her? She saw that she was weak and this made her all the more bitter against herself. She had not tried hard enough to conceal her sorrows and her negligence had given rise to this shocking evil. She alone was to blame and may all punishment fall on her.

Suddenly she saw Biswanath standing by her open window with a world of pain and love in his eyes. Uma sat up and panted out: Go away go away don't drag me towards sin any more.

Biswanath turned away with a white and quivering face. Another person who had been watching them closely, himself unseen, took himself off then as his task was done.

The eldest sister of Suresh had just left her bed and was about to sit down to her morning devotionals when her darling brother appeared before her with a broad grin. What is the matter? asked the lady.

Matter enough and to spare. I used to think that I alone was a scoundrel but I see now that there are many in the same boat.

The lady forgot everything about her morning prayers and asked eagerly: But what has happened?

You may well ask that. Now that snailly schoolmaster of yours, Suresh, settled himself down comfortably for half an hour's refreshing talk.

(3)

It was a dark and still evening. The sky was covered with dense clouds and threatening an outburst every instant. The gloom was reflected on the face of every person in the house. Everyone was engaged in his or her own work but none talked. But for all the silence a strong undercurrent of perturbation was plainly discernable. The two children were seated in the yard making mud hovels with great care.

Uma's stepmother was in whispered consultation with her sister. After a while the elder one said: Then this is settled?

The other answered: Of course; what

alternative is there? We must consider everything. She went out and dragged away her children forcibly from their play.

The storm suddenly burst with all its accumulated fury. All the windows and doors of the house were closed instantly, only Uma left her door open and gazed awestruck at the mad dance of the elements.

The storm howled and raged outside. It was as if some demented demon was indulging in a revel. She came and stood under the black and lowering sky. It was more friendly than the faces of her relations.

A maid servant came and said, "The mistress is calling you."

Uma went in and found the two sisters sitting with solemn faces. As soon as she entered her step-mother cried out, "Pack all your things, you are to start by to-morrow's train."

Uma stood rooted to the spot. After a while she asked, "Why are you sending me away, mother, what have I done?"

"Now don't try to put on the airs of an innocent my girl! It is too late for that, put in the widowed sister, 'let me tell you that you have been found out. I am going to Prayag to have a bath at the sacred confluence of the Ganges and the Jumna. After that I shall start for Benares. You are to come with me and expiate your sins. What more can a Hindu widow desire? Don't glare at me in that fashion please. I won't put up with any impertinence. I am doing this at your father's request, not that I have any special liking for the company of such a virtuous girl as you.'"

Uma came back to her room, the rain was streaming in through the open window but she did not notice that. So she was to go away, to go away from everything she had ever loved. But she was a widow and had no right to grieve over parting from anything or any body. It was a sin, but she could not help it, which but increased her sorrow.

Suddenly a clamour broke out somewhere in the house. Shambhucharan rushed into the inner apartments. Uma heard her stepmother's voice asking "What is the matter?"

"A bad business, a very bad business, I don't know what I shall say to his uncle," said her father, "have any of you seen Bishwanath?"

"O dear no," answered his wife, "why, has anything happened to him? He was to have started for his home to-day, perhaps he had done so."

"Go home indeed, how can he go home in this weather?" almost shouted Shambhucharan, "he must have taken a boat to do that. If so, it is all up with him. I have just heard that a boat has foundered with all aboard."

Uma had no tears now, she, who used to weep at a slight rebuke from her step-mother. She sat still like a graven image. The night came down, but the storm did not abate. It was nearing midnight, when Bishnu rushed into the room and sobbed out in a choking voice "sister, Bishwanath dada is drowned. I heard it from Bhola. I went to the river side to enquire, everybody says so. He had come up after the boat foundered, but went down again as he was trying to save a little girl." Bishnu rolled about on the wet floor in a paroxysm of wild grief, but his sister did not move.

Suresh and his elder sister were to start on their journey at the break of day. It was still dark, when they went to seek Uma, but found Bishnu sleeping on the damp floor, Uma was not there. After anxiously looking all over the house, Shambhu Charan's wife went and roused him from his heavy slumber.

Everybody woke up now and joined in the search. At last a maid servant gave the information that she had heard the back door being opened a short while ago, but had taken no notice of it thinking it to be the cat.

Shambhucharan took up a hurricane lantern and said, "I am going to find her, but don't any of you come with me." As he went out, Bishnu slipped out behind him in the sheltering darkness.

Shambhucharan searched all the thickets and bushes near his house, then started for the river ghāt. Something white was visible on the steps. Shambhucharan came down, it was Uma. The dark roaring river was rushing below her feet like a

THE TRIAL OF THE HORSE

By RABINDRANATH TAGORI

BRAHMĀ the creator was very near the end of his task of creation when a new idea struck him.

He sent for the Store keeper and said "O keeper of the stores bring to my factory a quantity of each of the five elements. For I am ready to create another creature." "Lord of the universe," the store keeper replied, "when in the first flush of creative extravagance you began to turn out such exaggerations as elephants and whales and pythons and tigers, you took no count of the stock. Now, all the elements that have density and force are nearly used up. The supply of earth and water and fire has become inconveniently scanty, while of air and ether there is as much as is good for us and a good deal more."

The four-headed deity looked perplexed and pulled out his four pairs of moustaches. At last he said, "The limitedness of material gives all the more scope to originality. Send me whatever you have left."

This time Brahmā was excessively sparing with the earth, water and fire. The new creature was not given either horns or claws and his teeth were only meant for chewing, not for biting. The prudent care with which fire was used in his formation made him necessary in war without making him warlike.

This animal was the Horse.

The reckless expenditure of air and ether, which went into his composition, was amazing. And in consequence he perpetually struggled to outreach the wind, to outrun space itself. The other animals run only when they have a reason, but the horse would run for nothing whatever as if to run out of his own skin. He had no desire to chase or to kill but only to fly on and on till he dwindled into a dot, melted into a swoon, blurred into a shadow, and vanished into a vacancy.

The Creator was glad. He had given for

his other creatures' habitations,—to some the forests, to others the caves. But in his enjoyment of the disinterested spirit of speed in the Horse, he gave him an open meadow under the very eye of heaven.

At the side of this meadow lived Man.

Man has his delight in pillaging and piling things up. And he is never happy till these grow into a burden. So, when he saw this new creature pursuing the wind and kicking at the sky, he said to himself "If only I can bind and secure this Horse, I can use his broad back for carrying my loads."

So one day he caught the Horse.

Then man put a saddle on the Horse's back and a spiky bit in his mouth. He regularly had hard rubbing and scrubbing to keep him fit, and there were the whip and spurs to remind him that it was wrong to live his own will.

Man also put high walls round the Horse, lest if left at large in the open the creature might escape him. So it came to pass, that while the Tiger who had his forest remained in the forest, the Lion who had his cave remained in the cave, the Horse who once had his open meadow came to spend his days in a stable. Air and ether had roused in the horse longings for deliverance, but they swiftly delivered him into bondage.

When he felt that bondage did not suit him, the Horse kicked at the stable walls.

But this hurt his hoofs much more than it hurt the wall. Still some of the plaster came off and the wall lost its beauty.

Man felt aggrieved.

"What ingratitude!" he cried. "Do I not give him food and drink? Do I not keep highly paid men servants to watch over him day and night? Indeed he is hard to please."

In their desperate attempts to please the Horse, the men servants fell upon him

and so vigorously applied all their winning methods that he lost his power to kick and a great deal more besides.

Then Man called his friends and neighbours together, and said to them exultingly,—"Friends did you ever see so devoted a steed as mine?"

"Never!" they replied. "He seems as still as ditch water and as mild as the religion you profess."

The Horse, as is well known, had no horns, no claws, nor adequate teeth at his birth. And, when on the top of this all kicking at the walls and even into emptiness had been stopped, the only way to give vent to his feelings was to neigh.

But that disturbed Man's sleep.

Moreover, this neighing was not likely to impress the neighbours as a proof of devotion and thankfulness. So Man invented devices to shut the Horse's mouth.

But the voice cannot be altogether suppressed so long as the mistake is made of leaving any breath in the body. Therefore a spasmodic sound of moaning came from his throat now and then.

One day this noise reached Brahmā's ears.

The Creator woke up from his meditation. It gave him a start when he glanced at the meadow and saw no sign of the Horse.

"This is all your doing," cried Brahmā in anger to Yama, the God of death. "You have taken away the Horse!"

"Lord of all creatures!" Death replied. "All your worst suspicions you keep only for me. But most of the calamities in your beautiful world will be explained if you turn your eyes in the direction of Man."

Brahmā looked below. He saw a small enclosure, walled in, from which the

dolorous moaning of his Horse came fitfully.

Brahmā frowned in anger.

"Unless you set free my Horse," said he, "I shall take care that he grows teeth and claws like the Tiger."

"That would be ungodly," cried Man, to encourage ferocity. "All the same, if I may speak plain truth about a creature of our own make this Horse is not fit to be set free. It was for his eternal good that I built him this stable—this marvel of architecture."

Brahmā remained obdurate.

"How to your wisdom," said Man "but if after seven days you still think that your meadow is better for him than my stable I will humbly own defeat."

After this Man set to work.

He made the Horse go free, but hobbled his front legs. The result was so vastly diverting that it was enough to make even a frog burst his sides with laughter.

Brahmā, from the height of his heaven, could see the comic gait of his Horse, but not the tragic rope which hobbled him. He was mortified to find his own creature openly exposing its divine maker to ridicule.

"It was an absurd blunder of mine," he cried, "closely touching the sublime."

"Grandsire," said Man with a pathetic show of sympathy, "what can I do for this unfortunate creature? If there is a meadow in your heaven I am willing to take trouble to transport him thither."

"Take him back to your stable!" cried Brahmā in dismay.

"Merciful God!" cried Man, "what a great burden it will be for mankind!"

"It is the burden of humanity," muttered Brahmā.

RESURRECTION OF MOTHERHOOD AND FATHERHOOD

FROM time immemorial motherhood has been regarded in this country as the highest function of female life. So much so that God has been represented

as having taken birth as a human babe to taste a mother's love.

"Nandah kumakarod brahman
Sreya ebum mahodayam

Yasodā mahābhāgā

Papanyasā stannam harāḥ".

Sumat Bhāgavat, Skandha 10.

Chapter 8, verse 36.

King Pratikṣat wondering asked Sakula "O Brahman, what good work Nanda and lucky Yasodā did so that God sucked her breast?"

"Nemam Birinchi na Bhāba

Na Srāgāyangaḥ mṛṣāyā

Prasādaḥ bhūṭe gopi

Yatat prāpa bhūṅkti dāt"

Ibid, Chapter 9, verse 15

The favour which Yasodā received from the Savior was never obtained by Brahmin, Śiva or even Lakṣmi

Sukadeva said

"Drono hasanām prahara

Dharmāḥ bhāgyayā sāha

Karishyamāna adeshān

Brahmunastanubācha ha

Jātanorṇa Mahādebe

Bhūṭi Bhavya are Haran

Bhaktiḥyāt paramā loka

Yayāṅa durgatim tarat"

Ibid, chapter 8, verse 38.

The chief of the Bhasu Drona in order to obey Brahmin in company with his wife Dharmā said: "Grant us that favour by which we, after being born as human beings may attain that love for God by which man gets salvation"

Brahmin said "very well", and that Drona and Dharmā became Nanda and Yasodā in Brindāban. Such is the dignity of motherhood or *bhāṣalya* which next to *mādhurya* or wisdom, is the highest form of devotion extolled by poets and saints alike. Those who have no child of their own, try to realise motherhood or fatherhood by showering their love on an artificial baby. Gopāl. They feed, dress and play with it as if it were their living child. This reminds me of the training the Americans are giving to the boarding girls to prepare themselves for future motherhood. At first they provided each girl with a doll with instruction to feed, dress and rear them as living babes. This method failed as every method without reality or religious enthusiasm behind it must fail. Now they are trying to teach the

girls motherhood by putting them in charge of some baby brought from hospitals or some such institutions. In this way they are making an attempt at the revival of ideal motherhood or resurrection of motherhood, if I may say so.

At a meeting of the American Association for the Study and Prevention of Infant Mortality, Mrs. William Lowell Putnam in her Presidential address observed:

"Into few businesses in life are people expected to enter with such a complete lack of training as that of motherhood—perhaps the most complicated occupation that exists. Men have evolved colleges and elaborated them into universities to give themselves the training which they need for their various forms of work, and women in entering the learned professions have very properly taken this education to fit themselves for their practice. Nurses are given a very careful and prolonged training. But when it comes to motherhood, what training have we—we on whom the whole future depends of those lives which come into being through us? Nothing at all. We do not even give our girls training for the common calling of house-maker, which happily falls to the lot of most women—for really a woman has to make a home wherever she is, and I have an idea that only a woman can make it. I am not advocating doing away with the higher education of woman—far from it—I believe in all the education we get. I want not less but more of it, but if we must omit some things to make room for home-making I would cut out some of the things that are more remote from the children's daily life."

As a result of this unpreparedness for motherhood many preventable diseases play havoc among mothers and their babies. Realisation of the difficulties of rearing children has led many a modern woman in the west to avoid motherhood by artificial means, and their example, I am afraid, is being imitated in the East as well. They play into the hands of those who carry on the insidious propaganda of "birth control". This propaganda consists, according to Mrs. Putnam, of saying to people: "Do what you like and as much of it as you like and I'll show you how to get away with it." It is undermining the morals of men and women. It is more than doubtful whether the poor women with large families whom the advocates of "birth control" pretend to protect are benefited by this propaganda,

By 1 Committees in every District to co-operate with the Central Committee and suggest means for the prevention of infantile mortality. Will not the cry for help raised every year by sixteen lacs of babes born and five lacs and a half of babes un-

born raise the dead irresponsible motherhood and fatherhood from their grave of lethargy and set them to work for the preservation of these national assets?

SUNDARIMOHAN DAS, M.B.

THE RIGHT CURE FOR AGRICULTURAL POVERTY

A PRACTICAL Scheme of Agricultural Organisation and Rural Reconstruction in Bengal is the title of a pamphlet published by the Bengal Cooperative Organisation, 6 Dacre's Lane Calcutta. It contains a lecture delivered by Mr G S Dutt, I.C.S. Magistrate and Collector of Birbhum at a meeting of the Calcutta University Institute held on the 28th March last under the presidency of the Hon. Mr. Cumming, Member of the Executive Council. The pamphlet deserves to be widely circulated and we desire to bring it prominently to the notice of the public. While the Press is kept constantly occupied with the sad and depressing events of the Indian political world and has scarcely any time to notice the slow march of progress in the everyday life of the people thanks to the guiding hand of an Indian Collector inspired by true patriotic enthusiasm, things seem to be moving in a quiet corner of the western marches of Bengal in a direction full of the richest potentialities for bringing prosperity back among the half-starved masses of our rural agriculturists.

Mr Dutt makes certain observations on the working of the Co-operative Credit Societies in the success of which we know Government takes a keen interest which are far from reassuring and considering his high official position and the still higher auspices under which the lecture was delivered they are indeed remarkable. As the result of the working of the Credit Societies over a number of years it is found that instead of a reduction in the indebtedness of the agriculturists there has been an actual increase. He quotes the *Pioneer* in support of this somewhat unpopular but none the less true estimate of the situation and is emphatically of opinion that the true remedy lies not in this direction but in increasing the productive capacity of the cultivator by the organisation of a network of Branch Agricultural Associations affiliated to the District Agricultural Association under the guidance of the special expert officers of the Government Agricultural and Veterinary Departments. These Associations will grapple with such questions as the distribution of the selected seeds in

production of suitable implements utilisation of farm yard manure measures for dealing with insect pests and diseases the eradication or utilisation of the water hyacinth cattle-food cattle-diseases cattle-breeding crop-rotations sericulture fisheries drainage and cultivation of marsh lands and the introduction of suitable crops for dry uplands etc.—The smaller the area to be served by each Branch Association the better and the aim should be ultimately to have one Branch Association for every large village. The more compact these Associations the greater is the amount of corporate and educative work that may be done by them. Mr Dutt then proceeds to describe the phenomenal success attained by agricultural organisation on this system in several European countries such as Denmark, Serbia, Holland, Belgium and Italy and also in America and Japan where the movement was started so late as in 1900 but already every village in the Land of the Rising Sun has its Branch Agricultural Association and the enormous cumulative effect of their various activities on the national life can be readily understood. Their system of consolidating small holdings by mutual co-operation and exchange in order to save time space and labour in cultivation is specially instructive to us. In all these countries the condition of the agriculturists was very miserable before the movement was started but now everywhere they are in a prosperous and flourishing condition. Besides increasing the productivity of the land such an organisation provides the agriculturists with a valuable training in combined work and by interesting farmers in their economic development gradually interests them in their social and political welfare and by generating a community consciousness in the villages leads to a natural process of rural reconstruction in the country.

The Birbhum District Agricultural Association was started about a year ago. At first one Branch Association was formed for the area of each Thana or Police station. This was found too large and Associations are now being formed on a much smaller territorial basis there being a steady increase in the demand. During the four

months ending in March last the number of Branch Associations increased from 16 to 30 and there will soon be a further increase. Each Branch Association has at present 50 to 100 members with a President and a Secretary. The annual subscription payable by each member is one rupee only. The members of some of the Branch Associations range from graduates and pleaders to the illiterate cultivator. The opportunity of common discussion and mutual observation thus afforded brings the most ignorant and illiterate member up to the level of those who by virtue of education or enterprise have shown themselves most receptive of new ideas. An ably-conducted quarterly agricultural journal the *Bhumi Lakshmi* is already finding subscribers outside the district.

The remarkable hold which the movement has taken on the agricultural population of the district will appear from the following extract—

I may mention here that as a result of this activity ground nut a crop which a few years ago was practically unknown in this province but which is a very valuable crop for the high sandy soils of the western districts of Bengal now covers 1000 highas in Birbhūm and a further expansion is expected shortly. Progress has also been made in the cultivation of cotton and in the process of home-extraction of ground nut oil by a simple machine. In 1918 the Branch Associations through the Agricultural Department indented new manures seeds of superior varieties of paddy and wheat and of ground nut and other crops as well as improved varieties of

sugar-cane cuttings &c worth about Rs 8000. In the present year the indents to be made through the Department are expected to be about Rs 14000 in value. Besides this a large amount of ground nut seeds and sugarcane cuttings of super or varieties will be available from members own plots for seed purposes. For a small district of only 1700 square miles these are no mean figures for the first year's work.

We have space only for one more quotation—

An organism instinct with the vital forces of nation building and national reconstruction which born in Europe has nourished and raised nation after nation from the depths of despair to the height of prosperity within the short space of thirty years—the seedling wherewith transplanted in Japan only 15 years ago has furnished the Japanese with the material wherewith to build up the inner tissues of their great national life—that very organism gentlemen has as if bidden by Nature to give Bengal her turn now takes its birth and fructified in a quiet and neglected corner of Bengal and it now invites you to sow its seeds broadcast in your land. Sons of Bengal will you or will you not accept this invitation? Sentiments of patriotism and philanthropy alone will not avail. What is needed is ceaseless and untiring effort for several years to come. The task is no easy one. It will take the best men in Bengal to fulfil this mission but I trust the best men in Bengal are there—ready to shoulder the work—and that it will be done.

REVIEWS AND NOTICES OF BOOKS

1. ENGLISH

THE TWO RINGS and RADHAKANT by Bankim Chandra Chatterjee translated from Bengali by Dakshina Charan Roy Students Library Calcutta and Decca, published by E. V. Dutt, 67 College Street Calcutta. A copy printed and handsomely bound. Price Re 1.

This is really a fascinating rendering into English of two of the most fascinating novelettes in Bengali acknowledged the most developed of the Indian vernaculars of Bankim Chandra Chatterjee who was in the course of a controversy in the early eighties of the last century characterised by the late Principal Huxley of the General Assembly's Institution (now the Scottish Churches College) Calcutta himself a staunch Scotchman as the Walter Scott of Bengal. The translators into English of the Bengali books of our notable Bengali authors are entitled to our thanks and grateful appreciation for they do

thereby indeed an immense service to the country and its people by bringing forward its literature before the world at large. For literature according to the celebrated Dr William Ellery Channing of America constitutes the expression of the superior mind of the nation in writing and it is in the words of the Sage of Chelsea the Thought of thinking Souls. And if in the West to-day the opinion as regards Indians whom they hitherto on most occasions looked down upon as a semi-civilised people at their best is somewhat changed and modified for the better is it not largely if not solely, due to the translation into English of the

Expressions of the Superior mind of our nation and the Thought of our 'Thinking Souls' such as that of Rabindranath Tagore? Mr Dakshina Charan Roy the translator of the books under notice therefore deserves not only our heart felt thanks but also every encouragement from us all who have every

reason to be proud of the great performances of our great authors and master minds whose writings have done so much in raising us in the estimation of the present day civilized world

THE LEAGUE OF NATIONS—AN HISTORICAL ARGUMENT by Dr Pollard Printed at the Clarendon Press Oxford & published by the Oxford University Press 11thmstone Circle Bombay Pp 68 paper cover Price Re 1

Since the promulgation of President Wilson's famous Fourteen Points about a year or so ago many things pro and con have been said and written here and everywhere all the world over by enthusiasts and pessimists alike about the proposed League of Nations initiated by him. All the time although we have willy nilly been impelled to swallow a great deal of these voluminous writings of diverse writers bearing upon this by no means unimportant subject from the view point of the world as well as here we feel bound to say in bare justice that the brochure under review contains a great deal that we have not found elsewhere and it is indeed highly readable on that account. Mr Pollard though not exactly a pessimist as to the welfare of the world arising from the League of Nations does not appear to us either over-enthusiastic about its outcome and results. For instance he writes in a qualifying tone. A simple League of Nations for defence would not however provide an immediate means of solving problems which peace will leave unsettled and the future will produce. It would not directly guarantee liberty for subject nationalities nor good government for any State and it would not provide for the settlement of a single international dispute. The bare prevention of war may thus seem a poor substitute for justice. Again. The simplest form of a League of Nations will require from all of us a self-restraint and sacrifice of nationalistic pride which will tax our moral qualities to the utmost it is prudent to demand

R. MUKERJEE

A MANUAL OF DISTRICT BOARD WORK. Part I Water Supply by L. C. Sen Gupta B. E. District Engineer Dighampur Thacker Spink & Co. Pages 76 and 6 plates Price Rs 3-8

This book dealing with all the circulars and author's experiences on the important question of rural water supply will prove an interesting reading to District Board Members and new District Engineers. The author has confined his discussions to wells of 4 and 6 diameter but our experience shows that a 5 diameter well is the most suitable and economical and is freely used by both the Hindus and the Muhammadans. In the standard plan for tanks (plate No 5) neither the side slopes nor the depths have been noted. Hence it is quite useless. An outward slope of 1 in 10 in spoil banks is too costly in places where the land is comparatively

dear. The population should be taken into consideration while determining the number and size of tanks or wells in a particular village. In a treatise like this intended for laymen a table showing the size of a tank or well for a population varying from 100 to 2000 and a chapter on the practical difficulties in sinking wells would have been very useful. The author's patent Air Water lift with slight modifications will render a well free from any pollution and so is strongly recommended. The author has stated nothing as regards construction of wells and tanks in rocky soils. Hence the book may be more appropriately named a Manual of District Board work in Bengal. The price appears to be high.

INDUSRI KIHAR BHATTACHARYA

MOULTIN FEATHERS by J. H. Cousins Published by Ganesh & Co. Madras

Mr Cousins has given to the world his songs during the present year with a lavishness that he has never displayed before. India whose heart he has sought and found has made him sing and the dedication of this slender volume to Mannadramath Chittipadhyaya may perhaps tell of a personal factor in Mr Cousins' new found inspiration.

In a poem with a very curious title—The Poet to his Alter Ego—there is a touch of something which takes one back for a parallel to the group of Crashaw, Donne, Vaughan and Trelhorne in the Seventeenth Century—the Welsh mystical poets who play such a strange part in English Literature—

Yet if you the fire would find
You must pay the price in kind
Since Life's Tree must hold in dower
Wood for Crucifixion's hour
Ere the skyward stair is made
For the Soul's high eschade
And the thorny cirelet blows
To the Spirit's living Prose

It is difficult to refrain from continuing the quotation but I must leave the beautiful mystical end of the poem to be read in the book itself. The sonnets on the Taj have I think, appeared already in the *Modern Review*. They do not move me in the same way (this may be a purely individual thing and in no way representative) as the poem from which I have just quoted or as the following lines have done—

His eyes with fresh creation shone
Before him new made beauty lay
Deep wonder eyed
In art's first smirking joy, he cried
I did not think I could have done
So much with such rough clay!

Master! when our crude lives have won
The stamp that doth Thy hand display
Perchance Thou too wilt cry

(Thou even Thou Artist of earth and sky)
I did not think I could have glone
So much with such rough clay!

There seems to me very little doubt that Mr J H Cousins' period of inspiration lies before him and not behind. There has come something into his verse—with the new life of the East—which here and there breaks forth with distinction. It is some truth if I am not mistaken that has not yet been fully revealed even to him self. Perhaps his new voyage of adventure to Japan where he has gone for a short time as Professor of English literature will reveal it.

C F A

I THE PHILOSOPHY OF ACTION OF B G
TILAK & GITARAHASYA by J Mangaladkar
Ind an Literature Publishers Madras 1919
Price Rs 2 Pp 305 Neatly printed and bound

Madras is to be congratulated upon its publishing houses and printing presses. Neither Calcutta nor Bombay can approach it in this respect. Lokamanya Tilak wrote his Gitaraha-sya to prove that the object of the Gita is to teach the philosophy of action. His book had a phenomenal sale in Maharashtra and it has been translated into Bengali by the worthy brother of the great poet Babu Jyotirindranath Tagore. The book under review purports to be a resume of Mr Tilak's book. Not having read the original, we cannot say how far the author has succeeded in his attempt. To rouse India from her age-long torpor and teach her that retirement from the world is not the *samum bonum* but a life of self-sacrificing activity is the goal of human endeavour is the highest benefit that can be conferred on her. Nobody will deny that Mr Tilak is one of the most outstanding figures in the ranks of orthodox Hinduism. His great learning has been acknowledged by western scholars. That he should have crossed the seas at the call of duty should sound the death knell of the anti-sea voyage movement. In this and in suffering repeated incarcerations for the sake of what he conceived to be the truth he has shown that he is an ideal Karma Yogi. The book under review is wordy, verbose and its English is peculiar. The author would have done well to deliver his message in his mother tongue.

II RIGHTS OF CITIZENS —by S Satyamurthi
B A B L Ganesh & Co Madras The Cam-
bridge Press 190 pages

The Right to Personal Freedom. Freedom of Judicial Trial. Freedom of the Press. The Right of Public Meeting. Freedom to bear Arms and to serve in the Army and Navy. Freedom to Enter the Public Services—these are the subjects discussed in the book. There is a chapter on the Rowlatt Bills and an Introduction and Appendixes. In the foreword it is truly said. The rights dealt with in this book are of far greater importance than any privileges which may be

exercised by the people's representatives in the reformed councils and in transferred departments of the administration. Whatever small instalment of self-government we may obtain immediately if these elementary citizen rights can be secured we shall have freedom of movement for national development and can work our own progress without them. The most attractive schemes of reform cannot take us near to that fulfilment of national right which is our birthright. In Appendix B we have the Declaration of Rights of the Indian National Congress and Appendix A gives extracts from a High Court and a Privy Council judgement showing the utter helplessness of the Indian Press before the whims of an irresponsible executive. It is because India does not possess certain elementary rights of citizens that the spectacle is seen in India of an Indian High Court Judge who hobbles with Governors of provinces being insulted by a common Tommy in a railway train or an Indian barrister and leader of public opinion and occupying the highest position in Indian society being sentenced to a long term of hard labour or transportation for life for what the people consider no offence at all. We recommend this highly useful and timely publication to all who desire to have a clear grasp of the disabilities from which we suffer.

III FOOTSTEPS TO FREEDOM ESSAYS —by
James H Cousins Pp 181 Neatly printed and
bound Madras Ganesh & Co 1919

These are short essays on a variety of subjects literary and otherwise. They possess the author's characteristic distinctness of style but some of the essays are too sketchy for publication in book form. The following extract will seem apposite to many readers who have followed recent events in the Punjab. On November 28 1918 when the poor [Irish] actor had served two months out of his two years imprisonment for singing two Irish songs (one song—one year) Robert Bridges in celebration of the end of the Great War sang

The good God bless this day
And we for ever and aye
Keep our love living
Till all men north heaven's dome
Sing Freedom's Harvest-home
In one thanksgiving!

To which every lover of freedom will say Amen and yet wonder whether the poet laureate to the Government that puts an actor to gaol for singing songs of his native land has felt the pressure of the true Footsteps of Freedom or whether the Freedom of which he sings is capable of the paraphrase—'I grant you perfect Freedom to do what I allow you to do. But the Footsteps of Freedom move on.'

IX IS INDIA CIVILISED? by Sir John
Woodroffe Second edition Ganesh & Co
Madras 1919 Price Rs 2 80 pp 335

THE MODERN REVIEW, FOR AUGUST, 1919

The first edition of the book was published towards the end of last year, and the demand for a second edition within six months of the publication of the first proves how greatly the book has been appreciated in India. We can only hope that this ready appreciation is not due to the fact, to which attention has been drawn by an Indian reviewer quoted in the Foreword that the book has proved in the hands of the unscrupulously and obtusely orthodox a weapon of offence and defence against the attacks of reason and commonsense. — We doubt whether a volume of recent essays by Rabindranath Tagore in which the reckless bloodthirstiness and inhuman greed of Western nationalism and the inhuman social abuses and practical materialism and worship of Power in Indian society have come in for equally strong reprobation would prove half as palatable to Indian readers as Sir John Woodroffe's book. The time has indeed come when we should not be put out by Western misjudgment and abuse or unduly elated by Western flattery. We should be strong enough to be able to judge ourselves as well as others with sobriety and truth, and thus we can do only when we have found ourselves and have definitely taken our stand on the side of progress and development on right lines. Sir John's book should furnish the necessary corrective to Western misjudgment, and should prove more useful to Western readers than to ourselves. But as it is we fear few Englishmen will care to go through the book whereas its popularity in India has proved to be exceptional. In the Foreword Sir John explains — The character however of Indian civilisation is distinctly and predominantly religious. But as to its present manifestation the distinguished Bengali scientist Sir P. C. Ray has recently written *apropos* of these writers who are ever holding up the Europeans as mere worshippers of mammon that they forget that the Hindu society *as it is* is thoroughly permeated with materialism. I was referring to the ideal not to present facts which as I have over and over pointed out, are inconsistent with it. I wish to insist on this point for I should indeed be sorry if anything that I had said was understood as countenancing any of the abuses into which through a descending scale of degeneracy Hindu society had fallen.

The bulk of the present edition exceeds the first by nearly 70 pages and the letter press and binding leave nothing to be desired. The matter has also been thoroughly revised and some of the criticisms on the first edition of the book have been attempted to be met in the body of the book and all quotations have been acknowledged.

THE KING'S WIFE—by James H. Cousins
Published by Ganesh & Co. Madras 1919

Mr James H. Cousins has given us in this new drama a further exhibition of the great

versatility of his powers as an artist in word and song. The drama is of the ideal type, in which historical dates and facts may be left behind and the soul tragedy alone is regarded. How far such liberties can be taken with success in drama is doubtful and in this new work of the poet there is to me an Englishman, something of unreality in the close association of Queen Mira with the Emperor Akbar which is hard to overcome. But the beauty of the language of the drama is unmistakable and again and again I have come across passages like this which have haunted me with their cadence —

Oh! she has brought strange quiet in the world
The exquisite sadness of things beautiful
That is more sweet than laughter. She has made
The heart's pure conquest lightly as a breath
Because her hands are eloquent with love
While power that thunders on the stubborn will
Smiles the response—that leaps to her in joy —

I cannot refrain from quoting another passage which appeared to me among the greatest in the book —

Ah! me to have lived
Through love's pure greenness when the happy rains
Made life a full glad river to have lived
Into the dry and shrivelled after time
That were indeed poor ending to our song—
Were it the end but past our little reach
I hear invisible compassionate lips
Laugh softly and in comprehending eyes
Catch a far meaning to the shadow dance
Of children who have hurt themselves in play
And shall have sleep and waken and forget

This pure form of blank verse (that hardest of all metres) is sustained throughout the whole play and the words carry music with them as they flow on. I have wondered if the drama could not have been stronger for some roughnesses by way of contrast—some prose for instance when *characters are talking together*—some humour broad and strong to take away the strain of the sustained idealism. But the dramatist himself knew best and his play has taken an almost lyrical note throughout.

The book should be read by all who can think for themselves

R C

HINDI

VANITA VILASA by Mahatira Prasad Dwivedi Published by the Commercial Press of Cawnpore Pages 87 Price 5 annas

This is a thought provoking book. Even were the reader would be disposed to disagree with the author he would on further reflection find some kernel of truth in the views of the great Satyagrahi. We are ourselves unable to endorse certain things that he says e.g. on education but we must say that we have derived much profit from the book by reading it from cover to cover.

The book is in the form of a dialogue between Reader and Editor. Editor being the Author himself. It is natural in the circumstances that Reader is not so acute a controversialist as Editor.

In reply to Reader's question "When and how did the real awakening take place?" Editor says in part "what you call the real awakening took place after the Partition of Bengal. For this we have to be thankful to Lord Curzon. At the time of the Partition the people of Bengal reasoned with Lord Curzon but in the pride of power he disregarded all their prayers—he took it for granted that Indians could only prattle that they could never take any effective steps. He used insulting language and, in the teeth of all opposition, partitioned Bengal. That day may be considered to be the day of the partition of the British Empire. The shock that the British power received through the Partition has never been equalled by any other act."

Mr Gandhi does not see real peace in the British Empire. He holds that the present peace is only nominal for by it we have become enervated and cowardly. He thinks that alone to be real peace which is brought about and maintained by the people of a country themselves.

Mr Gandhi holds that we were one nation before they [the English] came to India. One thought inspired us. Our mode of life was the same. It was because we were one nation that they were able to establish one kingdom. Subsequently they divided us.

Regarding the need of a third neutral party to decide our quarrels he observes "The fact is that we have become enslaved and therefore quarrel and like to have our quarrels decided by a third party."

Ancient cow killing he very pertinently asks "Who protects the cow from destruction by Hindus when they cruelly ill treat her? Who ever reasons with the Hindus when they mercilessly belabour the progeny of the cow with their sticks?" But this has not prevented us from remaining one nation.

Lawyers would do well to see themselves as Mr Gandhi himself a lawyer at law sees them.

This little book is the second of the series which the Commercial Press of Cawnpore have published with the commendable intention of making the inaccessible writings of this prince of Hindi writers whose name is so closely connected with the premier Hindi monthly *The Saraswati* easily available to the public. The present volume is a collection of ten essays written at different periods of time from January 1903 to April 1913 in the form of short sketches of the lives of ten famous women of whom seven are Indian and three British. The language is simple and the book can be safely recommended for both boys and girls.

MANUSHYA KE KARTAVYA by Krishna Narayana Lagate B.A. LL.B. Published by Narayana Prasad Arora B.1 Patkapur Cawnpore (To be had of the publisher and also of the author at Hewett Road Allahabad) Pp 128 Price 6 annas

This is a Hindi translation of Mazzini's *Duties of Man*. It is only the first part of the book once published in 1909 and the second part is promised soon. The original is well known in this country. The translation is good and the only pity is that the publishers have not brought out the complete book at one time.

HINDI LINGA VICHARA by Jagannath Prasad Chaturvedi (To be had of Chaturvedi Bhola Nath Sharma 5 Muktarim Road Calcutta and The Hindi Books Agency 126 Harrison Road Calcutta) Pp 18 Price 3 annas

This paper was read at the ninth session of the Hindi Sahitya Sammelan at Bombay (1918). It deals with the genders of Hindi words and contains many points which deserve the attention of Hindi writers. As the author has pointed out much of the confusion on which prevails at present in Hindi in the matter of treating certain words as masculine or feminine would disappear if proper attention were paid to the rules of grammar and the authority of old writers were duly respected. But when he asks us to use such words as *वर्तमान* *व्यवहार* and *व्यय* as masculine he is counting too much upon the credulity of his readers.

THE HISTORIAN SPEAKETH*

“INDIA has done much for me, and now before my working days come to an end I should like to do something for India—these are the words with which Mr Vincent Smith ushers this little book into the world. One should have

supposed that the scholar who has dwelt so much among the past glories of this ancient land would like Max Müller and others have discharged his debt to India, which he acknowledges with such apparent sincerity, in the only honourable sense in which the expression is usually understood. But Max Müller did not get the salt of India and was not a member of the Heaven-born service so in the name of hard facts and a candid statement of realities he did not treat us in the words

* In an *Constitutional Reform view* in the light of history by Vincent A. Smith F.R.S. (Retired) author of *The Early History of India* and *The Oxford History of India* &c Oxford University Press 1916 Price 3s 6d Pp 114

The subject matter of this little poem and the occasion of its composition are so sorrowful that one does not feel oneself at liberty to say all he has to say about it. The death of the writer's wife, in memory of whose last days spent by the husband and their children together in a bungalow at Visnagar has prompted him to pour out his feelings in verse and description of the innocent babble of the young ones is one of the best portions of the book. To express the sense of the word 'topheavy' in Gujarati we say that the turban is larger than the head. Something like this has happened in this case. The bare text, printed on about 14 to 15 pages is hedged round with a preface in વચ્ચાડન and a ચોટનિકા where two other writers have in the spirit in which they have carried the high sounding headings of their performances expatiated on the different aspects of a composition which is cast in no unusual or extraordinary mould. They try to put a factitious importance and serve more to over-lead some of the feeling and simple verses, than lift them up to the gaze of the reader. The best portions should be read as they are.

PRASANG RANG (પ્રસાંગ) by Dr. Natwarlal Fakirbhai Sheth M.B. B.S. Touring Medical Officer Dohad. Printed at the Jaina Printing Press, Surat. Paper cover. Pp. 41 (1919). Unpriced.

There are about 28 small sections in this book consisting of Gazals (verses) addressed by a pining lover to his Beloved. We find nothing in them which would take them out of the ordinary rut of such emotional outpourings. Perhaps growing age would mellow the feelings of the youthful composer.

(1) CORBETT NO UPADESH (કોર્બેટ નો ઉપદેશ) by Chhaganlal Harilal Pandya B.A., Educational Officer, Junagadh. Printed at the Arya Sudharak Press, Baroda. Cloth bound. Pp. 180. Price Re 0-15 0 (1919).

(2) KAROLIA કરોલોયા by Bhanusukhran N. Mehta B.A. printed at the Ar. a Sudha at Press, Baroda. Cloth bound. Pp. 156+4. Price Re 0-15 0 (1919).

(3) GIRDHAR by Jagrandas D. Modi, Printed at the Jagrati Press, Baroda. Cloth bound. Pp. 126. Price Re 0 15 0 (1919).

These three books are further additions to the Sayaji Salutya Mals whose managers do not seem to be taking any rest at all. Sure addition after addition is being promptly made to its existing numbers. Mr. Bhanusukhran seems to be a facile princeps at the work because not a batch of books sent to us passes without his having a time in it. This time he has selected 'spiders' (કારોલોયા કરોલોયા). We find to our

astonishment why this choice has been made on this

little creature which is always inviting unsuspecting flies to walk into its parlor, in preference to frogs or beetles, or bats, for the matter of that as they are all equally useful (?) members of creation. Of course, this is not his own composition. It is a translation of Warburton's Spiders which he has embellished with his own notes and observations. We only hope the reading public would betray as much enthusiasm in reading it as the translator betrays in translating it. Frankly is the magnificent amount of two lines meant to be frittered away on such treatises and or is it meant for a better purpose? Corbett's advice to young men (1) is translated by Mr. Pandya and it would be presumptuous on our part to find fault with the execution thereof. But what a role for the gifted translator of the inimitable Kadambari to play? It is said that if Bana had written his unique work in Gujarati he would have done it as well as Mr. Pandya's translation. For that gifted scholar now descends to translate Corbett or write short stories fit for juveniles is something like misapplication of energy and intelligence. Presidents are not wanting. Sir Connar Doyle has also taken to Magazine story writing for children. But surely looking to the dearth we have in our literature of sound writers and scholars Mr. Pandya should have been selected for some more sound and intelligent work than the translating Corbett. The third book is the biography of an old Gujarati poet Girdhar. There was room for just such a book and though not an ideal work still it is sure to be useful. The writer Mr. Modi seems to have a quaint idea. He thinks he has got poetic faculty and that he traces to a poet who flourished 200 to 300 years ago simply because he belonged to his caste and his native place. The book betrays signs of labor and assiduity and its writer has some other great interest in its subject matter.

MARATHI

1. NITISHASTRA PRAVESH OR INTRODUCTION TO THE SCIENCE OF ETHICS by Mr. I. V. Joshi, M.A. Professor Indian Women's University at Hignu Poonu. Published by the author. Pages 154-527. Price Rupees Four.

The present is an original work expounding the several theories on the subject closely examining them by the scientific method of criticism and establishing certain principles which guide or ought to guide the conduct of an individual as an individual and also as a member of society. The book is divided into 16 chapters which comprise such valuable and much-discussed subjects as the relation subsisting between religion and morality, Free Will, Conscience, Intuition, Influence of Heredity, theory of happiness, Immortality of the soul etc. The author has dealt with these subjects in a fairly impartial and

manner and has, by means of familiar illustrations, succeeded in carrying home to his readers, several truths, which when thoroughly imbibed ought to make him pause and reflect before judging. The special merit of the book is that it is not a mere compendium of Western thought on the subject. The author has taken pains to compare with it, Indian thought embodied in Sanskrit works, and this feature of the work greatly enhances its value. His exposition of the subject of Morals is quite up-to-date and leaves nothing to be desired except that in some places the work of condensation is carried to excess, thus leaving his reader rather bewildered. But I can very well understand the difficulty of the author. To attempt to expound and discuss innumerable theories of thinkers in a volume like this is undoubtedly a difficult task and I have to congratulate the author on the measure of success he has achieved.

It is a pity that such an important and bulky volume on a subject, which associates with itself hundreds of names of writers and a fairly large number of divisions should go without an exhaustive index. When well Marathi writers realise its value and usefulness and make it a necessary adjunct of their works.

Poona

V. G. APTE

THE PRESENT ABNORMAL DEATH RATE IN POONA
by Shankar Ksmachandras Bhagawat L. C. E. Published by S. B. Sahasrabudhi, Badhwar Peth, Poona City.
Pp. 20. Price Rs. 12, 9/10

This is an address delivered by Mr. Bhagawat at Poona. It is now published in book form with maps, diagrams and charts. The author has taken for the basis of his observation a period of 18 years from 1901 to 1919. During the first half of this period, the death rate in Poona was lower and in the second half higher than that of other cities in the Bombay Presidency. During the first half of this period only in two years the number of annual deaths in Poona was higher than 4000 and during the second half only in two years was it lower than 4000. Then the author considers the sanitary conditions obtaining in Poona before and after 1910. He admits that poverty and consequent low vitality is one of the principal causes of this abnormal death rate but as it is common to the whole country he does not consider it at great length. So far as Poona is concerned there is no marked change in the conditions necessary for the maintenance of the city's health except in drainage. It is the defects in the construction of drainage that have brought about this abnormal increase in the death rate. It must be noted that the work of the construction of new subsoil drainage was begun in 1910 and completed at the end of 1915. Many extracts are given from the opinions of experts to the effect that ordinary gutters are better than ill constructed subsoil drainage. The reader's attention is drawn to the fact that from

1865 to 1910 (45 years) 8 or 10 different schemes were brought forward for approval and the Municipality spent fifty thousand rupees on them. The total amount spent on the construction of new drainage is rupees eighteen lacs and fifty thousand with the result that the death rate before the construction of the new drainage was 34 per 1000 and after the construction it came to 40. The author suggests the ways and means of remedying the defects in the new drainage. His estimates for this improvement vary from Rs. 70,000 to five lacs according to its nature, permanency and extent.

The book is brimful of useful information. The charts, maps etc., in the absence of fuller explanation will not be understood by ordinary readers. A more detailed treatment of the subject is highly desirable. Many misprints have remained undetected. The price is a little too high.

G. K. WALTERS

SANSKRIT ENGLISH

THE SACRED BOOKS OF THE HINDUS (A.D. 109 to 111 July to September 1918) Vol. I of Part I. Studies in the First Six Upanishads and the Isa and Kena Upanishads with the commentary of Sankara, by the late Rai Bahadur Sri Chandra Vidyanatha and published by Baba Sudhindranath Yashu at the Panini office, Bahadurganj, Allahabad. Pp. 152. Price Rs. 4. Annual subscription Rs. 12 as 12 (Foreign £1 4s).

Of all the classical Upanishads, the *Isa* is the most difficult to understand. The *Anandasrama* edition contains seven commentaries and the views of some of them are diametrically opposite. The interpretation of Sankara and his followers is most unsatisfactory. The book under review gives the translation of the text according to Sankara and Ananta with their commentaries in English. The author has also given the summary of the doctrines of the Upanishad as interpreted by the Advaita School of Sankara, the Visistadvaita School of Ramanuja and the Dvaita School of Madhva.

In the notes given by the author, the meaning of all the important words has been discussed.

The book is indispensable to those who cannot read the different commentaries on this Upanishad.

It contains also the translation of the *Kena* Upanishad and of Sankara's commentary. The views of the schools of Ramanuja and Madhva have also been given.

The studies in other Upanishads (*Katha*, *Prasna*, *Mundaka*, and *Mandukya*) are brief but useful.

office Bahadurganj Allahabad Pp m+121
Price Rs 3 Annual subscription Rs 12 12as
(Foreign £1 1s)

In this part the author has given the translation of 27 Sutras of the 1st Pada the meaning of all the words of the Sutras and an independent commentary.

It contains also the interpretations of Sankara Ramanaaya Madhva Srikantha Ballarya charya and Nimbarka.

It is a valuable production.

THE HISTORIAN SPEAKETH*

"INDIA has done much for me, and now before my working days come to an end I should like to do something for India—these are the words with which Mr Vincent Smith ushers this little book into the world. One should have

supposed that the scholar who has dwelt so much among the past glories of this ancient land would like Max Müller and others have discharged his debt to India, which he acknowledges with such apparent sincerity, in the only honourable sense in which the expression is usually understood. But Max Müller did not eat the salt of India and was not a member of the Heaven-born service so in the name of hard facts and a candid statement of realities he did not treat us in the words

* In an *Constitutional Reform viewed in the light of history* by Vincent A Smith I C S (Retired) author of *The Early History of India* and *The Oxford History of India* &c Oxford University Press 1916 Price 3s 6d Pp 118

we cannot help raising a note of protest, in the interests of the same truth to which Mr Smith appeals. This truthful historian quotes Manu as if his injunctions have now the binding force of the Penal Code, and speaks of the minority of Indians as being 'under the heel of a tyrannous Brahmin oligarchy'. Europeans professing Christianity do not follow the social laws and ceremonial rules laid down in the Old Testament though it is a part of their scriptures. But these same Europeans seem unable to imagine or conceive that among vast multitudes of Hindus in extensive regions of India the caste rules laid down by Manu and other law givers are in great part not observed even now, and that even those rules which are now followed are gradually losing their hold. Anglo-Indians also pretend tacitly to believe that caste rules are as rigid in the Punjab, for instance as they are in Madras. The innocent hope of the authors of the Report—a hope which, in the case of the depressed classes shows every sign of realisation—'that those incidents of it [the caste system] which lead to the permanent degradation and ostracism of the lowest castes will tend to disappear' is according to Mr Vincent Smith, characterised by 'stupendous rashness and a perilous delusion which 'disfigures the Report for 'when caste distinctions give way Hinduism will perish. Reading the passages where the learned historian has been at pains to prove the necessity of the caste system for Hinduism to exist at all—a doctrine which at any rate in the present rigid form of that institution is denied by a large section of enlightened Hindus—it would almost seem that Mr Smith is rather nervous lest the hold of caste on the mass of the Hindus should relax in any way, and he seeks to clinch his argument by laying down two propositions viz. that 'so long as Hindus continue to be Hindus, caste cannot be destroyed or even materially modified,' and that 'its tyranny,' in the words of Mr William Archer, 'will have to be broken before India can become a nation among modern nations' but he very generously leaves us to draw the conclusion he so ardently desires from his

major and minor premises, to wit, that India will never be a nation. It is wonderful to think of the amount of research work in reactionary literature which the historian has gone through, for he displays an admirable command over the speeches and writings of men like Dr Nair, Mr Archer, Sir Harry Stephen, Lord Sydenham, *et hoc genus omne*, and of newspapers like the *London Spectator*, and so acute is his observation that he does not even forget the little affair about the disenfranchisement of the Burdwan Municipality in far off Bengal, and draws conclusions, so entirely satisfactory to his bureaucratic imagination from it.

At the very outset Mr Vincent Smith falls foul of Mr Montagu for describing the pronouncement of August 20, 1917, in grandiose style, as 'the most momentous utterance ever made in India's chequered history', and he is careful to point out that it has no pontifical character, and 'aroused no interest in the British public and remained practically unnoticed in England' that the 'Report binds nobody,' that 'Parliament and the public should not be juggled out of their rights to free unfettered discussion of both principles and details.' Mr Smith's discussion is no doubt unfettered, for he has made the most liberal use of the vocabulary of vituperation as well as free, in the sense of being totally untrammelled by justice, equity and good conscience, and like all fossilised Civilians in spite of his reputation as a historian he shows an absolute lack of reason and a grasp of the true lessons that history has to teach on reactionary Governments. To take one instance. According to Mr Vincent Smith, among passages filled with 'platitudinous exhortation or impracticable idealism' in the Report is one where its authors say that 'in deliberately disturbing the contentment of the masses they were working for their highest good, and that only by suffering will a people learn the faculty of self help.' 'It is difficult,' says Mr Smith, 'to comment with restraint on such a dangerous doctrine.' And why? Because 'The Prime Minister's ideal of a happy, a prosperous and a contented people' is the true one for

should be sedulously kept open and should not be quenched by the cold water of democratic theory. The King as the visible symbol of the unity of the Empire and a sobering influence in politics enjoys a unique position and while professing sincere allegiance to his Majesty we decidedly object to the humiliating use sought to be made by the bureaucracy of our personal sentiment in the matter with a view to keep us contented with our chains. Lord Hugh Cecil in his little book on *Conservatism* in the Home University Library advocating the participation of the King in party politics observes as follows —

if over a long series of years the sovereign takes no share in public quarrels his office may decline into something purely ceremonial the splendid centre of all national pageants but exciting only the temperate interest and half respectful pleasure which men feel for a stately show but though less obvious the dangers of the monarchy becoming discredited as an operative ornament and sinking slowly from being the centre of loyalty to be received first with good-natured toleration and finally with impatient contempt is perhaps now the more real menace

There is little chance of the King's intervention in party politics as advocated by Lord Hugh Cecil but knowing the little we do of his Majesty's views on India and its people from his public utterances we have no reason to fear that we should be losers if he did. But Mr Vincent Smith the historian forgets that in ancient India the sentiment of loyalty was not a hot-house growth and was not artificially fostered by royal portraits and biographies for the circulation of which systematic arrangements are urged by Mr Smith but it was universally recognised that loyalty was the spontaneous expression of the gratitude of a prosperous and contented people for whose sake the greatest of Indian Kings did not hesitate to banish the dearest and noblest of queens that ever lived.

Mr Smith is glad to note that all reformers including Mr Montagu and Lord Chelmsford are agreed that the minute control now exercised by the India Office should be materially relaxed and that the Government of India however

constituted should be given greater freedom of action than it now enjoys. He does not even hesitate to call this self-government or autonomy in a limited sense and hints the effrontery to add

That kind of self-government is absolutely independent of the internal form of the Government of India and could be granted if every member of the Government was an Englishman and if the powers of the Government were autocratic in the strictest sense. That would indeed be self-government with a vengeance—self-government for the bureaucracy to misgovern the people as they liked. Unfortunately there is a flaw in the ointment and Mr Smith narrowly complains. But such relaxation would not satisfy the demand for self-government which is understood to imply the Government of India by Indians so far as may be. How unreasonable and exacting these Indians are to be sure! In the same vein is Mr Smith's truculent opposition to the suggestion for the appointment of periodic parliamentary commissions as an undertaking of that kind tends to unsettle men's minds and to stimulate pernicious agitation.

Everybody being agreed that changes in the direction of self-government within certain limits must be brought into operation it is the bounden duty of all true friends of India (God save the mark!) to give what help may be in their power to the high authorities vested with the responsibility of decision. But anything like responsible Government in the English parliamentary sense is unthinkable within any period that can now be foreseen.

The necessity for extensive change in the old-fashioned method of governing India is admitted but the limits of practicable change are narrowly fixed by the barrier of hard facts—the direction of policy and administration by born Indians is subject to many limitations and is difficult of attainment—chiefly because we suppose it would tread to some extent on the toes of the Civil Service. The role of the candid friend hardly concerns the note of special pleading throughout the book and the concessions within certain limits which this impartial critic is prepared to make

of quite a mint of Indian money in pay and pensions, this is all the result that India has got to show? And is it so inconceivable that without the foreign bureaucracy at the top of every department of the administration, the Indians might perhaps by this time have developed sufficient initiative and power of organisation and acquired the necessary experience to play the game entirely off their own bats? But perhaps this is precisely the result which Mr Smith wants to avoid at all costs, and it is not difficult to read through his observations what is really at the back of his mind, as we shall presently see.

Reforms in the Civil Service are looked upon by our author entirely from the view-point of the Service, and not in the least from that of the people, though a learned Oxford historian need not be told that in a matter like this it is the latter alone that count, if officials are to be regarded as the servants, and not the masters of the public. Hitherto, and so long as the door to the Civil Service was practically shut against Indians, Mr Smith's conscience did not feel any qualms whatsoever, but now that the door is about to be partially opened to them, he is quick to invoke the aid of section 87 of the Charter Act 1833 against racial discrimination in any form in the public service to the disadvantage of Europeans or persons of European descent. The attractions of the Service are said to have lessened considerably, and first-class men believe that they can do better in other professions. In fact the difficulties of recruitment have been enhanced immensely by the war, and there is grave reason to fear that the quality of the men engaged has deteriorated. If that be so, the only reasonable solution as contended by Justice Sir Abdur Rahim in his dissentient minute in the Public Services Commission Report, is to replace third rate Englishmen by first rate Indians, and not to impose fresh burdens on the poverty-stricken masses of India for whom the Civil Service professes to be so solicitous by increasing the fat salaries and allowances already enjoyed by it.

The specialisation involved in the separation of the Judicial from the Executive

functions is admitted to be the normal practice in Europe, but it 'certainly would be disliked intensely by the great mass of the people.' This appeal to mass opinion we know, is the flimsiest of clap traps, for the masses suffer most from this unholy combination of functions. The actual reasons for opposing the reform are however soon manifest. 'The existing arrangements provide congenial careers for men of diverse tastes.' If the educated Indians succeed in forcing the change, 'the post of District Officer, which many members of the Service consider the most interesting that a man can hold, will no longer possess any charm.' Similarly, if the recommendation urged by many reformers 'that all judicial appointments should be made from the legal profession as in England' be adopted, 'the attractions of the Service will be very materially diminished, and the judicial type of man will no longer compete for an appointment' (It may be worth while to note here that Sir Robert Fulton, a former Judge of the Calcutta High Court, once wrote that the Judicial Branch is reserved for 'the slack and the incompetent' members of the Civil Service). It is thus quite clear that it is the prospects of the Civil Service and not the welfare of the people, that Mr Vincent Smith has all along in mind, in discussing the proposed reforms.

Mr Smith heartily approves of Mr Archer's plan of a revived, enlarged, and modernised Haileybury for the training of the probationers for the Indian Civil Service, because 'At the Universities India is regarded as a subject devoid of general interest, and the young men destined for the Indian services who pursue their special studies at a University never learn to feel that India should have the first place in their thoughts. The whole atmosphere of their surroundings discourages such a sentiment, and in fact prevents its birth.' Thus the truth is out at last, and all the gush about the Civilian's care for the masses of India is proved to be pure nonsense.

The purely technical branches of the public service such as Telegraph, Forests, Public Works &c. present easier problems [than the Civil Service] which can be solved by strict

attention to the principles of fair play without racial discrimination in any form of selection of the best men and of offering such material advantages as will attract really good officers whatever may be their colour.

In other words, in departments requiring expert knowledge, the best men should be selected, without racial discrimination in any form, and though the emoluments are moderate in comparison with those of the Civil Service, the material advantages offered are sufficient to attract really good officers whatever may be their colour. But in the Indian Civil Service which does not require any special knowledge of any kind to start with the problem is not so easy of solution that is to say, the above principles of fair play without racial discrimination and of selection of the best men do not apply. No greater perversion of reasoning could be imagined nor could such an argument be advanced by an Oxford historian not trained in the devious ways of the Indian Civil Service and bound by loyalty to the traditions of the Service to defend it against all encroachments on the part of qualified Indians.

But there is balm in Gilead and Mr Vincent Smith rightly says of the concrete proposals of Mr Montagu and Lord Chelmsford (as distinguished from mere pious enunciation of liberal principles in which the Report abounds) that they are certain to be largely modified. The event has shown the correctness of this forecast. Evidently Mr Smith knows his kidney better than we do, for members of the Civil Service voted solid against the introduction of any substantial concrete reforms as the Government of India despatch shows. He is also perhaps right when he says that 'the responsibility to constituents invented by the authors of the Report obviously is unreal, a mere piece of lip-service to a formula.' Mr Smith is sanguine that

he almost universally condemned and wholly unworkable Diarchy' must be dropped. In this, too, he may be right, at any rate having regard to the humiliating position assigned to the Indian Minister in the Reform Bill the introduction of the diarchical principle would be absolutely harmless from Mr Smith's point of view—it will rather help his cause by proving a failure. And Indians know very well indeed that if statesmen come to the conclusion that such government, whatever be its merits elsewhere, cannot be fitted to India and they decline accordingly to force it upon the land, their decision will be readily accepted both by the rank and file of the members of Parliament and by the constituencies who will not hesitate to follow the guidance on a difficult and unfamiliar subject offered by trusted leaders. But would Mr Smith assure his readers of such ready compliance if his sweetly worded invitation stood little chance of acceptance and instead of being cut down as they have been, the Reform proposals were likely to be further enlarged by the trusted leaders of the nation? The dulcet strain we know, would at once be replaced by bitter wailing and gnashing of teeth, and the guidance of the trusted leaders would be unceremoniously brushed aside. But even if the worst comes to the worst, Mr Vincent Smith need not feel so sorely troubled for the Bill leaves the real making power entirely in the hands of the Government of India where bureaucracy sits safely enthroned and so good a historian as Mr Vincent Smith knows quite well how the bureaucracy has, not once or twice in India's inglorious history, but often and invariably, ever since the chequered days of Lord Ripon, succeeded in making the Indians keep to their place with the aid of this powerful weapon of legislation by rules.

July 7, 1919

THE PRESS ACT AFTER THE BESANT APPEALS

By ST Nihal Singh

I have been discussing with some legal friends the effect that the judgment of the Lords of the Judicial Committee of the Privy Council delivered on May 13th in Mrs Besant's appeals will have upon the administration of the Press Act in India. They all agree that while that case did not give the opportunity of testing the constitutionality of the Act, it is bound to strengthen and to consolidate the position of the magistrates in India who may be called upon to administer the Act, and of the High Courts in India to which appeals may be preferred against orders made by the magistrates.

Mrs. Besant's solicitor, Major David Graham Pole, who is a member of the Ancient Society of Solicitors in the Supreme Court of Scotland (incorporated by Royal Charter in 1779), and who has large practice in the House of Lords and Privy Council, must have wished to raise the constitutional issue, for one of the "leaders" whom he briefed was Mr J Robertson Christie, K C, one of the best known constitutional lawyers. A considerable portion of the case handed in by him to the Privy Council dealt with that aspect of the question.

Mr William Ingram, the Junior Counsel for Mrs Besant, who, I believe, has the largest privately owned Indian law library in Scotland and who, in conjunction with Major Graham Pole, spent nearly two years in working up the case, told me shortly after the appeals had been filed that the Act had been so very loosely drawn up that its provisos practically destroyed the privileges granted. As it stood, it threw the onus entirely upon the person against whom officials chose to proceed, no matter how honest the intentions and how blameless the character of the writer. Indeed so very wide was the wording of Section 4 of the Act that the highest tribunal

in India could not afford a writer relief, even though what he wrote was free from taint of sedition, and though it might be too tame to appear in the most Tory of Tory newspapers in Britain.

The special Counsel retained in behalf of Mrs Besant to deal with the constitutional issue was not, however, given the opportunity of raising that issue. Their Lordships of the Privy Council sat under the Act, and, therefore, they could not consider whether or not it was *ultra vires*.

Had a different course been followed, it might have been possible to test the legality of the measure. A suit might have been filed in Madras by Mrs Besant against the Magistrate who ordered the seizure of her security, for the recovery of the sum seized. In that case, however, it might have been difficult to take the matter right up to the Privy Council, which, as a rule, does not entertain appeals involving amounts below Rs 10,000, while the security confiscated was only Rs 2,000.

Major Graham Pole had, however, engaged Mr W H Upjohn, K C, one of the ablest and most independent leaders at the British Bar, who had taken the trouble to become thoroughly conversant with every detail of the case, and who was able to make the utmost use of every possible opportunity that presented itself. In an argument that lasted several days, he submitted to their Lordships of the Privy Council that grave injustice had been done to Mr Besant, when, on May 28, 1916 the Magistrate in Madras had thought fit to withdraw the dispensation originally granted to her on Dec 2, 1914, absolving her from the necessity of depositing security under Section 3 of the Press Act, and required her to deposit Rs 2,000 as security which she did under protest, and later, on August 28, 1916, declared that the security deposited by her had been forfeited, and

that all copies of her paper New India containing certain articles declared by the Governor in Council to contain objectionable passages were forfeit to the crown. He further submitted that her petitions and applications made to his Majesty's High Court of Judicature at Madras had been wrongfully dismissed. He contended that the act of the Magistrate in cancelling the dispensation without giving her a hearing was judicially bad.

The last point was really one of the most important raised by Counsel—important not merely for Mrs. Beasant but for the cause of liberty of the Press in India for which Mrs. Beasant was fighting first and last and not for herself. But unfortunately their Lordships of the Privy Council held that in the last analysis the act of the Magistrate was only the withdrawal of a privilege which need never have been granted. It was not like a condemnation in which case justice requires that the person to be condemned should be first heard. It would have been however more discreet and it would have removed an occasion for comment and complaint if the magistrate had given the appellant some opportunity for making her observations before the privilege was withdrawn. It might have been a wiser discharge of his duty as an officer. Their Lordships having said this declared their inability to go any further.

Time alone can tell whether or not the Magistrates will take the very broad hint thrown out by their Lordships as to the wisdom of giving some opportunity for making observations before the withdrawal of that privilege. But even a layman can see that the expression by the highest tribunal to which Indian cases can be taken of the opinion that it is not incumbent upon a magistrate to give a hearing to such a person confirms and consolidates the powers enjoyed by the Magistrates in India under the Press Act.

In yet another way the judgment confirms and consolidates the powers enjoyed under the Press Act. Their Lordships were confronted with the puzzle offered by the Press Act as to whether or not an article containing comments upon

measures passed by the Government or an administrative or other action of Government or upon the manner of the administration of justice was made without bringing or attempting to bring Government into contempt and brought the press owner within the wide net of the law.

Mr. William Ingram who has one of the largest junior practices at the Scottish Bar in conjunction with Major Graham Pole and others has been devoted more than two years to working up Mrs. Beasant's case for the Privy Council.

On behalf of the Crown the India Office Counsel had urged that in considering whether or not an article or a passage from an article made the press owner liable under the Act it was necessary to consider (1) the want of education in India (2) the existence of numerous vernaculars (3) that the Government was foreign (4) that the rulers had no direct responsibility (or even relation) towards the governed and (5) the resulting difficulty that fault could not be found with a Government so established without making it both hated and contemptible to the immense population that it controlled. He argued that what may be innocent in Britain may be highly

(By the 10 of M. E. O. & F. J. Ltd.)

Major David Graham Pole, Mrs. Besant's solicitor, Major Pole is a member of the Association of Solicitors in the Supreme Court of Scotland and practices in the House of Lords and Privy Council.

seditions in India because the Indian mind was not developed and because the requirements of the Government of India were peculiar.

Their Lordships of the Privy Council while refraining from directly expressing any opinion in regard to these contentions definitely affirmed that they could not interfere with the conclusion arrived at by the Court in India in regard to the construction to be placed upon the natural tendency of the printed passages complained of by the Government. Their reason for doing so was that the Judges in India with a far closer knowledge of the character of the people likely to read the articles have better means of judging than their Lordships in England.

Any one can realize that this is a highly important pronouncement.

When it is remembered that the Press Act is very loosely drawn up that the judicial has not yet been separated from the executive function in India that the orders made by the Magistrates under the Press Act are now declared to be made in their executive and not in their judicial capacity and that the judgment passed by a local Government in regard to the character or intention of a certain article or set of articles carries with it a great measure of prestige the importance of the judgment delivered by their Lordships of the Privy Council will be realized. We Indians have always believed that in carrying a case from India to Britain we were able to secure an independent judgment that in the existing circumstances could not be expected in India. The meaning of the Privy Council judgment in the Besant Case unless my brain is incapable of comprehending it is that we shall have to be contented with what we can get in India.

There are in my opinion two ways of looking at this matter. One of them is to feel unhappy at the restriction of an opportunity greatly prized by us. The other is to feel that the more India is allowed to be self-contained in regard to her purely domestic affairs the better it will be for her at any rate in the long run.

The reader may of course urge that the Government of India is not responsible to Indians and that for years to come there is very little likelihood of its being made responsible to the sons of the soil. That may be true.

But is not that an argument in favour of the organization of the movement to secure full Dominionhood for India with as little delay as possible? We must insist that as subjects of the British Crown we must be given an unambiguously worded charter of liberties that the anomaly of the combined judicial and executive functions be removed and that Indians shall have a voice in the appointment and control of the judiciary in precisely the same way that the British have such voice and control. That I think must be our goal and we must press forward to it with firm faith in our destiny and the British goodwill.

of the film is intermittent at the rate of twenty images per second while through the sound recorder it is continuous. It is not feasible therefore to reproduce images and sound records side by side. Mr. Lauste hastens to assure us that this is no disadvantage and that even splices in the film do not noticeably affect the result. The writer goes on:

The galvanometer is the heart of the sound recorder hence the inventor has given considerable attention to its design. In the earlier form he used a single wire [but] in a more recent

principle which the inventor can not make public at present receives a current of constantly varying strength from a second circuit. This current is converted into sound waves which in an amplified form, are propagated through out a large theater.

Public exhibitions of the new talking pictures were given in England at various times during the past few years and even the most exacting of English critics have credited Mr. Lauste with a marvelous system of recording sounds. At the present moment the inventor is busily engaged

in repairing his equipment which have been rather badly handled in the journey to America so that exhibitions are not possible as yet.

While in its present state of development the talking picture system just described is claimed to be ready for the public, Mr. Lauste is the first to admit that many refinements remain to be made to bring the system still closer to the ideal. Indeed he has developed an ingenious system of flickerless cinematography which employs no shutter yet blends one picture into the next.

Together with the sound recorder these two contributions appear to be

form two wires are used. The resulting sound record is a double row of peaks.

A strong source of light is gathered into a sharp beam and projected through the sound bearing section of the film and upon a selenium cell. As the film is rapidly moved in front of the selenium cell the resistance of an electric current passing through it is altered in proportion to the amount of light falling on the sensitive material which as is well known has the property of changing its resistance according to the degree of illumination. By using two rows of two in peaks the inventor uses a larger area of the selenium cell resulting in much better results.

The rest of the reproducing process is simple. A sensitive relay is used in circuit with the selenium cell while a loud speaking telephone of special design is operating on a pneumatic

a big step toward the ultimate goal of motion pictures.

A Crop that makes its Own Weedkiller

The use of waste material to assist production in the very industry that cast it aside is an interesting feature of sugar growing in Hawaii. The first stage of this development was the discovery that sugar-cane will push its way through paper of sufficient thickness to choke down weeds. The second was the utilization of the fibrous waste from the crushed cane to make paper for this purpose. In the tropical countries where sugar-cane flourishes weeds spring up overnight in numbers and strength that will choke off any crop with ease. The expense of keeping them down is by no

Beneath the paper moisture is conserved and the temperature is from 3° to 5° Fahrenheit warmer than above it so that under such humid conditions the cane growth is abnormally rapid while at the same time all weed seeds germinate. The weeds spring up blanching in the dark only to smother since their soft tops provide no means for breaking through the paper. By the time the paper must be slit the weeds are no more and as the paper disintegrates the cane is so far advanced as to command the situation.

This method effects a labor saving of from 30 per cent to 70 per cent and an increase of some ten tons of cane per acre equivalent to more than a ton of raw sugar.

There is a second chapter to this story affording an unusual example of waste utilization. The paper required in rope making as the use of paper on cane rows is called had to be brought long distances while a fibrous material bagasse or the cane from which the

sugar has been pressed is produced on the spot in excess of fuel requirements. To make a suitable paper from this bagasse presented a new problem for which many good papers have been made from this raw material none has had the characteristics required for this special use.

The problem has been solved by an American chemical research company and a mill is being erected in the Hawaiian plantation which now supplies the paper exactly suited to the requirements from the bagasse. This is accomplished with a saving exceeding 50 per cent of the cost of the paper previously used.

Summed up the achievement is the utilization of a wasted material to found a new industry the product of which reduces the cost of growing sugar cane and at the same time produces an additional ton of raw sugar on each acre of the plantation in question.

NOTES

To Be and To Have

In different climes and ages men have had before them two objects or ideals — to be good and wise and to have much. History does not show that any nation in any age had before it only one of these ideals to the utter exclusion of the other. But it is equally plain that in different climes or in different ages very much greater stress has been laid on the one than on the other. It is this difference of stress which characterises the differing civilizations of the East and the West. For it cannot be denied that no country or nation can be said to be without those who value the riches of the spirit above all earthly possessions or those who value worldly greatness and possessions more than the treasures of the spirit.

Plain Living and High Thinking

Wordsworth's phrase plain living and high thinking expresses the essence of the ideal of Indian civilisation. But plain living is not equivalent to extreme poverty. A state of indigence in which no thinking

is possible except as to what a man shall eat is not generally compatible with high thinking. This is very well illustrated by the following paragraph taken from the *Indian Witness* —

There is little thinking of any kind possible to those who are half starved. Save thoughts of the physical thoughts of something to satisfy the hunger and sustain their strength. Journalist, professional men and great intellects of many walks in life confessed that while starving in German war prisons their whole thought and conversation from morning to night was of something to eat. If you would get men to think of the eternal and spiritual things you must see to it that they are relieved of the dire necessity of thinking continually of temporal things. Recently a preacher in a famine area was greeted by his audience with the statement that they wanted nothing but food.

In India there are millions of men who have not got to go to German war prisons to realise what it is to think and talk from morning to night of only something to eat. With them the process is lifelong. In order therefore that we may be able to make the ideal of plain living and high thinking a reality the material condition of the country must be greatly improved. But while

engaged in this work of economic improvement we should never allow ourselves to forget that material progress is only a means to an end. The goal to be placed before the country is that every one should have such food, clothing and housing accommodation as would enable him to lead a healthy and moral life and such means and leisure as would enable him to educate himself and his children and to taste of the pleasures of the intellect and the joys of the spirit.

India's Poverty

Many Indians and many foreigners have spoken of the poverty of India. Specially convincing must be the testimony of those who while not taking up the other cries of the politically aspiring Indian intelligentsia agree with them in believing that India is poor. We shall quote two such recent testimonies.

General Sir O. Moore Creagh's recently published work, entitled *Indian Studies* is not a pro-Indian book. Such a book contains the following paragraph relating to the poverty of the Indian people —

It is idle to talk of education or other measures of social reform when whole families in those parts of India I know have to work day and night to eke out a bare existence. Even in normal years the grain disappears before the harvest is over and then the fight with hunger and the illness it causes commences. There are millions who even in good years fail to get a full meal and they would die in droves if a bad one were it not for public relief. The peasant digs sows and reaps the rain falls and the crops prosper and are reaped but no sooner is the harvest ours than the crops are divided. The land lord, be he government or a great landlord takes the lion's share, the village shop-keeper and the village servants are paid from what remains when the producer has nothing left. He again gets credit for his food and seed for the next crop from the village shop-keeper which costs him dear and he goes home to plough sow and live in hopes of better times which never come. When after years of toil and favourable crops he may have got clear of the village shop-keeper the settlement officer pounces on him and skins off all profit by taxing him on a rigidly defined standard which throws him into the hands of the village shop-keeper once more.

The *Indian Witness* is an organ of the Methodist Episcopal Church. Its politics

use the politics of Anglo-Indians. And missionaries even if they choose see the real life of the people of India much more than Anglo-Indian officials or Anglo-Indian men of business. For these reasons what this paper says about the poverty of India should carry conviction. It says

How poor is India? Those who are fond of statistics will be most impressed with the statement that India's average daily earning per person is between an anna and an anna and a half and that the average wealth of India per capita is about ninety rupees. We know that there are many people in India who earn much more than an anna and one half a day so there is a great many others who do not earn so much. We also know that there are many in India who possess much more than ninety rupees and there must be many others who possess much less. Otherwise the average of them would not be possible. Mark Twain was certainly seeing straight when he characterised India as being the land of dreams and the land of fabulous wealth and fabulous poverty of splendour and rage of palaces and hovels of famine and pestilence. The only difficulty is that the fabulously wealthy are comparatively few.

How poor is India? It will do little good to compare the average earnings of her people and their per capita wealth with the earnings and wealth of the peoples of other nations. Comparisons are odious. The real meaning of the anna and one half average daily earning and of the ninety average wealth is best understood when they are considered in the light of their purchasing power. The anna and one half will purchase very little more in India to-day than it will anywhere else in the world and less than it will in many places. Wheat for food and cotton for clothing are just as expensive in India as in prosperous America. Milk in India is as expensive as it is in many other countries that are far more able to buy milk. How many babies will die in India this year because there is no proper food for them? We know of one wee baby in India whose milk diet costs five or six annas every day. How far will the anna and one half go?

How poor is India? Her great infant mortality and morbidity that is not infant her millions of barefooted people millions of half-naked people millions of people who have but one meal or less of the coarsest food per day and her millions in famine relief camps or suffering without the camps all bear testimony to the insufficiency of the anna and one half for daily needs and of the ninety rupees as a fortification against the day of famine to say nothing of providing capital for productive industry.

The question is then asked 'Why is India so poor?'

The one big reason for her poverty is that she produces so little. We have been talking of her average wealth and average earning; we may also speak of her average productivity. The average individual in India produces less than the average individual in almost any country on the face of the earth. Why is this so? First, because those who are producers use such primitive methods of production. Here a man uses his centuries old wooden plough and his slow-going oxen and cultivates a few bighas of land, at the most. In Australia and Canada a man will take his modern machinery and thoroughly till his 40, 80 or perhaps 160 acres of ground. Second, because there are so many people in India who are absolutely unproductive. There are millions of mendicants, religious and otherwise, millions of personal and house servants, hundreds of thousands of those who because of physical defects are unproductive, and there is a great host of the idle rich who live off the toil of the real producer.

Some complain that India is so poor because she has to pay such heavy taxes. We do not know whether her taxes are any heavier than those of other countries or not. We would like to have the word of some expert political economist on that subject. But whether taxed or not it is safe to say that India will be the poorest of the poor so long as her productivity is so little in comparison with that of other nations. And wealth and poverty are always comparative terms; it must be remembered.

Should any religious movement concern itself with such a thing as poverty? It certainly should. The Master indicated that it was to be taken for granted that men should have adequate food, clothing and shelter. He had no quarrel with wealth only with the love of it. Plain living and high thinking are fine things, but there is a great distinction between plain living and plain starvation. There are multitudes in India who would be glad to indulge in the high thinking, if only they could be assured of the plain living.

Increasing our Productivity,

How to increase our productivity? It is a big question, and cannot be answered within the compass of a brief note.

It has to be considered what things we require to produce. First comes food. A strictly scientific enquiry should be made to ascertain whether India produces sufficient food to maintain her population in normal health and strength, leaving a sufficient margin for export. If she does, why are millions of her children lifelong starvelings? If she does not, it is plainly the duty of the people and the Government to increase her food production by the

adoption and use of the best seeds, manures, implements and methods. The questions of agricultural holdings and of the fragmentation of holdings as it affects the introduction of agricultural improvements should be considered in this connection. These questions are dealt with in two papers published in the current (July) number of the *Agricultural Journal of India*.

All questions of reform and improvement are interdependent. No wonder then that agricultural improvement should depend on the possession of political power. More than any other government department, the agricultural department has or ought to have to do with the illiterate peasantry. Most of those agriculturists who are literate are literate only in their vernaculars. Those of their countrymen who have received agricultural education should be in a better position to advise, guide and help the agriculturists than foreigners; and it is only the selfishness of exploiters which can deny that Indian agricultural experts are more interested in the agricultural improvement of India and in helping the tillers of the soil than foreigners. But it is foreigners who rule the roost in the agricultural as in other departments. This state of things can be remedied only by Indians acquiring political power.

It is not denied that even illiterate peasants may be made somewhat better agriculturists without being made literate. But it is equally plain that no great improvement is possible unless there is universal free elementary education, were it to be imparted only as a means of giving agricultural education. The official attitude in this matter has always been clear and was made quite clear by the fate of the late Mr. G. K. Gokhale's Elementary Education Bill. The Primary Education Acts recently passed in some provinces, for the most part as the result of non-official zeal, provide, in the majority of cases, for the extension of primary education in urban areas. A great national education Act, giving every child, born in urban or rural areas, opportunity to develop to the full what capacity it brings into the world, has still to be ushered into existence.

Sufficient money will never be spent for

agriculture and education until the Indian Government is nationalised

The Choice of Crops

Those who take interest in such questions know that, as far as that is practicable influence and pressure are brought to bear on peasants and farmers to grow more of crops which are required for the advantage of exploiters and foreign countries than those which India requires for her own advantage and use. This can be remedied only by the possession of political power by Indians. Our notes on 'Mobilization of Indian's Agricultural Resources' pp 641-643 *M R* for December, 1918 and pp 94-95 *M R* for January, 1919, may be read to clearly understand what we mean.

Areas under Cultivation

The figures supplied by the Director of Statistics showing the total area area cultivated and uncultivated area under irrigation area under different crops &c in British India in the agricultural year 1917-18, give food for thought.

The total area sown in the year 1917-18 was 263 million acres (including 37 million acres cropped more than once) the same as in 1916-17. This total area may be classified under the two main heads food crops (219 million acres) and non food crops (46 million acres). Of the food-crops the area under wheat increased by nearly one and a half million acres in 1917-18 that under gram by one million acres and that under barley by half a million acres. The decreases are mainly under byrra (2½ million acres) jowar (¾ million acres) rice (one third million acres) and other food grains (one million acres). Among the non food crops the main increases are under cotton (1½ million acres) linseed (¾ million acres) and rape and mustard (one-third million acres) while the area under sesamum decreased by about two-third million acres and ground nut by one-third million acres. The total area irrigated decreased by 2 million acres as compared with that of 1916-17. As compared with the pre-war year the area under food crops at the end of the last agricultural year June 1918 was 8 per cent more than in the pre-war year owing to the increase on account of war demands for wheat and gram. In regard to non food crops the increase in the same period was 3 per cent chiefly on account of the demand for oilseeds and go and fodder crops. The per capita acreage of foreign countries is also of interest. The figures for the United States of America Canada the United Kingdom France, and Germany before

the War were as follows United States of America 2.97 Canada 5.98 United Kingdom 0.39 France 1.49 Germany 0.94. The figures for India before and at the end of the War were 1.02 and 1.10 respectively.

Every country should in the first place produce what it requires for its own consumption and then produce if possible, what other countries require for their consumption. And out of what a country produces only the surplus after reserving its estimated consumption should be allowed to be exported. But in India both the production of particular kinds of crops and their export are controlled with greater regard for the requirements of foreigners than is just and humane the consequences being scarcity famine malnutrition wide-spread disease and ignorance. Only self rule can remedy these evils.

One of the economic causes of our inability to keep in the country a sufficiency of the food we produce is our want of money. Foreign manufacturing peoples have more money and can pay higher prices for food grains than we can. Unless therefore we develop manufacturing industries we shall never have enough food though we may produce enough. But manufacturing industries can in the circumstances of India be developed on an adequate scale only if we have self rule.

The Question of Export

In normal times and in abnormal times too like the present of high prices and of famines food is allowed to be exported out of India without attention being paid to what Indians think of India's requirements. It is pretended or believed that we do not even understand whether we are hungry or how hungry we are,—and of course we do not understand how the export and import of food should be controlled! A recent letter contributed to the *Bengalee* by an official incidentally placed the public for the first time in possession of the information that Great Britain had undertaken to supply Sweden with large quantities of Indian wheat! Was not the War fought for making the world (minus India, Egypt etc.) safe for democracy, and was not this undertaking given without the

knowledge and consent of the producing country in right democratic style?

The remedy lies in self rule

Production of articles other than food

In addition to food India should produce also her clothing and all other things which are necessary for leading healthy beautiful and enlightened lives. No doubt no country can produce every thing which its inhabitants may require but India is so large a country and possesses such a large variety of climates from flora and physical features that it is possible for us to produce almost everything we require. And our productive activity should have this wide range not only to remove our poverty not only to add to our wealth but in order also that we may be better and more perfect men by developing all our capacities and in order that we may acquire and keep up that feeling of self respect which economic independence and interdependence on equal terms with other countries can produce.

Without manufacturing industries we cannot even conserve our stock of food. So long as wealthy manufacturing countries can pay higher prices for the food we produce than we can pay and so long as we are obliged to sell part of our food stock for the money wherewith to purchase foreign cloth and other necessities the food we produce must in great part find its way to foreign countries leaving us hungry. These considerations prove that we can not do without the Swadeshi movement.

Flourishing manufacturing industries presuppose technical and industrial education control over customs duties tariffs railway freight &c state encouragement banking facilities and organisation of capital. Most or all of these conditions depend for their fulfilment on the possession of self government.

Mysore Iron Scheme

We are glad to learn that the work in connection with the Mysore iron scheme is being pushed through at Benapur. The sites for the location of the workmen's quarters offices factories etc have been

selected under the guidance of Mr Peria the American expert. An informal conference of the Mining Engineer, the special officer of the Iron scheme, the Conservator of Forests in Mysore and the District Forest Officers of Kolar and Shimoga and one or two others is now thrashing out at Bangalore the problem of the fuel supply required for the works. This problem of the fuel supply will be understood from what appeared in our last December number p 641. There we gave an extract which said that an interesting experiment was being tried in Mysore, and that the government of that progressive state had decided to erect a charcoal blast furnace and appointed Mr Peria as their consulting engineer. It was further stated

He has placed orders for the equipment in America and the undertaking is to be constructed and managed by the Tata Iron and Steel Company. It is proposed to fell and transport timber from the vast forests of Kolar and Shimoga and convert it into charcoal at Benapur. Iron ore will be mined at a distance of twenty five miles and a high grade charcoal iron produced. It is also intended that acetate of lime alcohol and other by products be extracted. Calcium carbide may also be manufactured with the breeze or such portions of the charcoal as cannot be used in the furnaces.

There will thus be considerable wood distillation industries.

The Mysore Durbar has provided more than Rs 21,00,000 for this scheme during the current year.

Industries in Gwalior

The Leader publishes an article on 'Industrial Gwalior' which is a memoir on the economic position of the Gwalior State and a description of the principal industries carried on there prepared by the inspector general of commerce and industry under commands of His Highness.

During the short period that the industry and commerce department has been in existence efforts have been made to prove the commercial possibilities of the dry distillation of wood thymol manufacture extraction of turpentine and resin and commercial utilization of indigenous drugs. To the credit of the department we have as many as 115 factories although in the beginning strenuous efforts were needed—years of hard labour to quote the official in charge—to popularize gunning factories presses and cotton

mills. The success of the Gwalior workshops and leather factory is a record of persevering work carried on unmindful of expense with the sole object of establishing an 'example industry.' The Gwalior Workmen were imported from Agra and Cawnpore and paid big advances and systematic training of the local people was undertaken with the result that they have now nearly one thousand workmen all of the state working in all branches of saddlery, harness and boot making. The average annual profit of the concern is represented by half a lakh of rupees. As yet no systematic efforts seem to have been made in starting on any large scale the iron and steel industry which is the coming industry of India. Gwalior had at one time iron foundries capable of turning out wonderful works like the 24 feet long gun which can now be seen in the Jai Vilas Palace. This gun is described as a magnificent piece of welded metal made in 1602 and was used in the reduction of the Gwalior fort by the Marathas under their Scindia leaders and is called Falesh Laskkar. The rocks of the Vindhya series contain iron in the form of hematite and magnetite. A State with the resources of Gwalior ought to be able to lead the way even for the Tatras at Jamshedpur.

Other activities have also been summarized.

It is a credit to the industrial activities of Gwalior such as they are that when during the war the call came from the munitions department for bolts, nuts and rivets the Gwalior workshop undertook their manufacture draught poles, telescopic stands and other articles were also executed. Large supplies of prick mules, saddlery, harness boots and shoes and other leather goods were supplied by the leather factory. The chemical laboratory in Gwalior started to analyse and classify the raw and manufactured products of the State is doing splendid work laying the groundwork for new chemical manufactures. The results so far attained fully justify the keen foresight and affectionate regard for the well-being of the subjects by his Highness who realized the potential greatness and value of chemical and technical research for the growth of industries. Two research scholarships have been sanctioned by the Durbar for the investigation of indigenous drugs. The statistical department which is a useful handmaid to the industrial department is rapidly rising in efficiency. Forest industries which all over India have obtained a great impetus during the war and as a result of the activities of the munitions department have come in for particular attention. Turpentine on a commercial scale could be made as also the tannin extracts, rubber, aloes, adzuki beans, rose oil, these and other industries await the serious handling of the Government. Silviculture, in itself is a vast subject and the Gwalior State is about to associate a forest economist

with the conservator of forests. Reclamation of land ravines brought into existence by the destructive inroads of rivers is seriously taken in hand and the areas covered by ravines constitute excellent agricultural lands. Raw materials for the manufacture of cement occur in various parts of the State and now that the war is over, the State might take up the work.

Aid is given to small industries also.

Korea's Declaration of Independence

Korea came under the yoke of Japan ten years ago. Ever since that time, she has been ruled by the Japanese military governors with severity. The dawn of peace however gave her a new gleam of justice and roused her with the principle of self-determination. So that, imbued with the new idealism of liberty, she drafted her declaration of independence, of which the following is a translation.

We the people of Korea hereby declare the independence of Korea before all nations, assuming that this would be generally recognised by them.

We declare this with a united voice of twenty million people in the name of justice and humanity. We are no mean people having the long history of a distinct and self-governing nation through the centuries, efforts three centuries. It is a most solemn duty of us to secure the right of free and perpetual development of our own national character and ability, nurturing ourselves to the principles of the reconstruction of the world.

It is nearly ten years since we were for the first time in our history put under the yoke of another nation and made a victim of the cursed militaristic imperialism of the world. Since then, how much our spiritual development has been hampered, our national dignity injured and how many opportunities have been lost to make a contribution to the civilization of the world.

Oh fellow-citizens! The most urgent and the greatest duty for us is to secure our national independence in order to wipe off the injuries to get rid of the present sufferings, to remove the future threatnings, to stir up the national spirit and vitality so long suppressed under the unjust regime of Japan and to leave our children an eternal freedom and perfect happiness instead of a bitter and shameful inheritance. We shall fight to the last drop of our blood in the great cause of Liberty.

What the Koreans next proceed to say, shows that they were not in a revengeful mood when they made their declaration of independence.

We do not blame Japan for breaking treaties in which she so often solemnly promised

guarantee the independence of Korea. Nor do we complain of her for calling our land a colony and treating us as slaves. Because it is unnecessary for us to find faults in others but in ourselves. We do not mean to take such measures as to avenge ourselves upon Japan. All we desire to do is to right wrongs done to us not by the Japanese nation, but by the few of her statesmen who were led by the old aggressive policy.

The results of the Japanese annexation of Korea are thus described —

'See the actual outcome of the annexation which was made in 1910 without free consent of the peoples concerned! A bitter and unreasonably animosity is growing deeper and deeper between these two peoples though it has been glossed over with a tranquil appearance caused only by heavy pressure and with series of statistics most of which have nothing to do with our concerns. It is clear to see that the two nations must and ought to enter into a new relation of good friendship so that they would enjoy a permanent happiness and to avoid further perils on both sides. Moreover in view of maintaining the peace of the East the independence of Korea is not without a deep significance. It is not only because the unjustly subdued twenty million people of Korea may prove a source of incessant alarm but any longer occupation of Korea by Japan is likely to provoke more suspicion and fear against Japan in the mind of the four hundred million people of China whereas the true friendly relation between the peoples is the basis upon which any eternal peace of the East will possibly be established. Could any international peace be expected without the perfect harmony of the eastern nations?'

Babu Bhagwan Das on The Hindu University

Babu Bhagwan Das M.A., of Seca-
shram, Benares has published two articles on the Hindu University in New India July 7th and 8th from which we quote below. He is a gentleman of high culture with a profound knowledge of Sanskrit philosophy as of modern thought and learning—an accomplished writer, a deep thinker and a sane judge of men and manners. A gentleman of independent means and a student by taste and temperament he long served the Hindu University in its chrysalis stage of the old Central Hindu College and has been elected to several of the academic and administrative bodies of the new Hindu University since its foundation in 1916. He has also been twice chosen as Honorary University Professor. He has a name of his own to go with. The opinion

of such a man on the present condition of the Hindu University must have great weight. It strikes one that, though the items dwelt upon by Babu Bhagwan Das and 'Inside View' are not the same in every detail, the impression produced by the articles of the two writers is substantially the same.

Babu Bhagwan Das first of all proves that 'all is not right with the Benares Hindu University.' Indeed he goes so far as to say that "it is not an ideal fraternity of philanthropists requiring only quiet and steady work but sodden with intrigues and party politics."

Those who are, in his opinion, responsible for this state of things have not, he appears to think forgotten to employ the usual methods for preventing even the attempt at reform. As he plainly puts it,

Indeed it would be almost truer to say that there has been a conspiracy of silence in the Press as regards the affairs of the B H U. I could not get some letters signed by me in full published in the U P in January, 1918 and had to send them to other provinces where they were published by the *Amrita Bazar Patrika*, *Amrita* and the *Bombay Chronicle*. Apparently there was in the U P a strong notion that any criticism of the B H U is sedition and disloyalty and that nobody can wish well to the B H U unless he wholeheartedly praises its existing management. Things must have become very bad indeed when even the Press of the U P thinks fit to give space to even anonymous criticisms of that management.

Among the root causes of the mischief he gives the first place to Mr. Malaviya's manner of doing things—or, more correctly, of leaving them undone and practising, though he does not say or suggest intentionally, standing in the way of others doing them.

It stands to reason and even to common sense that a residential University should have a residential head and much more so a residential University in the making in its earliest feeble infancy, liable to many infantile troubles. But the B H U has dispensed with any and every such thing so far. The first Vice-Chancellor lived a hundred miles away. The second fifteen hundred. He gave clear and fair warning before election that he could not give more than a part of the year to Benares, and he did better than his promise. But he failed to take any impression upon the root mischief, partly because even the time that he did give

was not enough and largely because Pandit M. V. Malaviya could not time his visits to Benares concurrently with the Vice-Chancellor and could not develop another and even more necessary kind of concurrence i.e., of views and of mutual trust, between himself and the latter. As 'Inside View' has pointed out with facts and figures the present Pro-Vice-Chancellor Pandit M. V. Malaviya himself is able to give very little time to Benares. He seldom exceeds seldom even works up to the traditional pilgrim's limit of 'three nights at a place' in his visits, and these take place at intervals of weeks. And now that he is the Acting Vice-Chancellor also since the resignation of Sir Sivraswamy Aiyar the consequences to the work are so much the more perplexing, for he is not stationary even at Allahabad, his home (so that work could go to him if he could not come to the work) but is ubiquitous—all over India. No blame to him at all—on the contrary he is bearing an Atlas burden on his shoulders—but all the blame to our luckless and most miserable Motherland which cannot produce another being fit to be trusted by him to really share and lighten his mighty labours!

Out of the luck of a residential head then all the other mischiefs arise.

As regards the imagination and the plans of Mr. Malaviya, Babu Bhagwan Das writes—

Our guiding spirit our presiding deity or at least genius—the soul of the whole concern and its master as its solitary bread winner and holder of the purse-strings has an exceedingly rich and vivid imagination which pounces and fastens upon a new idea almost every day and rapidly develops it into a glorious structure of sunset clouds but then his arduous toils and the idea shrinks back into its inherent diminutiveness and is put aside. It is no doubt this very vivacity of imagination which has infected the country with the idea of the Hindu University and made its foundation possible. But the excess of it now is a hindrance. What is wanted now is steady continuous sober plodding on a level much below that of the bright imagination let us grant readily and sincerely but equally indispensable in the total scheme of the universe. If the prime founder of the business would only realise his limitation as well as his capacities, distinguish between what or rather how much he can do (as indeed no other can at the moment) and what he cannot do though he insists on doing it (as others realise painfully though few venture to express their minds frankly to him) then the B. H. U. would progress better and more quickly.

Babu Bhagwan Das gives direct evidence that Dr. Gangadhar Jha's resignation of the membership of the various University bodies was not due to dif-

ferences with Sir Sivraswamy Aiyar, as has been asserted by some apologists of the present regime. "The statement is wholly wrong, as I know firsthand, it was due to the general condition of affairs which made it impossible for him to be of any use and for which Malaviya's absence from the scene of work combined with his disinclination to let anything at all important be done in his absence is the main cause."

The following passage from his articles gives one the impression that the various university bodies have made the University a sort of talking machine hall.

At present many are the meetings of many of the B. H. U. bodies which after three or four hours of industrious talking simply end in postponements of most sometimes all of the agenda items. Things are half-discussed and dropped and taken up again and dropped again indefinitely. The slinking of one full and conclusive discussion in the beginning entails a perpetually recurrent waste of time afterwards. See the minute books and the files of notices of meetings and agenda papers.

An illustration is given from the meeting of the Executive Council on the 22nd June which was adjourned after an 'addled egg' meeting on the 14th.

After three hours—from 1 p.m. to 8 p.m. and more—of preliminary talking part of it relating to a matter not on the agenda at all it was decided that as copies of the budget had been placed in the members' hands at that meeting itself and no time allowed for previous conning over (—it appeared that a week was required by the rules—) the whole thing was postponed to the 12th July. So it goes on. An important question of principle whose continued mismanagement is likely to aggravate the corruption of spirit from which the B. H. U. is suffering is being shirked in this fashion. And travelling expenses are paid to outside members attending these meetings. One court meeting is estimated to cost about three thousand rupees and a Council or a faculty meeting may cost hundreds.

Legal quibbles hair splittings of words catch phrases invented by men engaged in executive office or forensic law or party politics to suit their own special purposes are often heard at meetings of the administrative bodies of this educational institution where the whole atmosphere should be that of the patriarchal joint family the guru-kul the Teacher's family home. At a recent court meeting a member pointed out with reference to an objection raised by another that the latter's remedy lay in a suit in the law-courts.

Want of spirit forbids us to give more

extracts from Prof Bhagwan Das's exposition of the situation. We shall only quote some of his paragraph headings to indicate his diagnosis of the case —

Haphazard our principle and Drift our policy
Our lack of proper head and heart
Our ignorance of what we want to do
Our safe policy of non-committal
Our keeping the public out
Our wish to repress criticism
Much talk and little work
Our waste of public money
Our slighting of the missionary spirit
Our Red tapism
Our insistence on blind faith and caste
nepotism
Our penny wise and pound foolish finance
Our worst symptom—the unrighteous spirit
Manipulation of procedure at will

Our own Impressions.

We have no first hand knowledge of the affairs of the Benares Hindu University. And it is not possible for us to constitute ourselves into a committee or commission of enquiry. At the same time it is also not possible for us to dismiss as unreliable the statements of men who have been long known as honourable and truth loving. We can judge of the state of things at the Benares University only from what has appeared in the Press from what has been brought to our notice and from the results of our inquiry on the few definite and specific points mentioned below.

(a) Have the morning periods of work at the C. H. C. been invariably of 40 minutes each and the day periods of 48 minutes each or were they on some days changed to 45 minutes or any other duration?

(b) Was the starting point of the College work changed during the last year only from season to season and not from time to time as detailed by Inside view? Was the starting point changed oftener than seasonal changes would necessitate?

(c) Was sufficiently early notice given to every member of the teaching staff of the changes in the starting point?

(d) Did any member of the staff complain of the conditions of his work under the shift system?

These were questions the answers to which would not be affected by personal opinion because these would be mere state-

ments of fact. We have no desire to enter into details, nor to quote in full the replies we have received. Suffice it to say that on these points the replies confirm the statements of 'Inside View'. On other matters we leave the reader to decide for himself.

The *Modern Review* wishes, we believe, the first among Indian journals to describe and advocate the Gary plan of teaching two sets of students by shifts. But our support of the plan was conditional. We laid down the condition that neither the staff nor the students were to be overworked or inconvenienced in any way. We have evidence to show that some professors really were inconvenienced by the shift system as adopted by the Hindu University. We have evidence also to show that science students have been placed at a disadvantage by it. The reasons can be guessed from what Prof N. C. Nag has written in his letter to the *Searchlight* —

Oftentimes Chemistry students have to carry on an experiment from one day to another and they have to leave their apparatus etc. on their table. The coming in of a new batch of students in their place is not possible in the practical class. There must be separate accommodation for the science students in the practical class.

We have independent evidence to show that on account of the lack of this separate accommodation for each science student, unfinished experiments have had to be started anew. This is a real disadvantage. A piece of writing becomes interesting if the writer throws some personal feeling into it. We have tried to write on the affairs of the Hindu University in as cold and therefore uninteresting a manner as we can. For we regret to observe that party feelings and prejudices generally divide those who have or have had anything to do with this University, though we presume there must be some who have been able to keep up a neutral judicial attitude. For this reason we wish to avoid even the appearance of belonging to any party.

In a new institution which is also a new experiment some degree of slowness of progress is inevitable—it may even be desirable. We cannot say whether the slowness of the Hindu University has exceeded this limit.

Some appointments we understand, could not be made because for one thing the gentlemen whose services were desired demanded very much higher salaries than the salaries attached to the posts which they now hold. It may seem unavoidable but it seems to us that the excessive salaries paid to foreign officers have made the demands of our own men higher than they ought to be in a poor country like India.

Ideals and their concrete realisation cannot there be no harm in bearing in mind always be made to keep pace with each other. The Peace Treaty falls far short of the idealism of so great a man as President Wilson.

A great reconciler and high minded broad hearted peace-maker is required. The Hindu University is an all India institution. It has brought together many and may in future years bring together many more workers with different upbringing and differing University and provincial traditions and predilections. Some one there must be at the head of the University who while utilising to the full the broadening effect of the good that there must be in those different traditions &c. would be able to rise superior to their narrowing and dwarfing influence.

A Noble Gift to the Indian Women's University

Mr V R Lande Sub-Assistant Surgeon originally of Nagpur died two years ago at Jinja Uganda East Africa after serving the Government there for about fifteen years. His poverty compelled him to take to medical studies without completing his secondary education. His property in Africa and India amounts to nearly Rs 55,000. He executed a will 5 days before his death setting aside a large portion of his estate for educational and charitable institutions. According to the law of Uganda however no immovable property can be assigned to charitable purposes unless the will is made one year before death and deposited in some place provided by law for safe custody within six months of the execution. If the two widows and the mother of Dr Lande had not given their consent the will would have been inopera-

tive. They have however nobly come forward to accept the terms of the will and have executed a release deed relinquishing all their rights over and above what has been left to them in the will. The Trustees of the Indian Women's University are Dr Lande's Trustees in India. The African Trustees were required to send all the proceeds of the Estate there to the Indian Trustees and Rs 19,000 have been received from them. Indian dues have yet to be recovered. About Rs 8,000 are to be given to four different institutions and after giving to the widows and the mother what is left to them the Women's University is likely to get Rs 15,000 now and about Rs 15,000 later on. This last sum is to be invested and the allowance of Rs 30 a month to each of his widows is to be given out of the interest thereon.

The Indian Women's University is deeply thankful to the late Dr Lande and the noble ladies for the very liberal help they have given to this movement.

Poona City Organiser Indian Women's University

The Press Association of India

* The Press Association of India has sent the following cable to the Prime Minister the Secretary of State for India and Lord Sinha Under-Secretary of State for India —

The Press Association of India begs to invite attention to the repression of the Indian Press under the Press Act, 1910 resulting in the suppression of legitimate expression of Indian opinion and creating a great alarm in the public mind. The Act since its enactment has penalised over 300 presses and 300 newspapers demanded securities amounting to over £40,000 and proscribed over 500 publications. Owing to the demand of security over 203 presses and 130 newspapers have not been started.

* Since 1917 the Act has been even more rigorously administered. Leading influential Indian English journals like the Amrita Bazar Patrika the Bombay Chronicle the Hindu the Independent the Tribune the Punjabee and leading Vernacular papers like the Basanti the Swadeshimtran the

Vyasa the Hindasi the Bharat nutra have been subjected to its rigours. Several Indian newspapers are arbitrarily barred from the different provinces. On the other hand violent provocative writings in the Anglo-Indian Press are entirely immune. Government refused last September an open inquiry into the operation of the Press Act urged by Indian members in the Imperial Council. Legitimate criticism on the Rowlett Act the Punjab Martial Law and other grievances is crippled by executive action. Influential journals are disappearing because of the existing Act and its administration. The unventilated expression of public opinion is bound to drive discontent and unrest underground. The extreme and unjustifiable severity to which journalists are subjected is painfully evidenced by the arbitrary deportation of Mr. Horraman Editor The Bombay Chronicle and President of this Association. The Association presses for the repeal of the Press Act urgently.

The Press Act Supremely Reasonable

The following telegram has appeared in the daily papers —

Bombay July 18.

At the Esplanade Police Court Bombay before the Chief Presidency Magistrate Mr. Muldeo N. Desai appeared to make a declaration as publisher of Young India. When asked by His Worship to deposit a security of Rs. 1,000 Mr. Desai submitted the following statement — I have been asked not to give any security apart from what has already been taken from the keeper of Young India as in the opinion of those including myself who are responsible for conducting the journal extraordinary endeavour has been made to keep its columns pure and unblemished by any seditious or even hostile taint. Every endeavour has been made to serve both the Government and the public fearlessly but with due regard to every interest. I can only express my very deep regret that Government has been unable to appreciate the service that Young India has rendered to it during critical periods and has been so ill advised as to ask for any security being given by the publisher. After reading the statement His Worship said no security was taken from the printers. Mr. Desai said he meant the keeper of the press.

The Magistrate — You say the keeper of the press has deposited Rs. 1,000.
Mr. Desai — Yes.

The Magistrate then ordered that Rs. 1,000 should be deposited subject to the proviso of Section 8(1) of Act I of 1910. His Worship further ordered that if a change in the place of printing were made he would have to deposit a further sum of Rs. 1,000.

Mr. Desai's truthful and courageous statement extorts respect.

The last sentence in the above extract which we have italicised shows conclusively how supremely reasonable the Press Act is. The Magistrate says in advance that if a change in the place of printing were made the publisher would have to deposit a further sum of Rs. 1,000. It is taken for granted that a mere change in the place of printing would make Young India more seditiously inclined than it already is in the opinion of the Magistrate! How absurd and ludicrous! And this is Law!

Indian Women's University

A FEW FACTS AND FIGURES

1 This University was formally inaugurated on 3rd June 1916 at the first meeting of its Senate in the Fergusson College at Poona.

2 Dr. Sir R. G. Bhambhani and Principal R. P. Paranjpye are its Chancellor and Vice-Chancellor respectively.

3 The Mahila Pathshala (Women's College) and the Mahilashram (Girls High School) both of Poona are the only institutions working under the guidance of the University.

4 There are sixteen students in the college and one hundred in the school. The staff of those institutions contains four M.A.s and 4 B.A.s of the Bombay University.

5 The first convocation of this University was held on 15th June last at which Mrs. Barabai Shinde the first graduate of the University received her degree of G.A. (Graduate in Arts) at the hands of the Chancellor Dr. Bhandarkar. This lady has joined the staff of the above-mentioned institutions.

6 The Senate of the University consists of 60 Fellows who are representatives of six electorates. Affiliated schools and colleges elect 15 patrons elect 10 members of Graduates Electorate elect 15, members

Mrs. Barabati Shrivastava
First Graduate in Indian Women's University

of the Educated Ladies Electorate elect 10 members of the General Electorate elect 5 and the Senate co-opts 5 making in all 60. Twelve Fellows retire every year automatically and their places are filled up by new elections retiring members being eligible for re-election.

7. The present Senate contains 6 ladies and 54 gentlemen. According to places 28 belong to Poona 11 to Bombay 2 to Gujarat 2 to Baroda State 2 to Sind 1 to Punjab 2 to Central India 1 to Bhopal State 1 to Bengal 3 to Madras Presidency, 2 to Mysore State 1 to Carnatic and 4 to Deccan. According to professions 24 were or are professors of colleges 13 Head Masters and Inspectors 8 leaders 8 doctors and 7 others.

8. It is a national university. All

authority is centred in the Senate which is made up of the representatives of the people. Any graduate can become a member of the Graduates Electorate by contributing Rs. 10 annually and any person can become a member of the General Electorate by contributing Rs. 5 annually. The list of eligible voters prepared for the election in last April contained 2000 names nearly. People from different parts of India have got themselves enrolled as members.

9. Indian vernaculars are given the first place in the scheme of studies and English is made a compulsory second language.

10. The movement is supported mostly by the educated middle class. The permanent fund of the University consists of 3 1/2 per cent Government Promissory notes of the face value of Rs. 15,000. Annual subscriptions come to Rs. 10,000.

11. Although there is only one high school and one college working under the guidance of the University at present it is hoped that more institutions will spring up later on. Similarly though Marathi is the only vernacular which has been made the medium of instruction it is hoped that provinces with other vernaculars will take up the idea. One lady from Gwalior passed the Entrance Examination of this University in April 1918 with Hindi as her medium of examination. Prof. Karve the Organiser of the Indian Women's University has expressed his readiness to exert himself to organise a school and college that would give instruction through the medium of Hindi if no workers in Hindi speaking provinces came forward either to start an independent Women's University or to found an institution to work under the guidance of this University in the next few years.

Poona 14th July 1919. A Maratha. The more truly independent educational institutions of the type of the Indian Women's University we have in our midst the more hopeful would our future be.

The Meeting of Lalla and Majnun

Lulla and Kais were children of two chieftains of wandering tribes in Arabia. They were brought up together like two

buds growing side by side with affection and love secretly treasured in their hearts. They hoped and dreamed that one day they would be united in wedlock and live only for each other. But this was not to be. They were separated from each other. Laila was married to a wealthy person. The disappointment of Kais was so great that he became mad—*Majnun*. He thought only of Laila. He spoke only of Laila. He wandered into the wilderness till he became a living skeleton and even wild beasts took pity on him and became friendly to him. In the meantime, however, the husband of Laila died and she sought the love-distracted *Majnun*. But the return of Laila was too late. *Majnun* did not recognise her. Laila spoke of her insatiable love for him, but *Majnun* described to her the Laila he adored—his beloved Laila of the past. Then their eyes met and *Majnun* recognised her. But this was only for a brief moment, instantly his madness came back and he rushed away into the desert and once more they were separated, to be united only on the other side of death.

The picture represents Laila speaking to *Majnun*. Two of her attendants are standing behind her. The camel driver in the foreground is making fire.

Early 18th century, Collection of Mr S. A. Gupta.

Naturalization of the Exotic

It is a somewhat trite though common argument, employed by Anglo-Indians and Tory Britishers to cry down our political aspirations or to assert that we do not possess certain moral qualities, that there are no current old vernacular words to describe certain liberal and popular political institutions or to express those moral qualities. One might retort that, as the words 'government', 'democracy', 'representative government', 'franchise', 'parliament', &c., are all derived from languages foreign to the British soil, a time there must have been when the things denoted by these words did not exist in Britain, yet these things have grown up and taken root there. Similarly one might argue that as 'gratitude' is not an indigenous British

word, the thing originally did not exist in Britain, and it was subsequently that its want was felt, and so the thing and its name was attempted to be transplanted to British soil. Seriously speaking, many exotic animals, plants, ideas and institutions have been naturalised and have flourished in new habitats. This process of conscious and unconscious naturalisation has gone on throughout historical and pre-historic ages. Very often the exotic has partially or completely supplanted what was indigenous. That what has not been or is not, can not merely for that reason be, is a most foolish argument.

Punjab Affairs

Whatever may have been the case in former ages, at present the English language is so highly developed and its vocabulary is so rich that whatever Englishmen do and think and feel and intend, may be adequately described and characterised in English words. Therefore it would not be right to say that it is not possible properly to describe and characterise recent events in the Punjab and the policy pursued in that unhappy province by its rulers and the rulers of India. There is quite an abundant stock of words in the English lexicon to correctly describe and characterise those events and that policy. And though English is not our vernacular, our knowledge of it, though defective, might suffice for such true description and characterisation. But on account of the Press Act, such true description and characterisation may not seem advisable,—particularly in the case of those newspapers and periodicals which do not possess presses of their own.

The 'Pratap' Case.

This is a case in which Lala Radha Krishna, editor of the "*Pratap*", was sentenced to 18 months' rigorous imprisonment, which has been reduced by the Lieutenant Governor of the Punjab as an act of mercy. Even if he had been released as an act of mercy, the wrong done to him would not have been wholly undone, for he ought never to have been prosecuted at all. In cases of injustice like this if the accused

person were set free, if it were declared that he was wrongly prosecuted and if he were compensated for whatever pecuniary or other loss he had sustained then alone it could be said that as much justice had been done to him as was possible under the circumstances.

Mr M. K. Gandhi has subjected the charge sheet and the judgment in this case to detailed criticism. He says

'In my humble opinion the judgment is a travesty of justice. The case is in some respects worse even than Babu K. L. N. Roy's case. There are no startling headlines in the Irish case. The accused has been sentenced not on a section of the Indian Penal Code but on a rule temporarily framed as a war measure.

He examines the indictment as follows—

Let us turn to the indictment. Now a charge-sheet should contain no avoidable inaccuracies and no innuendoes. But we find that this indictment contains material inaccuracies. One of the three statements claimed by the Prosecution to be false is that the accused said in his paper that they (the crowd) were fired at in Delhi without any cause. Now this is a dangerous inaccuracy. The passage in question reads they were *at least* from their point of view fired at without any cause. The words italicised have been omitted from the charge thus giving a different meaning to the writing from the one intended by the writer. From the third item too the relevant portion which alters the accused's meaning in his favour has been omitted. The third count concludes the people threw stones and brickbats at the time when the authorities had already taken the initiative. The relevant and qualifying sentences in the article from which the above is extracted are—*But it is possible that somebody among this huge crowd might have thrown stones on the Police officer (before they resorted to firing).* Even admitting this to be true we say that the wisdom and prudence of the authorities demanded that some other method than firing guns should have been adopted with a view to suppress this disturbance. This sentence with the portion italicised again alters the whole meaning. If such an omission was made by a defendant it would amount to *suppression veri* and he would rightly put himself out of court. Done by the prosecution the omission has passed muster but in reality it is far more dangerous than *suppression veri* on the part of a defendant. The Crown by a material omission intended or otherwise may succeed in bringing about an unjust conviction as it appears to have done in this case.

In the *Hindus* case in Sindh the Prosecution charged Mr Jethmal with *sup-*

pressio veri for bringing the Government into hatred and contempt, and the trying magistrate observed—

What are we to think of the good faith of a writer catering for a considerable body of Sindh readers who having at his hand the materials from which he could have compiled a true and faithful account of the events at Delhi deliberately set out to garble those materials so as to put the action of the authorities in the worst possible light? It has been proved that he deliberately omitted from more or less responsible accounts of the occurrences certain statements. What was his intention in so doing? There can be no doubt that it was to hold up to hatred and contempt the authorities responsible for maintaining law and order.

The application of these observations to the charge-sheet in the *Pratap* case is obvious.

Not is this all

The last paragraph of the charge contains an unpardonable *innuendo*. The accused has published a number of seditions and inflammatory articles but the Crown prefers to proceed under Rule 23. The suggestion that the accused has written seditions and inflammatory articles could only be calculated to prejudice the defence. I have never seen an indictment so loosely drawn up and so argumentative as this. In a properly constituted court of law I venture to think that it would have been ruled out of order and the accused set free without having to enter upon any defence.

Mr Gandhi then criticises the judgment.

The judgment too I am sorry to say leaves the same impression on one's mind that the charge does—in *suppression* of prejudice and haste. It says The prosecution have also established that each of these statements is false. Now I have I hope already demonstrated that two of the statements in the indictment could not be proved to be false for they are statements torn from their context and incomplete. No amount of evidence to prove the falsity of such incomplete statements could possibly be permitted to injure the accused. There remain only two statements to be examined. The first statement is By the evening of the 31st March forty Hindus and Mussalmans had been killed. Now it would be quite clear to anybody perusing the judgment that even now it is not known how many persons were killed. I suggest that the deciding factor in examining the falseness or otherwise of the above statement is not the number killed but whether any people were killed at all. If anything could then alarm the people it was the fact of firing not necessarily the number killed. And the fact of firing is not denied. As to the number the newspapers including the Anglo-Indian press had different versions. The learned Judge dismisses the plea that other

gether to carry on organised agitation against the Rowlatt Act was in the opinion of the judges a criminal conspiracy. If that be so then any kind of conference or meeting private or public for purposes of deliberation or consultation for settling any programme of constitutional agitation is conspiracy. We have read the Lahore judgment from the first line to the last but nowhere could we discover any proof of any criminal conspiracy of which the Lahore leaders were guilty. A conspiracy of a different kind though not one which the Indian Penal Code can take cognizance of seems indeed to have been hatched in the Punjab a conspiracy of which the object it is presumed was that whatever extension of political rights the people of the other provinces of India might have under the Reform Scheme the Punjab must politically remain what it is. Nay it is probable that it was intended that the Punjab should make progress backwards by the curtailment of peoples rights. Sir Michael O'Dwyer was guilty of this conspiracy — who else was is not known.

Were it not for the tragic consequences of these trials some passages in some of the judgments would be considered highly comic. For instance in an Amritsar judgment the fact that one of the accused started a platform ticket agitation and wrote intemperate letters to the railway authorities in connection therewith is gravely brought forward as establishing and enhancing his guilt! He was instrumental in stopping a cricket match. Could rebelliousness go further? The opening of *langarkhanas* or free kitchens for the poor during the shopkeepers' strike in Lahore has been pressed into similar service by the Lahore tribunal. It too was an act of war! But pray in what respect legally did it differ from the Strikers' Unemployment Funds in the West out of which the unemployed are helped during strikes and lock-outs?

The Lahore judges have given it as their opinion that the object of the Lahore leaders was to overawe the Government by *hartals* &c and thereby bring about the repeal of the Rowlatt Act. Now the object

of all constitutional agitation is to bring pressure on the Government in furtherance of legitimate public object and this pressure is justified so long as there is no physical force no violence no armed resistance or any intention or suggestion thereof. It has not been shown that the Lahore leaders either intended to use any physical force or had any connection with any rioting or other act of violence which might have taken place. Should Government dislike the inconvenience resulting from constitutional agitation and therefore feel inclined to avoid providing occasions for such agitation in future surely it must be an abuse of language to describe the object of constitutional agitation to be to overawe the Government.

It is too late in the day for any tribunal military or civil to try to make out that any form of passive resistance (call it *Satyagraha* or by any other name) is criminal. It is and would remain legitimate and constitutional in spite of what Anglo Indian or British judges may choose to say. For British justice though often the best, is not always the best or the only variety of justice. The ideal and standard of justice and the ideal and standard of what is legitimate and constitutional are independent of what some British judicial and executive officers may think or say.

Hartals (stopkeepers strikes) and every other similar form of self-chosen and self-inflicted loss suffering and mode of public mourning are immemorial rights of the people which no British or other man made pronouncements or laws can abolish or deprive of their legitimacy. Surely it would be intolerable slavery if we could not have even the liberty to suffer for a cause!

Much is made in the Lahore judgment of the fact that the crowds were dispersed by firing on more than one day. But that a crowd was fired upon does not in itself show that the men forming the crowd were violent and dangerous were in the wrong or constituted an unlawful assembly. On the contrary what has to be proved first of all is that (a) the crowd was violent and constituted an unlawful assembly (b) and other means had been

in his minute of dissent. He concludes his observations on this subject by saying—

I am therefore opposed to an Advisory Committee with no responsibility and no statutory functions. If it should be decided that for some time at least a Council or an Advisory Committee is necessary, I should prefer a Secretary of State in Council and to make it easy for the Council to disappear when the time comes, without having to wait for a Parliamentary Statute, I should accept the recommendation of Professor Keith, that the King in Council, whenever he is so advised, may make an order transferring the functions of the Secretary of State in Council to the Secretary of State and abolishing the Council. Nor do I see much objection to accept as an alternative the suggestion of Sir James Brunyate, that the Council should at the end of the 1st period of 10 years cease to exist unless the Parliamentary Commission reports in favour of its continuance.

We think there is great force in Mr Basu's contention that the power of veto at present possessed by the Council should be retained.

If the final Parliamentary decision now be in favour of an Advisory Committee distinct from the Secretary of State the Committee should have statutory powers so that the difficulties I have suggested as likely to arise may be avoided, and so long as the revenues of India are by Statute vested in the Secretary of State and can be dealt with by him irrespective either of the Government of India or of any popular control in India, I would not abolish the veto of the Council: the veto has, it is true, never been exercised, but its existence must have a restraining influence and must strengthen the position of the Secretary of State as against the Cabinet. The abolition of the veto may create unnecessary suspicion in India as an attempt to remove the last obstacle to the unaided of the British Treasury on Indian revenues especially in view of the fact that the non-official Indian element in the body which would advise the Secretary of State is about to be strengthened.

As regards the composition of the Council or the Advisory Committee, we endorse the views of Mr Basu. Regarding the Indians to be appointed Mr Basu says—

The Report recommends that not less than one third of the body should be Indian public men selected from a panel and leaves it open to the Secretary of State to appoint other Indians representing special interests or possessing administrative experience. In my opinion, having regard to the altered circumstances the necessity of restraining the officials when they may be tempted to overstep the limits of their

spheres, of stimulating, advising, and guiding the popular governments, of harmonising the relationship between the official and non-official Provincial Governments and between the Government of India and its Legislative Assembly, the authority which will have the final decision cannot be safely constituted with less than half its members as Indians. I would, therefore, recommend that half of the number should be Indians, and I am prepared to concede, though this is neither desirable nor essential, for I am sure Indian electorates will elect men possessed of the requisite qualifications, that not less than two thirds of this number should be selected as recommended in the Majority Report: the rest being nominated by the Secretary of State.

Half the number of members being thus suggested to be Indians, regarding the other half Mr Basu observes—

As regards the other half it must be evident from the nature of the duties that the Council or Advisory Committee will have to discharge, that it should not consist wholly of officials. The official experience will be primarily and efficiently represented in the despatches that will come from the Government of India and also in the permanent departments of the India Office, this experience, while essential in matters of ordinary administration in which the Secretary of State will interfere less and less is not of the same value when he has got to deal with important matters of policy or constitutional usage involving decisions of critical questions between the official governments and the popular elements. Under these conditions it is not only not desirable but may even be embarrassing to have a preponderantly official element in the Council of the Secretary of State. What is wanted is not a reduplication of the Indian official point of view, but a broadened outlook from the Indian and British points of view. The Indian point of view will be secured by the increased representation of the non-official Indian element. The British point of view can only be secured by the introduction into the Council of a new element, namely Englishmen taken from the public life of England. I would therefore recommend that room should be provided for such association by laying down that not more than one-third of the members should be officials who had held office in India, the rest being men of British experience nominated by the Secretary of State. To my mind a Council so constituted will be an ideal fly-wheel for the new machinery we are setting up. If we revert to the old constitution of an overwhelming official preponderance in the body which will advise the Secretary of State we shall be courting grave risk. I see no sufficient reason why the members of the Council of the Secretary of State should be as now, excluded from sitting in Parliament. There would be obvious advantages if they were allowed to do so, especially if they become a merely advisory body.

The majority of the members of the Committee have opposed the proposal to establish a Select Committee of the House of Commons on Indian affairs. We are in favour of the establishment of such a

committee, and of its retention until India gets full Dominion government. The fears of the Crewe Committee of excessive parliamentary interference in the affairs of India are entirely groundless. Hitherto, what has been every M.P.'s business has been no M.P.'s business. The actions of the Indian Executive in India and Great Britain must be subject to scrutiny, control, and reversal, if need be, somewhere and by some persons. Seemg that it is proposed to keep the supreme Government in India practically autocratic for an indefinite period and that even in the Provinces popular control must, if the Reform Bill passes as it is, be for an indefinite period more nominal than real, parliamentary control must be made more real than it is at present. And the only way to do so is to appoint a Select Committee of the House of Commons on Indian Affairs. The observations of Mr B. N. Basu on this subject are so statesmanlike that we quote them in full inspite of their length.

PARLIAMENTARY COMMITTEES

16 This is a feature of the Montagu Chelmsford Report which has met with universal and unqualified approval in India. The Majority Report has raised an objection to it which it considers fundamental, namely, that an increasing interest taken by Parliament in Indian affairs might encourage a tendency to interfere, and might militate against the object of the reforms which is gradually to transfer control to the Legislatures in India. We have to bear in mind however that this object specially in the Central Government is remotely in prospect and we shall have a long way to travel before reaching it. In the meantime all the more vital concerns of Government will remain vested in an official executive. This executive will have a very difficult part to play. It is casting no slur upon it to say that it is not properly trained or constituted for its new role. Hitherto it has held all the threads of administration in its hands; it has been alike the source of power and the instrument of its effective use in all directions. Henceforth, while it will still exercise the paramount functions of government and consequently retain its position of unchallenged supremacy in what are justly regarded as the attributes of power, namely the enforcement of law and order, it will have in other branches of administration to take a subordinate place as executant of the will of the people whom it is controlling and governing in a different sphere. The Civil Service has shown great adaptability in the past and I hope its fabric will respond to the new conditions in a spirit of loyal co-operation. But the whole situation requires careful supervision and guidance not alone by the Secretary of State but by Parliament itself. Parliament is now deliberately transferring some of its power to the Indian legisla-

tures and has reserved to itself the determination of the future stages of further transference until India has secured self-government within the Empire. Therefore until that goal is reached, India would not only not lose any tendency in Parliament towards taking an increasing interest in her affairs but would urgently want it, and would welcome any means to secure it. We cannot at the present moment give Parliamentary representation to India though India, which is still governed by Parliament, stands on a different footing in this respect from the Dominions, and therefore the only way to secure in Parliament some knowledge of and interest in Indian affairs is by means of a parliamentary Committee which will be annually constituted with importation of fresh blood and will thus in the course of a few years give the House of Commons a fairly large number of members with some acquaintance with Indian affairs. Even if this Committee like the Committee of Public Accounts deals with the preceding year, it will be able by its annual reports to place before Parliament a resume of some of the most important aspects of administration in India in a form essentially different from the present official reports on the moral and material progress in India. The British public will have the inestimable advantage of having a picture of India in outline presented by an independent body of men who are dissociated from both the official and non-official elements in India and are the chosen representatives of the British people and the Indian public will have access to an authority which it will regard more or less as impartial.

In his remarks on the India Office staff also Mr Basu makes clear the Indian point of view.

17 As regards interchange of the superior staff between England and India I do not appreciate any very great difficulties. The higher officials in the India Office may and should from time to time be sent out to India to serve or assist in the Secretariat and their place taken here by Indian officials who should be of Indian descent if available. I would not claim any special privilege for the Indians but it is only fair that when the Indian is equally qualified he should have preference, not because he is an Indian but because the British element will, in the very nature of things, be preponderantly represented in the India Office staff. This will be a matter of arrangement which will grow into a system and so arranged as not to affect the prospects of the home officials. As regards Indians being allowed to take a responsible part in the higher control of the Office I think it should be definitely laid down that there should always be an additional Indian permanent Under Secretary of State. Ordinarily he should not be an Indian official. With an Indian non-official member in all the Provincial Executive Councils, and probably more than one minister in all the provinces with also not less than two members in the Executive Council of the Government of India it will be easy to combine non-official training with administrative knowledge in a non-official Indian selected for the post.

In the above, we demur to the words "not because he is an Indian" Where general qualifications are equal an Indian should be preferred to a Britisher, *because he is an Indian and because the India Office is meant for the management of Indian affairs* Until the whole world is internationalised or, at least until throughout the British Empire only merit is taken into consideration but not race or nationality, a fully qualified national must everywhere have preference in the affairs of his country.

Sir James Meston on Democracy in an Eastern Country.

In Reuter's cabled summary of Sir James Meston's evidence before the Joint Committee we find him stating 'that the Government of India fully appreciated the gravity and magnitude of their responsibilities of creating for the first time in history a democracy in an eastern country.' What is the exact meaning of this claim of creation? Does it mean that it is the Government of India who are creating a democracy for the first time in any eastern land? That would be clearly a wrong claim. For Japan, China and the Philippines have all had for years more or less developed democracies previously created. If it is meant that it is the British Government which is establishing a democracy for the first time in the eastern land called India that also is not historically true, for even Mr Vincent A. Smith can be quoted to prove that democracies, not less developed than those of any ancient land, existed for centuries in ancient India.

And what a democracy it is which the Indian Reform Bill proposes to establish in India!

Work of India's Delegates in England.

Readers of Indian newspapers know what the different bodies of delegates are doing in England to press on the attention of Englishmen what powers over their country's affairs Indians want. It would have been of great advantage if they could have presented a united front. But it would seem as if that was not to be.

Could not the delegates agree to make their demand identical in respect of one

thing at least, namely, as regards at least the introduction of the principle of popular control over some subjects under the Government of India? In other words, in addition to provincial affairs, the principle of diarchy should be applied to all India affairs also, Indian ministers being in charge of transferred subjects, and executive councillors in charge of reserved ones, and all the subjects being transferred in a decade or two to Indian ministers responsible to the representatives of the people. If in affairs of the gravest moment to the people, touching their lives, liberties, health, and economic condition, they are to be subject to an autocracy, we do not see why they should go into raptures because, in the provinces Indian ministers may be appointed and dismissed at the pleasure of the Governor, because, their salaries are to be a matter of haggling, because, their advice may or may not be accepted by the Governor, because, the revenues are first of all to be commandeered by the Government of India and by the Provincial Governments for their reserved subjects, and only the crumbs left are to be given to the ministers for their transferred subjects, to be supplemented by fresh taxation if the provincial Governments agree to it, because, the Indian and Provincial Governments are to have full power and machinery to pass whatever laws they like and to prevent the passage of whatever laws they dislike, because, the Government of India would continue to have arbitrary power to make use of the old Regulations relating to deportation, declaration of martial law, &c., and so and so forth.

The Indian Daily News is quite right in observing,

There is no one apparently, there to get information as to precisely what is meant by the Reforms except that there is to be a so-called democracy to be driven in blinkers by the Government like the cattle. No one asks Sir James Meston whether he proposed to give the country the control of the Press Act or of the tariff or of the police or of the introduction of Martial Law at any moment, and though we know inferentially that all these subjects are to be reserved these are precisely the matters over which the mind of India has been so perturbed and the main cause of the unrest apart from the economic causes.

What we want

Both Moderates and Extremists agree in holding that in the long run India must have full self government in all provincial and all India affairs. The parties differ only as to what should be demanded now and as to the steps which should lead to complete self rule and the period which the gradual attainment of self rule should occupy. There is also another point of difference. If the kind and degree of self government proposed to be given to us for the present do not appear satisfactory to us and if the givers practically say, 'Take this or you get nothing' should we run the risk of losing the little that is offered by standing up for a substantial measure of self rule as the first instalment or should we make a very respectful salaam and say, 'Garib parwar you are very merciful.' We confess we are not adepts in the arts of political bargaining or of political begging. But our natural inclination is to demand something substantial something which will lead inevitably to full self government within a definite period. We believe that the 'Take this or you get nothing' attitude is common flage that it is not really optional for the British people to give us political liberty or withhold it from us and that if we really deserve it and mean seriously to have it we must get it. It is also our belief that whatever little may be given to us now may be used by our opponents for about a generation to prevent our getting more by these opponents continually demanding. Prove by your performance that you deserve even what you have got before you agitate for more. Therefore from this point of view it is better to have nothing than to have something inadequate something which will not irresistibly and within a definite period lead to autonomy both in the provinces and in the whole of India.

Both Moderates and Extremists have too readily agreed to exclude the Army and the Navy (which does not yet exist) from the sphere of the self government which we want. We know this readiness has sprung from a desire to prevent

and allay all suspicions of our harbouring separatist or rebellious intentions. But can Home Rule ever be a reality without the opportunity and the power of Home Defence? So long as the Indian Army is not both manned and officered mainly by Indians the taunt will be flung in our face that a people who cannot protect and defend their hearth and homes certainly do not deserve Home Rule and cannot keep it if given to them. But if we be content to exclude the Army and the Navy from the purview of our political demands how and when are we going really to nationalise the Indian Army and Navy? And what about the financial aspect of this exclusion? Out of 86 millions sterling budgetted for the current year by the Government of India 41 millions are for the Army (and 24.2 millions for railways). These items absorb 75.38 per cent of the total revenues. From the remaining 24.62 per cent we can safely challenge even a legislative assembly and ministers to whom all subjects have been transferred to adequately improve sanitation irrigation agriculture industries education and science.

Iswar Chandra Vidyasagar

On this the 29th day of July Pandit Iswar Chandra Vidyasagar breathed his last. To day we remember him with love, gratitude and reverence for all that he did and suffered for Hindu widows, for all that he tried to do for *Kula* Brahmin girls and women the victims of a polygamous system of marriage for all that he did to rouse the social conscience of the Hindu public for all that he did for famished stricken men women and children for all that he did for the education of girls for all that he did for the cause of Sanskrit and general education for all that he did for Bengali literature for the manhood that was in him and the tender heart of a woman which lay concealed within his tough exterior. It is a great pity and a shame that the most courageous and humane thing which he did in life—the re introduction and legalisation of the re marriage of child widows—continues to be looked upon with disfavour most of all in the province of his birth.

Peace Treaty Has Not Brought Peace to Europe

Though "military war" has ceased between the Allies on the one hand and the Central European powers on the other, the Peace Treaty does not contain any provisions for the prevention of economic war between them, on the contrary, some of the terms are in effect a declaration of economic war, which, when the parties are ready for it, may lead to 'military war'. This is not all. Actual fighting is still going on between different parties in Russia, in and on the borders of Poland and Rumania and Hungary, &c.

Besides this, there is disastrous class war in England and other countries, as in the coal mine areas in Yorkshire in England, resulting in the flooding of mines worth millions of pounds. Other industries have also been affected.

Where the essentials of peace are not in the heart of man, external machinery and arrangements can not bring it about.

Death of Dr T M Nair

By the death of Dr T M Nair, the "Noa Brahman Movement" of Madras loses its bulwark, and India loses a strong personality—a man who, during the greater part of his public career served her well and right manfully and who only latterly gave up to party what was meant for all his countrymen. He rendered effective service to his fellow-citizens in connection with the Madras Municipal Corporation. It is generally believed that his taking up the cudgels against Mrs. Annie Besant led her to deflect her almost unsurpassed energies to the field of Indian politics. If this belief be correct, Dr. Nair's active campaign against her produced a good result which he did not intend it produce. No sane man, no lover of humanity and of India, can approve of the virulence and hatred of Dr. Nair's anti Brahman campaign. At the same time, no far minded man can fail to observe that it is the unjust, unrighteous and inhuman character of the Hindu social system in the South which is primarily responsible for this virulent hatred. The non Brahman movement will not have been brought into existence in vain if it leads the Brahmans

and other high-caste people in the South to recognise in practice the common and equal humanity of themselves and the so-called low-caste and non caste people.

"Hindus" in America

By now several natives of India have become naturalised citizens of the United States of America. Naturalisation in a free democratic country can give our countrymen there that fullness of opportunity to show what stuff they are made of, which is denied them in their motherland. In a free country like America it is practicable, too, to speak and write the whole truth about India, which is not possible in India. For these reasons naturalisation in America ought to receive an impetus.

We are glad that the political ardour of our countrymen in America has found an outlet and an embodiment and organ in 'The Indian Home Rule League of America', and Young India Revolutionary propaganda is unwise and futile, and unrighteous, too, when it advocates murder. The mature and wise judgment of Lala Lajpat Rai could not have taken shape in any other kind of unaided political activity than a Home Rule League. In connection with the League Dr. Hardiker has been delivering lectures in many states and cities and forming branches and enlisting new members. His activity, as described in Young India the monthly organ of the League, is very praiseworthy.

Colonel Yate recently asked a question in the British House of Commons relating to Lala Lajpat Rai's so-called misrepresentation of British rule in America. True representation is as Britishers and Anglo Indians see themselves, misrepresentation is as patriotic Indians and impartial foreigners see them.

Many of our readers are writing to us to know the address of the Hindustani Association of America. It is 116 West 39th Street, New York City, U S A.

Dr. Sudhendra Bose's circular letter to the Press, printed elsewhere, suggests a duty which we owe to our country. As in many other things, so in this, the progressive Indian states, like Mysore, Baroda, Travancore &c., may take the lead.

Gwalior has been forging ahead in industrial activity. There is much to learn in America about industrial education and enterprise. Why not send a deputation there to observe enquire and report?

Mr Shafi's Appointment

As the immediate cause of Sir C Sankaran Nair's resignation was the Government's Punjab policy it is in the fitness of things that his successor has been found in Khan Bahadur Mian Muhammad Shafi whose ardent and whole-hearted admiration of and homage to O'Dwyerism found public expression in the banquet &c. given to the outgoing Punjab satrap. It does not much matter that his appointment has not been hailed with delight even by his own community and that he has never given any proof of zeal for the improvement and spread of education the subject of which he is to be in charge. He opposed Mr Gokhale's Elementary Education Bill. The surprise is not that a Shafi has been appointed but that a Sankaran Nair was appointed. Some people have observed that if according to the principle of turn and turn about a Musalman was to follow a Hindu why was not Sir Abdur Rahim appointed? But it is forgotten that that gentleman wrote a very patriotic and very just minute of dissent to the Public Service Commission Report. And Sir Ibrahim Rahimtulla and Sahebzada Aftab Ahmed Khan too were not quite safe men. Government could not take any risks.

China and Japan

Since the signature of the Peace Treaty Japan has reiterated her promise to the Allies to restore Shantung to China and only retain the economic control of the railways and the Kiaochao concession. It is believed that the Chinese delegates in Paris will eventually sign the Versailles Treaty. It is stated that the late Austrian concession at Tientsin will revert to China.

The Chinese Government is expected soon to sign the Peace Treaty after the explanation from the Peace Conference that Japan's pledge to restore Shantung to China was not given to China alone but to

all the Allies. The Japanese will withdraw troops from Shantung but will retain the economic control of railways and the peninsula. She will also receive the possession of the German concession of Kiaochao.

We are sure the Chinese are able to see through this economic camouflage. Economic dependence is not less injurious and humiliating than political dependence. And the protection of economic interests has in the history of empire-building nations not rarely furnished the occasion and excuse for military enterprises. History may repeat itself in China in this respect. And why is Kiaochao to go to Japan? China was and is an Ally. Why is she to be treated like a conquered enemy country in any matter?

Influenza and the Paucity of Doctors

The recrudescence of the influenza epidemic has led the provincial and Indian Governments to issue communiquees and suggest the taking of precautions &c. But there is no mention of the need of increasing the number of doctors. Of course it takes years to train up young men and women into doctors. But influenza is not going to disappear this very year nor is it the last and only epidemic afflicting India. Plague has been here for well nigh a quarter of a century. Influenza may follow suit. It is imperatively necessary to immediately establish a good many medical colleges and schools. But unfortunately they are not pet bureaucratic or imperialistic schemes or hobbies. So the treasury is empty.

Indians in South Africa

It is with pain and resentment that Indians have learnt that their countrymen in South Africa have again to face the necessity of another strenuous passive resistance campaign. They are about to be deprived of the trading and land-owning rights which they enjoyed even under the Boer regime. Representations made to and by the Government of India have up till now proved ineffectual—because India is not self-ruling. As the community is thus threatened with pauperisation and ultimate destruction a session of

the South African Indian Congress has been convened for the 3rd instant to confer on the taking of some concerted action. Meanwhile the Indians are signing the agreement to disregard the civil laws in South Africa as long as any law imposing any class distinction or disability upon the British Indians remains on the statute book. Our sisters and brethren there have our deepest sympathy.

We are pained to learn that in East Africa, too, attempts continue to be made to injure the trading and other interests of Indians though it is their efforts from before pre British days which have made East Africa what it is.

Famine Prices Everywhere

Famine may not have been declared everywhere but famine prices rule throughout the country. Prices were very high last year too, but this year there has been a further rise as the following figures compiled by *Commerce*, will show —

The wholesale prices of food grains and pulses in India at the middle of March 1919 increased by 63 per cent (unweighted average) according to a return issued by the Department of Statistics as compared with this time last year. The weighted average price of rice in India advanced by 60 per cent. The increase in the great rice-producing provinces was 68 per cent in Bengal 36 per cent in Bihar and Orissa 51 per cent in the Madras Presidency and 39 per cent in Burma. Among the minor provinces the rise of 78 per cent in the North West Frontier Province 73 per cent in Assam 67 per cent in the Central Provinces and Berar 64 per cent in the United Provinces and 59 per cent in the Punjab is noticeable. According to the figures that have been issued by the department for May, 1919, the wholesale prices of cereals and pulses in India at the end of that month were more by 3 per cent as compared with the previous fortnight. The price of wheat rose by 4 per cent, but there was no fluctuation in the unweighted average price of rice the weighted average showing a rise of 3 per cent. Of the inferior grains maize advanced by 10 per cent, barley by 4 per cent and jowar and bura by 1 per cent each. Gram showed a rise of 6 per cent and arhar dal 1 per cent. There was a rise of 5 per cent in raw sugar (gur) and 1 per cent in ghu, while the price of salt showed a fall of 1 per cent. The marked provincial fluctuations are an increase of 11 per cent in wheat in Bengal 13 per cent in barley in Bihar and Orissa 34 per cent in maize in Burma and 18 per cent in Bihar and Orissa 21 per cent in grain in Bengal and

15 per cent in the North West Frontier Province. On the other hand there was a noticeable fall in the price of rice in Bombay (12 per cent) and Madras (11 per cent) and in the price of salt in Bihar and Orissa (16 per cent). At the end of May 1919 wholesale prices of food grains and pulses in India advanced by 85 per cent (unweighted average) as compared with the average of the prices which ruled at the corresponding date in the last three years. The weighted average showed a rise of 97 per cent. The price of rice rose by 61 per cent. The increases in the chief rice producing areas were 70 per cent in Bengal 121 per cent in Bihar and Orissa 49 per cent in Burma and 35 per cent in the Madras Presidency. Wheat prices increased by 63 per cent. In the principal wheat growing provinces the Punjab showed a rise of 58 per cent the United Provinces 69 per cent the Central Provinces and Berar 90 per cent and Bihar and Orissa 99 per cent. The price of barley rose by 64 per cent (unweighted average) the weighted average showing a rise of 85 per cent. The noteworthy increase was in Bihar and Orissa (133 per cent) and the United Provinces (85 per cent). There was an advance of 119 per cent in the price of jowar and 116 per cent in that of bura in India. Gram prices showed a rise of 93 per cent the noticeable percentage increases being 126 in Bihar and Orissa 121 in the United Provinces 115 in Bengal and 105 in the Bombay Presidency. The price of arhar dal advanced by 89 per cent in India it rose by 187 per cent in Delhi 162 per cent in the Central Provinces and Berar 138 per cent in the United Provinces and 103 per cent in Bihar and Orissa. There was an increase of 38 per cent in the price of ghu and of 65 per cent in that of raw sugar (gur). The rise of 168 per cent in raw sugar (gur) in Sind Baluchistan is striking. The price of salt rose by 5 per cent in India although it declined in the Bombay Presidency (18 per cent) Bengal and the Madras Presidency (6 per cent) Delhi (2 per cent) and in Assam (2 per cent). The marked rise was in the North West Frontier Province 50 per cent and in the Punjab 35 per cent. Prices in the United Provinces remained unchanged.

The situation is very serious, and calls for not only temporary palliative measures, but for lasting remedies as well. First of all the causes have to be studied dispassionately, and then remedies thought of. As to the causes, non official Indian opinion is not likely to coincide with official views. Those amongst our public spirited persons famous or obscure, who are interested in economic inquiries and competent to undertake them are earnestly invited to study this vital problem. It is a question of life and death for our people.

But it is to be hoped no one will follow the example of Maharaja P K Tagore, who said at a recent conference in the British Indian Association rooms

"We have all seen, how about two months ago Col Frank Johnson at Lahore had succeeded, by virtue of the exceptional powers conferred upon him under Martial Law, in bringing down by a stroke of his pen the prices of meat, wheat, milk and even vegetables. Gentlemen if the choice lay between Martial Law and semi-starvation, I am sure the great majority of the population of this Presidency would gladly and gratefully welcome the former without a moment's hesitation."

Was it a joke or was it merely the animal in man that spoke?

A B. Patrika Security Case

Though we are not surprised, we are sorry that the bench of three High Court Judges who sat to hear the *Amrita Bazar Patrika's* appeal against the forfeiture of its security of Rs 5000, have upheld the order of forfeiture. We are not competent to call in question the correctness of their judgment from the legal point view but we have no doubt that if the law has been correctly expounded it is a bad law going against the spirit of political progressiveness. Laws should be such as would allow all speaking and writing which do not suggest or directly incite to the use of physical force against Government. There can be no effective criticism of any system of government or its officers and measures, which does not directly or indirectly produce some dislike or repulsion. What degree of dislike or repulsion may be styled contempt or hatred, it is not always easy to say.

Commendable Industrial Plans

It has given us pleasure to learn from the papers that the honorary secretaries of the Indian Industrial Conference are making efforts to extend the usefulness of that body in three important practical directions

It is intended shortly to publish a revised edition of the Directory of Indian Goods and Industries which was compiled by Messrs Mudholkar and Chintamani some years ago. A list of Indian and foreign experts who are capable of rendering assistance to the capitalists and others in starting new industries or reviving old ones is also being compiled. Thirdly, it is intended to organise a commercial museum in

Bombay to display samples of indigenous and foreign industrial products, models of machinery, raw material and art ware. About Rs 12000 only are stated to be needed to achieve the objects in view and an appeal is made to the public for help—*The Bombay Chronicle*

A Labour Meeting in Madras

Madras has been making headway in one democratic direction, leaving behind backward provinces like Bengal. When the Calcutta postmen struck in order that their grievances might be remedied, they received no help from their 'politically minded' countrymen, but on the contrary Boy Scouts and members of the Calcutta University Infantry Corps were encouraged to work as strike breakers. In Madras they do things in a different way.

Under the auspices of the Central Advisory Labour Board a public meeting was held at the Gokhale Hall to enlist public sympathy with the cause of labourers in general and with that of the labourers thrown out of employment by Messrs Addison & Co and Hoe & Co in particular.

Mr C Rajagopalachari proposed the Zaminder of Kunnammangalam to the chair and in doing so observed that it might seem curious that a Zaminder should be asked to preside over a labour meeting but it should be remembered that in this country Zaminders were near relations to workmen on the soil. The Zaminders were the feeders of the country. It was a peculiar feature of social arrangements in this country unlike in any other country, that in the midst of barriers of castes and position the greatest and best democracy prevailed.

We only call attention to the significance and the vital need of such meetings. For details one should read *New India* and the *Hindu*.

Mr Gandhi Postpones Civil Disobedience

It has often been urged in these pages that armed fights for freedom are out of the question in India. Two of the chief means recommended to be adopted for winning freedom are intellectual and moral suasion and civil disobedience. The best means is, of course to make ourselves physically, intellectually and morally equal to any class of men in the world.

There is in India no greater master of the art of civil disobedience than Mr M K Gandhi. As he thinks it necessary in the present circumstances of the country to keep civil disobedience in abeyance, to be said. Some a

Indian papers have insinuated that the warning of grave consequences conveyed to him by Government may have made him nervous. They do not know of what metal he is made. Some Indian papers have exhorted him to give up thoughts of civil disobedience for good. We think that is a futile, unnecessary, and rather paucily and officious exhortation.

Report of the Sadler Commission

The Report of the Calcutta University Commission has "leaked out." Some of its recommendations have appeared in a Madras Anglo-Indian paper, from which other papers have copied. It is greatly to be hoped that this "leakage" does not prove the unfitness of any class of men to govern themselves or any other persons.

As for the recommendations which have been published, as all the recommendations are most probably interrelated, comments on any of them had better not be made till the Report itself is before us.

Scholarships for Oriental Women at the University of Michigan

The scholarships for oriental women at the University of Michigan, U.S.A., are known as the Barbour Scholarships. They were established in June, 1917, through the generosity of the Honorable Levi L. Barbour of Detroit. The income of \$100,000 is devoted to these scholarships and the income is such that the University maintains ten scholarships of the annual value of \$500 each. (A dollar is equivalent to a little more than 4s.) Their purpose is to provide for the care, support, maintenance and schooling in the University of young women from oriental countries, including Japan, China, India, Russia, the Philippines and Turkey. No exact number is allotted to any country. Applications for these scholarships should be made in writing to the President of the University of Michigan, Ann Arbor, U.S.A. Accompanying the applications, certificates of character and certificates showing scholastic attainment and fitness for university work should be filed. The scholarships are awarded by a committee consisting of the President of the University, the Dean of the College of Literature, Science,

and the Arts, the Dean of Women, and the Dean of the Medical School. There is sharp competition for the scholarships. Many more applications are filed than can be granted. The amount of scholarship (\$500) does not include travelling expenses, "and," adds President H.B. Hutchins in his letter, from which the above particulars have been taken, "I think it advisable that one should have some money in addition to the \$500."

In a letter to the editor of this Review President H.B. Hutchins says that "these scholarships have already been awarded for the coming University year, 1919-1920." If any Indian ladies "desire to become candidates for them for the year following, 1920-21, I would suggest that they forward to the President of the University credentials showing their training and fitness for work in the University."

Danger of Leaving "Revolution" Undefined

The Mahratta has brought to notice the danger to the public of leaving the word "revolution" undefined in the Rowlatt Act. When the Rowlatt Bill "was under discussion in the Legislative Council, many a member pressed the Government to define what is called 'a revolutionary movement', but the Government refused to do it on the ground that the meaning of revolution was perfectly plain." It is rightly contended that though the dictionary meaning of "war" and "rebellion", too, are perfectly plain, yet in utter defiance of these meanings and of common sense as well, it has been held that there were rebellion and war in the Punjab and on that assumption martial law was proclaimed there and terrible sentences pronounced on many men which gave a shock to the moral sense and the sense of justice and humanity and took one's breath away. What guarantee is there that in spite of the meaning of "revolution" being plain, regions will not be officially declared to be in a state of revolution without there being any revolution there in the usual sense of the word?

THE MODERN REVIEW

A Monthly Review and Miscellany

Edited by
Ramananda Chatterjee

Vol. XXV. Numbers 1 to 6

THE TEMPLE CITIES

ALTHOUGH the impressiveness of Indian monuments comes down from their own times, and their fame is as old as travel, our actual modern knowledge of Indian Architecture, and its appreciative study, date essentially from the works of James Fergusson, who is thus among the true discoverers of India to the world, in deed in great measure to herself and he thus is only second to Sir William Jones, with his discernment of the significance of Sanskrit language, literature and learning. We may be but speculating in viewing James' essential insight as the renewal of the hard feeling and historic spirit of his ancestral Wales; but we may more certainly interpret the mental attitude which guided Fergusson, as a later fellow citizen of Robert Burns by birth, and then of Walter Scott by education. In an exposition of civics and town planning which has in so many ways set out from Edinburgh, we cannot but see how its character of striking architectural effects, upon an impressive natural scene, must have communicated to his mind much of those traditions and outlooks, historical and geographic, humanistic and scientific, which have so long made Edinburgh an educative environment, and this in far more than any merely scholastic or academic sense. As Linnaeus's ordered enthusiasm sent out a younger generation to botanise over the world, so Scott was a yet wider impulse to the brightest of his young readers, through his vivid visualisation of history, and thus largely in terms of architecture in fact, as he tells us in his biography, of the panoramic contrast of the romantic old city with the modern "New Town", the first familiar from boyish home and school surroundings, the other in contrast emphasised by daily professional walk to the courts in old Edinburgh from his neo classic mansion in the

New Town. How largely this receptive historic vision stirred up young Oxford to many-sided movements of the renewal of the past and young France, young Germany as well, has been fully recognised in the biographies of the historians of that generation, in all countries alike. And while most of these historic students, these lovers of old architecture, naturally specialised in their own countries, Ruskin discovered for himself and his readers the old beauty and deep meanings of the "Stones of Venice", while Fergusson, further travelled, thrilled in his earlier years to the "Rock Cut Temples of India" (1845), and devoted his long and fruitful life primarily towards completing his "History of Indian and Eastern Architecture" (1876), and to the due presentation of this within the "History of Architecture" (1855 onward) — a work which as the last edition of the "Britannica" puts it, "for grasp of the whole subject, comprehensiveness of plan, and thoughtful critical analysis, stands quite alone in architectural literature."

Yet after all, the best function of such encyclopedic summaries, is to furnish fresh starting points and for all countries, and India among them, writers have been busy. Some are geographically more thorough, or historically more accurate, others again more clearly trace evolution from simple origins, and others again are esthetically more appreciative.

II.

With books like all these available for reference, it is unnecessary, even were it possible, to attempt to review the great past of Indian Architecture, and though one may in a lecture, with advantage, flash upon the screen a succession of pictures chosen from all this varied magni-

ficeoce, to reproduce even a selection 10 these pages would exceed their limits, yet he far too incomplete wheo done Yet the main out line of Indian architectural evolution may be put more simply From the simple mud hut of the peasant, upon its necessary plinth with its verandah, and with its gradually added cook room and yard, its sleeping chamber, its adjacent guest room and so on—there grows up the Indian house, and even mansion, by and by even the great palace Its verandah is now raised, enlarged colonnaded, and in marble, as the Audience hall and Throne room for the Durbar of a sovereign, and the women's yard, with its tulsi plant, its single tree, now extends, through long cloistered perspectives of shady fragrant pathways and liled waters to the gloriously flowering garden courts of his queen

Here however we need not enter into detail of the stages of this evolution, nor give examples of the esthetic charm which Indian palaces so often possess For present purposes, our problem, as students of cities and their planning, is to get beyond architectural studies, as commonly understood What we need are interpretations sociological and civic, i.e. on the one hand in terms of the social life and psychology from which buildings of each type arise, and of the movements these express, and on the other of the main types of City Development which are their fullest concrete expression, and which react to their turn on the mental world of their inhabitants Thus around the palace aforesaid, arise the fort, the mansions of the noble and administrative classes, the hazaars, and notably those of the luxury industries and so on into manifold detail

III

How may we understand the development of the temple, and the Temple City?

From yet more simple beginnings than those of the Palace arise the splendours of the Indian Temple, and grow to more elaborate and more enduring magnificence We may start, for instance, here in Madras, from the storm water pool, or even the hole from which mud, for plinth and house, has been taken, or later, from these two united into one, the Tank The water settles over night to clearness and invites the morning bath Refreshed by its coolness, moved by its down reflections

womro and mao, young and old, householder or ascetic, all alike, respond, in two fold thrill of admiration and contemplation This glory of the Universe without, this ecstacy of the soul within, day after day renew and intermingle These daily inflowings and upwellings of emotions cosmic and human, not separate but interacting seek expression, and they find it in simple natural symbol—cosmic eternity to the enduring mystery of the stone—human life and love, and their passion, to the transient perfections of the flower For childhood, for meditative age, and for woman, in whose instinctive feeling and subtle intuition both extremes of development so strangely mingle, such simple symbol rituals may suffice; and so they endure But the unending, ever changing pulsation of the tides of the spirit go on, saturating all the varied phases and moods of individuality and sex, and rippling from them anew All the changing environments of nature—through its regions, from Himalayao peaks and snows, glaciers and torrents, rivers and plains to sea, through its seasons of heat and cold, of rose and drought, and through their labours, from sowing to reaping—lay each their hold upon the heart strings, their influence upon the emotions, and the changing situations of human life become stronger influences still To all these impulses the lyre of life cannot but respond, and so ways by turn passive and active, calm and creative, So the spirit sings of and to Nature, in all its forces and aspects, all their majesty and wonder, all their beauty and terror, and thus the Vedic Gods appear, now as Nature visions again as mighty personalities, yet these interchanging, and in ways untraceable—beneficent and avenging by turns

For the philosophic spirit images fade, yet ideas clarify the abstract emerges from the concrete, the general from the particular and unity from all Again this unity differentiates, into triadic unities, into intellectualised attributes and perfections, passivities and activities In time, these all become vitally and vividly imaged anew, as in the breaths of Brahma, in the dance of Shiva, in Kali, cataclysmic and destructive, yet mother of life anew Life individual, associated, collective Love through all passions simplest to highest; Death too, in all its mysteries, its fears, its hopes,—all these seek and

find expression, and this more and more protean. Religious emotions and aspirations, ideas and doctrines, thus ever develop: they find expression in new imagery, in fresh symbolism, and thus at length in Temples, to house and synthesize them, each and all.

Here then, is this rhythm of ideation and imagination in their dealings with emotional experience, which has been for so many ages pulsing in the soul of India is the origin and explanation of her varied temples and their styles, each the stage and scene work for some new canto of the unending epic of her religious evolution. In all lands religions have grown, and lived, but commonly also died here, beyond all other lands, religion is ever rising anew, in fresh metempsychoses, recurrent avatars.

IV

Coming now to that remarkable temple evolution, which is the glory of Southern India, and of its Tamil culture especially, our series of lantern slides must be omitted, or rather taken as seen, as they may practically be in any collection of photographs. For the fuller knowledge of these marvellous monuments, with which nothing since ancient Egypt can compare in magnitude, nor anything since Gothic Cathedrals in elaboration, we need a monograph, one comprehensive in range, developmental and comparative in treatment, and well illustrated above all. Combination is needed of local and of special knowledge with general research, of historical and mythological knowledge with architectural and sculptural taste, and from psychologic interpretation to skilled photography. Local knowledge like that of Mr. Subramania Aiyar for Madura Temple, critical taste like of Mr. Ganguli for sculpture, show that such qualities are available, and why not in collaboration under an able editor? In other Presidencies the Archeological Departments have been productive, but here in Madras is one of the greatest of opportunities, not simply for a volume, but rather for a series of monographs which would be widely appreciated throughout India and the world, and by architects and artists everywhere, not merely by Indian scholars. By help of the plates of such volumes, we should follow out the actual evolution of Tamil Temple building in general, and of its architecture,

sculpture and decoration, of its symbolism too, and all in due fulness of detail.

To this vision of Temples I can add no new facts: others have of course seen far more than I. I can but add my testimony to all that is most appreciative of their varied magnificence, and this seen from far or near. Even the commonest street is given, order and beauty by the simply pillared mantapam with which its vista so often terminates, or is raised to dignity, even to sublimity, when it leads up to a mighty many storied Goparam, with its manifold exuberance of sculpture, or towering dark behind its lofty central lamp-series, a light house of the night. The lofty walls running so straight and far on either side of these colossal pylon gateways, and with their plainness in perfect contrast with that enrichment, are in turn relieved by pillared palms, and their swaying crowns give life and brightness to the whole.

It is natural for the European to admire Tanjore Temple, since likest of all buildings perhaps in India to a Cathedral, with its lofty central tower and spire, and with its beautiful small temple beside giving it scale, much as St. Margaret's Church does for Westminster Abbey, indeed to my eye more harmoniously. One rejoices in the stately and spacious cloister which encloses the whole, and cannot refuse admiration to the colossal monolithic hall, who is the pride of Temple and City. But when all this is said, it is from one's visit to such a temple as that of Madura that there returns the deeper emotional impression, of architecture majestically voicing religion, and of religion inspiring architecture with its symbolic mysteries. Both are of course unfamiliar to the European, as indeed to the Indian of other provinces but neither can say that such architecture is monotonous, though at times wellnigh overpowering by its magnitude, or again by its elaboration. That in this architecture there are strange elements, as of fear and fearfulness, of terror and gloom, is true enough, and others of venous exuberance also, both expressing presumably the absorption of autochthonic cults and traditions earlier than the coming of Hinduism. Yet here is the Hindu Pantheon, from kindly Hanuman, and wise Ganesha by the gate, to great Shiva, veiled in darkness of the utmost sanctuary. And here too is carved, painted, and

modelled, the human story, from the per sonages and doings of the epics, and of legends without end

Magnitude is a mighty resource of architecture and here in Madura—where the mere Entrance Mountapam of King Tirumulu has sixty feet moonoliths for gate ways, is 333 ft long, and might cost a million sterling to build and carve today, and the Temple to which it leads covers an area which would hold four European cathedrals,—the impression of immensity is extraordinarily given. Not in the Western way (save that of the long entrance hall, itself of cathedral magnitude—by a single main perspective, with lofty roof and range of view from western door to choir and altar, and to chapels behind—) but in its own. In the open air one sees towers beyond towers enters by court beyond court to flowering garden close, and comes to spacious stair walled bathing tank with pleasant ways and painted walls around. Within the long corridors, the stupendous cloisters, the hall of a thousand columns, are each of amazing magnitude and magnificence, yet all are felt subordinate to the sacred place within, as the ancestral temple of earlier days, and so of fullest sanctity, which it has been for this later architectural profusion to enclose and to enshrine.

By some again the incredible wealth of sculpture is lightly dismissed, as 'barbaric,' or conversely, faintly praised, for "patient industry." But this again is too much to submit it to the Procrustean measures we bring from other civilisations, other conceptions of art. We better understand, and so naturally prefer, architecture and sculpture in our Northern ways, but here is a different combination of these, in which sculpture and pillar are more fully one, glyptic tecture shall we call it?—and not mere patient industry, or rather passionate. These wild threatening shapes, half heraldic, half demonic—with horse and rider, lion and dragon strangely combined, rearing in fury, repeated in nightmare, are not of course our carven tradition—yet have much of our Apocalyptic and Dantean horror, which Durer, and Orcagna, for instance, have sought to render in graphic fashion, with more variety in deed, but not more terrific effect. All religions in fact have struck these notes of feeling, even the joyous Greeks—from the Argon's flight to the Battle with Serpent

Giants around the altar of Pergamus. What wonder then to find this here in the tropic world, with all its intensification of the growth and flowering of life in its exuberance, yet ever threatened by the sudden onset and destroying spread of death?

V.

Still, to gain appreciation from brother Europeans for South India sculptures, I would not begin with these. Books like those of Mr. Ganguli, and of Dr. Conmaraswamy, give us some of the best and notably show us two forms not only supreme in Indian art, but permanent contributions to the world's iconography of ideals. One of these is of course the Buddha, throned upon the lotus, calm in meditation, and the other its perfect contrast, the dance of Shiva within his arch of flame,—surely the most vivid of all symbols yet devised, of cosmic forces controlled by creative energy. We have learned to read of late of the "El in Vital," the "Urge of Life"—but here is its expression in immemorial art.

From sculptures like these, each essentially among the world's few permanent masterpieces of divinely human imagination, (albeit often debased in execution), we may next turn to forms stranger and less attractive to Western eyes. With only our limited zoological sympathy for the elephant, Ganesha may be to us difficultly intelligible, but as we enter into that varied understanding of the great beast with which the Indian regards him, and know the tales he tells of his wisdom, faithfulness, courage, we understand better his place as symbolic guardian of the doors, as master of enterprise, helper of the future. This god's mingled animal and human form becomes less unpleasing when we recall the Indian mother's pet name of "little elephant" for her chubby and rotund babe, as he makes his early clumsy strivings to creep forth on the journey of life.

But of Hanuman, what can be said—reduced so often to the rudest of all shapes adored by mortals, and then dandied with vermilion over that? Nor is there any great edification in the tales as we are told it by our countrymen, or in their mythological dictionaries, of how this is the king of monkeys, who helped Rama to cross Adam's Bridge to Ceylon over a bridge of

tails. But if this anecdote were all, would it suffice to explain his old and widespread cult? I know not how a scholarly and reverent Hindu interprets this village god in his humble shrine but I submit to him, in all good will, this anthropological speculation. How if we have here perhaps the very oldest legend of humanity, coming down from the time when in the evolution of our species there was already the high human type of Rama, yet also surviving in that corner of India the humbler still in completely developed, and so more monkey like, type of Hanuman and his people? And that the contrasted, yet mutually understanding, leaders made peaceful co-operation instead of war? If indeed 'an honest god & the noblest work of man' even the rude adoring of this simple old tutelary spirit of nature and the primeval village might better for our souls than that self-worship as superman which in Europe has so much replaced its older and gentler theology.

True popular Indian art has grown at once conventional and rude but in Calcutta (and why not also in Madras) there are living promises, and earnestness, of its renewal.

Do I alarm any by these gentle, yet frankly defensive, interpretations of the Hindu Pantheon? I cannot see why those who respect and understand Western personifications, like the Muses like Pallas for wisdom Apollo for beauty and manhood, Hercules for heroic labour, and so on,—even if they do not know that the more we enquire into the significance of any such ideal beings, the more we are compelled to respect them and the civilisation and religion which they express—should be such intolerant literalists to the gods of coeval, and certainly not less spiritually gifted peoples. And I cannot but think that the deficiencies of our Western appreciation of Indian mythology find part of their explanation in a spiritual pride which hinders our learning its meaning, and partly in that withering of poetic imagination and creative idealism which have given every mythology its birth, and which alone can keep it living.

VI

Leaving now the Temple for the open air, and not without some feeling of relief from the varied emotional stress of a first course through its labyrinth upon a

stranger, we see standing near the gate the Temple Car, itself a veritable tower, upon colossal wheels, the carved palace of the god upon his seasonal procession. Its carving is vivid, its lions of heraldic vivacity and vigour, and with a sort of strange humour expressed from head to tail which compel one to defend it as a true and individual work of art, singularly free from mere conventionalism, into which it is ever the danger and curse of ecclesiastical art in all lands to fall.

But of all things Indian of which the West has heard unfavourably—Protestant Britain and perhaps America above all—this 'dreadful car of Jaggernath' is probably the extreme one and of course where such peculiarly unfavourable an impression has been created, and such gruesome stories told, there may well have been some foundation for them. Still, there is less danger of human self-sacrifice now a days, and accidents may be guarded against. So in my town planning discourses I cannot but defend this ceremonial of the car, as a civic institution, and a festival essentially beneficent. That to this we largely owe the fine lay-out of the main quadrangle of streets of a Temple City will not be denied, nor that this lay-out, by setting this high standard for the best streets must have helped to maintain that of other also. How much better a way of encouraging the maintenance of good roads, before the demands of motors. What better lesson of discouragement of the perpetual encroachment upon streets which is a minor (yet in aggregate a main) cause of congestion of thoroughfares? And how superior this way of at once carrying public opinion against encroachments, and summarily removing them when made to that by perpetually serving magistrates notices, with all that these involve!

I can imagine nothing more helpful to city improvement than the re-establishment of car routes by a conjunction of Temple authorities and municipal planning office, and this wherever extension or widening is really required and I have more faith in the good sense of both types of man and mind than to believe that their present mutual estrangement, by too exclusive devotion to their respective specialisms, can much longer continue. I ask nothing better than to plan streets worthy of the car being used to

inaugurate them, and to clear them too from time to time: while the collective pull, in which all citizens are encouraged to take a hand, is already an admirable form of civic education, which might readily be developed in India, and even initiated in other countries, say by American Civic Societies!

In some cities there is a Floating Car, and it may be a Water Festival to keep it company, with lantern illuminations in the evening. Instead of filling up Tanks in malaria panic as so many misguided sanitarians and municipal bodies have done, I look forward to the revival of this floating Car and Water Fete upon every considerable Tank; and this not simply as one of the most delightful and joyous forms of festival, but also as the best of ways of assuring the respect and the purifying of these beautiful and cooling waters. These great Temple Tanks and city tanks, when not neglected of course, but properly kept and laid out, are the very finest, and most beautiful, of public places and public gardens in the world. Calcutta seems one of the few Indian cities where such Tank Squares are appreciated: yet even there, there seems to be far more of filling up than of making new ones. A true combination of planning and gardening with sanitation, will however set about accomplishing this everywhere: and the present, or rather recent, panic of tank-filling will be remembered only as an unlucky dream.

We thus return once more to the City. Planning which constantly underlies all the present discussion, even where not at first sight in evidence. So let us next consider the town-plan of Madura, with its processional square of streets, and its ancient fortress walls and moat, now converted into a second series of streets. But outside these survivals of old religion and old governmental control respectively the town has lost its sense of unity and order, and begins to break down towards that congested slumdom, which is now so largely destroying it.

VII.

We need therefore to seek out some better example than Madura, some other old Temple City not yet cursed by premature industrialism, and pushed towards chaos. This good example I peculiarly find in Srirangam, a city of which I had

never heard in Europe; nor indeed in India until lately; but close beside Trichinopoly, a name well known to Europeans, by old associations, if mostly with cheroots.

As guidance offered to this city, for its own sake, and also as a needed criticism of Fergusson's less satisfactory influence and authority upon current opinion, I here cite the South Indian Railway Illustration Guide. It says of Srirangam Temple:—"This island contains one of the largest and richest temples in Southern India. This Temple can hardly be considered architecturally beautiful; and, as is too frequently the case with Dravidian Temples, is imposing simply on account of its enormous extent. It is rather a fortuitous assemblage of walls, gopurams, and mantapams, than a structure built to a well-arranged and preconceived design. In all probability the temple is the work of many Kings; and originated in the central shrine, which successive monarchs left untouched, while rivalling each other in surrounding it with halls and lofty gopurams. Be the explanation what it may, the fact remains that the architectural merit of the entire structure becomes less the closer the proximity to the central shrine. This is to be more regretted, as it must be admitted with Fergusson, that could the principle of design be reversed, Srirangam would be one of the finest temples in Southern India."

This writer appears to think that successive kings should have cleared away their predecessors' buildings. Here we see, advocated for old temples, as so commonly for old towns, clearance first. Always demolition—whereas these old fashioned Kings left the central shrine—their holy of holies—untouched.

The main point is that Fergusson has condemned this style of architecture as a failure; since to him it seems that a reversal of the temple-plan would have been the right thing. But despite all the respect previously expressed for this really eminent and initiative writer, I am here compelled to propose the reversal of Fergusson; through a re-interpretation of this Temple, not once more appreciative, and more rational also, because developmental in its own way not merely esthetic in ours. So let me state my thesis strongly in defence; not to maintain, against all comers, that here is a case of Fergusson missing the point, and failing to understand: for

Sri raagam in its own high characteristic way, of *plan* and *growth*, when we understand these as it was built to be—understood, is so far as I can discover the greatest Temple of all time, and all faiths! (I do not say all styles)

Of Course such reconsideration must be on its own merits. We must not bring to it our external foreign taste, and because it is not like Tanjore Temple, or a European Cathedral complain that it is 'a fortuitous assemblage without design'.

We have to ask 'What is this?' How did it arise? As in any science, so in any criticism, we seek to see the thing as it really is only, thereafter have we any right to consider wherein it might have been amended and improved, and this again not according to our personal and arbitrary desires but towards its own efficient purpose.

Our problem then is first of all to read its history, that is to decipher its growth and this not from books but from its actual plan, here before us, and starting from the centre outwards.

Here in ancient days there was a local shrine, central to the island and its villages. Some thoughtful teacher at one time, some saintly soul at another became an influence extending beyond the island and pilgrims began to come. A little Temple was raised to include the shrine, and its court would be inhabited by its holy man doctress with his disciples. Outside this gather more dwellings, first the huts of banyassins, but later more permanent, and increasingly of Brahmin character. Granaries are needed and arise first as round huts of the old type still common even as dwellings in Madras, and surviving as corn stores in Bengal villages, though there superseded as dwellings by rectangular plans. The whole area becomes included within a larger wall with a southward gateway—(on the third wall from centre in plan). Within the enclosure, and outside it also further developments proceed both material and spiritual, us of increasing granaries and additional shrines. Outside arise new dwellings of larger magnitude and space, in time these likewise become spiritualised in property and use, and at length transformed as well. New shrines thus appear; and here also, though probably far later, the N.E. space becomes the Hall of a Thousand Columns. The new rectangular

wall is more carefully oriented than its predecessors: three gateway Gopurams are built, the largest to the eastward. There is a now a clearer differentiation of temple and town, of sacred and secular, for a new street is kept clear all round the wall presumably as a Car Street, and with house lots opposite. These are to day of very varying breadth suggesting that those now narrow may have arisen by division. Another wall again rises to surround this clear rectangle of dwellings facing the Car Street next the Temple wall, and this is given four gateways towards the cardinal points but these comparatively small in subordination to those within and on three sides of the previous temple enclosures. But outside this a new town extension is provided. This is again a rectangular street system, parallel to the last with a fresh Car Street and now houses on either hand, and lots less deep. Evidently, with city growth caste distinctions and wealth requirements are being more emphasised. The lower and poorer castes are kept outside the larger gateways of this wall, and their houses cluster especially to the South and East but not to the less auspicious west. Note on plan how these poorer dwellings spread and sub divided from these gates on either hand, in lots of small and irregular size and with a narrow lane running obliquely N by E, from near the East Gopuram.

Finally comes the great completion by Tirumala king of builders. In the South Bazar it will be seen that existing properties were respected, as they stand mostly facing northward towards the road along the south wall. But this road is narrow, so instead of wasting compensation and upsetting business (as modern municipalities and their engineers in the industrial age, of lapsed planning, have done and still largely incline to do) the sensible course is taken, and also the more practical for business and communications more seemly also—that of making a new Bazar Street east and west, and of allocating new plots of larger size on each side, upon the land hitherto unoccupied. Some houses next the wall outside also a small temple (perhaps private, perhaps for the humbler caste hitherto outside) seem to have already sprung up on the west side. The new street northward is continued with houses on each side but on the

east, the open space next the wall suffices; and also on the north, so that new and deeper plots are kept opposite, so far as existing irregular holdings allow. This new town enclosure, as yet the final one, is thus kept in good proportion. Its rectangular wall is built, and the four great gopurams, N., S., E., and W., are now begun, of course in true alignment to their predecessors. These gateway towers are on a scale unparalleled, as their megalithic beginnings show; but they remain unfinished, like other works of Tirumala, owing to his untimely and tragic death, and as too monumental for the means and inclinations of his successors.

The same process of the Temple guiding and including its city development, is even now going on, clearly and simply, at the adjacent smaller (Shiva) Temple town, a mile or so eastwards, of which the plan is reproduced (on a larger scale) below that of Srirangam. Outside the triple temple walls (marked by dark lines,) runs the Car Street, with houses of its caste community. A great wall, with four gopurams, encloses the whole; and a secondary street surrounds this fourth wall, and is thus obviously included within the temple-system, and so far sharing its sanctity. Here then is plainly a second Srirangam, and still in progress. It is not a little interesting to find within the Temple itself, a great building activity, with carvers busy at work, at once traditional and skilled: so here, more than in any other old temple or cathedral I have seen, the old constructive spirit is still living.

Returning to Srirangam, we notice on the way that, despite minor irregularities the lay-out of fields and rural holdings shares the rectangular lay-out and orientation of these temple cities, greater and less. That is the ancient folk-way: simple ploughing and sacred building are at one; life at its simplest runs parallel to life at its highest.

It is this mode and process of growth—so essentially regular, so natural, yet so reasoned, so peculiarly defined, so monumentally organised, through zone after zone of growth in succeeding centuries—that the writer of our Railway Guide described for us at the outset (page 218) as "rather a fortuitous assemblage of walls, gopurams and mantapams, than a structure built in a well-arranged and pre-conceived design." Let it not be supposed that

this is merely the carelessness of a minor writer or a passing error of Fergusson's: broadly speaking, the guide-books of the world are still too much at this level, as regards the cities they describe: even the best of them; for the most part Baedeker and Murray themselves. Their statements of facts, catalogues and dates of buildings etc. are not complained of: it is their understanding of cities which is deficient. The idea and method above outlined is not adequately before their authors—that of reading the essential history of a city from its plan; which, in so far as showing its growth, is the essential record of its outward history, and even of its inner evolution. Hence the guide-books of the future must each be much of an anti-Baedeker, and super-Murray.

That our writer above is not without some feeling that "fortuitous" is no sense, he shows by his next sentence (q. v.) that (undeniably of course) "the architectural merit becomes less the closer the proximity to the central shrine. This is the more to be regretted, as it must be admitted with Fergusson, that could the principle of design be reversed, Srirangam would be one of the finest temples in Southern India."

In the would-be utilitarian age, nothing has been more utilitarian than its esthetics. Our writer is solely thinking of this or any other temple as a show-place; and thus essentially constructed for his people, the tourists, as indeed too much does Fergusson also. Any real comprehension of the nature, purpose and function of a temple is here absent. For that is the spiritual power-house of its folk and faith, accumulating its influence throughout the growth of ages, and expressing this as new generations set themselves to enshrine these venerable glories in more and more spacious extensions of its walls, in higher uplift and richer adornment of its advancing gates and towers, but also in more and more reverent conservation of the ancient sanctities within, small in their housing though these were: The real growth process, as Fergusson assuredly knew, and felt, when not in the mere tourist and dilettante mood cited above, is that of Egyptian temples; where the mighty pylons which all these successive gopurams so strikingly recall, and in some ways rival and even surpass, are but the impressive gateways which proclaim the sacredness of the little cell to which the whole magni-

face leads inward, and which it exists but to enshrine. So with the utmost significance of that Temple of Jerusalem which, most of all temples, has aroused the imagination and reverence of the West. This sanctity, this sublimity, was not in its golden gateways or its marble courts, wonders of the world though they have been, but in its inmost enclosure, small, jealously veiled, its Holy of Holies, because recalling the simple tabernacle tent of wanderers in the wilderness, and with its sacred chest of inscribed stones, and other relics. To imagine the inversion of such a plan is thus to lose its meaning altogether and this not only of the monument in question, but of the religious spirit it expresses, indeed of all religions, and thus necessarily of their essential architecture also.

VIII

So far, I trust, I have made good my criticisms, but I may make clearer my initial claim for Srirangam, as the very noblest of all cities in its way. Am I asked, how can a little place like this be foremost among cities in its evolution? I might answer that Athens and Jerusalem, Benares or Gaya are not remembered for their size yet this answer may seem weak, when a few, even in big Madras, have ever heard of Srirangam at all, and in the larger world hardly any.

Return even on plan, once more, through these mighty entrance gateways which announce to all comers from whatever art the ancient sanctities within, and then, as we return under their towering and heightening succession, each higher and statelier than the last—each expressing an increasing claim of their idealism upon their world—we recall the psalm of David—"Lift up your heads, ye gates!"—with fuller sense of its glory. But beyond this nobleness of architectural development, is the social genius, the civic spirit and symbolism, which in this temple beyond all others, have periodically and increasingly included the growing city itself within the extensions of its sacred walls. So here—and strictly as planning lecturer, not missionary preacher—let me remind my audience or reader that the Eastern scriptures adopted by the West, begin with the tale of the birth of humanity, and its fall, from happy rural labour in that orderly four square garden of which we still see the plan on Indian carpets, and they end with the redemption of redeemed

humanity in the ideal city. Again four-square like Srirangam, and like it, with the streets and temple at one

IX

There is manifest in the city before us the contrast between that ideal—which though no longer that of a literalist belief, all the more serves as an expression of civic evolution—and the actual present, since I am under no illusion that actual Srirangam has reached such apocalyptic perfection. Far, like other places and people, when not moving in onward direction it has been receding downwards yet why not again resume its ancient (and even comparatively recent) progress? Here then, in these days of revising town planning, of revising education also, are such suggestions as a planner may offer.

Returning then, to the everyday matters of Srirangam, we find that as sanitary improvements are needed, lanes are to be cut behind the houses along the long walls. A suburb extension is needed, and I am asked to criticise the plan—as usual, of standard quality, already sufficiently explained elsewhere. I ask, "Why abandon the tradition of your city to copy this?" I am told, "Walls are too expensive, besides, they keep out the breeze." I answer—Your main tradition is not in the walls, but in the cardinal points, to which your very fields are set. So for your suburbs and extensions, give up all idea of more walls, enough to repeat them by lines of trees—the great thing will then be to go on laying out proper avenues. Thus your new town will develop in due continuity and harmony with its city's past, and yet with the character of modern times, of the surrounding country, and of modern cities at their best as well. If this be done, city, suburb, and surrounding country will harmonise, like the three notes of a chord. But will this improvement of the plan be made? I know not. The standard plans in Indian cities are still as hard to dispose of as they were in England ten years ago. So strong is the habit of a generation, that even their municipal victims often defend them. In the rituals and temples of administration, no less than of older faiths, indeed more rapidly, custom acquires authority, and precedents are printed into power.

Thus this old city should again consciously enter upon a new zone of growth, and this in continuity and in keeping with

the plan of its admirable historic development. By all means let the prosperous classes have the pleasant suburban houses and gardens they desire; but with their new suburbs, as aforesaid, in continuous harmonies with the town; also let the poor, the humble castes, even the casteless, be provided for as well. So may little old Srirangam give a new and great example in India, of how the worst of all its modern plagues—that of slumdom, breeder of the rest—may be effectively stayed.

Again, let this city link itself up with its smaller sister to the eastward and why not also with big Trichinopoly itself, of which it may increasingly become a partner—of preponderatingly spiritual type as that of more temporal type; yet in neither city restricted.

Albeit of less advantageous business situation, Srirangam has educational advantages; above all a primary one,

the traditional atmosphere of idealism and learning. So it may here renew its lead. But "how are we to find sites and money for college building?" What so costless, what finer, what more magnificent beginnings than these for the uncompleted gopurams of the city gates? Complete then, that on the South—the main gateway—simply, yet effectively, for the traditional and sacred learning, as Sanskrit, Pali and Tamil College; with its lecture-rooms, its library in lower storeys, and its students' chambers in those above. Make that towards the North the high outlook of Astronomy, of Geographic Survey, of those of Social and Natural Science. Devote that on the West to History, local and regional, Indian and other. Then for the fourth gopuram, that towards the dawn, the right use will soon appear—the most vital of all.

PATRICK GEPPES.

REPORT OF THE INDIAN INDUSTRIAL COMMISSION

By SIR P. C. RAY.

IT is not my purpose to go in detail over the Report of the Indian Industrial Commission. I shall confine myself to a few salient points.

It is fortunate that the main object of appointing the Commission has been explained in no equivocal terms by Sir William Clark. According to the late member for Commerce and Industry, the building up of industries where the capital, control and management should be in the hands of Indians was the special object which we all have in view. He was particularly careful in pointing out that the development of Indian industries would not mean that "the manufacturer who now competes with you from a distance would transfer his activities to India and compete with you within your boundaries." His Excellency the Viceroy in his address at the Calcutta University Convocation the other day also laid particular stress upon this aspect. According to Lord Chelmsford, "We do not want mere Indian capital, we want Indian men and not Indian men only as labour but as leaders

who will turn their attention to industrial enterprise and equip themselves for a great Industrial regeneration in India."

It is thus evident that the declared policy of the Government of India is decidedly against the *exploitation* of Indian minerals and her almost inexhaustible resources of raw materials by foreigners, be they British, American, or German.

It is necessary to pause here for a moment to discuss some of the potent causes which have conspired to bring about the ruin and even extinction of the staple Indian industries. The East has been immobile, inert and conservative to the core for centuries. In a manner she was "living in peace and repose dreaming dreams or absorbed in meditations on the essence of the Supreme Being." Every village with the graduated hierarchy of the caste regulations was an ideal republic. There was the village artisan and the smith—the harber, the washerman, the priest—the landlord, the tenant-cultivator—the weaver and the small trader and so forth—each doing his allot-

ted duty. But contact with the mahile, progressive and energetic west changed all that. At barely a moment's notice India found herself confronted with a formidable rival. She must run at railway speed or be lost forever, and thus came a tremendous crash and the collapse of her industries. Here again, Nemesis overtook unhappy India. What was once an apparent source of strength now became the weak point in her armour—I mean the pernicious caste system. As I have said elsewhere—

The caste system was established *de novo* in a more rigid form. The drift of Manu and of later Puranas is in the direction of glorifying the priestly class, which set up most arrogant and outrageous pretensions. According to Sanskrit the dissection of dead bodies is a *vice qua non* to the student of surgery and this high authority lays particular stress on knowledge gained from experiment and observation. But Manu would have none of it. The very touch of a corpse according to Manu, is enough to bring contamination to the sacred person of a Brahmin. Thus we find that shortly after the time of Vagbhata, the handling of a lancet was disallowed and Anatomy and Surgery fell into disuse and became to all intents and purposes lost sciences to the Hindus. It was considered equally, and grieved to sweat away at the forge like a Cyclops. Hence the cultivation of the *Astas* by the more refined classes of Society, of which we get such vivid pictures in ancient Sanskrit literature, survives only in traditions since a very long time past.

The arts being thus relegated to the low castes and the professions made hereditary, a certain degree of fineness, delicacy, and dexterity in manipulation was no doubt secured but this was done at a terrible cost. The intellectual portion of the community being thus withdrawn from active participation in the arts, the how and why of phenomena—the coordination of cause and effect—were lost sight of—the spirit of enquiry gradually died out among a nation naturally prone to speculation and metaphysical subtleties and India for once bade adieu to experimental and inductive sciences. Her soul was rendered morally unfit for the birth of a Boyle, a Descartes, or a Newton and her very name was all but expunged from the map of the scientific world.*

That the exclusive monopoly of privileges by the higher castes ends in the long run in their moral and intellectual deterioration is almost the burden of President Wilson's campaign speeches. We can make room for only one or two short extracts:

"The nations are renewed from the bottom, not from the top; that the genius which springs up from the ranks of unknown men is the genius which renews the youth and energy of the people. A nation is as great, and only as great, as her rank and file."

Again,

"It is one of the glories of our land that nobody is able to predict from what family from what

region, from what race, even, the leaders of the country are going to come"—*The New Freedom*.

The invention of the steam engine by Watt in 1765 brought about an economic revolution from the effect of which India has suffered most, since it was followed up by or rather was contemporaneous with three successive inventions in twelve years, that of the spinning jenny in 1764 by the weaver Hargreaves, of the spinning machine in 1765 by the barber Arkwright, of the "mule" by the weaver Crompton in 1776. The mischievous and suicidal effects of the caste system now began to operate. Almost from the Vedic ages the blacksmith, the weaver and the various classes of artisans have remained much the same in this land of stagnation and torpor, they have failed to advance *pari passu* with progressive Europe and with their primitive methods had to succumb to the competition of the cutlers of Sheffield and the weavers and spinners of Lancashire, who, not having had the handicap and disadvantage of following a hereditary calling, could always recruit new blood and bring in or invent new ideas and originality. The Brahminical and other high castes have always disdained to do manual work with the result that they have been fit only for literary and clerical pursuits. No wonder that our *intelligentsia* should fail to develop a right tradition of industrialism.

The ruin and downfall of Indian industries was further hastened by the selfish policy of British statesmen, who by the imposition of prohibitive duties protected the British manufacturer and who began to look upon the vast continent as a field for the supply of raw material required by them. It is a happy sign of the times

* Cf. "It was so such a state of her industrial life that India passed under British sway and was drawn into the vortex of the whole world's international commerce and intercourse, and came to be exposed to the full force of the competition, of the highly perfected industrial organisation of Europe and America. Unprepared for such a formidable competition, and obviously unable to cope with it, she was fairly entitled to the aid of the State at least for a time during which to put herself in a proper posture of defence. But the British Government in the country did not think that their duty lay in any such direction. They did not think it right or expedient to foster by artificial aids the system of native industries and save it from its destined doom. And accordingly they not only declined to stand between us and our rivals and extend to us a helping hand in the fight, or even observe a strict impartial attitude of

* "History of Hindu Chemistry"

that both the Government and the people are now realising the critical situation we are in and have been devising means to avert the disaster in which we have been landed; but the efforts which have been hitherto made in this direction are fitful and spasmodic and no continuity in the policy is discernible. But the most fatal mistake—a mistake which now almost borders upon a political crime—has been the hostile attitude of the Government towards elementary mass education. There is a saying in Bengali that it is folly to cut at the root of a tree and at the same time to water its top branches. Thus we read: "There is no doubt a great deal of scope for improvement. The average yield for India is 98 lbs. of ginned cotton per acre; while the figures for America and Egypt are 200 lbs. and 450 lbs., respectively. The fluctuations in the field of *gaur* are equally striking. Thus in the irrigated area of the N. W. Frontier Province it is two tons per acre while in Assam it is only 0.9. The Agricultural Department of Bombay, however, by the proper application of water and manure, has secured an yield of six tons per acre. Mr. Fletcher, Imperial Entomologist, adds his valuable testimony to the effect that the annual damage by crop pests cannot be placed at less than five thousand lakhs of rupees." On this ground he advises the Government of India to follow in the wake of Canada, which has got an Entomological Service, having for its aim: first, the prevention of the introduction and spread of injurious insects; second, the investigation of insect pests affecting agriculture, horticulture, forestry, and the health of domestic animals and man; and third, the imparting of the information so obtained to those interested and concerned by means of bulletins, circulars, press notices, addresses, letters, and personal visits. For these purposes there exists at Ottawa and at the various field laboratories throughout the country a staff of men of such scientific training and ability as will

enable them to make the service of the greatest benefit to the people of Canada. Mr. Fletcher, therefore, puts in a vigorous plea for the establishment of a Central Entomological Research Institute which would cost roughly fourteen lakhs non-recurring and four and a half lakhs recurring when the scheme was in full working order.

Similarly we have already got an Agricultural Research Institute at Pusa, with all its paraphernalia of expensive machinery and the "Imperial" and "Provincial" Services.

But we always begin at the wrong end. I should be the last person to disparage the necessity for scientific research. The simple fact is, however, overlooked that our agricultural population, steeped in ignorance and illiteracy and owning only small plots and scattered holdings, are not in a position to take advantage of or utilise the elaborate scientific researches which lie entombed in the bulletins and transactions of these Institutes. Mr. Mackenna very rightly observes: "The Famine Commissioners, so long ago as 1880, expressed the view that *no general advance in the agricultural system can be expected until the rural population had been so educated as to enable them to take a practical interest in agricultural progress and reform.* These views were confirmed by the Agricultural Conference of 1888 ... The most important, and probably the soundest proposition laid down by the conference was that it was *most desirable to extend primary education amongst agricultural classes.* Such small countries as Denmark, Holland and Belgium are in a position to send immense supplies of cheese, butter, eggs, etc., to England, because the farmers there are highly advanced in general enlightenment and technical education and are thus in a position to profit by the researches of experts. The peasant proprietors of France are equally fortunate in this respect; over and above the abundant harvest of cereals they grow vine and oranges and have been highly successful in sericulture; while the silk industry in its very cradle, so to speak, namely, Murshidabad and Malda, is languishing and is in a moribund condition.

Various forms of cattle-plague, e.g., rinder-pest, foot- and mouth-disease, make havoc of our cattle every year and the ignorant masses, steeped in superstitions,

centrality and allow us to settle our account as best we could, but going further they did all they could to help the foreign competitor as against us in various ways—by adopting Free Trade measures, by making Railway extensions, by making grants of special privileges to foreign enterprises, etc.—"G. V. Joshi's Writings and Speeches—p 785

look helplessly on and ascribe the visitations to the wrath of the goddess Sitala. It is useless to din Pasteur's researches in to their ear. As I have said above, our Government has the happy knack of beginning at the wrong end. An ignorant people and a costly machinery of scientific experts ill go together.

The panacea recommended for the cure and treatment of all these ills is the foundation or reorganisation of costly bureaux and Scientific and Technical Services, the latter with the differentiation of "Imperial" and "Provincial" Services which acc in reality hot beds for breeding racial antipathies and "sedition." For the recruitment of the Scientific Services the Commissioners coolly propose that not only "senior and experienced men" should be obtained from England but that "recruits for these services—especially chemical services—should be obtained at as early an age as possible, preferably not exceeding 25 years." What lamentable ignorance the Commissioners betray and what poor conception they have of this vital question is further evident from what they say.

"We should thus secure the University graduate who had done one or perhaps two years post graduate work whether scientific or practical but would not yet be confirmed in specialisation. We assume that the requisite degree of specialisation will be secured by adopting a system whereby study leave will be granted at some suitable time after three years' service when a scientific officer should have developed a distinct bent."

In other words, secure a dark horse and wait till he develops a distinct bent! The writer of this article naturally feels a little at home on this subject and it is only necessary to cite a few instances to illustrate how under the proposed scheme Indians will fare. At the present moment there are four young Indian Doctors of Science of British universities, three belonging to that of London. Two of them only have been able to secure Government appointments but these only temporary, drawing two-thirds of his grade pay. One has already given up his post in disgust, because he could get no assurance that the post would be made permanent. In fact, both of them have

been given distinctly to understand that as soon as the war conditions are over, permanent incumbents for these posts will be recruited at "home." In filling up the posts of the so-called experts one very important factor is overlooked. As a rule only third rate men care to come out to India. The choice lies between the best brains of India and the mediocres of England, and yet the former get but scant consideration and justice. It may be urged that these gentlemen had not their cases represented at the India Office. The answer may be given in the eloquent words of the late Mr A. M. Bose:

"Not that they did not try to get appointed in England. No gentleman after taking their degrees in the great English and Scotch Universities after having won all the high distinctions—distinctions not less high than those of their English brethren in the service in some cases perhaps even higher—they tried their very best they made what I may almost describe as frantic efforts at the India Office to get an appointment from England. But all their efforts were in vain. After waiting and waiting and after heart-rending suspense they were told that they must ship themselves off as soon as they could to India for the Government to appoint them there."

The creation of so many Scientific Imperial Services means practically so many close preserves for Europeans.

There is another strong reason in favour of employing Indian agency, as has been pointed out elsewhere:

A European naturally looks to India as a land of exile and his thoughts are always turned homeward. As soon as he joins his appointment he begins to look forward to his furlough and ever during summer holidays he often runs home. Socially speaking the European lives on the spot and it is only in rare cases that he is found to mix on equal terms with his people. The result is that he fails to create any thing like an intellectual atmosphere.

Moreover the European when he retires from the service leaves India for good and all the experience which he gathered during his service of office are clean lost to the country. But the mature experiences of an Indian after retirement are always at the disposal of his countrymen—he is in fact a valuable national asset.

The case from the Indian point of view has been so ably put by Mr. Malaviya that it need not be further discussed. One painful reflection, however, oppresses the writer. That three Indian members of the Commission in their sober senses could make up their minds to affix their signatures to this portion of the Report is what surpasses his understanding. It never even

* With the notable exception of Pandit Madan Mohan Malaviya, whose Note is really the most important portion of the Report. All honour to his patriotic son of India.

* Vide Memorandum submitted before the Public Serv. Com. on by Dr. P. C. Ray—*Essays and Discourses* p. 168.

deedly occurred to them that they were committing themselves to the scientific suicide of India.

The Indianisation of the Scientific Services has become a paramount necessity, not only because it would afford scope for the play of the Indian brain, but also in the interests of economy itself. The claims of the dumb millions, who after all are the real tax-payers, have hitherto been systematically ignored. The primary education bill of Gokhale was shelved because of the prohibitive expenditure it would have involved. On similar grounds sanitation and drainage schemes are postponed to the Greek calends. The revenues of India are of an inelastic nature. If we are to find money for these crying needs it must be done by the utilisation of indigenous agency. When the Reform Scheme is given effect to, a large number of Indian members will naturally occupy places both in the Provincial and Imperial Executive Councils. If, however, the present princely and exorbitant scale of pay were to be retained all along the line, the result would be simply ruinous. The poor ryot would then be justified in saying that what his educated and favoured compatriot was clamouring for was not so much the welfare of the land as the division of the spoils—the share of the loaves and fishes.

The most essential and vital aspect of the Industrial Commission must not be overlooked. The policy to which the Government of India is committed is foreshadowed in the following extract from Lord Hardinge's Despatch to the Secretary of State, dated the 26th November, 1915:

"It is becoming increasingly clear that a definite and self-conscious policy of improving the industrial capabilities of India will have to be pursued after the war, unless she is to become more and more a dumping ground for the manufactures of foreign nations who will be competing the more keenly for markets, the more it becomes apparent that the political future of the large nations depends on their economic position. The attitude of the Indian public towards this important question is unanimous and cannot be left out of account. Manufacturers, politicians and the literate public have for long been pressing their demands for a definite and accepted policy of State aid to Indian industries; and the demand is one which evokes the sympathy of all classes of Indians whose position or intelligence leads them to take any degree of interest in such matters. After the war India will consider herself entitled to demand the utmost help which her Government can afford to contribute to take her place, so far as circumstances permit, as a manufacturing country."

The after-war problems have now to be

tackled, but a most serious situation now arises owing to the unpreparedness of India. The war has proved to be a veritable God-send to Japan and she has taken the fullest advantage of the psychological moment. Japanese goods have flooded the Indian market. In our utter helplessness we have only to be passive on-lookers and realise our absolute dependence upon foreign countries for the supply of manufactured articles and finished products most of which could be easily prepared at home; but here a most difficult and delicate problem has to be grappled with. Indications are not wanting which go to show which way the wind is blowing. Already some powerful British companies have been started or promoted, with huge capital and gigantic resources at their back, and every patriotic Indian who has learned to think for himself is naturally filled with dismay and consternation. Within the last few years, in and about Calcutta, a few *Swadeshi* industries have sprung up, which after gasping for breath in the infant stage have arrived at the period of adolescence. But their very existence is now at stake and in fact they are threatened with extinction. Remember, again, these indigenous enterprises never sought the help of any special legislation nor asked for or obtained any pecuniary help from the State. To mention only one instance. "Messrs. Cooper and Allen started the Government Boot and Army Equipment Factory and, at the outset, they received a considerable amount of financial assistance from Government." (Indian Industrial Commission's Report, Appendices, p. 56.) The italics are ours. In marked contrast with it the *National Tannery* of Sir Nilratan Sircar may be mentioned. This noble and patriotic son of Bengal has not only devoted his valuable time and energy but has also risked his fortune for the cause. It is urged that it is one of the redeeming characteristics of the British Government that it grants equal opportunities and facilities to all and in such matters it holds the scale of justice even. This is true, but only in a qualified sense. It is notorious that the poor ryot when he finds himself pitted against his wealthy zamindar is simply ruined. The former is harassed from one law-court to another and whereas he can barely secure the services of a petty *mukhtar*, his formidable opponent

can engage counsel at a fee of Rs 1,000 per diem, if necessary. This is justice and fairplay with a vengeance! We are threatened with this kind of warfare in the industrial world. The British and American capitalists with their centuries of experience, marvellous powers of organisation and so operation and elaborate machinery, and almost unlimited command of capital, have already appeared on the scene and their Indian competitors will naturally go to the wall. President Wilson has sounded the note of alarm in his own country in no uncertain voice. 'To-day if a man enters certain fields, says he there are organisations which will be means against him that will prevent his building up a business which they do not want to have built up organisations that will see to it that the ground is cut from under him and the markets shut against him. American enterprise is not free, the man with only a little capital is finding it harder to get into the field and more and more impossible to compete with the big fellow. Why? Because the laws of this country do not prevent the strong from crushing the weak.' If this is the state of things when the competition is American vs American we can easily gather how the Indian will fare in his competition with the American and British syndicates and combines and trusts. Let me adduce a concrete specific instance to illustrate my point. Twelve years ago a small venture was undertaken which was purely of the nature of a pioneering demonstration experiment. A company was floated to enable our struggling and starving young men to have an opportunity of taking part in inland navigation. A steam launch was purchased and it began to ply in a narrow river the upper regions of which are getting silted up. As soon as it was discovered that the business was not paying one a powerful British company sent a couple of big steamers and reduced the original fare of one rupee from terminus to terminus to one anna so that the Swadeshi company might be crushed out of existence. As the latter had still the hardihood to persist in this desperate game the former sent an additional steamer and the fiat went forth *defenda est Carthago*. Thanks to the self-sacrificing zeal and patriotism of a medical practi-

tioner and a local reminder, the Swadeshi company somehow or other manages still to strive. It is not, however necessary to state here to what extent it has been affected financially all this time or to pause to inquire by how much the present writer, a 'patron' of the undertaking poor school master as he is suffered in pocket. Yet the Industrial Commission Report expresses the pious hope that 'there is no reason why India should not be ready to man her own ships when they are built.'

Even when a Swadeshi concern is once started after overcoming immense difficulties in the initial stages serious obstacles have to be encountered in the matter of marketing the products or the output of its factory. The damaging evidence of Mr. Adamee Peerbhoy of Bombay which for obvious reasons the President of the Commission wanted to be heard *in camera* but which has leaked out goes to prove what is, however, notorious that the Heads of the big purchasing departments show but scant consideration to the claims of Indians when there are British competitors in the field—it is but natural that they should fraternise with their own countrymen. The excellent intentions of the Government as embodied in Resolutions with sonorous periods get whittled down to precious little in filtering through the official strata.

One of the most important factors in the development of the resources of India is that relating to the working of her vast and in many cases untapped mineral wealth. The Report lays down elaborate suggestions as regards concessions and the acquisition of mineral rights and so forth but is ominously silent on the most important point. Indians are hopelessly backward in industrial matters—they are far behind Europe and America in the modern metallurgical and technical education—they are lacking in co-operation and power of organisation, but that is no reason why the fullest advantage should be taken of their helplessness by foreign exploiters. The fact is overlooked that England holds India as a trustee and guardian and in a future age she will be called upon to render an account of her stewardship.

Our benign Government has already accepted in principle the imperative necessity of protecting the weak ignorant and backward.

pettifogging sharpers and dishonest sow cars, e.g., by enacting the Encumbered Estates Act. The object evidently was to prevent their being sold out of their patrimony. Some such Act is urgently required for safeguarding our national patrimony.

After all, India is progressing and waking up and if her sons to-day are unable to work her own mines, their children or children's children will be able to do so. If in the meantime all the mining rights and concessions in Burma, and Assam and other provinces of India proper are leased out to foreign exploiters nothing will be left for six future generations. The late Mr Gokhale often used to tell the present writer that the greatest injury which the British Government is inflicting upon this unhappy land—an injury which is beyond her powers of recuperation—is the slow but continuous exhaustion of her mineral wealth. As the *Statesman* put this point with great clearness.

"In the case of the mining industry for instance, it is the development of the country's resources by English Capitalism and not merely that the children of the soil must be content for the time being with the hired labourer's share of the wealth extracted but that the exportation of the remainder involves a loss which can never be repaired. Though the blame largely rests with them we can well understand the jealousy with which the people of the country regard the exhaustion mainly for the benefit of the foreign capitalist of wealth which can never as in the case of agricultural produce be reproduced. It is in short no mere foolish delusion but an unquestionable economic truth that every ounce of gold that leaves the country so far as it is represented by no economic return, and a large percentage of the gold extracted by foreign capitalists is represented by no such return, implies permanent loss."

As we said in a previous article the exploitation of the mineral resources of the country by the foreign capitalist stands on a different footing for in this case the wealth extracted is not reproduced and on the not unreasonable assumption that it would sooner or later have been exploited with Indian capital may unquestionably be said to deprive the people of the country for all time, of a corresponding opportunity of profit.

vide G. V. Joshi's Writings and Speeches "pp 534-55

The future historian of India will have to write a dismal chapter indicating that when her people at last woke up they found all the wealth in the bowels of the earth carried away by foreign exploiters and only empty dark caverns and subterranean vaults and passages left behind. It is not necessary to proceed further. The future of industrial India is gloomy

indeed. Happily there is a silver lining in the dark cloud.

Sir W. Clark, as we have already seen, fully alive to the danger of the situation, was careful to point out that industrial progress did not "merely mean that the manufacturer who now competes with you from a distance would transfer his activities to India and compete with you within your boundaries," and successive Governors General have given distinct pledges that every effort will be made to enable Indians to have a fresh start. The task will be a tremendously difficult one in view of the clamorous opposition of powerful interested parties. A Viceroy of India, close upon half a century ago, in his attempt to do justice to the people entrusted to his care, was confronted with the determined hostility of his countrymen out here and in his bitter anguish exclaimed "Millions [out of the revenues of India] have been spent on the conquering race, which might have been spent in enriching and elevating the children of the soil. It is impossible, unless we spend less on "interests"—and more on the people. The welfare of the people of India is our primary object. If we are not here for their good, we should not be here at all." Noble words, nobly uttered.

President Wilson in commending the League of Nations' covenant for acceptance observes "We are done with annexations of helpless people. In all cases of this sort it shall be the duty of the League to see that nations assigned as tutors, advisers and directors of those peoples shall look to their interest and development before the interests and material desires of the mandatory nation itself. Under their tutelage the helpless peoples of the world will come into a new light and a new hope." If, however, the exploitation of India goes on at this rate, England will be giving the lie direct to the noble ideal and aspirations breathed above. Recent events have, however, shown that British statesmanship can take courage in one hand and justice in the other, it is to be hoped it will prove equal to the occasion.

Postscript—Since the above was in type, I have learned with sorrow that one of the three principal Swadeshi industrial concerns of Calcutta, which

was hitherto regarded as a pride of Bengal is threatened with extinction so far as its swadeshi character is concerned. I mean the Calcutta Pottery Works. It is not necessary here to recount with what zeal sacrifice and singleness of purpose combined with expert knowledge Mr Satyasundar Dev helped the undertaking and made it a successful concern. In fact it might be said that the very cement of its kilns and furnaces represents the life blood of Mr Dev. A powerful British company partly with threats of overwhelming competition and partly with the offer of a rich bait has succeeded in practically buying it out. I understand the negotiations have been already completed. This regrettable affair

is a sad commentary and reflection on the intelligence and patriotism of Maharaja Sir Niamindra Chandra Nundy Bahadur and Rai Baikunthanath Sen Bahadur the proprietors of the factory who are both wealthy men. Alas! Even such men could be prevailed upon to part with their heritage for a handful of silver.

The fate of the other two concerns referred to above is also trembling in the balance. If this is an earnest of what bids fair to become of a self contained India she will soon be reduced to the position of a human cattle farm and a plantation with her people as coolie and Babu labourers and the Industrial Commission had better be called for Foreign Exploitation Commission.

A NOTE ON THE HISTORY AND ANTIQUITIES OF BISHNUPUR

THE chronology of the Bishnupur dynasty hears the name of 57 kings who have swayed the destinies of the principality for more than ten centuries.

The ancient Rajas of Bishnupur trace back their history to a time when Hindus were still reigning in Delhi and the name of Mussalmans was not yet heard of in India. Indeed they could already count five centuries of rule over the western frontier tracts of Bengal before Bakhtiyar Khilji wrested that province from the Hindus. The Mussalman conquest of Bengal however made no difference to the Bishnupur princes. (R. C. Dutt) Towards the close of the sixteenth century the suzerainty of the Muhammadan Viceroys of Bengal was for the first time acknowledged by the Bishnupur Raj and an annual tribute of Rs 1,07,000 was promised but the tribute does not appear to have been regularly paid the Rajas being treated more as Wardens of the Marches and allies than as subjects. Muhammadan historians record that when Nurshid Kuli Khan introduced a more centralised form of government in 1707 S. A. D. the Raja of Bishnupur was exempted from his rigid regulations. The freedom of Bishnupur from Moslem influence may still be traced

in the fact that only about 5-6 per cent of the people of the district at present follow

Madan Gopal Temple

Shyam Roy Temple

the religion of the Prophet and Brahmins form a very large percentage of the population numbering about a lakh coming in point of population next after the aboriginal Bairs and Santhals. Hindu music and Hindu architecture as well as Hindu religion (of the Vaishnavite form) found munificent patrons in the Rajas and though the architectural glories of Bishnupur only excite the admiration of archaeologists now the place still retains its supremacy in the vocal art. *Jadu Bhatta* is the most famous name among Bishnupur musicians. *Babu Gopewar Bannerjee* author of several books on music is the best known of the living musicians of Bishnupur. Only once in the beginning of the eighteenth century was Hinduism seriously threatened in the reign of *Raghunath Singh II* when infuriated by the wives of a Muhammadan mistress named *Lali Bai* who was brought in the train of *Sobha Singh's* daughter whom *Raghunath Singh* married after defeating *Sobha Singh* who was the notorious but brilliant chieftain of *Chetua Barda* in *Minapur* and overran *Burdwan* and unsuccessfully attacked *Bishnupur* *Raghunath Singh* was about to

embrace Islam with his whole Court but the senior Queen with the advice and approval of his ministers, sanctioned the murder of the Raja by his younger brother *Gopal Singh* who then ascended the throne and saved the kingdom for the religion of his forefathers.

The Rajas of Bishnupur were at first *Sivas* or worshippers of the god *Siva*, and this is attested by two temples one called *Shandeswar* about five miles away from the civil station erected by Raja *Prithwi Malla* in 1335 A.D. being the oldest temple extant in these parts, and the other named *Mailleswar* in the heart of the town erected nearly three centuries later in 1622 A.D. In the palmy days of their power and prosperity the Rajas were however followers of the *Vaishnav* cult, and the city of Bishnupur itself came to be known as "Veiled Brindaban" and names derived from *Vaishnav* mythology were given to the embanked lakes known as *Bandhs* in and about the town, and also to several of the surrounding villages. Modern research has discovered a larger number of *Vaishnav* manuscripts in this

Kalachand Temple.

Dalnadal Cannon

sub-division than in any similar area in Bengal. From a slip attached to the manuscript of the recently discovered 'Srikrishna Kirtan' of the famous poet Chandidas which has caused such a stir in literary circles it appears that it was preserved with unusual care in the Library of the Rajs of Bishnupur more than two centuries and a half ago. All the temples save the two named above are dedicated to one or other of the forms of Vishna, the great Bengali apostle of Vaishnavism, Sri Chaitanyan being among the number.

In the days of its greatest expansion the kingdom of Bishnupur included almost all the neighbouring districts and was known by the name of Mallabhum, i.e. the country of the Mallis or wrestlers. Malnapore is said to have been named after Medini Malli, first cousin of Adi Malli, the founder of the Raj. Kharagpur owes its origin to Kharga Malla who reigned between 841 and 883 A.D., and the name of Bankura has been traced to Binku Kiri, the youngest son of King Hambir, a contemporary of Akbar. Murni Misra, author of the Sanskrit drama *Isarajyoti*, which is freely quoted from in that standard work on Rhetoric, the *Sahitya Darpan* (Kamas), Pandit the author of the *Sakra Parana* which is devoted to the propagation of the worship of Buddha in the guise of Dharmas and is one of the earliest specimens of genuine Bengali literature extant and Subhankara the anthracite, whose system of reckoning is still memorised by Bengali schoolboys flourished in this kingdom and later Vaishnav literature makes frequent mention of the only independent Hindu kingdom in Bengal

where Vaishnavism was accepted as the State religion.

The Army was organised on a feudal basis and was maintained by grants of land known collectively as the *Senapati Uchal*. A comprehensive system of military police prevailed known under the names of *Ghatwals*, *Sadwals*, *Simandars*, &c. who held service tenures under a quit rent known as *Panchak* and whose duties included the prevention of robberies, the

Stone Gate.

Madanmohan Temple.

maintenance of boundaries, and the preservation of peace and order. Justice was administered in the villages by the *Patradharis*, i. e., those who were appointed under a *patra* or royal charter, and also by *Mukhyas* or headmen. The king in council, assisted by learned Court Pandits, forming the highest court of appeal. The unqualified eulogium bestowed by competent foreign observers on the simple yet efficient system of administration prevailing in Bishnupur proves that the government was suited to the needs of the unsophisticated people among whom the Rajas held sway.

The founder of the dynasty, Gopal, better known as Adi Malla, settled at Laugram, off Police Station Kotalpur.

Many curious legends testify to his Kshattriya origio, and although his descendants called themselves Mallas for many centuries, they later on assumed the Kshattriya title of Singh. Mallas are called Vratyas in the Code of Manu, and classed with Dravidians. "The fact that the Rajas of Bishnupur called themselves Mallas (an aboriginal title) for many centuries before they assumed the Kshattriya title of Singh, the fact that down to the present day they are known as Bagdi Rajas all over Beagal, as well as numerous local facts and circumstances—all go to prove that the Rajas of Bishnupur are Kshattriyas, because of their long independence and their past history, but not by descent. The story of descent is legendary, but the Kshattriyas of Bishnupur can show the same letters-patent for their Kshattriyahood as the Rajputs of Northern India or the original Kshattriyas of India could show, viz., military profession and the exercise of royal powers for centuries." (R. C. Dutt.)

Adi Malla was crowned in 695 A. D. corresponding to the first year of the current Bengali Era by 101 years. He defeated the chief of Pradyumnapur (off Police Station Jaypur) and following an ancient Hindu custom, celebrated the coronation ceremony by worshipping the flag of Indra, the Jupiter of the Hindu Pantheon—a custom which prevails to this day at Bishnupur, the occasion being marked by large festive gatherings of Santhals, with whose aid Adi Malla is said to have vanquished his adversary. He was followed, down to the middle of the sixteenth century, by forty-eight rulers in succession who were engaged in waging constant warfare with the neighbouring chiefs and in extending and consolidating their dominions. The capital is said to

have been removed to Bishnupur by Jagat Malla the nineteenth king of the dynasty, about the middle of the eleventh century.

With Hambir we take leave of the more or less legendary accounts and enter into what may be termed the historical period for he was the first king to be mentioned by the Muhammadan historians. He gained the title of Bir or Hero by defeating the Pathans in alliance with the Moguls. A moat outside the outermost line of fortifications about a mile from the present civil station known as the Ford of Skulls preserves the memory of the bloody encounter. When the Mogul Viceroy Nizam Singh invaded Orissa his son Jagat Singh was detached to check the Afghan Commander Kutlu Khan but was put to flight and rescued by Bir Hambir and brought to Bishnupur. The fort received its last embellishment in the reign of this king and guns were mounted on its walls and the fine large stone gateway of the citadel was built by him. But an unexpected incident put a sudden stop to his military career and turned

him into a gentle and devout Vaishnav. The Vaishnav works relate that the celebrated Sriivas Acharya on his way from Brindaban to Gour with valuable Manuscripts was robbed near Bishnupur by Bir Hambir's men but he so moved the Raja by his exposition of the Bhagavata Purana that the latter forthwith became a convert and even composed two well known songs which have been preserved in Vaishnavite collections. His successor Raghunath Singh I (1627-57) first gained the title of Singh as he was going to the house of his religious

Radha Shyam Temple

Ras Mancha

Jore Bangla

at Jajgram he was arrested by the Kazi of Burdwan for arrears of revenue and sent to Rajmehal where the Viceroy Prince Suja being pleased with his exquisite horsemanship granted him the title of Singh (Lion) which is the title the dynasty has borne ever since Raghunath built some of the best known temples and by this time Bishnupur seems to have risen considerably in importance being described by local chroniclers as rivaling the city of Indra in beauty and containing theatres barracks stables storehouses armouries and a treasury. But with the introduction of the arts of peace the military glory of the principality began to decline.

Bir Singh succeeded his father Raghunath. He was a crueling but kept the subordinate chiefs in order and excavated the lakes or Bandhs of which the Jamuna Bandh near the Railway Station and the Lal Bandh outside the fort are in the best state of preservation. He further added to the beauty of the town by building temples, which had now become the fashion with every succeeding ruler or his queen. It must be said to their credit that though they lavished all the resources of the State in adorning these places of worship they took little care to build a suitable palace for themselves and the contrast cannot fail to strike the most casual visitor to the ruins.

The end of the seventeenth century left

the Bishnupur Rajas at the summit of their fortunes. Gopal Singh (1730-45) was a pious prince and he issued an edict that all his people should count their beads and repeat the name of the god every evening at sunset. This evening prayer owing to its compulsory character was not very popular and is still known by the name of *Gopal Singh Begar*. In his reign, when Ali Vardi Khan was the Viceroy of Bengal the Marathas under Bhaskar Pundit appeared before the gates of Bishnupur and encamped in the portion of the town occupied by the subdivisional offices which still goes by the name of *Marathan Chhauri*.

Gopal Singh retreated inside the fort and ordered both citizens and soldiers to offer prayers to the presiding deity Madan Mohan to save the city. The prayer was heard and the legend relates that the guns were fired without human assistance by the god himself. The Marathas being unable to pierce the strong fortifications retired but mercilessly ravaged the surrounding country as graphically described in the *Riaz us-Salat*.

The last of the Rajas of Bishnupur was Chaitanya Singh who true to his name, was a devout Vaishnav of retiring disposition and therefore unfit to hold the reins of government during the troublous times which followed in his reign which commenced in 1752. The Marathas again appeared and made Bishnupur their headquarters during the invasion of Shah Alum whom they assisted. They retired when Nawab Mir Jaffer supported by a British force under Major Calliaud advanced to meet them but left a small force at Bishnupur which was turned out by the British at the end of the year (1760 A.D.). The country was impoverished by these successive raids and in 1770 it was desolated by famine. Bankura was ceded to the British as part of the Burdwan Chakla in 1760 and Chaitanya Singh was reduced from the position of a tributary prince to that of a mere Zemindar. To add to his miseries a rival claimant appeared in the

person of his cousin Govinda Singh and litigation in the British Courts now took the place of the pitched battles of yore, and brought him to the verge of ruin. The Raja was imprisoned for arrears of landtax and Mr Keating was appointed Collector, but the inhabitants supported by the Collector's head assistant, made common cause with the hillmen to oppose the Government and were not brought under control without some difficulty (1790 A D). The disorders in Bishnupur would 'says Sir William Hunter, 'in any less troubled time have been called rebellion'. This attempt to throw off the British yoke has been described by a learned local historian as 'the last flicker of the military spirit.

It is said that Chaitanya Singh went to Calcutta to lay his case before the British Courts with the family idol Madan Mohan first established by Bir Hambir and pawned it to Gokul Mitra of Bag Bazar. As how ever he was unable to repay the loan the god was set up at Bag Bazar where it is worshipped to this day and the temple of Madan Mohan at Bishnupur has remained empty ever since. The removal of the presiding deity of the Raj symbolised its downfall in the popular mind and many pathetic ballads commemorating the incident are sung by local bards. Lord Clive finding the system of primogeniture prevalent in the Raj had confirmed Chaitanya Singh in possession and the Sadar Dewany Adalat also decided in his favour but soon after the Raj was resumed by Government for arrears of revenue. At the decennial

Rajas and Temple

settlement of Lord Cornwallis the Raja was reinstated on his engaging to pay the exorbitant revenue of four lakhs of sicca rupees and eventually in 1806 the estate was again sold for arrears of land revenue and bought up by the Maharaja of Burdwan. The family has since been dependent upon small pensions granted by Government and upon what little debutter property they had. The title died with Raja Ramkrishna Singh. The descendants of Chaitanya Singh are to be found at Bishnupur and also at Indas and Kuchiakole. Though the Raj is no more the leading representatives of the family are still popularly called Rajas and Ranas as the case may be and are treated with great respect by the people.

BISHNUPUR,

(To be concluded)

SOCIAL WORK IN THE AMERICAN ARMY CANTONMENT

By SUDHINDRA BOSE M.A. PH.D.

LECTURER IN POLITICAL SCIENCE STATE UNIVERSITY OF IOWA

NOT long ago I visited one of the largest American military camps (cantonments) for the training of soldiers. As an American citizen I expected the

drilling and marching of soldiers in olive drab khaki the exhibition of the manual of arms and the digging of trenches to inspire a patriotic thrill. In this I was

not disappointed; but what challenged my interest most and aroused my keenest admiration, more than the martial novelty of this military establishment, was the workings of the forces of socialization. To me the Y M C A and Knights of Columbus buildings, the library, the theatre, the soldiers' co-operative store, and the hostess house were far more inspiring than all the rifles, cannon, grenades, bomb throwers and machine guns.

TRAINING CAMP COMMISSIONS

The men in uniform have left their homes and friends, clubs and college societies, dances and theatres. They have entered upon a strange experience in which everything is secondary to the necessity of making an efficient fighting force—an experience in which they are cut off from the normal relations of life. In order partially to remedy this evil, to create a normal environment, to promote social and recreational work in the army and navy, the War Department and Navy Department have appointed Commissions on Training Camp Activities. The task of these Commissions 'is to re-establish as far as possible the old social ties—to furnish these youngmen a substitute for recreational and relaxation opportunities to which they have been accustomed—in brief, to rationalize us far as it can be done, the bewildering environment of a war camp.' The Commissions have not created much new machinery; they have for the most part employed agencies which were already in operation. Inside the cantonment social activities are directed by such organizations as the Young Men's Christian Association, the Knights of Columbus, the American Library Association, the Young Women's Christian Association.

YOUNG MEN'S CHRISTIAN ASSOCIATION

The Young Men's Christian Association which works in close co-operation with the Commissions on Training Camp Activities carries on its educational, religious and recreational activities in its own buildings in the cantonment. The visitor to one of these buildings can see at any night something of interest always going on. There are musical entertainments, moving pictures and lectures. There are also classes in French, English, history, government and mathematics.

Besides one can find a special room supplied with newspapers, magazines, books, pens, ink, pencils, stationery—all free. Letter writing is one of the most favorite occupations of the soldiers in the 'Y' building. Such legends as, "Write Home", "Mothers' Letter First", are found on every wall. It has been estimated that soldiers and sailors write a million letters a day on Y M C A stationery.

Activities similar to those of Young Men's Christian Association are also provided for by the Lutheran Brotherhood and the Knights of Columbus. Although this brotherhood is intended to look after Lutheran Christians and Knights of Columbus after Catholic Christians, the facilities of both of these organizations, as well as those of Y M C A, are accessible to all soldiers without reference to their religious creeds. The meetings of every one of these societies are open to all men in uniform whether Protestants, Catholics, or Jews. "No meetings are held in any of these buildings", writes Mr. Raymond B. Fosdick, Chairman of the War Department Commission on Training Camp Activities, "to which all the troops in camp are not invited, regardless of religious or other preferences. Indeed, the admission of such organizations to the camps was on the express condition that their activities must not be limited to any particular constituency, and from the first there has been a broad spirit of co-operation among them."

EDUCATIONAL WORK

The Training Camp Commission has appointed a committee on education to look after the educational interests of the men. In the camp there are many foreign born Americans who can neither read, write, nor speak English. For them, as well as for those native born Americans who have had no schooling, classes in English have been organized. The study of French is immensely popular, and so, conversational French is given to officers and enlisted men in hundreds of French classes. But education in the cantonment proceeds beyond elementary English and French. Instruction is also given in such subjects as clerical work, shorthand, type writing, telephony, telegraphy, engineering, animal husbandry, and German. There are in addition many regular university courses which make it possible for college

and university youths to carry on their studies while training for military service

THE LIBRARY.

The task of finding reading matter for the soldiers and sailors has been under taken by the American Library Association. This society has perfected an organization which virtually ensures a good book within the reach of every fighting man. "We will get for you any book in print if you will ask for it," is the challenge of the army library. The aims of the American Library Association are, first, that librarians and library facilities be available for soldiers and sailors wherever assembled, second, that the libraries be maintained in such a way that not only will reading matter be available for the large number of soldiers, but that every possible encouragement and stimulus shall be given to reading by the men in the service of the country.

A special library building is found near the centre of each cantonment. The library is in charge of trained librarians, and the building is open every day of the week from ten in the morning to nine in the evening. Books are kept on shelves which are free and easily accessible to all. They can be taken out by the borrower himself for seven days by the simple expedient of leaving a memorandum at the loan desk, a purely 'honor system'.

In addition to the central library, there are also branch libraries in the base hospital and in the Knights of Columbus and Y M C A buildings. Furthermore, there are in mess rooms and in the barracks deposit stations which contain from fifty to a hundred volumes.

The books that are most in demand are of fiction, but I have been informed that works on science, history, government, biography, travel, philosophy, and religion are also read in large numbers.

RECREATIVE ATHLETICS

It is not an easy life that the soldiers live in a camp, for the army is run on Spartan lines. The discipline is strict. Soldiers must do what they are ordered, and when they are ordered. Excuses do not go. Their days are pretty fully occupied.

Camps are camps and soldiers are soldiers.

And yet and yet

30½-4

Soldiers have their fun they have their hours of leisure. They are generally free from five thirty in the evening till taps or 'lights out'. Moreover, the regular routine of military training is suspended on Wednesday and Saturday afternoons, and all day Sundays. This leaves the soldiers a considerable margin of leisure on their hands. The question then arises as to how the opportunities which the leisure brings may be improved. For one thing, men are encouraged to participate in some form of athletics during their leisure time. They play baseball, football, soccer, and basketball. They also take part in field and track athletics.

Great stress is laid on boxing because of its close connection with bayonet fighting. "Boxing instructors have been appointed in nearly every large camp, and they have trained groups of men to assist them. In many camps from two hundred to four hundred of these assistant instructors have been developed and are giving lessons. Frequent contests are held, and to standardize the instruction and to give the men a better idea of the work, moving pictures have been made to demonstrate the fundamental principles of boxing and the elements of bayonet practice. Nearly every blow and position in boxing has its counterpart in bayoneting. Sometimes boxing lessons are given to a thousand men at one time by these moving pictures which are explained by a man on a high stand."

The athletic work in the camp is placed under directors who are regarded as important functionaries with military rank.

It is true that athletics are primarily intended to develop the fighting instinct and the technique of fighting. Nevertheless, they are not without recreational value. They divert the attention of training soldiers from the continuous round of military discipline to wholesome sports.

THE LIBERTY THEATRE

An up-to-date theatre, called the Liberty Theatre, is provided by the government in each of the army camps. It has a local manager who is responsible for its use. Plays of the very best type by the professional theatrical companies are presented in this theatre. There is also a dramatic coach to search out and develop the dramatic talent from among the soldiers themselves. The "home talent"

production invariably makes a hit with the soldier boys. A very very low admission fee is charged to defray running expenses.

Liberty Theatre, as one writer has aptly said, is the town hall of the cantonment: in it are given not only theatricals, but also lectures, moving picture shows, and important athletic exhibitions.

SINGING.

"Democracy! Near at hand to you a throat is now inflating itself and joyfully singing." Thus wrote the true representative of American national spirit, Walt Whitman. And though the poet had in his mind a spiritual song, he might actually have been prophesying what is taking place every day in the American army cantonments.

The place of singing in the camp and field is as important as that of powder. The army which does not sing heartily, Americans are wont to say, does not fight heartily. Indeed, in the opinion of military experts, a singing army is the winning army. "It is just as essential that the soldiers should know how to sing," said United States Major-General Leonard Wood, "as that they should carry rifles and know how to shoot them. It sounds odd to the ordinary person when you tell him every soldier should be a singer, because the layman cannot reconcile singing with killing. But when you know these boys and know them, you will realize how much it means to them to sing. There isn't anything in the world, even letters from home, that will raise a soldier's spirits like a good, catchy marching-tune."

As an aid to military efficiency, mass singing is most systematically practised and developed in the army and navy. Song-coaches are appointed from civilians, who are awarded the rank of commissioned officers. The soldiers and sailors have regular times for singing under these song-leaders. They sing from a small book, called *Songs of the Soldiers and Sailors* which is published by the government and sold to civilians for five annas and to men in uniform for ten pice.

The most popular camp song I heard among the soldier boys was the one entitled *Over There*. It is full of Yankee snap and go. These are the words:

Over there, over there.

Send the word, send the word over there

That the Yanks are coming,
The Yanks are coming.
The drums rum-tummiog everywhere.
So prepare, say a prayer,
Send the word, send the word to beware.
We'll be over, we're coming over,
And we won't come back
Till it's over over there.

CO-OPERATIVE STORE.

The post exchange or soldier's co-operative store is one of the most important institutions within the camp. Here the soldiers can buy such articles of comfort luxury as are not "issued" by the government. Here he can purchase anything from tobacco, handkerchiefs, hooks, and magazines to officers' hoots and wedding rings.

There is in each cantonment one post exchange for every regiment. The goods are sold at cost price plus five per cent. profit. By trading at their own exchanges the soldiers benefit themselves. Here they can obtain goods cheaper than elsewhere; and "any profits accumulating to the post exchanges are expended in a way decided upon by the votes of the men in the regiment." Usually the profits go to provide for athletic equipments, musical instruments for the band, better food for the mess, and sometimes for a tobacco fund for smokes in France where cigarettes can not be had easily.

THE HOSTESS HOUSE.

The Young Women's Christian Association has established a "hostess house" within the confines of each cantonment. The primary object of the hostess house is to furnish a place with pleasant surroundings where a soldier can meet his family and friends. As there are in a training camp anywhere from thirty to sixty thousand men, there is a naturally large influx of wives, mothers, and sweethearts. To those the hostess house furnishes a comfortable meeting place free from trouble and annoyance.

The building is usually as attractive inside as it is inviting out: it is furnished with all the latest appointments. The hostess house provides large rooms for visiting purposes, several bed-rooms for women visitors who have men very ill at the base hospital, an emergency hospital room, a mothers' room, and a children's nursery.

Sometimes the members of the hostess house staff go to the railroad stations and meet the trains so that arriving experienced woman visitors are left to wander alone in that man-made world in search of her soldier. She is brought to the hostess house where she finds every assistance and protection that she may need.

It should be noted in passing that the moral conditions in and around the camps and training stations are exceptionally clean. The government has adopted a rigorous policy of absolute repression in the matter of drink and prostitution—the twin evils of camp life. "The Federal Government," declared President Wilson himself, "has pledged its word that as far as care and vigilance can accomplish the result, the men committed to its charge will be returned to the homes and communities that so generously gave them with no scars except those won in honorable conflict." And so successfully has the government kept its word that it has "actually reduced to small an amount vice and drunkenness in our army and navy, that it is a fair statement that civilian America will have to clarify its moral atmosphere if it is to take back its young men after the war to an equally wholesome environment."

But to return to the hostess house. It supports a cafeteria, where good meals can be had at reasonable prices. The women who run the cafeteria are aggressively cheerful. At the instant, there flashes before my mind a scene at one of these places. The hall was crowded, yet it was pleasant and comfortable. I could not quite see why, but there was an indefinable something about the place which was exquisitely wholesome and clean. The women attendants, who had the appearance of college students (how shall I describe them) so lively and so happy. To see them makes one's heart glad. They had such charming ways. Somehow they make you feel that you are a guest and not a customer. They treat you like an old friend of the establishment. You go to the food counter, take what you like, pay your bill, and they smile at you generally. To be sure you have to wait on yourself, but what matter? You are in an American camp where all things are American.

On one occasion, I bought among other

things at the cafeteria, a bowl of what I considered to be delicious soup. I took my luncheon tray to a round table and began to sip from the bowl. Good heavens! What was I eating? Soup? Hardly. It was hot, pungently hot, it nearly burned my throat. I decided that the luncheon was a dismal failure. Quite chagrined, I went back to the counter and asked for an explanation. Behold, it was not soup at all. I had picked up the wrong bowl. I had taken a new kind of French salad which looked very much like soup. With well-bred courtesy, they took back the dish and refunded my money. And how we laughed and laughed at the mistake! They are provokingly good-natured people, those wonderful women folks of the hostess house.

SOCIAL VISION

From the social work at the army cantonments it is evident that America does not regard her troops to be soulless machines—mere cannon fodder—as they are called in some of the European countries. The United States government has fully risen to its moral obligation. It is doing a work of vast magnitude to keep its fighting men in physical, mental, and moral trim. The government has mobilized every material, social, and spiritual resource behind its troops. Nothing is considered too good for these brave men. Indeed, to the American government, this social service is an opportunity, a privilege, and increasingly, a special responsibility. "It is a movement for the improvement of the nation," writes one of the members of the Commission on Training Camp Activities, "and is utterly devoid of sentimentality. To make the men fit for fighting, and after, to bring them back from war as fit and as clean as they went, is just plain efficiency."

The noted English writer, Mr. John Galsworthy, said the other day that "the house of the Future is always dark." It is so, may be, but we know beyond a peradventure that the war has already coined for America many significant social ideas and ideals which have brought about in the American mind profound changes—changes which are bound to culminate in the re-making of the whole nation. With a new sense of values American leaders of thought are demanding that the social program which has proved so beneficent

to army cantonments should also be provided for civil communities; community stores, community theatres, community play, community singing and in short, community co-operation should be as much an integral part of civic as of army

life. When this social vision is fully realized, then indeed this mighty Republic will have fulfilled its highest destiny in respect to human liberty and social justice. Iowa City, U. S. A.
November 1, 1918.

THE HOUSE OF COMMONS AND INDIA

BY THE HON. R. D. DENMAN.

IN the working of institutions continuity of form does not necessarily imply continuity of spirit. From time to time, therefore, you have to consider whether a given institution which may have admirably performed some function in the past, is still capable of fulfilling that particular purpose. Such consideration is especially needed in the case of the House of Commons. A body so truly living, so intimately related to the life of the British people, is subjected to all the elusive and subtle processes of growth and change, and on examination you discover that without any deliberate design or conscious act of human will its qualities and outlook have suffered alterations that have come about almost unnoticed.

In suggesting that the House of Commons has ceased to be a body that can usefully supervise the government of India, I do not wish it to be inferred that it has undergone some recent deterioration. On the contrary, it has probably never been a more competent assembly than it is today. More than ever it is a truly representative body, composed of men of fully average intelligence, honesty, and public spirit, possessing collectively a wide experience of statecraft. Never has it enjoyed a more complete equipment for carrying into action the democratic plan of "government of the people, by the people, for the people." For this very reason, however, its skill in the art of government of one people by another has diminished. In these days a representative body is expected primarily to regard the welfare of those whom it represents. Its interests tend to become more specialised and its range of knowledge narrowed.

No one who looks back into the 19th

century can be blind to this growing self-centredness of democratic institutions. Take the test of modern general elections. What are the topics that have dominated them and stirred the passions of electors? Everyone remembers the storms which raged round the reform of the House of Lords, Mr. Lloyd George's Budget, and the Insurance Act. Leading statesmen declared that they saw in such domestic matters as these evils which heralded "the end of all things." In such an atmosphere what candidate can preserve a due sense of proportion and give to Imperial or Foreign affairs their proper weight?

This last election, when the future of the world was at stake and when, if ever, our country ought to have cast its gaze beyond its own shores, provides a crowning example of its electoral domesticity. Its dominant issues, "expel all Germans," "make Germany pay our War Debt," were strictly insular. "Death to the Kaiser" represented an appeal to a world-wide emotion,—a longing that war-making shall be a universally recognised crime; but speaking generally that was as far as the electorate went in an enthusiasm for an ordered reign of international justice. At a moment when India presents one of the great problems of the world, I doubt whether the very name of India was mentioned in a score of Members' election addresses.

This increased self-centredness of democracy is no mere accident. It follows inevitably from the current conception of the function of the State. The State is no longer a majestic organisation erected to repress injustice and to maintain order, security and liberty. It is rapidly becoming

ing an intimate partner in the everyday affairs of a citizen's life. This tendency is bound to fix the attention of a Member more closely upon details of domestic legislation and leaves him less leisure than his grandfather, or even his father, enjoyed for the examination of wider problems. His constituents compel him to study improvements in State services which concern their daily well-being and give him no encouragement to acquire knowledge of Asia.

Let us now consider the recent practice of the House in relation to India. We find that the Secretary of State made an annual statement to almost empty benches. That was about all that was heard of India unless something went wrong. Then of course, questions were asked and sometimes debates ensued. Now surely no one can argue that a system of supervision amounting only to a criticism of past mistakes is a satisfactory form of control. A control which is always looking backwards, rather than keenly watching the present and preparing for the future must tend to thwart and discourage. It certainly cannot stimulate qualities of imagination and enterprise in those responsible to it.

The evil of the House of Commons supervision of India is not merely negative. It is not only that the House brings no store of understanding to current Indian affairs. There is a real danger of positively injurious action by the House in the event of a clash of economic interests between the two peoples.

Striking evidence of this peril appeared

last year in the debates on the Indian Cotton Duties.

The growth of democracy affords no security here. Labour Parties in this connexion cannot be trusted any more than Capitalist Parties. Suppose Labour were led to fear that a fiscal system desired by India threatened established trade in British goods. Can anybody feel confident that the House would then act as a fair and impartial judge of Indian interests?

These considerations unite in pointing to one conclusion: the need for removing the control of India's domestic affairs from the House of Commons and for increasing her own authority to manage them. The Standing Committee proposed by the Secretary of State and the Viceroy does not really meet the case. We must reorganise on federal lines the whole political machinery of the Empire. Subjects of common interest,—defence, foreign policy and the like—will become the province of a body representing not only the United Kingdom but also the Dominions and India. In internal affairs each unit must be self-determining. To get the best out of India she must be encouraged to play her full part in both aspects of this Imperial scheme. Since self-government is not the growth of a day, we cannot afford to delay in laying foundations. The sooner we promote in India, by wise measures of devolution, the habit of self-government, the sooner will she be able to add to the common fund of our Imperial life the abundant riches of her ancient and valued civilisation.

THE DUTIES OF MAN

THIS is the name of a volume of *Essays* by Joseph Mazzini (1805-72), "the great apostle of Nationalism." "The most timid and law-abiding citizen need not fear to turn over its pages," says Mr. Jones who contributes the introduction, though its author was once arrested by

the Government in his youth." "Despotic Governments dislike dreamers. Mazzini was arrested really as the Governor of Genoa told his father because he was a thoughtful young man of talent, fond of solitary walks by night. 'We don't like young people thinking without knowing the subject of their thoughts.'" Such was the condition of Italy when he lived, "that Mazzini's name will live on among

* *The Duties of Man and Essays* by Joseph Mazzini (Everyman's Library J. M. Dent and Sons)

those of Italy's greatest citizens and the world's best men seems now beyond dispute. But Mazzini's most precious bequest to the world was not a bundle of Essays, but a noble life. His real mistress was literature, and he would have served her with a fine devotion had not the more imperious call of Country claimed his loyalty. The idea of Italian unity is to be found also in the writings of Dante and Rienzi, but Mazzini differs from them in being political and not merely literary, and constructive and passionately religious. He regarded life as a mission, and duty its highest law. He had poor qualities for a conspirator, and was a failure in that role. "This pestiferous conspirator" displayed to the subjects of the Pope a spiritual grandeur the like of which had rarely, if ever, been seen in a Vicar of Christ through all the ages of Roman Christendom. A writer of elevated thought and glowing prose, an inspiring talker, he was an

'Established point of light whence rays traversed the world.'

Carlyle, a friend of Mazzini, called him 'a man of genius and virtue, a man of sterling veracity, humanity and nobleness of mind, one of those rare men who are worthy to be called martyr souls, he had the firm conviction that no nation deserved freedom or could long retain it which did not win it for itself. And with that conviction, he waged a life long warfare not only on Austrian misrule, but on Italian ignorance, dissension and vice—the wretched brood of oppression. Servile habits and unworthy affections must go. The nation must purify herself in order to fulfil her mission. The sole path to victory was through sacrifice,—constancy in sacrifice.' He died full of patriotic schemes and his days were full of toil for the salvation of his country. He wrote to a friend who was ill, it is absurd to be ill, while nations are struggling for liberty.

"Open my heart, and you will see
Graved inside of it, 'Italy'."

Let us now turn to the teachings of the man, who wrote mostly for the workmen of his country. At the outset he speaks of two maladies which threatened to lead Italian progress astray. Materialism—"that political Jesuitism which they call diplomacy"—and Materialism. He therefore preferred to insist on the duties, and not on the rights of man.

"When I say that the knowledge of their rights is not enough to enable men to effect any appreciable or lasting improvement, I do not ask you to renounce these rights, I only say that they cannot exist except as a consequence of duties fulfilled and that one must begin with the latter in order to arrive at the former. And when I say that by proposing happiness well being or material interest as the aim of existence we run the risk of producing egoists I do not mean that you should never strive after these things. I say that material interests pursued alone, and not as a means, but as an end lead always to this most disastrous result. Material improvement is essential, and we shall strive to win it for ourselves, but not because the one thing necessary for man is to be well fed and housed, but rather because you cannot have a sense of your own dignity or any moral development while you are engaged as at the present day, in a continuous duel with want. You need then a change in your material conditions to develop morally. You must strive, then for this change and you will obtain it, but you must strive for it as a means not as an end; strive for it from a sense of duty, not only as a right, strive for it in order to make yourselves better, not only to make yourselves materially happy. "To make yourselves better this must be the aim of your life." "Preach Duty to the men of the classes above you, and faith, as far as possible your own duties, preach virtue, sacrifice, love, and by yourselves virtuous and prompt to self sacrifice and love."

This sense of Duty derives its sanction from God. Whosoever the Spirit of God is, there is Liberty—liberty of choice between good and evil, which evokes in us the sense of duty?

'Without God whence can we derive Duty? Without God, you will find that whatever system of civil government you choose to attach yourselves to, has no other basis than blind brutal, tyrannical Force. There is no escape from this. "Either we ought to obey God, or to serve men—whether one or many, matters not. If there be not a Supreme Mind reigning over all human minds who can save us from the tyranny of our fellowmen, whenever they find themselves stronger than we? Without God there is no other sovereign than Fact; Fact before which the materialists even bow themselves."

But who is to interpret the law of God?—the voice of the individual, or of the human race? On the one hand, 'the conscience of the individual speaks in accordance with his education, his tendencies, his habits, his passions.' On the other hand, in the history of Humanity we read the design of God. 'The law of God is one, as God is one, but we only discover it article by article, line by line, as the educative experience of preceding generations accumulates more and more and the association of races, peoples and individuals grows in extent and closeness.' At the same time we must remember that 'all great ideas which have helped the progress of Humanity began by being op-

posed to the general beliefs of Humanity, and were preached by individuals whom Humanity derided, persecuted, and crucified. We thus come to the conclusion that 'whenever the voice of your conscience corresponds with that general voice of Humanity, you are certain of the truth, certain of knowing one line of God's Law.' God speaks in both the individual and the human race, and 'whenever they agree, whenever the cry of your conscience is ratified by the general conscience of humanity, there is God.'

But the economic question being at the root of all the misery of the working classes, 'to point out to them the duty of progress, to speak to them of intellectual and moral life, of political rights of education, is in the actual state of society, sheer irony. They have neither the time nor the means for progress. The doctrine of everyone for himself and liberty for all is not, as is alleged, sufficient to create little by little an approximate equilibrium of ease and comfort among the classes that constitute society. It may lead to increase of productive activity and of capital but not of universally diffused prosperity. 'The poverty of the working classes remains unchanged. Freedom of competition for those who possess nothing for those who are unable to save anything from their daily wages and therefore have nothing with which to start any commercial undertaking is a lie, just as political freedom is a lie for those who from want of education instruction opportunities and time cannot exercise their rights.' Socialism would, according to Mazzini be no remedy. Such an existence, if possible, would be a life of bravers, not of men. Physical life might be satisfied by it, but moral and intellectual life would perish and with it emulation, free choice of work, free association stimulus to production joys of property, and all incentives to progress. The remedy, according to Mazzini, lay in the union of capital and labour in the same hands in association of labour and division of the profits of labour, in peasant proprietorship and the like.

But Mazzini is never tired of reminding his audience that those who speak to them in the name of material happiness are sure to betray them.

"No! I tell you with profound conviction that without God, without belief in a Law, without

moralty without the power of self-sacrifice you will never succeed. The lot of a man is not altered by renovating and embellishing the house in which he lives where only the body of a slave breathes and not the soul of a man. All reforms are useless the neat dwelling luxury only furnished is a whitened sepulchre nothg else. And I believe that man can not be made better more worthy of love more noble more divine—which is our aim and end upon earth—by heaping upon him physical enjoyments and by setting before him as the object of his life that irony which is called happiness. I believe that man ought to be able to eat and live without having all the hours of his existence absorbed by material labour that he ought to have time for developing his superior faculties. But I listen with terror to those voices which tell us: Man's aim in life is self-preservation on enjoyment's sake right because I know that such maxims can only create egoists and that they have been in France and elsewhere and threaten to be in Italy the destruction of every noble idea of all martyr spirit and every pledge of future greatness."

Mazzini boldly challenges those who call him a dreamer dwelling on abstract principles and neglecting facts. A revolution whether social political or otherwise, —not necessarily violent— includes a negation and an affirmation the negation of an existing order of things the affirmation of a new order to be substituted for it. This means not only destructive criticism, but presenting before the masses a new aim. The generation which participates in the destruction of the old order of things is nearly always condemned to mark with its own dead the road of progress for its successor. Itself can never enjoy the result of its travail. Now what theory of material interests, what proof of individual rights could argue a law of self-sacrifice, or martyrdom if martyrdom be the goal that awaits us? Martyrdom is folly to a people that has no stimulus outside material interests. Great things are never done except by the rejection of individualism and a constant sacrifice of self to the common progress. The true instrument of progress of the peoples is to be sought in the moral factor. We are therefore driven to the sphere of principles which alone are constructive. We must revive belief in them, the logic of things demands it. The spirit alone gives importance to forms.

"Rise to the sphere of principles guide the peoples, now wandering in darkness, to the law of progress to Humanity to God; awake again the moral sense the sentiment of Duty in men whom others would fain convert into calculating machines show a great purpose to the young as easily assailed today by discouragement and doubt; give to men by enthusiasm and religion and love a new

moral existence." "Men who mock at enthusiasm, deny the power of inspiration and self-sacrifice, call martyrdom quixotic, and try to regenerate the peoples by statistics." "But we subordinate the economic to the moral factor, because if withdrawn from its controlling influence, dissociated from principles, and abandoned to the theories of individualism [each for himself and the devil take the hindmost] which govern it to-day, it would result in brutish egoism. Principles, which none would relegate among abstractions, by their nature lie so near material interests, and what is called the economic factor, that they involve its practical triumph as an inevitable consequence. The sphere of principles includes and embraces them all."

To the religiously disposed man, whose theme is that the earth is clay, life is but of an hour, terrestrial existence is a period of trial, earth is a land of exile and so on—a theme with which we are only too familiar in India—and that we should therefore despise it and rise above it and turn to God, Mazzini's reply was equally emphatic:

"To the others who speak to you of heaven, separating it from earth, you will say that heaven and earth, like the way and the end of the way, are one thing only. Do not tell us that the earth is clay. The earth is God's; God created it that we might climb by it to Him. The earth is not a sojourn of aspiration and temptation; it is the place appointed for our labour of self-improvement, and of development towards a higher state of existence. God created us not for contemplation, but for action. The life of a soul is sacred in every one of its stages, in the earthly stage as well as in the others which are to follow; so, then, every stage must be a preparation for the next, every temporary progress must help the continuous upward progress of the immortal life which God has kindled in each one of us, and in collective humanity which grows by the operation of each one of us. 'Thy kingdom come on earth as it is in heaven.' Let these words be the utterance of your faith, your prayer, O my brothers. Repent it, and act so that it may be fulfilled. Do not heed those who try to teach you passive resignation, in difference to earthly things, submission to every temporal power even when unjust, repeating to you without understanding it this other saying: 'Render unto Caesar the things which are Caesar's, and unto God the things which are God's.' Nothing is Caesar's except in so far as it is such in conformity with the divine law. Caesar—that is, the temporal power, the civil government—is nothing but the mandatory, the executor, so far as its powers and the times allow, of God's design, whenever it betrays its mandate it is I will not say your right, but your duty, to change it."

Religious individualism, like its political counterpart, is only 'egotism draped in the mantle of philosophical formulas.'

"We may not lock ourselves up in barren and selfish prayer for our own souls, while the cry of the poor and the oppressed smites our ears, nor turn away our faces from our neighbour, and be content with our own spiritual progress, while all around us is falling to wreck; while the country that God has

given us is in danger of a dishonourable death. . . . 'The earth is of God; it cannot be accused. Life, like the God from whom it springs, is one and everlasting; it cannot be broken up in fragments, or divided into periods of a character radically opposed. There is no antagonism between matter and spirit. The earth is of God. It is a step upon the infinite ascent that leads us to heaven: ours sojourn during one of our existences, during which we are bound to prepare ourselves for the next. . . . The earth is the sphere where we have an appointed mission to perform, with instruments of labour furnished by it; and we are bound to regard it with love and reverence, as the seat of our possible sanctification. . . . Life is a mission. . . . We are each and all of us bound to strive to incarnate in humanity that portion of eternal truth which it is granted to us to perceive; to convert into an earthly reality so much of the 'kingdom of heaven'—the divine conception permeating life—as it is given to us to comprehend. . . . The moral code deduced from our dogma preaches therefore to man: Seek not to isolate yourselves; imprison not your soul in sterile contemplation, in solitary prayer, in pride of individual purification, in pretending to a grace which no faith not realised in works can enable you to deserve. Be not deceived by the doctrine that salvation may be achieved in spite of, and in opposition to, the earth. You can only save yourselves by saving others. God asks not, what have you done for your soul? but, what have you done for the brother souls I give you? Think of these; leave your own to God and His law. Labour unwearingly for others' good: such action is the holiest prayer. In God thought and action are one. Seek to imitate him from afar."

In his great religious apology, the sum of all his teaching, entitled "From the Council to God", Mazzini elaborates his views on the Papacy and on religion. He declared the Papacy to be morally extinct and regarded its alliance with the monarchy to be an impossible arrangement and to both he said, 'descend into the tomb you have dug for yourselves.' The Papacy worshipped force (authority), 'which, from Prometheus to Galileo, has ever sought to enchain the revealers and precursors of the future to the motionless rock of present fact.' The dignitaries of the Church are all practical materialists. Mazzini did not ignore the great service which the Papacy had rendered, in the past, by civilising, humanising and democratising Europe, and he bowed in reverence before the image of its great past, but a fatal inertia had overtaken it, and made it indifferent to the miseries of millions, and so its mission was over. Religions are transitory, but religion is eternal. To build, as the Papacy did, that the whole truth had been revealed to it is to restrict within a narrow groove 'the limitless ascending spiral traced by the finger of God between the universe and the Ideal it

is destined slowly to attain ' Life is move meot, aspiration, progress. You deny progress, shrink in terror from all aspiration, crucify humanity upon Calvary, reject every attempt to detach the idea from the symbol, and strive to petrify the living Word of God '.

"When a religion no longer either creates deter mines or directs action when it raises no power of sacrifice when it no longer harmonises and unites the different branches of human activity when its vital conception ceases to inform new symbols or new manifestations in art science or civil life—that religion is expiring." Motionless sphinxes in the vast desert you inertly contemplate the shadow of the centuries as they pass. Faith is perishing among the peoples because the dogmas that inspired it no longer corresponds to the stage of education which they in fulfilment of the providential plan have reached.

The new faith no longer accepts a privileged interpreter, a sole immediate Revealer between the people and God. Jesus says Mazzini, we love as the best of our human brothers. The Catholic dogma humanises God, our dogma teaches the slow, progressive divinisation of man. The teachings of Jesus and the Apostles constantly insist upon ordovorce from all terrestrial things as a condition of moral improvement of salvation. They preach the suicide of the man within us, the renunciation of every natural desire, abdication of every aim of social transformation, indifference to every earthly good, resigned acceptance of everything evil unreasoning submission to the powers that be, exclusive import ance given to the work of internal purification.

' Christian charity was rather a means of purifying one's own soul than the sense of a common aim which it was God's will that man should realise here below. It did not overpass the limits of benevolence and led to no attempt to destroy the causes of human hunger and misery. Love of country and that love which embraces the generations of the future and is devoted even unto sacrifice for the sake that love which will not tolerate the brand of inequality or slavery on the brow of a brother man was unknown to Christian morality. The true country the real home of Christian free men and equals was heaven. Every man was his own land and his own inheritance [citius dei] and the greater his sufferings on earth the stronger the hope he might entertain of his soul's future and celestial joy. The world was abandoned to Satan. Religion taught man to renounce it, religion which was all his isolation and his refuge, it imposed on him an of earnest and resolute struggle and of slowly progress but certain victory.

Christianity is, therefore the, religion of the individual man, ' but remember that life is given to you in order that you may

endeavour to improve the society in which we live, to purify and enlarge its faith and to urge forward in the path of eternal truth the men who surround you, and who will bless your work." The Book of God is not closed, God is spirit, and there is continuous revelation of the spirit of God through humanity. Revelation which is, as Lessing says, the education of the human race, descends continuously from God to man. Each religion is a fragment, enveloped in symbols of the eternal truth. Having accomplished its mission, that religion disappears. 'Columns of the temple which the generations are handing to God our religions succeed and are linked to one another sacred and necessary each and all but having each and all their determinate place and value according to the portion of the temple they sustain.' The world is athirst of God of progress and of unity. You substitute for God an idol an infallible Pope. Therefore the Papacy will be swept away.

To fix your gaze always on the Past, and avert it from the Future, is puerile.

Now while we are among our fathers we forget that our fathers are no one and were great because of this. Their aspirations flowed from contemporary sources from the needs of the masses from the nature of their environment. And precisely because the instrument they employed was adapted to the purpose they had in view they worked miracles. Why do we not act as they did? Why while studying and respecting tradition should we not move onward? We ought to worship the greatness of our fathers and seek in their tombs a pledge of the future not the future itself. The future is before us and God the father of all revelations and all ages alone can point out the future way. Up then! and let us be great in our turn. Our fathers repose fearless and proud in their tombs. They sleep like warriors after battle wrapped in their flag. Fear not that you will give them. But let us advance in the name of God. We will return hereafter to lay at its foot there where our fathers lie some of the laurels that our own hands have won. The old Age can attain its actual fulfilment only in the baptism of the new.

'The end of politics is the application of the moral law to the civil constitution of a nation in its double activity, domestic and foreign.' Therefore it is necessary to have a right conception of our Duty, not only to God but to the family, to the country, and to Humanity. Duty is the mother of self sacrifice, the inspirer of great and noble things. The family is the cradle of humanity, the country of the heart, and the angel of the family is woman. 'In her there is treasure enough

of consoling tenderness to allay every pain.

"Love and respect Woman Do not seek only consolation in her, but strength, inspiration, a redoubling of your intellectual and moral faculties. Blot out of your mind any idea of superiority to her, you have none whatever. The prejudice of ages has created through unequal education and the perennial oppression of the laws that apparent intellectual inferiority which you use to day as an argument for maintaining the oppression. But does not the history of all oppression teach you that those who oppress rely always for their justification upon a fact created by themselves? The feudal classes withheld education from you, sons of the people, almost up to our own day, and then from your want of education they drew, and still to-day draw, their arguments for excluding you from the sanctuary of the city, from the place where the laws are made, from the right to vote which initiates your social mission. The owners of the negroes in America declare the race radically inferior and incapable of education and yet persecute who ever seeks to educate it. For half a century the supporters of the reigning families have affirmed that we Italians are ill-fitted for liberty, and meanwhile by laws and by the brute force of mercenary armies they keep every way closed by which, if the disability did really exist, we might overcome it for ourselves—as if tyranny could ever be an education for liberty." "Today, half of the human family, the half from which we seek inspiration and consolation, the half to which is entrusted the first education of our children, is, by a singular contradiction, declared evilly politically, and socially unequal and is excluded from this unity. The emancipation of woman should be always coupled with the emancipation of the working man."

After the family, comes the country.

"A country is not a mere territory, the particular territory is only its foundation. The country is the idea which rises upon that foundation, it is the sentiment of love, the sense of fellowship which finds together all the sons of that territory. 'A country is not an aggregation it is an association. There is no true country without a uniform right. There is no true country where the uniformity of that right is violated by the existence of caste, privilege, and inequality—where the powers and faculties of a large number of individuals are suppressed or dormant in such a state of things there can be no Nation no people but only a multitude, a fortuitous agglomeration of men whom circumstances have brought together and different circumstances will separate. Your Country should be your temple. God at the summit, a people of equals at the base.'"

But before associating ourselves with the Nations which compose Humanity we must exist as a Nation.

"There can be no association except among equals you should have no joy or repose as long as a portion of the territory upon which your language is spoken is separated from the Nation [Italia Irredenta]." "Without country you have neither name, token voice nor rights no admission as brothers into the fellowship of the peoples. You are the bastards of Humanity Soldiers without a banner, lawless among the nations, you will find neither faith nor protection, none will be surties for you. Do not beguile yourselves with the hope

of emancipation from unjust social conditions if you do not first conquer a country for yourselves; where there is no country there is no common agreement to which you can appeal, the egotism of self-interest rules alone, and he who has the upper hand keeps it, since there is no common safeguard for the interests of all. Do not be led away by the idea of improving your material conditions without first solving the national question. You cannot do it... O my brothers, love your country. Our country is our home, the home which God has given us, placing therein a numerous family which we love and are loved by, and with which we have a more intimate and quicker communion of feeling and thought than with others, a family which by its concentration upon a given spot, and by the homogeneous nature of its elements, is destined for a special kind of activity. Our country is our field of labour... In labouring according to true principles for our country we are labouring for Humanity; our country is the fulcrum of the lever which we have to wield for the common good. If we give up this fulcrum we run the risk of becoming useless to our country and to Humanity."

The individual is too weak, and Humanity too vast. Hence, in order to enable us to multiply our forces and powers of action indefinitely, Humanity has been divided into distinct groups, and thus the seed of nationality has been planted. This is the nationalism of which Mazzini speaks and of which he is universally regarded as the apostle, and the idea underlying it has been well expressed in the following lines of the present poet-laureate's latest poem, 'England to India':

Truth is as Beauty unconfined
Various as Nature is Man's Mind;
Each race and tribe is a flower
Set in God's garden with its dower
Of apical instinct, and man's grace
Compact of all, must all embrace
China and Ind, Hellas or France,
Each hath its own inheritance;
And each to Truth's rich market brings
Its bright divine imaginings,
In rival tribute to surprise
The world with native merchandise

The following passage from Mazzini is almost prophetic, and rings the clarion-call of justice and freedom and truth to the august delegates to the International Peace Conference now assembled in Paris:

"Governments have disfigured the design of God, which you may see clearly marked out, as far, at least, as regards Europe, by the courses of the great rivers by the lines of the lofty mountains and by other geographical conditions, they have disfigured it by conquest, by greed, by jealousy of the just sovereignty of others, disfigured it so much that to day there is perhaps no nation except England and France whose confines correspond to this design. But the divine design will infallibly be fulfilled. Natural divisions, the innate spontaneous tendencies of the peoples will replace the arbitrary divisions sanctioned by bad governments. The map of Europe will be re-made. The Countries of the Peoples will

rise, defied by the voice of the free, upon the ruins of the Countries of Kings and privileged classes. Between those countries there will be harmony and brotherhood. And then the work of Humanity for the general emancipation for the discovery and application of the real law of life earned on in association and distributed according to local capacities will be accomplished by peaceful and progressive development.

Written more than half a century ago, the truth of these observations is just being made apparent to the dawning vision of the great political thinkers of the day.

Those who teach morality, limiting its obligations to country, teach a more or less narrow egotism. Progress is the law of human nature, and Humanity alone, continuous through the generations and through the general intellect fed by the individual intellect of each of its members, can gradually unfold the divine idea and apply it. Generations have progressively improved, and will continue to improve the conception formed by Humanity of God, His law, and our duties.

'It is of little avail that you worship the truth in your hearts if error rules your brothers in some other corner of this earth which is our common mother and you do not desire and endeavour as far as lies in your power to overthrow it, you are false to your duty.' And wherever human nature grows better, wherever a new truth is won, wherever a step forward is taken on the path of education of progress and of morality it is a step a gain which will bear fruit sooner or later for the whole of Humanity. The time has come to teach men that as humanity is a single body we are all of us as members of that body bound to work for its development, and to make its life most harmonious, active and strong. We improve with the improvement of Humanity not without the improvement of the whole can you hope that your own moral and material conditions will improve. . . your souls with the exception of the very few men of exceptional power cannot free themselves from the influence of the elements and which they exist, just as the body however robust its constitution cannot escape from the effects of corruption around it. So whatever land you may be wherever a man is fighting for right for justice for truth, there is your brother wherever a man suffers through the oppressor of error of injustice of tyranny there is your brother. . . Ecopostles of this faith, apostles of the brotherhood of nations and of the unity of the human race—a principle admitted to-day in theory but denied in practice.

Mazzini also speaks of certain fundamental rights, foremost of which is Liberty.

'Without Liberty morality does not exist because if there is not freedom of choice between good and evil between devotion to the common progress and the spirit of egotism there is no responsibility. Without Liberty no true society exists because between free men and slaves there can be no association but

only dominion of some over others. Liberty is sacred as the individual whose life it represents is sacred. Where there is not Liberty life is reduced to a mere organic function. A man who allows his Liberty to be violated is false to his own nature and a rebel against the decrees of God.' Personal liberty, liberty of locomotion, liberty of religious belief, liberty of opinion on all subjects, liberty of expressing opinion through the press or by any other peaceful method, liberty of association so as to be able to cultivate your own minds by contact with the minds of others, liberty of trade in all the productions of your brains and hands; these are all things which no one may take from you. God has given you thought, no one has the right to restrain it which is the communion of your soul with the souls of your brothers and the only way of progress which we have. The press must be absolutely free, the rights of the intellect are inviolable and any preventive censorship is tyranny; society may only punish the offences of the pen such as the incitement of crime and openly immoral teaching as it punishes other offences. Punishment decreed by a solemn public judgment is a consequence of human responsibility while every intervention beforehand is a negation of liberty.

The right of education is another fundamental right.

Without education you cannot choose rightly between good and evil you cannot acquire a knowledge of your own rights you cannot obtain that share in political life without which you will never succeed in emancipating yourselves you cannot define your own life work to yourselves. Education is the bread of your souls. Without it your faculties lie dumb and unfruitful.

Therefore, 'ask, and exact, the establishment of a system of free national education, compulsory for all.'

The third important right is the right of association. If Progress be the law of life, association is the guarantee of progress.

The wider the more intimate and comprehensive your association with your brothers the further will you advance on the path of individual progress. Inertia and content with the condition of things already existing and sanctioned by the common consent of mankind are habits of mind too natural in men to allow a single individual to shake and overcome them. But the association of a minority which grows very day can do it. Association is the method of the future. Without it the State would remain stationary enshrouded to the degree of civilization already reached.

Association must be peaceful. Its purpose must be to persuade, not to compel. It must also be public. 'Outside these limits, liberty of Association among citizens is as sacred and inviolable as Progress, to which it gives life.'

But 'awake are indifference and oblivion to the man who sits in the sanctuary of his family, surrounded by smiling faces, while the wintry blast blows without,

and the snowflakes, swift and fine, beat against the panes of a double window."

"Do you hope to drag these favourites of fortune from their apathy by simply prattling of your rights? You must preach to them a new philosophy of life, hold up before them a new conception of the ideal—the ideal of duty. To do that you must have Faith." "What will translate into art the religious and social philosophy; it will surround with its own beautiful light woman—who though a fallen angel is ever nearer to heaven than we—it will sing the joys of martyrdom, the immortality of the vanquished, the tears that exiate, the sufferings that purify, the memories and the hopes, the tradition of one world interwoven in the cradle of another. It will murmur words of holy consolation to those children of sorrow born before their time, those fated and puissant souls who... have no confidants on earth... And it will teach the young the greatness of self-sacrifice, the virtue of constancy and silence, how to be alone and yet despair not, how to endure without a cry and an existence of torments half understood, unknown, long years of delusions

and bitterness and wounds, all without a complaint it will teach a belief in future things, an hourly travail its promote it, without a hope in this life of seeing to victory."

Again and again in reading the noble call of duty, preached so eloquently by a mind permeated with the sense of the divine and devoted to the realisation of the divine ideal on earth which it never ceased to regard as a preparation for heaven, have we been reminded of the opening lines of the *Isopanisad* :

इयं वाक्यविद् यन्मं मयु विदितुं जगतां जगत् ।

नित्यं मन्त्रं न भूयोदा, या यदयः कल विदुः यदयः ॥

कुन्धमेव कर्त्ता वि निजो विषेयतां यदाः ।

एवं सवि, माययोदीति, न जन्म विपत्तिं गति ॥

V.

REVIEWS AND NOTICES OF BOOKS

ENGLISH.

INDIAN NATIONALISM—its Principles and Personalities by B C Pal S R Murthy & Co. Triphucan, Madras Price—Rs 2

This slender volume of 238 pages consists of ten character sketches. The subjects, with the exception of Mr Tilak and Sister Nivedita, are all Bengalis, and all of them are leaders of the Nationalist movement; hence the title of the book. The get up and binding are excellent, the letter press neat and bold, but printing mistakes abound, especially in the earlier chapters. So much for the outside of the work.

The author, Mr. Bipinchandra Pal, is the best exponent of the philosophy of Nationalism on this side of India. By his intellectual equipment, well-digested erudition, political training, and his natural abilities as thinker and writer, he is well qualified to discourse on the subject of his choice. And the book is replete with pregnant observations, showing deep insight and a profound grasp of the political, philosophical and cultural aspects of Indian Nationalism—all presented in language which has a distinct literary flavour and is as far removed from the style of the hustings as it could well be. Many of the studies are obviously scrappy—that of Aravinda Ghose, 'in endowment, education and character perhaps superior' to all the other Nationalists though the youngest in age (p. 155), is disappointingly meagre—and this is admitted in the Foreword. Some characters have been evidently introduced with a view to make them serve as pegs to hang the author's own sermons on. Nevertheless, these sermons, or expositions of particular phases of Indian cultural life (e.g., the doctrine of the Guna in Hinduism, the ideal of leadership in India, the rationalist movement in Bengal, the nature religion of Sister Nivedita, the Vaishnavism of the Saint Bijoyn Krishna Goswami, etc.)

are profoundly suggestive, and will give the book a permanent value among that growing body of literature which seeks to interpret the soul of India in the rest of the world.

The book is one to be read from cover to cover and we shall not mar its interest by trying to summarise its contents, much as we should have liked to do so. We cannot, however, refrain from saying that in the greatest of his characters, Sir Rabiindranath Tagore, who leads off the volume, Mr. Pal seems to us to be rather unjust. It is not exactly a case of damning with faint praise, for Mr. Pal has paid his homage unreservedly to the greatest living genius in the Indian world of letters, but sometimes it has seemed to us that the praise offerings which he has bestowed with his right hand he has sought to take away with his left. One instance must suffice, for we do not like to enter into a controversy which would almost surely be disapproved by Rabiindranath himself. According to Mr. Pal, Rabiindranath has led the revolt against the intellectual and moral bondage of European civilisation 'with greater courage and effect than anyone else' (p. 29). And yet, under the guise of a new abstract Cosmopolitanism or Universalism, he is said to have drifted into the safe role of a social and religious reformer, which in part at least has contributed to his European success (pp. 24-30). If any proof were needed that this is a most cruel and unjust aspersion, it lies in Rabiindranath's American lectures on Nationalism. A bolder attack on some of the ideals of modern European civilisation, right in the midst of the most advanced representatives of that civilisation, has never before or since been delivered by any man who has a reputation to lose either in the East or the West.

Mr. Pal's exposition of Indian Nationalism shows that this business of social reform is thoroughly distasteful to the conservative instincts of the Na-

timidist, though he admits that "No revival can really revive the past just as it was in the past. It has to adjust the past to the living conditions of the present. A successful revival must, therefore, offer a new view point and a new synthesis. It is in such a synthesis that the Hindu revival in India of the last quarter of a century has had its main strength. And, it must be admitted that the underlying thought of this Revival has more or less openly and consciously taken note of the protest of reason raised by the Brahmo Samaj and other religious reform movements of our day. Neo-Hinduism, as it is called, is not really the Hinduism of our fathers; it is a new phase, a new development, a new interpretation, and a new adjustment of the old and traditional ideals to the light of present needs and conditions" (pp. 199-200).

Elsewhere he says that the object of the Hindu Revivalists is "to revive the medieval faiths and ideas and perpetuate the current social institutions of the land. There was, thus, in some sense a work of resistance, so far as modern thoughts and ideas are concerned" (p. 212). "The present Nationalist movement in India is very largely indebted to this Reaction or Revival for a good deal both of its inner strength and its outer influence" (p. 201). The connection between Reaction and Nationalism being thus established, it is no wonder that social reform should be looked upon with disfavour by a section of the Nationalists.

Mr. Pal admits that "one ugly feature of Nationalism" is "a persistent and almost constitutional antipathy against the foreigner" (p. 196). If that be so, it seems that there is considerable justification for the preaching of Cosmopolitanism, specially in other countries such antipathy is confined to the physical man, and does not extend, as to our infants, to the social man, to whatever the nations regarded as hostile have to give us materially, morally and intellectually. Hence these contrasts (1833 & p.) Froch and German patriotism.

"The patriotism of the Froch consists in the heart warms; through this warmth it spreads, it enlarges so as to encompass, with its all-embracing love, not only the nearest and dearest but all France, all civilisation. The patriotism of the Germans, on the contrary, consists in narrowing and contracting the heart, just as leather contracts in the cold, in hating foreigners, in ceasing to be European and cosmopolitan, and in adopting a narrow minded and exclusive Germanism." And Heine proceeds to speak of "the grandest and noblest idea ever brought forth in Germany, the idea of humanitarianism, the idea of the universal brotherhood of mankind—no idea to which our great minds, Lessing, Herder, Schiller, Goethe, Jean Paul, and all people of culture in Germany, have ever paid homage." The Nationalist patriot seeks to remove the evils and weaknesses of his own nation "from within by working up the latest goodness and strength, and is in the meantime lovingly tolerant of them" (p. 203). To what length this tolerance is carried by some of our nationalists in the conditions known to his cost. Rabindranath's poems and essays are a living witness to the fact that he realises as few else have done, the latent goodness and strength of Hinduism, but he has the courage, which many have not, to speak out against the evil, killing customs of Hindu society and the inertia of the spiritually dead pandits (p. 228). To proceed as far as Hindu public opinion allows as is done by one of Mr. Pal's heroes (p. 204) is really no virtue for public opinion is made up of the opinions of indi-

vidual members of the public, and unless some of them have the courage to advance beyond the line prescribed by public opinion it leaves us just where we are and there is no progress. To recognise the frailties of society and yet shrink from ruthlessly rooting them up for fear of wounding the organ itself (p. 201) and to allow reason to be controlled by patriotism (p. 202) is, according to Mr. Pal, the true position of the philosophical nationalist. The nationalism of the masses simply consists in their natural conservatism (p. 195). So between popular nationalism on the one hand with its blind and unreasoning conservatism and philosophical nationalism on the other with its sentimental tolerance of the evils of society, the cause of social reform seems to be in a bad way indeed and it is up to Sir Rabindranath, as, unquestionably the greatest living man of letters in Bengal (p. 1) to wield his mighty pen in this uphill and unpopular struggle on the side of truth and justice and progress. Mr. Pal, a Vaishnav, calls Rabindranath a Cosmopolitanism emotional, and says that because it was not addressed to the intellect it fell absolutely flat on his own people (p. 30). But Mr. Pal's typical nationalist, as we have seen, allows his reason to be controlled by the patriotic sentiment which evidently Sir Rabindranath does not, for he has a fiercer and nobler idea of patriotism, and it is this which makes him say (*Modern Review*, September, 1918). "If I did not love my country, it would have been quite easy for me to become popular with my countrymen."

Almost every nationalist, says Mr. Pal (p. 204), has "given up many of the obsolete institutions and usages of his country and caste." Vivekananda we know was one such, and Mr. Pal himself is another. Vivekananda, vehemently denounced our social abuses and Mr. Pal's advanced social life, and broad outlook, places him outside the narrow grooves of orthodox Hinduism. And yet he, in common with Vivekananda has gone out of his way to have a fling at social reformers. It is difficult to understand why this is done by persons who have themselves seceded from orthodox mores we make the rather cheerful able appropriation that they want to gain a favour able hearing for themselves by posing as orthodox. Rabindranath has never done so and has praised and blamed orthodox institutions according to their deserts without assuming the role either of a reformer or of a staunch Hindu, though his eloquent and sympathetic defence of Hindu social ideas and ideals centers on him, to say the least, an equal title with Vivekananda and others to pose as a true representative of Hinduism.

In Mr. Pal's opinion, the concrete universalism of Vaishnavism is an advance on the abstract universal ideal of the Vedanta which is the highest theological following expositions of Vaishnavism will show how much of his own twentieth century enlightened Hinduism Mr. Pal reads into his philosophy of Vaishnavism which is here indistinguishable from political advancement. To the devout Vaishnav, every man is a manifestation of Narayana. And Narayana being endowed with a divine sensorium and participating in some sense in the enjoyment and suffering of each individual human being. This suffering is not original but vicarious; but none the less it is a fact of divine experience. Collectively, also, the sufferings and sufferings of the race are equally part of man—every attempt to remove his ignorance, to

relieve his offerings and set him upon the truest and highest basis of his life—all these elements are in the worship of God. Whatever contributes to human misery whatever retards the developments of humanity, whatever obstructs the advance of man into his proper and conscious life in God is therefore an out rage against God himself. Nanyana is perpetually seeking to reveal and realise himself in and through the life of each individual man and woman and through the life of humanity. The bondage of man is in our sense the bondage of Nanyana himself. Poverty, ignorance, social repression, political servitude, are therefore as much a violation of the Dharma or the Divine Law as anger and lust and other mortal sins" (pp 224-25).

On the whole, the book under review is one of that rare order to which one turns again and again for helpful suggestion and inspiration.

Q

HINDU ACHIEVEMENTS IN EXACT SCIENCE—By Prof. Benay Kumar Sarkar of the National Council of Education, Bengal. 12 mo. 32 pages. Cloth price \$1.00, Longmans Green & Co.

This is a handy little volume from the facile pen of Prof. Sarkar who has been lately sending us interesting reports on foreign lands. In the Preface he tells us that "it has been sought to present a comprehensive, though very brief account of the entire scientific work of ancient and medieval India in the perspective of development in other lands." He reminds us that "its worth should however, be estimated in the light of the parallel developments among their contemporaries, the Greeks, the Chinese, the Græco-Romans, the Saracens, and the medieval Europeans."

The work is therefore very ambitious and requires an amount of labour which, to us, would appear stupendous. A fair amount of knowledge not only of each branch of science but also of its historical development from the ancient times almost down to the present not only in India but also in other lands and a broad philosophical insight rarely met with among specialists. Nor can the work be intended for every reader. For he must possess a similar amount of knowledge in order to appreciate the perspective view presented to him. The task is not lightened even when the author tells us that "the main object of this little book is to furnish some of the chronological links and logical affinities between the scientific investigations of the Hindus and those of the Greeks, Chinese, and Saracens." Nor when we are told that "all the achievements of the Hindus in any branch of science have not been treated in an exhaustive manner." For we actually find the author dipping into eighteen topics including mathematics and astronomy, chemistry and kinetics, human anatomy and physiology, natural history and the applied branches of chemistry, medicine and surgery. A bibliography of 79 volumes appended to the book shows that the author has diligently searched for his materials, through the references in the body of the book are scanty. Considering its small size we must say that his attempt has been successful. He has brought out some of the salient facts of Hindu knowledge extending over two thousand years from the 8th century B.C. to the 12th century A.D. At places there appear in the form of a mere catalogue though at others connecting links have been supplied by him. He has handled them with a directness which many students of science

would envy. There is nothing vague, no padding any where. The reader is reminded of the state of knowledge possessed by other contemporary nations and led to consider what the Hindus did. The style of the author is eminently suitable for the work, and the get up excellent.

It is not possible for a reviewer to check the accuracy of every statement made in the book or to trace it to its original source. There may be difference of opinion as to the relative value of the facts enumerated in this history of science, and also in accuracy due to the sources from which the author has collected his data. But a compiler can hardly be held responsible for the opinion of his authorities. It is gratifying to note the self-restraint exercised by him, avoiding on one hand undue glorification of his ancestors, and depreciation of the worth of their discoveries on the other, because other nations could make similar ones. There was a real need of a handy volume like this for a rapid albeit an imperfect and disconnected, survey of Hindu achievements in positive science.

A perusal of the book forcibly reminds us of the need for exploring untrodden fields, scrutinising known ones and accumulating data for the purpose of a fuller history. Whoever thought that a rich harvest in the shape of commentaries awaited the patient scholarship of a Dr. Seal, or that our mental store of ancient history could be appreciably increased by a single labourer? The work has to be done by competent Hindus, who are better fitted by their environment and inherited culture than a foreigner to judge and interpret properly the significance of a term, perhaps a stray illustration, or even a metaphor. Many of the Hindu writers who have attempted to tell us the work of their ancestors fall, curiously enough under two opposite groups: one blindly following the impatient and often amateurish criticism of Western scholars and belittling the worth by their canon, and the other as blindly showing racial bias in the opposite direction and extolling every idea which can be deciphered in a Sanskrit verse. It is difficult to say who are less fitted for the task. The worst sinners are undoubtedly those who cannot say that they do not know, do not understand, but boldly put their own interpretation on sutras, phrases and words and there find reasons for condemning the Hindus. Objective science without a synthetic philosophy as the basis is apt to be conceited and dogmatic. It is easy to cite instances of wrong judgment based on a fictitious interpretation. Thus writers on Hindu Chemistry while naming the five classes of stuffs which form material bodies have a line to say that the Hindus regarded the earth and water as chemical elements! Yet it is now well known that at least some of the metals such as iron, tin, lead, copper, silver, and gold were in use among the Aryans of the Vedic literature and that by the 6th century A.D. the Hindus recognised at least three dozens of stones suitable for ornaments. And is it after all so very difficult for one ignorant of modern chemistry to separate at least some of the ingredients out of different samples of the earth's crust? It is equally wrong to translate the three dhatus of the human system assumed in the Hindu practice of medicine by the words air, bile and phlegm. Probably the origin of the triad of lik is to be found in the three gunas of the Sankhya philosophy, which the Puranas allegorized as Brahma, Vishnu and Siva. The surprise is that the grand conception of the trinity has so often been ridiculed. Prof. Sarkar has not mentioned the so-called

"elements" recognised by the Hindus, but is not happy when he writes that "both in the East and the West chemistry was at first alchemy." This statement regarding the East has yet to be proved. Besides, the author has apparently doubts about this. For he writes immediately after that chemists try was "principally a handmaid to the science or art of medicine." Similarly we cannot commend the author's comparison of the Hindu *dhata* with Greek humours when he writes that "the physiology [?] of humours, whatever its worth, is older in India than in Greece." The fact is, the Hindu *dhata* has to be understood apart from the four Greek humours. Besides, even if the rate of the Hindus be translated as "air," can it be called a humour?

A glaring instance of wrong judgment based on insufficient evidence is afforded by the oft repeated assertion that the Hindus were indebted to the Greeks for their knowledge of astronomy. Prof Sarkar is perfectly right when he says that "it is difficult to see precisely what the Hindus borrowed 'since in no case do the numerical data and results in the system of the two peoples exactly correspond.' He has, however, unconsciously fallen into the trap laid by superficial writers and reiterated Varaha's "cautious acknowledgment of the fact that this science is 'well established among the barbarian Yavanas.'" But the fact is that Varaha did not refer to the science of astronomy; he referred to astrology as practised by fortune-tellers, the *daivagnas*. Every one knows that the Hindus, astrologically minded, borrowed a heap of rubbish not only from the early Greeks, but also from the Saracens at a later date. Speculations of one race mingle rapidly with those of another when there is intercourse between the two.

But we have no time to go into details, or to quarrel over the capacities of the Hindus to build up a civilisation peculiarly their own. It is admitted on all hands that they possessed an unrivalled power of analysis which some critics would have us to believe developed only in metaphysical subtlety. These apparently forget that this subtlety is as much a work of intellect as positive science. It is, however, time to repeat that the Hindus were more practical than many imagine. They did not regard all kinds of knowledge as of equal worth at any rate the present want of knowledge for its own sake was unknown for could it ever be an end to itself? A due recognition of this fact is necessary in every history of the ancient Hindus be it a history of their chemico-physical sciences or of their society and politics. Practical necessity compelled them to discover ways and means of living and bring well the seed of future science just as men were compelled to be hunters, though hunting is at present a pastime. These plans why the Hindus did not care to catalogue the stars or the plants and animals of forests, or even to enunciate geometrical theorems for which they had no use. They did not despise this knowledge or even the diversion of research, but, as practical men, did not hesitate to ask at the same time *Quid bono*. Prof Sarkar like most historians appears to have missed the fundamental key to the Hindu mind and is probably ashamed to admit that the Hindus did not value knowledge because it is knowledge. For he tells us that the sole object of the Hindu specialists was "the discovery of the positive truths of the universe or the laws of nature according to the lights of those days." We agree so far as the statement goes, but demur if it refers to what they denigrated *apara vidya*, inferior knowledge, as distinguished

from *para vidya*, superior knowledge. It does not, however, follow that arts and manufactures did not flourish, that the people preferred a voluntary poverty, or that they were all ascetics. On the contrary, as the author says, "India was the great industrial power of antiquity." The difference lies solely in the point of view. India adored the ascetic king Janaka, and, as far as history goes never like the French revolutionaries guillotined a Lavoisier, or declared that the nation had no need of chemists. Prof Sarkar need not have been apologetic and written that "from the standpoint of modern science a great part of all that is described here is too elementary to have more than an anthropological [?] interest. For, consider for a moment the fact that the present have inherited what has been left by the past, and therefore appear richer by contrast. Intelligence has not increased since the present have appeared and it is certain that the present would have been insignificant and dark had not the past slowly and patiently accumulated the hard won secrets of nature and opened the way for light. We therefore salute the past with reverence be they of the East or of the West, and thank Prof Sarkar for a presentation of the same."

SCIENTIFIC EDUCATION AND INDIA'S NEGLECT OF SCIENCE. By F. D. Marad, B.A., M.Sc., Professor of Physics, M. A. O. College, Aligarh. Demy 8vo 100 pages 1917.

It is an address delivered by the author in 1917 before the aesthetic society of the Aligarh college, in the foreword, he tells us "that he feels that the subject is in several places far from being well-digested or systematised and that the sequence of facts is not everywhere strictly logical." This is painfully the impression when one tries to follow the author in his address which is rendered obscure by profuse quotations. He would have been well advised had he not yielded to "the Resolution of the Society and the persistent demands of its indefatigable honorary secretary for the publication of this book" in the present shape. The author informs us that "this book was originally written for the young but 'errata to hope that as it stands now it will afford to older persons who will accept its limitations, interesting information concerning the scientific regeneration of India and the place of science in a complete scheme of education." We expected to be benefited by his suggestions but have been sadly disappointed. "Scientific regeneration like 'scientific education' sounds mysterious and cannot be understood without the help of a complete scheme. The opinions of scientists and non-scientists quoted on the value of science have therefore an academic interest. The bibliography appended will be useful to our college students."

WATER IN THE ECONOMY OF NATURE. By the same author 1915 23 pages.

It is said to be "a popular exposition of the part played by water in the economy of nature." But it is doubtful whether the experimental details regarding the composition, maximum density, etc., of water can be followed by "laymen in science."

J. C. RAY.

DICTIONARY OF CHEMICAL REACTIONS, with an appendix, containing an alphabetic list of minerals and ores with their composition and formulae. Compiled by Genoa Saluzzo Apis M. A., B. Sc., Professor of Chemistry, Victoria College, Guelph, Pp. 246 + 5 + 222 1915, Price 1/-

This is a collection of chemical equations and is intended for students going up for B A and B Sc. examinations. The endeavour of the author is good and it certainly would have supplied a 'long felt need of students' but it is so full of mistakes. Already the errata give 135 corrections, but yet there are many more mistakes. Thus, beginning with the slip on page 1, there are 2 mistakes both in the 6th line (equations, numbers); page 2 (line 5, bottom) rions, page 5 (line 5, top) cinnamon; page 67 (line 8, bottom) phosphoreted, page 199 (line 18, top) Atacamite $4H_2O$; page 200 (line 9, top) glance, page 207 (line 5 and 6 top) Harriotome Hansmannite, page 208 (line 15 and 19, top) Kieselguhr, Kroyolite, page 222 (line 6, top) Brittanilla, etc.

On page 200, bauxite is said to be found in France and even in Iceland but no mention is made that it is found in India (Jubbulpore) Tannin (page 199) when boiled with water is said to produce pyrogallie acid, but strictly speaking only gallic acid can be converted into pyrogallie acid by heating with water under pressure. On page 17, it is mentioned that almond oil when acted by chlorine and hydriodic acid gives respectively benzoyl chloride and toluene. The formula given is that of artificial oil (essence) of bitter almonds and not of almond oil.

I would request the author to issue a new edition of the book and make it as free from typographical mistakes as possible so that it may be really useful to students. Every alternate page may also be kept blank so that notes and additions may be made by the student.

MODERN CHEMISTRY AND CHEMICAL INDUSTRY OF STARCH AND CELLULOSE, (with reference to India) by Tarnai Charan Choudhuri, M. A., Professor of Chemistry, Arinath College, Berhampore (Bengal) Publishers, Butterworth & Co (India) Ltd, Calcutta. Cloth bound pp. viii + 156, and a map of India, 1918 Price Rs. 3 12

In the preface the author writes "While engaged in the study of starch and cellulose, the writer felt the necessity for a handy compendium on the subject containing up to date information in all its bearings. ... monographs based on original sources have a speciality of their own. With this end in view, it has been attempted, in the present volume, to give a brief survey of the chemistry and the various chemical industries that have direct and indirect bearing on starch and cellulose, especially in the light of recent researches—theoretical and technological." In practice, the author has dealt, in the small compass of 150 pages (printed in big pea types) with nearly every branch of organo-chemical technology. Thus, among others, the following subjects have been noticed: synthesis of Formaldehyde and sugar, plant physiology, chiefly theories on the mechanism in plant synthesis, industrial education and industrial problem of India; condensed milk; manufacture of alcohol (and remotely) of artificial perfumes and scents, natural rubber and chemistry of synthetic rubber, manufacture of gas masks, paper, artificial silk, collodion and gun cotton, fermentation and distillation products of wood, etc. The result is that the main subjects have not received proper attention, the industries having "direct or indirect bearing on starch and cellulose" occupying most space. The author, apparently, tried to give a general outline of chemical industries to the lay reader, but in that respect it is quite unintelligible to them, being full of technicalities. From the point of view of advanced students it must be said that he can scarcely learn

anything that is not already known to him. It would have been well, in my opinion, if the author had written a true "monograph" on starch and cellulose which the author has acknowledged would have a "special" value of its own.

Lastly, we must congratulate the author (and publishers) for the beautiful get up of the book. Indeed at first sight one would suppose that the book was done up in England.

P. C. CHATTOPADHYAY,

LITTLE BOY'S OWN BOOK, by B. Anumananda. Can be had of Boys Own Home, 47 A Durga Charan Mitra's Street, Calcutta. Price 8 as.

This little book is a continuation of the series known as Boy's Own Primers. In those primers the author has tried to train the ears and vocal organs of the child and to accustom him to speak English. But in this book, while continuing the habit of conversation, the object of the author is to enable the child to express his thought in English writing. From this stage the boys will begin to read and write English.

The author is a great believer in teaching the Indian boys the English language by the direct method. English is compulsory throughout in the secondary schools of India. But the Indian boys require an unusually long period to write and speak the language with readiness and intelligence.

The old method of teaching a living language like English as a dead language, compelling the boys to cram grammatical rules and vocabularies of word book, and to undergo translation exercises from the very beginning, is mainly responsible for this unsatisfactory result.

However, it is hopeful to observe that increasing attention has been paid during the last few years to the teaching of the beginners of English. The direct method for the beginners has been introduced in many institutions. We are glad to see that an Indian teacher like Swami Anumananda has published the result of actual experience gained by following this method in his class room.

Some teachers insist that better result can be got by the old method in a shorter time. But Swami Anumananda says with great confidence "This is not a fact. My own experience in teaching compels me to give the palm to the direct method. Try it and you will see its potency also."

The special features of this book are as follows—
(1) The author does not teach words separately but as parts of a sentence.

(2) He does not dictate the meanings of words or sentences in the vernacular.

(3) With the help of this book teachers will do well in teaching grammar inductively by means of sentences given in it. Teachers are instructed to put the children on the way of discovering grammatical rules from the construction of sentences.

This book is specially suited to Indian children. The author's observation of the psychology of Indian boys is noticeable in his framing the lessons. He did not aim at teaching idiomatic English but tried to teach correct English.

The book contains a few pages of notes and hints for teachers full of suggestions.

KALIMOHON GHOSH

SPEECHES AND WRITINGS OF SIR WILLIAM WEDDERBURN, Pp. 542 price Rs. 3

The enterprising publishing firm of Messrs. G. A. Nathan & Co., of Madras, have done a great service

to the people of India by bringing out in a handy form a collection of speeches and writings of one who though not an Indian himself has been all through his life a true friend of India. In the course of this Presidential address to the Fifth Indian National Congress held in Bombay, in 1889 Sir William Wedderburn said: "I have passed a quarter of a century among you, and during that period of time have not known what it was to suffer an awkwardness from a native of India. During that period I have been in the service of the people of India, and have eaten their salt. And I hope to devote to their service which still remains to me of active life", and Sir William, as promised by him, continued to render that service to India and her people even in his retirement in England. That the utterances of such a true friend of India, written or spoken ought to be studied with appreciation and gratitude by us all, needs no emphasis.

A FRIEND OF INDIA—SELECTIONS FROM THE SPEECHES AND WRITINGS OF B. G. HORNIMAN WITH FOREWORDS by Mrs Sarojini Naidu and Mr Syed Hassan, pp 269. Price Rs 2. Published by Messrs Lakshmidas Rowjee Tourtee and R Venkat Ram 70 Apollo Street Bombay.

Mr Benjamin Gur Horniman Editor of the *Dombay Chronicle* is heart and soul in sympathy with our countrymen in their aspirations as true citizens of India and a perusal of this book will give a fair idea of what he has so far been doing towards securing this end.

SPEECHES OF BAL GANGADHAR TILAK with a foreword by the Hon Ganesh Srikrishna Acharjee Member, Imperial Council, pp 283. Price Rs 2-4-0.

Messrs. R. Thirumalai & Co., of 114 Coral Merchant Street, Madras have, indeed, rendered a great service to the public by publishing these speeches, which embrace a period of from 1889-1919 of Loka manya Tilak.

SPEECHES AND WRITINGS OF M. K. GANDHI, with an Introduction by Mr C. F. Andrews and a Biographical Sketch by Mr H. S. L. Polak. Pp 416, priced at Rs 3.

We owe this splendidly bound book containing several portraits to the enterprising firm of Publishers Messrs. G. A. Natesan & Co. of Madras. Mr Gandhi is truly a patriotic son of India and his speeches and writings as well as his actions are worthy of the serious study and attention of one people.

SPEECHES AND WRITINGS OF PANDIT MADAN MOHAN MALAVIYA, pp 514, Price Rs 2-0-0, published by Messrs G. A. Natesan & Co., Madras.

This, indeed, is a splendid book containing as it does the utterances of one of our most prominent men, who, though it may be said still young in years, is old in experience and wisdom and whose services to the country are acknowledged by all friends and opponents alike.

SIR S. P. SINHA—A Sketch of his life and career

SIR J. C. BOSE—A Sketch of his life and career

DR P. C. ROY—A Sketch of his life and career.

Messrs G. A. Natesan & Co., Madras, have added to their Biographies of Eminent Indian Series three more new sketches. Sir S. P. Sinha, the first Indian Member of the Viceroy's Executive Council has just become the first Indian Member of the British

Ministry, having been selected for the office of the Under Secretary of State for India and is now known as Baron Sinha of Raipar. The discoveries of Sir J. C. Bose and Dr (now Sir) P. C. Ray's Researches in Hindu Chemistry have won for them great distinction as Scientists in India. These sketches recording the achievements of the three eminent Bengalees, or for the matter of that three prominent living Indians of to-day will be read with interest and we wish to see them in the hands of every young man. Each sketch has a fine frontispiece and is priced at four annas.

THE PARROT'S TRAINING By Rabindranath Tagore (Translated by the author from the original Bengali) With Eight Drawings by Abanindranath Tagore and a Cover Design by Nanda Lal Bose, Calcutta and Simla Thacker Spink & Co. Price Rs 2.

This apologue by Sir Rabindranath Tagore originally appeared in its English version in the *Modern Review*. It is a masterpiece of pitying and shrewd satire. The cover design by Nanda Lal Bose is striking with its portrayal of the king and his courtiers and officers as blockheads with solemn faces who looked very important. The eight drawings of Abanindranath Tagore are delightful and full of meaning. Among the persons portrayed, only the fault-finder looks like an ordinary human being as he alone has natural intelligence and a mind unwarping by mechanical or bureaucratic theories of education. The scribe who writes text books has been rightly drawn as resembling a mechanical contrivance, because in Bengal text books are required to conform to the rules and standards and opinions of the Text Book Committee in style, substance, number of pages, price, &c. The raja looks like an automaton. The frontispiece represents the parrot as dead pierced through with a fountain pen! The only fault we have to find with the book is that it has been dedicated to Prof. Patrick Geddes for it should have been dedicated to the Bureaucracy composed of the Raja's Nephews!

GITANJALI AND FRUIT GATHERING By Rabindranath Tagore. With illustrations by Nanda Lal Bose, Surendranath Kar, Abanindranath Tagore, and Abanindranath Tagore. The Macmillan Company, New York. Price Two Dollars and Fifty cents.

The two works of Sir Rabindranath Tagore which have appeared in this illustrated volume, do not require any new commendation. We have therefore to say a few words only as regards the get up and the pictures. The paper and printing are good and the binding in cloth very tasteful. There are eight illustrations in colour and twenty-three in black and white. While all the illustrations have been neatly reproduced those in black and white appear to us better done than those in colour. Many of the pictures appear to be very appropriate and full of meaning. Being a layman, the writer of this notice has not been able to discover the connection of some of the pictures with the text they illustrate, but for this he does not blame the artists.

In this connection one observation may perhaps be excused. In the old Indian water colours one usually finds bright and pleasant colours. On the other hand, water colours of the new Indian school, are sometimes characterised by a certain grayishness. Is it because

in the former days life in India was full of colour and variety and interest, but at present it is rather colourless dull and monotonous?

STORIES FROM TAGORE *The Macmillan Company New York Price one dollar and fifty cents*

This collection of the short stories of Sir Rabindranath Tagore is meant for school use. All the ten stories are sure to prove interesting to school boys and girls while their appeal to older readers is also undoubted. Two of the longest stories in the book are reproduced in English for the first time. Appended to each story is a list of words to be studied chosen from the story in order to bring to notice different types of English words. There are a few pages of notes at the end of the volume. In them we have noticed a few misprints. "Dada" has been explained as "The usual Bengali word for 'Brother'." It ought to be "The usual Bengali word for 'Elder brother'." "San Vajlean" ought to be "Jean Vajlean." Baul ought to be "Baul." The printing is very clear, making it a pleasure to read this book.

The English of the translation is very good. We are glad to learn that it is proposed to publish together in a single volume the original Bengali stories whose English translations are given in this Reader.

C

ENGLISH-HINDI

THE STUDENT'S PRACTICAL DICTIONARY containing English Words with English and Hindi Meanings in Devanagari character. Ram Narain Lal Publisher and Bookseller, Allahabad 1956+30 pp Rs 2-8

That this book has reached the Seventh Edition is a sufficient proof of its usefulness and its appreciation by the reading public. In the first place, the words have been defined in English so as to give a full clear and correct idea of the sense which a word has crystallised round it. Secondly an idiomatic translation into Hindi of the English definition has been given. In an appendix words and phrases of foreign languages often used in English have been explained both in English and Hindi. This handy volume we think will be of great help to Anglo-Hindi students both indigenous and foreign.

C B

HINDI

PRACHINA LIPĪ MALĀ (THE PALINOGRAPHY OF INDIA) by Sri Bakadri Pandit Ganurishankar Hirachand Ojha Curator, Rajputana Museum, Ajmer and published by the author. Cloth bound quarto pp 104-195 and 84 lithograph plates Price Rs 25, or £ 2

Pandit Ganurishankar Hirachand Ojha is well known for his services to the cause of the Hindi language and literature. The credit of producing the first book in the Hindi language and for the matter of that in any language on the subject of ancient Indian scripts rightly belongs to him. The book entitled *Prachina Lipi Mala* was issued as far back as 1891 and was very much appreciated at the time by all scholars Indian and European interested in the study of Indian epigraphy. The first edition was about one third the size of the book now before us and was also moderately priced (Rs 3 per copy). The most satisfactory nature of the lithographic plates, however which accompanied that edition induced

the celebrated German scholar Dr G. Buhler to publish in 1896 a new book entitled "Indische Paläographie" consisting of 96 pages of letterpress (in German) and 9 plates of alphabetical characters and numerals and tables of explanatory transliteration of them in the *Grundriss der Indo-Arischen Philologie und Altertumskunde* or *Encyclopedia of Indo-Aryan Research*. For scientific purposes this volume of Prof. Buhler was far superior to the Hindi book of Pandit Ojha, but as the latter was intended for the use of Indian students to whom the German book was not accessible the first edition was soon exhausted. In 1904 the late Dr J. F. Fleet published an English translation of the *Indische Paläographie* as an appendix to Vol. XXXIII of the *Indian Antiquary*, but the plates which accompanied the German Edition were not reproduced. The necessity of a fresh publication has been most keenly felt for some time past owing to the many discoveries in the field of Indian Epigraphy since the publication of Prof. Buhler's book and the fact that even the old tables which were published with the original German edition have been out of print for many years. Recently the study of epigraphy has received considerable encouragement in this country and, thanks to the wisdom of the authorities, archaeology has found a place in the curriculum of our advanced universities. Pandit Ojha has thus chosen a very opportune moment for bringing out a second edition of his book and we wish the enterprise a success.

Unlike so many voluminous publications in the vernaculars of these days the present book is not a translation but an original compilation and is written throughout in elegant Hindi suited to the requirements of the subject. It is divided into two parts: (1) the descriptive and (2) the illustrative. The descriptive portion consists of twenty-four chapters including those on (i) the antiquity of the art of writing in ancient India, (ii) the origin of the Brahmi alphabet, (iii) the history of the decipherment of ancient characters and the chapter on writing materials. The other chapters explain the plates which constitute the illustrative portion of the book. The letterpress also includes an appendix on the epochs of the various eras used in this country. Although one may not agree with the learned author in all his conclusions the attempt to bring together the opinions of various scholars scattered in publications of the various countries which possess institutions for the study of Indian antiquities is commendable, and it is expected that the present volume will open the door of antiquarian studies to those of our countrymen who have hitherto been prevented from taking an intelligent interest in the ancient history of the country owing to their ignorance of the language or languages in which these researches are generally carried on and recorded.

Finality can hardly be claimed by any scholar in such studies where important discoveries are still being made, and those engaged in the study of Indian inscriptions will naturally be disappointed if they expect to find an up-to-date discussion on the subjects dealt with in the present volume, which is primarily intended for the beginner. But the chapter on the origin of the Brahmi alphabet deserves to be carefully studied by all inasmuch as the author has differed from the opinion of the most renowned of European scholars and considers that the Brahmi script is of home origin. In this conclusion he has not been swayed by mere sentiment as sometimes happens, unfortunately in discussions of the kind—a weakness for which European and Indian scholars are equally

blameable. One may be permitted, however, to state that the explanation which the learned pandit has offered on page 27 for the reversed order of the letters on the Iran coins is far from convincing.

But the same amount of originality is not noticeable in the other parts of the book and the sections dealing with the writing materials and the Indian eras ought to have been brought up to date. The author still persists in the now discarded theory with regard to the date of the Buddha's Nirvana which was held by Mr V. Smith to have occurred in 457 B.C. It may be mentioned in this connexion that this very scholar has now accepted the traditional date 543 B.C. for the Buddha's Nirvana while commenting in the last issue of the *Journal* of the Royal Asiatic Society of Great Britain and Ireland on the edition of the Hathigumpha inscription by Messrs A. P. Jayaswal and E. D. Banerji in the *Journal* of the Bihar and Orissa Research Society for 1917 where this date has been conclusively proved to be correct.

But when one comes to the plates which form the illustrative portion of the volume one meets with an unexpected disappointment. In preparing this large number of lithographic plates in which characters have been copied from a very large number of records on stone, copperplates, etc., the learned compiler seems to have forgotten that no amount of draftsman's skill can produce a facsimile which may claim to be of use for scientific purposes. Nothing but mechanical reproduction can satisfy the needs of an enquirer and a student so far as the shape and form of the ancient characters are concerned, and it is to be regretted that the example of Dr. Bohler has been ignored by the author of the Hindi volume. A good deal of time, energy and money must have been spent by the compiler in producing the 84 plates but it is seriously doubted if the advantage which the buyer of the volume would derive will be proportionate to the price he has to pay, as these plates seem to be largely responsible for the eightfold increase in the price of the present edition although the author himself admits (p. 2 English preface) that the bulk has been increased only three times what it was in the first edition.

The compiler knew that some of the Indian Universities have included palaeography as an optional subject for the M.A. degree (p. 2 of English preface) and that in the absence of any better publication on the subject the students going up for that examination have to rely upon this book and consequently the majority of these will have to buy Pandit Ojha's volume.

In the circumstances the comparative poverty of the student class in India should have been borne in mind in fixing the price. As a matter of fact it has not been so done. This is regrettable; for it does not help to make the literature accessible to the average student, a circumstance which Pandit Ojha has himself deplored (vide p. 1) when speaking of the publications in other languages and which induced him to produce this book.

H P

STARA CHORITA SANGATHAN, by S. Daya Chandra Goshalya, P. A. & Published by the Rajyatala Hindi Sahitya-Sabha, Jharkhand. Price Rs. 5.

This is a Hindi translation of a book in Bengali. It deals with the several stages of a woman's life and contains instructions suitable for culture in those stages. The get up of the book is excellent.

VIMALA, by Pandit Gobindlal Chaturbashi of Qayanganj. Price as 12.

This is a Hindi translation of a Bengali book. The plot is not very elaborate. The book will certainly repay perusal. It ought to have good circulation.

PATRAYALI, by Pandit Kalyanankanta Trivedi & Published by the Ganga Pustakamala Office, Lucknow. Price as 8.

This again is a translation of a well known Bengali book. Several imaginary letters from a husband in his wife are contained in it, as also an answer thereto. The book will certainly be instructive. The get up is nice and the book deserves encouragement.

MARATHI

SUDHARANA WA PRAGATI—translation of Crozier's "Civilisation and Progress" by Mr. Daya Nagesh Apte, B.A., LL.B. Baroda. Publisher—Mr. V. A. Thakkar, Baroda. Price 35 Pice Rs. 3.

The philosophy of human progress is a fascinating though laborious study and at a time like the present when old world notions about culture, society and reform are being thrown into a vast cauldron for being melted and reshaped into God alone knows what nothing can be more opportune than a presentation to Marathi readers of a readable philosophy of human progress. Buckle's *History of Civilisation* found years ago a place on the shelf of Marathi books. Crozier has not yet found a translator, Crozier also would have remained unknown to Marathi readers had it not been for the generosity of H. H. Maharaja Galkwar. The original work is no doubt rich in thought and clear in expression and with the broad and open mind of the author and an unbiased and unequivocal judgment forms throughout an interesting reading. But even a cursory glance at its pages leaves one with an impression that the writer has not fully recognised the significance of the cleavage between the two halves (Eastern and Western) of the Human race. He has ignored this difference and treated of the subject as a whole from the Western point of view. Mr. Apte, if he were not bound by restrictions laid upon him, would probably have seen the futility of conclusions drawn from such haphazard inquiry. It is no good saying as Mr. Apte has done in a light hearted manner that the Indian mind has been averse to material progress as if material progress was the only criterion with which to measure the civilisation of every nation. Nor can such a statement be altogether true. For India has achieved in the past even material progress and evolved social, political and industrial institutions which stand as objects of admiration even to this day. The fact is that no general conclusions can be drawn with regard to India and culture and progress from the data supplied by Western Society. India forms a separate entity and requires an earnest and close investigation from scholars. With this reservation Crozier's book is really valuable.

It must be said to the credit of Mr. Apte that as a translator he has done his work very satisfactorily. Mr. Apte has been to Crozier not only a translator of his work, but an intelligent interpreter of his thoughts. Assuming the role of an interpreter he had naturally many gaps to fill up, many amplifications to make so as to suit Indian requirements. But in fairness to the original author he should have marked

his addenda with asterisks or some other suitable device which unfortunately he has not done and this gives occasion sometimes to the bewilderment of readers as to which portion of the book is the original author's and which belongs to his emendator.

This Marathi book forms the 15th volume of the 'Shri Sayaji Sahitya Mala' inaugurated by the magnificent allotment of two lakhs of rupees made by H. H. the Maharaja Gaikwar for the enrichment and development of Marathi and Gujarati literatures.

DEOHANIKAYA, BHAG PAVILA—translated by Prof. C. V. Rajwade, M.A., B.Sc., Professor of Pali in the Baroda College. Publisher—Mr. A. B. Clarke, Commissioner of Education, Baroda State. Pages 266. Price Rs. 1/8.

It is a pity that the Buddhist period of Indian history should still be enshrouded in mystery and no attempt should be made by educated people to bring to the notice of the reading public the rich treasures of religious and philosophic thought which were the characteristics of that glorious epoch. Bengali writers are decidedly ahead of Marathi writers in this respect. One reason probably is that Pali has only been recently introduced in the Bombay University as a second language and it is no doubt a strange coincidence that a proposal to drop the subject from the University course is mooted just at a time when the first fruits of the devoted labours of a few Pali scholars turned out by the University are beginning to make their appearance.

Deghanikaya is an important section of Sutta Pitaka, which together with Vinaya Pitaka and Abhidhammapitaka, forms the Threefold Basket of Buddhist lore. The work under review is only one third of the original Pali book, and being in the form of dialogues is no interesting reading for those who have an inclination for religious reading. To an earnest student of Pali books, the Marathi translation will be a real boon, as the translator has spared no pains to facilitate his studies by means of elaborate foot notes and references. But such earnest students can be counted on one's fingers. Here a question may be asked whether it would be more desirable to interest the general reader in the knowledge of Buddhism by producing such works as would give him a general idea of the religion and philosophy of Gotama in a compact form, rather than spend large sums of money over the production of volumes like the one under notice. I think the experiment is worth trying and offer the suggestion for the consideration of the Baroda Publication Committee.

The book is the 3rd contribution to the 'Shri Sayaji Sahitya Mala' and deserves a high rank among Marathi books on religions of the East.

V. G. APTE

KAVYA KANTAR (काव्य कान्तर) a poem, the first part, and some other poems by Mr. Balwant Ganesh Khaparde. Pages 157. Price annas 8. Printed and published at Chitrashala Press, Poona City.

The poems of Balwant Ganesh Khaparde are of a high order, and full of promise. They furnish us with a good and vigorous specimen of new Marathi Poetry. The publication now before us contains the first half of his longer poem entitled Kavya Kantar or the Garden of Poetry, and several other smaller poems. He has written several other smaller poems

on different themes. They are not however included in this first publication.

The spirit of the poems is purely Indian. It is expressed in vigorous and fresh forms.

His longer poem takes as its theme—that visit and wandering of the poet himself in the 'Gardens and Groves of Poetry' where he is taken to see the Goddess Saraswati, after all sorts of preliminary experiences, to be inspired as a great poet. The poet who writes this poem after a visit, so to say, to Kavya Kantar puts before us his best composition as a poet. Unless we read the latter half of his longer poem we cannot pass our final judgment. As it is, the style of his writing is at once sweet, charming and clear. Some of his descriptions are captivating. A few of the similes are original and delicate. The descriptions and similes at the end of the third Canto when the poet loses his consciousness, and those at the beginning of the fourth when he regains it are wonderful and show how the poet is deep in his study of emotions and in his observations.

S. V. PLATAMBEKAR, B.A. (OXON), BAR AT LAW

GUJARATI.

SPEECHES AND WRITINGS OF DIVAN BAHADUR AMBALAL SAKARLAL DESAI, M.A., LL.B., Collected and published by Vastunthlal Shripalrai Thakore, B.A., with an Introduction by Prof. Balwantrai K. Thakore, B.A., Printed at the Karnatak Press Bombay. Cloth bound, Pp. 72, 277, 164. Price 2/80 (1918).

The late Divan Bahadur was one of a batch of the first graduates of Gujarat and was known as the Prince of its graduates. He was also known as a practical economist, a sound lawyer, a high class educationist, and above all, a possessor of robust and healthy character. The introduction of Prof. Thakore is mainly taken up with the elucidation of these points, and stocked as it is with incidents and stories, derived firsthand, does full justice to the hero of the story. The speeches and writings which follow, both English and Gujarati, by their fearless tone, logic and argument, straight talk and sturdy independence give a vivid picture of Ambalal Desai, as he was in flesh and blood. There was great need to preserve in book form the public utterances of one who was a valuable asset of our province and Mr. Thakore deserves our thanks for having done so.

SWADESH GITAVALI, by Keshav H. Sheth, printed at the Dharma Vidyā Printing Press, Ahmedabad, Cloth bound, Pp. 89. Price Rs. 1/4 (1918).

This little book contains songs and poems, as its name implies, of a patriotic nature. It is an emblem of the spirit of our times and the songs are set to that tone. So far they would attract attention.

YUVAK RATNA, by the late Ambalal Motibhai Patel, B.A., published by the Society for the Encouragement of Cheap Literature and printed at the Diamond Jubilee Printing Press Ahmedabad. Cloth bound, pp. 48. Price Rs. 1/20 (1918).

Mr. Ambalal Patel who died young had interested himself in education and social service. While doing so he found time to translate certain English writings bearing on self-sacrifice, morality and other

hundred subjects, and this posthumous work embodies them.

(1) MIRAJI BAI, by Bhanusukhram Nirgunaram Mehta, B.A., printed at the Sayaji Vyaya Press, Baroda, Cloth bound Pp. 102 Price Re 0-12-0 (1918).

(2), MANUSHYA VIDYANAN TATTVO (मनुष्य विज्ञान तत्त्व) by Madhukumar Shripriasad Dasa, M.A., S.T.C.D., printed at the Arja Sudharak Press, Baroda, Cloth bound Pp 185 Price Re 1-0-0 (1918)

(3) BALDHTAN PARDHATI SUN GRIHA SHIKSHANA (बालदत्तान पद्धति नु सूर्यप्रकाश) by Bharatram Bhanusukhram Mehta, Printed at the Same Press, Cloth bound Pp 116 Price At 14 (1918)

(4) PALASTIVE KI SANSKRITI (पल्लवों की संस्कृति) by Surendranath Rangnath Ghoshan B.A., Printed at the Same Press, Cloth bound Pp 117. Price Re 0-12-0 (1918)

These four books form part of and are further additions to the Shri Sayaji Sahitya Mala, some of the books going to make up this series, we noticed a short time ago, and the present additions do not incline us to change the views we expressed then. For instance, we fail to understand the utility or need of a History of Palestine in Gujarati. The translation, for it is nothing else, of MacAlister's History of Civilization in Palestine, must have been projected at the time, when Palestine had not been so much on peoples' lips as at present on account of the Indian troops having distinguished themselves in that Theatre of War, so that even so that ground the selection cannot be justified. The third book is a translation of Froebel's Kindergarten Teaching At Home, and one wonders what practical experience the young translator has of this system of teaching. He has, all the same, essayed to adapt the work to Indian homes. Marret's Anthropology has been translated by the third gentleman, who has tried to elucidate his subject by a glossary at the end explaining difficult and scientific words. Mirao Bai's life is a compilation it cannot be said that either in research or telling, it surpasses anything that has been published before it, however, amongst the four books which we have received this time, we would surely give it the palm for interest and attraction.

K M. J.

CORRESPONDENCE

Inter-caste Marriage Among Hindus.

To

The Editor of *The Modern Review*

Sr,—With reference to your note on the Inter-caste Marriage Bill in the current number of *The Modern Review*, may I be permitted to elucidate a point or two arising out of it?

Anuloma (in the order of the classes) marriages are sanctioned in Manu (ch 3, 13) and *Pratiloma* marriages in ch 10, though they were looked upon with some disfavour. A host of well known Varnasankar castes are however attributed by Manu to such marriages, the Chandala, begotten on a Brahmin female by a Sudra male coming in for special reprobation (ch 10, 12) but the Chandalas, who now pass by the name of Namasudras are a recognised caste in Hindu society, and form an important section of the Hindu population, particularly of East Bengal. If the issues of *Pratiloma* marriage in its most pronounced form are thus already a part of Hindu society, why, in the name of reason and commonsense, should the parties to such marriages, if contracted at the present day, be compelled to declare themselves non-Hindus as under the existing law they must?

Jimutavahana's *Dayabhaga*, which regulates the Hindu law of inheritance in Bengal, says (ch 1, 2) that *Anuloma* marriages are allowed, and Vishnueswar's *Mitakshara*, an eleventh century compilation, which governs the rest of India even goes the length of

saying (ch 1, sec VIII 2) that 'under the sanction of the law [Jainavalkya 1, 57] instances do occur of such marriages (Colebrooke's translation) [Balam Bhatta, one of the best known commentators of the *Mitakshara*, and a contemporary of Colebrooke, in commenting on 1 XI, 2, says 'even a Sudra woman may be the wife of a Dnyaya and the issue will be legitimate']. It will thus appear that such marriages were prevalent even in Vishnueswar's time—a fact which has been noticed by Justice Sir Pratul Chandra Chatterjee in *Haria v Kanhaya* (Punjab Records, Vol 43 p 326) where he held that a marriage between a Rajput and a Kshattriyani is valid. Intermarriage between Vaidyas and Kayasthas in East Bengal districts has been held to be valid according to local custom by the Judges of the Calcutta High Court in *Ramlal Sukul v Chandra Kanta Sen* (Calcutta Weekly Notes, vol 7, p 679) and many interesting instances of the practice have been recorded in the judgment of Babu Gurindra Mohan Chakrabarty, Subordinate Judge, published in the same issue.

Jimutavahana's date is variously placed between the twelfth to the fifteenth centuries of the Christian era (vide the History of Smritis in Bengal and Mithila, J.A.S.B. vol XI, p 321). There is an interesting passage in the *Dayabhaga* which gives us an idea of the depraved code of morals prevalent in his time, which we are now asked to conform to. In Ch IX, cl 9 he says 'Though such a marriage be in the direct order of the classes, Manu and Vishnu have strongly censured the union of a man of a regenerate to be with

a Sudra woman (1) (Colebrooke's translation) But in clause 11, adultery, with such a woman has been held to be comparatively venial. The exact words are 'Hence these evils do not ensue on the procreation of offspring upon a Sudra woman not married to the Brahman himself' (2) (Colebrooke's translation).

It is only the commentator Raghunandana of Nadia (sixteenth century) who on the strength of a text in the *Brihannaradiya Purana* (XIII, 12-16) which is a minor Purana of doubtful authority, prohibits intermarriage in the Kali Age. But the same text of the *Brihannaradiya* also prohibits, among other things, sea voyage and 'द्वेषकाय ब्रह्मचर्य' which may mean 'practising sexual continence for a long time' or 'study of the Vedas for a long time'. We very much doubt if all who protest against Mr Patel's Bill would also be prepared to subscribe to these two injunctions of the *Brihannaradiya Purana*, and we are not sure that some of them have not violated the prohibition against sea voyage themselves.

And after all, when we think of it what a blind, unreasoning torpor must have come over Hindu society

when it cannot go back even in imagination further than the time of Raghunandana barely 400 years ago, when Bengal was under the worst days of Mahomedan rule and the Prophet of Nadia rose and himself revolutionised society by obliterating distinctions of caste in the order of Vaishnavas created by him. Not only do we find Yavana Haridas accepted into the fold but in the *Chaitanyacharitamrita*, (Antyodish ch 16) we read of Kaldia a devout Vaishnava well-beloved of the Master, who considered himself honoured by taking the dust of the feet of all Vaishnavas irrespective of caste, and even of such a low caste man as Jharu Bhumali, a Vaishnava of great piety. To treat Raghunandana as a fixed star in the social firmament, when radical changes were going on in society all around him, shows what a dry rot has set in Hindu society, and that free thought, which was so characteristic of the times of Chaitanya, has altogether vanished from Bengal and a slavish adherence to customs deadening the intellect and constituting a sure proof of national decay, has taken its place. And when graduates of the University and lawyers by profession have joined the unholy combination of Rajas and Maharajas, who need not be expected to know any better in denouncing Mr Patel's Bill who can say that priestly domination does not still flourish in our midst like the green bay tree, and that to quote the words of Sir Rabindranath (*Nationalism*, p 122) we do not hope 'to build a political miracle of freedom on the quicksand of social slavery'.

Dayabhaga, Prasanna Kumar Tagore's Edition, 1863

(1) 'ब्राह्मणोऽपि द्विजो, ब्रह्मणो ब्रह्मणोऽपि द्विजो'.

(2) 'अथ ब्रह्मचर्यं ब्रह्मचर्यं ब्रह्मचर्यं ज्ञेयं दोषः, किन्तु ब्रह्मचर्यं प्रायश्चित्तकारणम्'.

Yours &c.

Λ

A LETTER FROM KAUTILYA TO INDIAN POLITICIANS

Dear friends,

I pray you to spare a little time to read this letter from one who has served your country in the past. I have seen many such political crises as we have to-day in our country, and it is just possible that my advice may prove useful to you. It is, of course, for you to accept or to reject it, you are the sole judges of the affairs of India to-day and you are the Kautilyas of your own time. I cannot, therefore, presume to ask you to accept my opinion without consideration.

The proper constitution for India would be not what you, revered sirs, both 'Moderates' and 'Extremists,' apply for or demand. You should, in a Congress assembled, petition His Majesty King George V. to be allowed to elect him as King George Chudamani I. of India and to declare your

country a limited monarchy. If His Majesty deign to grant your prayer, you may crown him with your sacred texts, which allow the election of a foreigner, crown him with Vedic texts and put to him the coronation oath of the Aitareya Brahmana, which is quoted below —

यौ च रात्रौ जन्मते यौ च प्रेतसि तद्वयममरश्चेष्ट-
इयं मे लोकं दृक्कृतमायुः प्रजा हृद्योदा यदि ते द्रुष्टव्यमिति ।

"Between the night I am born and the night I die, whatever good I might have done, my heaven, my life and my progeny may I be deprived of, if I oppress you."

Aitareya Brahmana, VIII, 4 1 13

As His Majesty is a constitutional monarch who has never oppressed his subjects, he has already been all along reigning in accordance with the spirit of this oath.

You should never pray to be under the

gana or *samgha* or, what you call to day, Parliament, of any people Rule of one people by another is far worse than one man's rule. In my humble opinion, you should reversed sirs prefer the autocracy of Chudāmani George I to *samgha* government dictated by the workmen of the west who are destined now to rule all European countries. By praying for permission to adopt the constitution which I suggest, you would ensure your liberty and the safety of the *vamsa* of Chudāmani George I. You determine for yourself this form of *Rājya* and you will become once more as strong as the India under my master Chandragupta. I may add that I have consulted my master, the great

est of sovereigns who liberated India in the past here in *svarga*, and he quite agrees in my opinion and submits it jointly with me to you with affection and blessings

HAUTHIA

Punashcha

Do not forget to help that nation of heroic love of liberty, the Irish like whom no other nation has struggled in my recollection to instal *Sri* (Goddess of Liberty) in their country help them by passing resolutions all over your country in favour of the Imperial British Government granting the Irish the full right to manage their own affairs

K

"NATIONAL EDUCATION"

By LALA LAJPAT RAI

I

THE Indian papers to hand report that our publicists are engaged in a discussion of the question of 'National education for India. The movement is led by some of the sincerest and most devoted leaders of the nationalist movement for Home Rule for India, and appears to be spreading. From the stray papers that I have received I have not been able to find out the exact position of those who are reported to have struck a note of mild dissent, more by way of criticism than of opposition, but they give some idea of the position of those who are supporting it. Mrs Besant has kindly mentioned my name as one of those who pioneered the movement in the Punjab, in the eighties of the last century.

It is quite true that I am one of those persons who raised the cry of national education in North India so far back as 1883 A D and have since then used it rather effectively for enlisting sympathy and collecting funds for the various institutions that were from time to time started to impart education on 'national' lines. It is also obvious that the nationalism that we preached in those days was rather narrow and sectarian. Sir Syed

Ahmed Khan was the first among the Indian leaders of thought in North India who set afloat the idea of denominational education. The Christian institutions had led the way before him. The Mohammedan Anglo Oriental College at Aligarh was a symbol of the new Muslim Nationalism which (Sir) Syed Ahmad Khan founded educational in function, but political in scope and effect.

The Arya Samaj representing the new nationalism of the Hindus followed suit and the Dayananda Anglo Vedic College, at Lahore, was the fruit of its efforts. Then came the movement of the Central Hindu College at Benares upon which has now been erected the superstructure of the Hindu University. The Mohammedan College at Aligarh, the Arya College at Lahore, the Hindu College at Benares all embodied the 'National' ideals of their founders limited and sectarian as they were at the time. Each professed to provide its own kind of national education. The educational facilities provided by these institutions were open to persons of all creeds, denominations and religions, but the nationalism aimed at was undisguisedly denominational. Each institution created an atmosphere of its own—national to a

certain extent, so far as the general cult of love of mother-country was concerned but otherwise openly sectarian.

The education imparted in these institutions, as distinguished from the ordinary State-owned schools and colleges, was "national" only in so far as it helped the creation of the denominational atmosphere aimed at by its promulgators. The Muslim College and the Hindu Colleges all professed to enforce and encourage the study of the vernaculars and their sacred languages, but the emphasis all the time was on the University course and the University examinations. The scheme of studies promulgated by the official Universities was accepted unreservedly, except in the additions that were made to the courses in Hindi and Urdu, Sanskrit and Arabic. The principal business of the staffs engaged was to prepare students for University examinations. The results achieved in these examinations were the measure of their success and popularity. In the two Colleges in the United Provinces, the leading positions on the staff were reserved for Europeans. Special efforts were no doubt made in each institution to inoculate the students with the serum of that narrow nationalism which had inspired its founders. Subscriptions were raised and endowments made for the dissemination of religion, for the encouragement of the study of Sanskrit, Arabic, and Persian. Some attempts were also made to encourage original research in the literatures and records that existed in these languages, with a view to prop up the several interpretations that the founders and the managers put upon their respective religious and their histories; but the success achieved in this line was, in each case, dubious and almost imperceptible.

I can speak more definitely of the Dayananda Anglo-Vedic College, at Lahore, with the management of which I was intimately associated for about a quarter of a century. For over nine years I was the general secretary of the governing body, and for several years its Vice-President. I hope I shall not be charged with vanity if I say that for twenty-five years I gave the best in me to the institution—grudged neither time nor money, nor energy in doing all that I could to ensure its success and progress.

My duties were by no means confined to field and office-work (running the office, addressing public meetings, collecting funds, raising subscriptions, doing publicity work, conducting and writing for periodicals, etc.), but included close association with the staff and the students and the supervision of the different departments, particularly the boarding houses.

It is with immense pleasure and pride that I look back upon that period of my life. It was a rare privilege to associate and co-operate with men of the character and calibre of Hansraj, Lalehnad, Dwarka Das, Ishwar Das, and others, too numerous to be mentioned here. Their spirit was denominational and sectarian, no doubt, but there was hardly anything of meanness or pettiness, or jealousy in it. Even their sectarianism was of an exalted kind, the Country—the Motherland—had always the uppermost place in their affections. They were all inspired by a spirit of genuine and disinterested patriotism and altruism. Their methods were clean and above board. It was a joy to work with them.

Of all the schemes of national education promulgated till then, theirs was probably the first which took cognizance of the economic problem. They were probably the first to include in their educational programme the idea of "Swadeshi". The original prospectus of the Dayananda Anglo-Vedic College was remarkable for these things: (a) the emphasis it laid in bridging the gulf between the educated classes and the uneducated masses; (b) in emphasizing the necessity of technical education in arts and industries, which would make the future leaders of the country, independent of State service; and (c) in insisting that their scheme of national education should be absolutely independent of Government patronage and Government help.

Looking back on the record of the institution for the last thirty-two years of its life, giving all possible credit to the founders and the managers and the leaders thereof, for the best of intentions, the best of efforts and the best of every thing, I regret to say that failure in their principal aims, written and unwritten, is writ large on it. Let me guard against misunderstanding. There is no man in India for whom I have greater respect than Hansraj, the Founder-president of the

Arya College, nor another body of men in the whole country towards whom I entertain feelings of greater respect, regard, and reverence than the past and present managers of the Dayananda College. The spirit of self-sacrifice and national service, shown by Hansraj and his pupils, is almost unique, and worthy of the highest praise. The work done by them deserves all credit. The tiny bark of high education in the Punjab was rescued by this college at the time of its greatest danger. The spirit of public service in the land of the five rivers owes an immeasurable debt to the little band of workers who brought the college into existence and have run it since. Considering the positions and the resources of the men who conceived the idea and worked hard to make it a success, considering the general air of all-round suspicion and distrust in which they lived and worked, the story of the financial and educational success of the Dayananda Anglo Vedic College, Lahore, is nothing short of a romance.

The Muslim College at Aligarh, and the Hindu College at Benares, were both started under better auspices, blessed with the smiles of the leading aristocracy of their respective communities, and with the good will of the ruling authorities. The Arya College had none of these advantages. It was founded, managed and run for a long time in defiance of both. Every brick of this institution has a story of its own, which, perhaps, will never see the light of day. These stories have already been forgotten and the few that are current will be burned with the bodies of those who composed them not to words but to deeds. Yes, all this is true, it is a pleasure and a privilege to be able to say this. Yet it must be owned that in solving the problems of national education, the Arya College at Lahore has been as conspicuous a failure as the other institutions started with similar objects in other parts of the country. Prior to the foundation of the National College, in Bengal, the Dayananda Anglo Vedic College, at Lahore was the only institution in the country which could even by a stretch of imagination and language, lay any claim to being called "national" in the sense in which the word was understood then. The Fergusson College is named after a

foreigner, and with the exception of the spirit of self-sacrifice of its founder, directors and teachers, had no other claim to be distinguished from the ordinary State Colleges. The Aligarh College and the Benares College both have had all the time, foreigners on their staffs and have, besides, in conjunction with the Fergusson College at Poona, been almost regularly in receipt of State aid thus subjecting practically the whole of their policy to Government control. Not that that fact necessarily makes them denationalised but that it reduces their claim to any great distinction from the ordinary State managed institutions.

Besides the institutions mentioned above there are some others also which claim to impart National education and which have been founded for that purpose. One of them is the Gurukula Academy at Hardwar founded by L. Munshi Rama and his party. The Gurukula, too, is a sectarian institution. Otherwise it certainly has a greater claim to being "national" than any of the others mentioned previously. It is an institution founded, managed, staffed, and financed by Indians only. In its curriculum it gives the first place to Indian languages. It is more in conformity with the spirit of Hinduism than the College at Lahore, or the Central Hindu College at Benares. It takes no notice of the official University courses or the University examinations. It enforces a discipline which is more truly national than anything done in the other institutions.

All that has been said about the spirit of self-sacrifice of those who founded the Dayananda Anglo-Vedic College is applicable to it in its entirety. Yet I am afraid it is no more national than any of the others.

Another institution of almost the same kind is the Tagore School at Bolpur. It does not profess to impart high education, and is a secondary institution. There may be some other institutions which claim to provide national education, with whose origin and history I am not acquainted. If so, I beg to be pardoned for not noticing them. It is not my purpose to give a complete list of "national" schools and colleges. The object is to notice some typical efforts and make a retrospective review.

The only effort of this kind which was,

in my judgment, truly national, was that made by the National Council of Education in Bengal, under the impetus of the Swadeshi and the Boycott movements. The scheme of the National Council was free from the sectarian tinge of the Upper India movements; it took no notice of denominational nationalism; it took ample cognizance of the economic needs of the country as a whole, and it frankly recognized the necessity of ignoring the official University curriculum, on the one hand, and of State aid on the other. It aimed at National consolidation and national independence. It was a direct challenge to the Government and the Government accepted it whole-heartedly. What came of it is known to everybody and need not be stated here. It failed, as it was bound to do, because it came into conflict with the State,—not, of course, of its own seeking.

The National Council of Education still exists, but only in name. Its condition is moribund. The leaders and officers themselves have strangled it. Tinnak-nath Palit and Rash Behari Ghosh, two of its greatest pillars, gave it a death-blow when they handed over their magnificent endowments to the Calcutta University, instead of to the National Council of Education, founded and led by them. The few scholars who, with characteristic self-sacrifice, gave up careers to give instruction to the students of the National College, are almost all dispersed. They are seeking appointments in Government and aided institutions. The Nationalist schools, started by the Council, have (most of them) been disintegrated by the force of circumstances, and at the present moment the movement is nothing but a dilapidated and discarded landmark in the educational progress of the country.

The only institutions that are still in existence and prospering are the denominational ones.

The D. A. V. College at Lahore and the M. A. O. College at Aligarh, are thriving and a source of joy to their founders. They follow the policy of least, or no resistance. The D. A. V. College, which was under suspicion ever since its birth, has more or less gained the confidence of the rulers by a radical change in its policy, and the reins of the Mohammedan College at Aligarh are held tightly by the Government. The Benares College is an independent University which enjoys both the confidence and the control of the Government. The Gurukula at Kangri, is virtually the only institution that is really independent of Government control. It was under a cloud for a long time, until Sir James Meeson and Lord Hardinge put upon it the seal of their approbation. I think the same might be said of Tagore's school at Bolpur.

Now I do not mean to insinuate even by implication that these institutions have not been educationally useful to the nation, or that their managers or leaders were not actuated by the best of motives. The remarks that I have made above about the Arya Samaj institutions apply, with equal force, to almost all these institutions. They are, without exception, monuments of the patriotism and public spirit of their founders and managers, and far be it from me to make any reflection on them.

Yet I cannot help repenting once more, that they have not, except by their failure, made any substantial contribution toward the solution of the problem of "national" education. I want the leaders of the new movement to realize that, fully, and to keep it in mind in formulating their new scheme. I, for one, do not believe in living in a fool's paradise. The first thing is to clear our minds of cant, and have a clear conception of what we mean by national education.

WOUNDED PLANTS*

By Sir J. C. Bose.

It is a little over four years now that the Embodiment of World Tragedy stalked over Western Europe. The fair field of France and her bright sky

* Lecture at the Bose Research Institute. All rights reserved.

were under a pall of battle-smoke. Our sight could not pierce through the dense gloom, and the mortal cry of the wounded and dying, drowned by hoarse roar of a thousand cannon, did not reach our ears. But from the time the Sikh and the

Pathan, the Gurkha and the Bengali, the Mahratta and the Rajput flung themselves at the battle front, from that day our perception has become intensified. The distant cry of those whose life blood has crimsoned the white fields of snow, has found reverberating echo in our heart. What is that subtle bond by which all distances are bridged over, and by which an individual life becomes merged in larger life? Sympathy is that bond by which we come to realise the unity of all life.

And before us are spread multitudinous plants, silent and seemingly impassive. They too, like us, are actors in the cosmic drama of life, like us the plaything of destiny. In their checkered life, light and darkness, warmth and cold, drought and rain, gentle breeze and hurricanes, life and death alternate. Various shocks impinge on them, but no cry is raised in answer. I shall nevertheless try to decipher some chapters of their life history.

When a man receives a blow or shock of any kind, his answering cry makes us realise that he is hurt, but a mute makes no outcry. How do we realise his suffering? We know it by his agonised look and the convulsive movement of his limbs and through fellow feeling realise his pain. When a frog is struck it does not cry, but its limbs show convulsive movements. The shock of stimulus thus evokes movement in response.

MEASURE OF VITALITY

Responsive movement being a test of life we shall try to construct a scale with which the height of livingness may be gauged. What is the difference between the living and the dead? The living answers to a shock from outside, the most lively gives the most energetic, the torpid or dying the feeblest, and the dead no answer at all. Thus life may be tested by shocks from without, the size of the answer being a gauge of vitality. The answer of the strong will be violent and almost explosive in its intensity, while the weakling will barely protest. The responsive movements may be recorded by a suitable apparatus. The successive answers to similar shocks will remain uniform if the responding tissue remained always the same. But the living organism is always in a state of change, for environment is always building us anew, and we are changing every day of our life. We are thus subject to

change, some day we are in a state of high exuberance, and at other times in a state of lowest depression, and we pass through numerous phases between the two extremes. Not merely does the present modify, but there is also the subtle impress of memory of the past. The sum total of all these, characterises one individual from another. How is the hidden to be made manifest? To test the genuineness of a coin, we strike it and the sound response betrays the true from the false. The genuine rings true and the other gives a false note. In this way perhaps the inner history of different lives may be revealed, by shocks and the resulting response.

Turning from human subjects we will now inquire as to how the hidden history of the life of plants is to be recovered. For this it will be necessary to excite the plant by a shock, and make the plant itself record its answering signal, and the character of the recorded script will enable us to decipher its history.

SIGN OF EXCITATION IN THE PLANT

There are certain plants like *Mimosa pudica*, which answer to a shock by movement. At the lower side of the leaf joint there is relatively large mass of tissue. As our muscle contracts under a shock so does the lower cushion of tissue in *Mimosa* contract under excitation, and the leaf undergoes a fall. After this sudden fall due to excitation it gradually recovers and regains its normal horizontal position. Just as a man answers to a shock by a movement of his arm so *Mimosa* answers by movement of its leaf. The plant may be excited by the same irritation that excites us — by a blow, by a pinch, by a burn, or by acid acids. But under such torments the plant is likely to die. For long continued experiment it is necessary to have some feeble form of stimulation which can be measured and repeated. This is supplied by shocks given by an electric coil. The apparatus for record is my Resonant Recorder which is extremely sensitive and measures time as short as a thousandth part of a second (Fig 1).

In investigation on the effect of wound, we take the record of response of the plant in a normal condition, we next take the record after wounding it. The difference in the reply reveals the effect of injury.

But before entering into this question an interesting problem arises. The plant,

Fig 1 —The cut leaf attached to the Resonant Recorder.

ordinarily speaking, moves its leaf under excitation. But does the dog wag its tail, or does the tail wag the dog? So it may be asked whether the tree wags the leaf, or the leaf wags the tree? I have been able to carry out certain experiments which will be of interest to metaphysicians.

When the *Mimosa* is rooted to the ground, the plant cannot be displaced, and the leaf alone shows movement. But if the roots be carefully freed from the ground and the plant be held by the leaf, it will be found that it is now the tree that wags in response. (Fig 2). The effect of a shock does not remain confined to any one part of the plant, but is conducted to every other part and perceived by the tree as a whole. Every leaf, every twig and every branch is thus in intimate connection with the rest. The tree is thus not ageries of unrelated parts, but an or-

ganised unity; its different members are thus intimately bound to each other.

EFFECT OF WOUND.

I undertook three separate investigations on the effect of wound on plants. The first is the effect of injury on growth; the second is the change manifested in the pulse-beat of rhythmic tissues in plants. The third investigation had for its object, the study of the paralyzing effect of wound.

In the first of these, the normal rate of growth and change of that rate by injury were found from automatic records given by the Crescograph. When the growing plant was pricked with a pin, the normal rate was at once depressed to a fourth, and it took about two hours for the plant to recover from the effect of pin-prick. A slash made with a knife was found to arrest the growth, the inhibition persisting for a very long period. Severe shock caused by wound thus retards the growth in normal healthy specimens.

The reactions in exceptional cases are highly interesting. Certain plants, for reasons at present obscure, remain stunted in growth, the branches and leaves presenting an unhealthy look. Lopping off the

Fig 2 —Wagging response of the plant.

Plant held (1) by leaf and (2) by stem

offending limb, curiously enough, is found good for the plant. The stimulus of severe shock renews the growth that had remained arrested.

MARCH OF DEATH.

Another series of investigation was car-

ried out with the leaflet of the Telegraph plant which pulsates up and down like the movement of a semaphore. When the leaflet is cut from the parent plant and the cut end placed in a nourishing solution the pulsation is found arrested by the shock of operation. After a time the pulse throb is slowly renewed and maintained for nearly 24 hours. But death has found an unguarded spot at the wound and its march though slow is sure. The death change thus reaches the throbbing tissue which becomes permanently stilled with the cessation of life. Experiments are in progress to retard and arrest this death march. The problem is intimately connected with the proper understanding of conditions which lie behind life and the other conditions under which the molecular cog wheels become arrested in the rigor of death. The experiments already carried out, appear promising the throbbing life of the cut leaf has then been prolonged under proper treatment, from one to seven days.

PARALYSIS OF SENSITIVITY

For studying the paralysing effect of wound I took for my experiment the sensitive plant *Mimosa pudica*. On cutting off one of the leaves the shock effect was transmitted to every part of the plant and all the leaves fell down and remained depressed for a considerable time. The detached leaf with its cut end placed in a nourishing solution was also depressed. The subsequent histories of the parent plant and the detached leaf were, however, curiously different.

The paralysing effect of the wound was determined by means of testing shocks the response being at the same time traced by the automatic recorder. The parent plant gradually recovered and showed signs of returning sensitiveness (Fig 3).

The detached leaf fed with the nourishing solution soon held itself up with an attitude rather of defiance. In its newly found freedom from the entanglement of its former associates it was unusually energetic in its responses. This vehemence lasted for a whole day after which a

Fig. 3.—Slow recovery of the plant from the effect of wound

able to survive the disaster while the detached and free leaf nurtured even in lux

Fig. 4.—Effect of wound on detached leaf (a) Response four hours after section (b) Response after 4 hours (c) After 49 hours

ury falls a prey to death. Why should there be this difference? The reason is that the tree is rooted safely in its own soil. It is the place of birth that provides its proper nourishment and endows it with strength in its struggle of life. Many waves of change and disaster have passed over it. The shocks from outside have never been able to overpower it, these have only called forth its nascent powers. It had met external change by counterchange. The decaying and the effete had been cast off like worn leaves and changing times had called forth its powers of readjustment.

The tree also derived an additional strength from its racial memory. Every particle of the inconspicuous seed may thus bear the deep impress of the mighty baobab tree and so the sprouting seedling forces its roots into the yielding earth to anchor more safely the stems rise high against the sky in search of light and the branches with their canopy of leaves spread out in all directions.

What is the strength that has con

curious change crept in the vigour of its responses began rapidly to decline. The leaf hitherto erect fell over death had at last asserted its mastery (Fig 4).

The wound ed plant is thus

ferred on the tree the power of endurance and enabled it to emerge victorious from the struggle of life? It is the strength derived from the place of its birth, its perception and quick readjustment to change, and its inherited memory of the past.

The efflorescence of life is the supreme gift of place and its associations. Isolated from these, what fate awaits the poor wretch, nurtured in alien ways? Death dogs its footsteps and annihilation is its inevitable end.

NEED OF HINDU INTER-CASTE MARRIAGE

THE internal condition of Hindu society shows the urgent need of some sort of sanctioned intermarriage among its constituents, if it is really to prosper. Serious students of Sociology must have observed that Hindu society is not only horizontally stratified, but vertically divided. It is a well-known fact that Hindu marriage is subject to many restrictions. There are seven types of castes, viz., tribal, functional, sectarian castes, castes formed by crossing, castes of national type, castes formed by migration and castes formed by change of occupation.

Many of these types are endogamous and several are known to be exceedingly small; and even the larger ones, when distributed over a large area of country, may be so scantily represented in a given locality that the number of possible marriages open to their members must be inconveniently restricted.

"The disintegrating influence of the constant creation of separate communal groups has not escaped the notice of Indian Social Reformers. In an able paper on the fusion of sub-castes in India Lala Bajnath Lal, Judge of the Court of Small Causes in Agra, has pointed out the harm which they do 'physically by narrowing the circle of selection in marriage, intellectually by cramping the energies, and morally by destroying mutual self-confidence and habits of co-operation'."

About the Kanaujia Brahmans Lala Bajnath remarks that "the smallness of their various clans causes the greatest difficulty in obtaining husbands for girls except on payment of extortionate sums of money" [India Census Report, 1901, p. 423]. As Endogamy restricts intermarriage in one direction by creating a number of artificially small groups within which people must marry, Exogamy, on the other hand, has brought about the same result by artificially expanding

the circle within which they must not marry. The third restriction is known as Hypergamy or "marrying up", which forbids a woman of particular group to marry a man of a group lower than her in social standing, and compels her to marry a man in a group equal or superior to herself in rank. I would like to refer the readers to the India Census Report 1901, p. 426, in which Late Sir H. H. Risley very ably and graphically sums up the evil effects of hypergamy in society, which leaves, though theoretically, a large female population of a certain high sub-caste without their respective bridegrooms and brides. This led to many evil practices. To avoid the difficulty which the marriage of a daughter involved, the most horrible of crimes, female infanticide, was resorted to. [India Census Report 1911, pp. 215-218; also John Wilson's History of the Suppression of Infanticide in Western India—Bombay, 1855].

The exigencies of space will not allow me to enter into any detailed analysis of various endogamous, exogamous and hypergamous forms of marriages. It is a notorious fact that castes and sub-castes are all watertight compartments and the whole of Hindu community is divided into those groups. But now these rules are breaking up in certain quarters and Mr. Gait in the Bengal Census Report for 1901 gave numerous instances showing how in that Province the barriers dividing sub-castes were growing much weaker than those which separate castes. The same is the case in some sections of educated Indians outside Bengal. But reaction is working hand in hand and wherever an inch is conquered a foot is given elsewhere. Let us take the example of Bengal and

examine the working of the social stratification in detail Bengalees have no social connection with any indigenous community outside Bengal. So Bengal is an unit in itself, which must be self contained if it wants to be socially pure, as they would say. The Hindu Society of Bengal, according to orthodox views is divided into seven grades. I Brahmanas stand pre-eminently superior to all others. II Other castes ranking above the clean Sudras, III Clean Sudras, IV Clean castes with degraded Brahmanas, V Castes lower than the above whose water is not usually taken, VI Low castes who abstain from beef, pork and fowls, VII Lastly come the unclean castes.

But each of these castes is not a homogeneous whole in which all the members can act freely and choose their wives from amongst the community. In Bengal there are as many as 450 groups of castes and in Bihar and Orissa as many as 205 separate castes and tribes were enumerated in 1911. In Bombay the main castes and tribes, which in most instances include numerous endogamous subdivisions, number over 500, but of these only a small number have more than 100,000 members. The *Ethnographic Appendices*, published as supplement to the *Indian Census Report of 1901*, will furnish the readers with a very detailed description of the castes and sub-castes of Bombay and Rajputana in a tabulated form. The 1901 Census Report of Madras distinguished 450 communities of all degrees of civilization and enlightenment, from the Brahmins down to the *Khonds* of the Agency Tracts. It would be a tedious task to go from province to province and enumerate the number of castes, no attempt can be made here to analyse and explain the distribution of 2,400 castes and tribes which has been enumerated in the Census of 1901.

In a population of 300 millions 2,400 castes might not appear to be a large number. But let us cast a glance at the details of these castes. Each caste is divided into numerous sub-castes which are strictly endogamous and no sort of commensality is allowed amongst the members. The social stratification of Bengal has already been referred to where the apparently seven strata are divided into many castes and each caste again into several sub-castes, thus a variety of shades and restrictions the parallel of which is

nowhere to be found, has evolved within our society.

It is a well known fact that there is a general deficiency of females amongst all the Bengali Hindu castes, except a few lower classes. A few other castes or tribes of Mongoloid origin, who live on the borders of Bengal also show a slight excess of females. In Bihar and Orissa at the same time nearly every caste has a preponderance of females the exceptions being the three higher castes the Rajputs and *Minyas*. It might be asked that this paucity of males in the different castes of B Orissa, is due to the exodus of their males but it is noticeable that there is no striking deficiency among the Animist Santals and Orons who are the pioneer races furnishing a large proportion of emigrants. Mr O Malley points out two noticeable features in these statistics. First, there is a smaller number of women among the Brahmanas and Kayasthas in both the provinces, a feature which is not noticed in other castes that have representatives both in Bengal and B Orissa. Secondly females are in excess amongst the Vunda and Dravidian tribes (*Bengal Census Report, 1911, pp 295-9*).

Let us take, for example some of the unclean castes of Bengal who are neither served by Brahmins nor by Dhobas (washerman) nor by *Hapit* (barbers). Those who have any knowledge of the social life of these depressed classes of Bengal will at once recognise in their life the rule of division deep rooted in imitation of the higher castes. The Bauris of Bengal who seem to be one caste to the non-informed, are really divided into as many as eleven sub-castes. The sub-castes are all equal in rank and local superiority generally depends on numerical strength. Their social customs differ in various districts. In Bardwan, Hooghly and Birbhum inter-marriage among them is forbidden on pain of social excommunication. In Faridpur and Nadia the same rule is in vogue but paying a penalty he can expiate his sin. In Bankura inter-marriage among different sub-castes of Bauris is freely allowed.

The Chamars who seem to be a homogeneous caste, are divided into as many as 25 sub-castes inter-marriage between them is strictly forbidden on pain of being out-casted, and members of different sub-castes will not eat, drink or smoke together, no member can gain admission

into any other sub-caste except in a few cases. I have already referred to the great sex disparity amongst the lower castes of Bengal and B. Orissa; and amongst these Chamars it is distinctly marked. The strength of Bengal Chamars is 137 thousands and that of B. Orissa is 1174 thousands. But the vital question,—I mean the disparity in the numerical strength of the sexes—should always be before our mind's eye when we want to solve some social question. The number of females amongst the Bengal Chamars is 544 and that among the B. Orissa Chamars is 1153 per thousand males. Of course we must remember the great number of male Chamars who annually migrate to Bengal. But in spite of this such disparity is abnormal and hence ruinous to the society.

Let us next take the case of Doms; they are divided into 28 sub-castes amongst whom inter-marriage is generally forbidden on pain of being outcasted; but in certain districts there are a few exceptions. Commensality is not allowed. Each sub-caste has a separate Panchayat and members cannot gain admission into any other.

Our popular belief about the Haris is that they are one homogeneous people and not divided like ourselves. But there, too, we find the same pitiable law of division repeated with no less vigour. The Haris of Bihar are divided into four and those of Bengal into five sub-castes. In the district of Birbhum there are four sub-castes of this caste amongst whom inter-marriage and commensality are strictly forbidden. The proportion of females amongst the Bengal Haris is 982 to 1000 males and in Bihar it is 1032 to 1000 males; so there is an excess of female in one and deficiency in another; and this disparity could have been made up and a healthy generation might have been raised from inter-marriage among the sub-castes.

The *Barhis* of Bihar and the *Sutars* of Bengal are the hereditary carpenters; and though their function is the same, they will never intermarry. Even the *Barhis*, who are divided into nine sub-castes, allow no inter-marriage amongst themselves. The Bengal carpenters have a low proportion of females (944) and the Bihar *Barhis* (1084) an excess of 84 females per thousand males.

The same is the case with the *Dhobas* of Bengal (932 females per thousand males) and Bihar (1063 females per thousand

males), who are divided into more than 30 sub-castes, and do not allow intermarriage and common eating and drinking are generally forbidden, for the weapon of excommunication is not unknown to them. The great sex disparity in Bengal as well as in Bihar might be made up if they were allowed to intermarry and the sub-castes were fused into one.

The *Ganins* of Bengal were once a very healthy and prosperous caste. The sturdy people had a fair increase of population in 1881-1891, when it was 7.14 p.c.; since then they have shown no sign of growing numerically,—in 1891-1901 showing an actual decrease of 1.10 p.c. and only in 1901-1911 they showed an increase of 1.8 p.c., which is absolutely below the normal. The *Goalas* of these two provinces are divided into 40 sub-castes, who are absolutely separated from each other by caste rules. Inter-marriage and commensality are forbidden, except in a few cases. But the notorious fact among the *Beogals* *Goalas* is well-known to all and the rich dowry, which is expected of the bridegrooms, is sufficient to damp the heart of many of them. The proportion of females is only 819 in Bengal, whereas the proportion of females amongst the *Bihari Goalas* is 1003 per thousand males. These people must be saved from degeneration and corruption and we must not restrict the marriage area and thereby create problems, whose invisible undercurrent is a sufficient set-back to many of our great endeavours to elevate the people.

The sub-castes of Brahmins, with their numerous ramifications, are too well-known to the educated public to require any elucidation. The Brahmin of India is not a homogeneous caste; a *Mahratta* Brahmin will not enter into any social connection with the *Maithili*, *Bengali*, *Kanujia* or *Madrasi* Brahmin. The Brahmins of Bengal, like those of other provinces, are a separate class, who have nothing to do in common with any of them. There are in Bengal three main classes of pure Brahmins. *Rarhi*, *Barendra*, and *Vaidik*, but there are others also, including the *Kanujia* and *Maithili* Brahmins, who are chiefly immigrants from Bihar and upcountry, the *Utkal* who are come from Orissa, the *Madhya Sreni* who are found in Midnapore, and the *Kamrupi* Brahmins of North Bengal, who serve as priests to the *Rajbansis*. Brahmins who

descendants of Kayastha emigrants from Bengal and women of Chasa and Bhandari classes and are entered into the Reports and known in the society as illegitimate children.

Hindu society was a living organism; there were intermarriages among its constituents and new castes or Varna Sankaras rose out of them and they had a social position. Even in the days of *Manu* and *Vrihat Dharmapuran* there were as many as 39 Varna Sankara castes. But now there are ten times as many and Hindu Society has not yet collapsed.

Before the question of individual liberty, the question of sex disparity, the question of division among the castes, are considered in details, we cannot pass judgment against intermarriage.

It is a well-known fact that throughout Bengal the Mohammedan population is on the increase, contrasted with a steady deterioration in the case of the Hindus; and the reasons are not far to seek. They are the thousand and one restrictions placed against the growth of the Hindu population. The sturdy lower castes have imitated the higher castes and have taken to all the evils that are destroying the vitality of the higher ones. In a certain community there is a great want of girls, and in another an excess of girls and want

of males; in another group there are many marriageable widows; and these things have naturally given rise to many sex problems, which have been continuously attempted to be white-washed instead of being boldly faced.

We have made no provision for the people, who cannot get a bride within their caste, to marry outside and live decently and purely. Are we not aware of the wretched conditions of certain castes, who have been a problem to the whole society? Is not this undue restriction on marriage partially responsible for the conversion of a large number of lower class people to Christianity and in earlier days to Mohammedanism? Is not this restriction partially responsible for the large displacement of the Hindu population by Mohammedans?

One serious defect, that I have come across in handling the Tables of the census Reports is the want of figures for the male and female populations of the sub-castes of some of the important castes. Had these figures been given, the disparity of sex population among the sub caste could have been proved to demonstration.

INDIAN PERIODICALS

Woman in Social Co-operation.

In the course of an article on the above subject in the January number of *Everyman's Review*, Mr. P. R. Krishnaswami, M.A., writes:

It is attempted to show here that woman has a social duty as well as a domestic one to perform. The principle of freedom of social meeting between the two sexes is an incomparably trivial matter when compared to the admission of women into the British Parliament. Yet it is an essential step for the furtherance of all serious matters of social reform. It is foolish to overlook this. It can even be argued that the failure of social reform in many matters of importance in the past in this country is due to the want of recognition of the principle of free social meeting between the two sexes as necessary to sound social organisation. We fret at early marriages and

want post puberty celebrations. But how can a grown-up girl or boy be reasonably drawn into marriage without being permitted by social etiquette to have previously met and known and chosen her or his future partner? Again we talk of extending the period of a girl's education to greater length than at present. How is this possible if social feeling does not previously throw away the barrier of seclusion now effectively weighing on our womanhood, or, how can widow-marriage again take place unless it has been humanly led up to by mutual meeting? A Surgeon-General tells us one day that women-doctors and women nurses are a crying need in Indian hospitals. The idea catches us immensely and we echo it. But how is it possible unless our social feeling has properly recognised that woman's life is not necessarily confined to the home but should extend to the social sphere? Women-nurses—what angels on earth they are to the sick! And yet according to the popular feeling of

the bird. National life is impoverished, is crippled, deprived of its feminine element.

But of late there has been an awakening of women, touched by the wide sweep of National consciousness, and feeling the modern exclusion from all humanity outside the home. The wrongs wrought in South Africa on Indians brought the Indian women there to face, as of old, the dangers which were faced by their men. Women went to gaol as men went, aye and died from the hardships suffered. Then women in the Motherland arose, stung into action by the sufferings of the exiles, and women's meetings called for justice, so that men and women together marched in one army against wrong and—won. The degradation, foul and monstrous inflicted on Indian women in Fiji as indentured labourers, called in their sisters in the Motherland for help again; they moved sent a deputation to the Viceroy and succeeded in gaining a promise that indentured slavery should cease. A third great victory was won in the internment struggle, 9 women's meetings and women's processions played a remarkable part in the agitation.

Meanwhile efforts to win higher education were steadily carried on, and progress was made. Qualified women teachers, women doctors, began to appear. Handicapped by the evil custom of child marriage and child motherhood, women yet strove for education, and

Mr. Karmes had stood for widow education, widow marriage, finally for a Woman's University, played a fine part in the struggle. Girl undergraduates and graduates attended Government Universities and distinguished themselves in the examinations. A woman poet, Sarojini Devi, showed an easy mastery of English melody that no masculine Indian has rivalled. Toru Dutt might have held her own had not death cut short her promise. Shrimati Sarojini's rare eloquence alike in English and in Urdu is making her a power in the political field of India.

Everywhere, as we look around us, we see the glorious arising of Indian Womanhood, the promise of a near and sure victory for Liberty for Woman is the Shakti, the Divine Power, and without her Man cannot reach the fullness of Life. Partner, not subject, comrade not rival, complement not antagonist, helper, not burden—such is Woman to Man. With her Freedom India shall become free. The subjection of the Motherland and of the Mother must end together. For Man and Woman are the halves of a Perfect Whole and by their united strength shall India enter into her Kingdom.

We say Amen!

FOREIGN PERIODICALS

Indian Constitutional Reform.

In the January number of *The Asiatic Review*, of London, Sir F. S. P. Lely, C.S.I., K.C.I.E., a retired member of the Indian Civil Service, contributes an article on "The Report in Indian Constitutional Reform," in the course of which he says—

I desire to express my deep sympathy with the educated men of India who wish to take a larger share in the government of their country. Also I may be allowed to offer my tribute of admiration for the statesmanlike spirit which pervades the Report though on some points it seems open to criticism.

The authors do not take enough account of the inhuman institution of caste, which is still by far the strongest and most tenacious social force in the country, though it may have been concealed from view by phrases borrowed from England. It is not true that the training of the people to political activity is all that is needed to produce a fairly balanced system. A difficulty in the way of an Indian democracy which radically differentiates it from that of the Colonies is that the equality of all men before the law is not grasped even by the best, and will certainly not be learned in five or ten years more. The belief is still deep-rooted—a survival of the not far distant days when the Brahmin was exempt alike from penalties and taxes—that a man's rights vary with his caste

and that the lowest have no civic rights at all. They are regarded by the higher castes as simply of no account, as on the level of animals—in parts influenced by Jainism, as below animals. I could give innumerable instances from real life, but they would seem incredible, or else raked up to make out a case.

Towards the end of last century, being Collector of Surat, an advanced district of Bombay, I found on inquiry that the depressed classes—i.e., the outcastes, certain low castes, and the aborigines (called locally "the black people")—were outside the village school, even when they formed twenty per cent or more of the population. Occasionally by force, but generally by social pressure, the higher castes made them feel that the school was not for them. I used my influence as Chairman of the Local Board, to get a notice served on the worst villages that unless within a certain time a certain proportion of the inferior classes were receiving education, the Board School would be closed as not fulfilling its purpose. Rather than deprive their own children of it, the caste people gave way and numbers of the outsiders were let in. Now under any possible franchise these caste people will form the bulk of the electorate. If, as is assumed, they are truly represented they will add an element to the country's government not perhaps in these days of active tyranny, but of passive resistance to the upward progress of the labourers, and especially of the 'unclean'. They will stand behind the Brahmins, who will occupy the places of

of our political superstitions of peace time persist in this hour of peril and anxiety and distract us, not only from the momentous contest raging almost in our hearing of the busy activities of London, but from the work quietly performed by men of many races and tongues, in many different fields of unostentatious activity. There have even been Indians from Pondicherry and Chindernagore who have had the high privilege of fighting in the French Army as gallant and valued soldiers of the French Republic. When the German militarists let loose the unspeakable calamity of war in the hope of an easy, profitable, and rapid victory over unprepared and peaceful communities, they little knew that they were, in effect, bringing to a rapid head many incubating tendencies in East and West which were the very antipodes of their own social and political ideals and aims.

In concluding Mr. Anderson observes :

What the ultimate result will be, who shall say ? As I write, there are problems in Ireland, in Russia, even in India itself, which may well dismay the most opti-

mistic, and puzzle the most keen-sighted. Yet, after all, our so-called "democratic" principle, and the ideals for which we are fighting, are essentially optimistic. We refuse to despair of human nature ; we refuse to believe that the only way out is a sullen and despairing acquiescence in and submission to, military force engineered and supported by a marvellous abuse of scientific organization. Once that issue is fought out, we shall have other puzzles and problems. But we can face them in another than the Prussian spirit. We can cultivate a sense of humour and kindness, which, as I have hastily and inadequately striven to show, is not wanting even in the minds of animistic Tibeto-Burman savage races. We have learned, as never before, to work in hearty friendship with men of many nations, tongues and beliefs, in a sturdy confidence that the optimistic love of liberty, which we inherit, and now share with many other peoples, is the most infallible guide that stumbling humanity can employ.

DEMOCRACY VERSUS BUREAUCRACY

OF the varied aspects of the human society of to-day, one is the awakening in the masses all the world over of the consciousness of their political existence. The sentiment of national pride is keener and more widely diffused nowadays than it was in former times. The questions which directly affect the sons of soil and toil are those most calculated to enlist their sympathy, and the governing classes conscious of this fact have begun to modify their tactics accordingly. The masses have realised the condition of poverty, ignorance and misery in which a large part of them spend most part of their lives—a condition brought into existence by a certain number of economical forces, themselves the result of great progress in material sciences during the past one and a half centuries. This consciousness has led to what is known as the co-operative movement and the formation of trade-unions all over Europe and Europeanised world. The latter have come to the conclusion that the amelioration of the condition of the vast masses of the labourers is impossible unless they have a hand in politics and send their representatives to their respective legislative assemblies. They advocate the doctrines of socialism.

The middle classes see and realise that their interests clash and are in conflict with those of the wealthy classes and the feeling is based upon a bitter experience in the past that as long as the government remains in the hands of the latter, their interests would be crushed. This has raised the problem whether the government is to be carried on in the name of a people merely, by a privileged class for its own benefit, a government irresponsible to the people at large or it is to be carried on by the people for the good of the nation as a whole and responsible to the nation as a whole. In other words, whether there is to be a democracy or a bureaucracy. Before I describe the forces that are gravitating towards the success of democracy over all other forms of government to the utter mortification of the bureaucrat, I may let you know, what I understand by the two terms.

Bureaucracy may be defined as a system of government centralised in a graded series of officials responsible only to their chiefs and controlling every detail of public life as it was till lately in Germany. On the other hand a democracy may be defined as a form of government in which the supreme power is vested

in the people collectively and is administered by them or by officers appointed by them, e.g., in France

Before I examine these two definitions, I shall make clear certain terms which I shall use, by giving their explanations

Reduced to its fundamental principles the problem of government is how to protect members of a State against outside attacks and internal dissensions and how to promote their general welfare. Thus external and internal protection and the promotion of the general welfare comprise all the responsibilities of a government. If it avoids any of these two or adopts a course which is prejudicial to any of these two, it does what it ought not to do and in doing so it violates the rights of the members of the State, who naturally resent it and come in conflict with the government. In order to carry out its proper work, the government has to frame laws and make the machinery to carry them out, i.e., it has got power to legislate and to execute the legislation. Thus the task of the government is divided between the legislative and the executive. Now I proceed to examine the definitions which I gave of bureaucracy and democracy

The former definition may be analysed into three clauses—

- (a) Centralisation of authority in graded series of officials,
- (b) their responsibility to the head of government alone,
- and (c) control of every detail of public life

Taken as a whole the three elements in a bureaucracy exhibit its great power of organisation which is essential to success in all departments and enjoin strict discipline and obedience on its members

But the power being vested in a graded series of officers—the lower officer is responsible to his immediate superior officer and the latter to his immediate superior officer—each officer from the lowest to the highest forms but a link in the chain, the last remaining unlinked which represents the absolute authority of the highest officer who is the head of the government. Now the highest authority might be vested in a single individual or a few members of them who are absolute, i.e. are not responsible to the people whom they govern

The danger of such a system lies in

the fact that it may deviate and such systems have deviated from the right path, i.e., they have avoided what they ought to have done and done what they ought not to have done. They have actually put restrictions upon anybody and everybody's right to move about from one place to another or from one country to another. They have stifled and stifled a nation's education, repressed the freedom of its press, disarmed its citizens, if citizens they might be called who have no rights of citizenship, and neglected and crushed its industries. They have embittered the public life of the governed and have even in some cases interfered with the sacredness of their private life. The wretchedness and the miseries of the people have only increased in cases where the personnel of the bureaucracy happens to be of foreign extraction, i.e., where this form of government is superimposed upon a people by individuals of an alien race. But my quarrel is not with the personnel but with the system itself

Now have you ever tried to understand the psychology of the bureaucrat? It is this. The bureaucratic form of government is good for a country, I would not call nation in the period of its lactation. Its work is educational. It moulds the different tribes into a national unit. Beyond that it has no justification to continue to exist. It has to give over charge to democracy. But the difficulty lies in the fact that instead of quietly and peacefully transferring its authority to its successor it tries to continue by unlawful means its unlawful lease of life and in consequence it has to be dethroned. The bureaucrat is a parasite. He enjoys freedom by withholding the same from its legitimate proprietors, i.e., the people at large. He has resorted unscrupulously to the tyrant's most terrible instrument of refusing the right of open trial and committing innocent individuals to jail on the pretext of public safety. Even the devil has his good side. It is said and in the same manner even the bureaucracy can justify its unlawful actions by the appointment of what are called "commissions." Further to strengthen its position it sets up a strong militarism at the cost of the people ready to be used even against the very people themselves if they even try to open their muzzled mouths and utter the word 'liberty.' The evils

of such a system have been amply demonstrated in the case of the German East African Colonies where the people used to live daily under a sundry sort of such other tortures. This leads to movements at first secret and then open like those of the Communists. It is the result of this system that Bolshevism is at present rampant in Eastern and Central Europe.

So much for Bureaucracy. Now I must examine the definition of Democracy. It may be analysed into two clauses—

(a) The supreme power is vested in the people collectively

and (b) administration is carried on either directly by themselves or by the officers appointed by them.

Now there are two things introduced here. First the power is transferred from an individual or a few individuals or even from a privileged class to the people themselves. They are the sovereign. Some might call it a paradox but like all other paradoxes it has to be understood in order to grasp the deeper significance which underlies it. It does not mean that any individual can exercise the sovereign authority. That would be anarchy against which we are fighting. But the people as a whole possess that sovereign power which is denied to the individual. Moreover the people collectively relegate their authority for immediate purposes of legislation and its execution to a number of themselves while retaining to themselves the ultimate authority. They can criticise the actions of the body to whom authority has been relegated and can even dismiss it if they like. Usually the people choose their legislature which appoints the executive which is responsible to the legislature and through it to the people at large. This briefly put is the principle of democracy.

Now according to the different answers to the question who shall control the government the different forms of government e.g. monarchy aristocracy plutocracy theocracy democracy and in fact many other cracies depend. Therefore it would not be amiss to find out with whom the ultimate sovereign authority rests from which the government derives its sanction.

Plato in his Republic gives expression to the ideals of democracy which differs much from its modern form. He and his great disciple Aristotle did not abstract

man from the society, the latter went to the length even of opening his Ethics by offering the economic structure of society. Their ideal was to establish a large measure of justice between man and man and in their systems there seems to be no place for any form of government but in which the rights and privileges of the various members of the State are equal.

Now passing on to the modern times we find in the seventeenth century Thomas Hobbes rejecting Aristotle's notion of society as an essentially human characteristic and maintaining what is called the 'Natural State of man'. To come out of this chaos he invented the doctrine of *Social Contract* by which the whole community surrender their right of individual sovereignty into the hands of one man who thenceforth becomes the absolute ruler of the State and whose authority no body can deny in future. 'But the logic of Hobbes absolutism says Mr. Bean, 'shrivelled up under the Sun of English liberty'.

Although after Hobbes, Locke and Rousseau maintained his views as to the origin of the political society which is false as is shown by recent writers who hold that in the primitive stages of human development governments like languages are not made but evolve yet they hold in contradistinction to Hobbes view that the will of the people should be the law. According to Locke the chief and main end for which men unite into commonwealths is the mutual preservation of their lives liberties and estates (Treatise of Government) and if a government neglects to secure this end or invades the rights of its subjects may be lawfully set aside whenever an opportunity occurs. Hence the people themselves are to be regarded as the sovereign authority.

It was according to this great democratic principle that the members of the French National Assembly formulated the rights of man and since then this principle has been adopted in all the States of Europe Turkey excepted. As to Russia nothing can be said at present when it is being ruined by an internecine war and Bolshevik Terrorism prevails everywhere in the country.

Not only this the democratic principle has created a tendency to extend the franchise to all adult males so that they may be able to force the government to do

according to their own wishes. In England even women have been enfranchised and authorised to sit in the House of Commons. Moreover, the Bombay Legislative Council has also now passed the bill giving right to women to be elected as members of Bombay Municipal Corporation.

Besides this, written constitutions exist in all European countries, except England and Turkey, the one requiring none so strong being the traditions of constitutional government, in the other, the despotic government granting none, to prevent kings or president or government officials to exercise despotic powers.

The upshot of this whole is that it is now acknowledged that it is the people at large in whom the sovereign power resides and who are the ultimate arbiters of their fate. Now we find that bureaucracy derives its authority from above, democracy from below, i. e., the people themselves. Even in religion where authority might be supposed to come from the above, the Reformation has denounced it and we find among the Protestants as far as my knowledge goes, that the authority resides in the congregation and not in the clergy. In the latter it is only a delegated authority. If it be so, if man can look well after his soul, can he not look after his poor body? I think the bureaucratic principle here falls to the ground.

Now as to the second point—whether the government is to be carried on by the people directly or through their representatives. This is the basis of the distinction between what is called Absolute or Direct Democracy and Representative or Indirect Democracy. This is the distinction between the ancient Greek City States, for example, and the modern democracies. Nevertheless, it is often advanced as an objection against modern democracy itself.

I say they confound the two ideas. To have a correct understanding of absolute democracy, we must think of a small community, living within the four walls of a single town enjoying independent sovereignty as Athens was in the fifth century B.C. Or as the modern original Swiss Cantons are where all public business is discussed in a full assembly of the people. It was possible in ancient City States and it is possible now in Switzerland because of the difficulty of communication between one part of the country and another and owing to the fact that

geographical conditions isolated the cantons which have remained independent.

Nowadays our idea of State has expanded from a City State to a big country under one government. Moreover, the modern conditions do not permit of such City States. Therefore, the only form of democracy that is possible nowadays is what is called Representative Government.

Some sapient bureaucrats think that this is to give up the whole position. I say, not in the least. Whatever be the constitution, the representative body is responsible to the sovereign body whose creature it is. Whatever powers the latter may delegate to the former as long as the former is responsible to the latter the principle of democracy still holds good. It is no secret nowadays that the control of the purse implies the control of policy and the lower or the representative chamber alone grants or withholds supply. The saying 'No taxation without representation' is familiar to all of us. Thus the principle of democracy is not violated.

Moreover, some pious bureaucrats raise the objection that in representative government the will of the people is liable to be thwarted by their very agents. May it not be replied that it is rather an advantage that the first impulse of the public will sometimes passionate and short-sighted, should be tempered and enlightened by passing through a series of media on its way to action and the hold which the constituencies have upon their elections and in other ways is a sufficient guard against any defeat of a steady, earnest and public conviction.

Again it is objected that in a Representative Government majority is to decide and majority may often be in the wrong. Had not Socrates to drink the bitter cup of poison in accordance with the sentence of the majority? Yes, it was so with Socrates, and one must open and read Plato's dialogue with Crito to know that Socrates himself clung to the Athenian constitution and preferred dying in Athens rather than seeking the protection of some other government. Moreover, is it not sufficient to point out that large minorities by opposition and criticism can get the point cleared and thus hold in check the extremists on the other side? Moreover, if, as it is said, good government is no

substitute for self-government be true, it implies the right to go wrong.

Even John Stewart Mill, who considers Representative Government to be the ideally perfect form of government and whose extension he thinks is inevitable, doubts the sufficient mental qualities of the governing class under the system as compared with the aristocracy who have made it their business of life. But sufficient mentality can be secured by attaching the conditions of some educational qualifications in the persons appointed to public offices. Moreover, under a Representative Government there would be fair competition and only the best intellects would be able to come to the fore. Does anybody doubt the sagacity of the present British Cabinet because it is largely drawn from the people and not the aristocracy?

Another author who is now the democrat of democrats wrote more than a dozen years ago when she had not entered the arena of politics that democracy runs counter to all the compelling laws of nature, for said she, men are not born equal but very unequal and never can a stable society be built if we start by disregarding nature and treat all as having rights to equal power, the ignorant and the wise, the intellectual and the stupid, the criminal and the saintly. I admit that men are not born equal but very unequal and it is for this reason that the wise, the intellectual and the saintly will play the prominent part, by having the government of the people entrusted to them. Birth does not give man his rights. That is an exploded theory now. Whatever they are, they are made by the society and thus they can have no right as against society or its members. What are required are not equal rights for all, but equal chances and opportunities of developing and perfecting their personalities for all.

The bureaucrat might say that though a democracy is good during peace time, a centralised government is the only government for war purposes. To some extent this is true. But can democratic governments not rise to the occasion and succeed in gaining a unity and secrecy of purpose for outwitting the enemy without impairing their essential nature? It is democracy that has been the saviour of the world.

Perhaps, a bureaucrat might open his mouth and venture to enquire of me, what would be the result if the principles of Democracy are carried to the extreme and even if the doctrines of the Communists be ever carried into law under the auspices of Democracy, the society would come to a standstill. Gentlemen, it is not so. Certainly we do not know what other forms of government are in store for us besides those with which we are acquainted. But a glance at the past, and a historical review disclose the fact that Democracy is not of spontaneous generation. There is a certain order. First comes Autocracy to be followed by its mate bureaucracy which in its turn gives place to Democracy. Thus democracy has been evolved out of the primitive form of government where might was right, there can at all be any government in such a form of society. Some one might say that it may be a return to Autocracy. But they ignore the very facts of nature. The plan of nature is evolution. If autocracy transplants Democracy everywhere the long and laborious process by which nature has worked would be reversed and there would be again a return to what is called a state of nature. The *huidator temporis acti* may believe that the Golden Age has passed away and for ever, but we of this generation believe that the Golden Age is to come. Nations may rise and fall, there may be revolutions of civilisations—but all such revolutions minister to the progress of the civilisation itself, though not of any one particular type of civilisation. Even the present war whose happening we all so deeply deplore has brought the world but a step forward. The long Czarism of Russia and brutal despotism of Turkey which no political force could uproot for above 1000 years have been sapped and undermined by the present war. Would you like to have such Autocracies again and would nature allow it? Indeed, we do not know what form of Government would succeed Democracy, but this much we know that there is to be no retrograde return to either Bureaucracy or to Autocracy after the most gigantic war has been fought for Democracy. But if human foresight and reason are anything, if the experience which history gives, teaches us something, I may venture to say on my account that individuality as well as society would be directly developed.

and brought to perfection by Democracy. If it be so, what then? The two extremes of human existence have been moulded and perfected. But this is a mere *speculus*. It is a problem not for me but for time itself to solve.

Now it may be asked what is the lesson which history gives us in this direction. When we turn to the history of the classical nations, we discover legislative attempts that Saviour of modernity. Even in the fifth and sixth centuries B.C., the Athenians established a form of government which aimed to give an equal voice to all free men in determining the laws that were to control them. Nothing could be more provocative for the modern legislator than to read of the legislative experiments of Lycurgus at Sparta and of Solon and his successors at Athens. If we pass on to latter part of ancient history and consider the attempts at federal government that found expression in the Achaean and the Aetolian leagues we shall have been presented a prototype of nearly every legislative experiment of more recent times.

In our own times France after a century of bloodshed and struggle commencing with the French Revolution attained the ideal of liberty which England and America already possessed only to plunge again into the present world war to preserve the democracy.

As to England, John conceded the beginnings of English liberty in the Magna Carta. Charles I and James II questioned that liberty and history records the answer that England gave them. With the coming of the Hanoverians Cabinet system came into existence and after many cataclysms liberty emerged full-grown.

Italy inspired by Mazzini with the ideals of liberty found its saviour in Victor Emmanuel of Sardinia and in 1818 was conferred upon her a constitution by which the King governed through a ministry responsible to a Chamber of Deputies elected by the people.

Spain and Portugal have their respective Cortes and even the Russia of the Czar had its Duma.

America, we all know, revolted at the gross injustice of the Mother country. England. It formed a Constitution and gradually the different States entered into the Union. Even in the East, China is an experimental republic. Japan instituted a Diet of two Chambers by the

Constitution of 1889 and Persia expelled the despotic Shah and established a Majlis or Parliament in 1909.

Even the rulers of India have pronounced Self government in reasonable time for her to be the goal of their policy, but when that time will come nobody knows. Gentlemen, the greatest of the wars fought for the principle of liberty and justice has come to a long sought victorious end for the Allies. If it be true that the present war is a war of ideals, may we not hope that with the victory of the Allies Democracy will be enthroned all over the world? Indeed the strongest argument in favour of democracy is to be had from the colossal failure of the most efficient and the most powerful Bureaucracy in the world, I mean the Prussian Bureaucracy and the Russian Autocracy. Bolshevism must teach too severe a lesson to the Bureaucrat and the Autocrat. They must know that the Panacea for all such evils is the Divine Democracy. Moreover it has been recognized all over the world, in press and on platform that some sort of league of nations should be established in future. Is not Democracy the most akin form of government in national politics to a league of nations in International Politics?

Gentlemen, such are the forces, not under the control of any one body or even one nation that are gravitating with accelerated speed towards the enshrining of Democracy in the governmental temples of every country in the world.

What is the conclusion then? Bureaucracy has become an anachronism in the twentieth century has been well remarked by Dr. White. It would hardly survive this century. If the laws of mechanics always hold good and if I may be permitted to draw an illustration from that source, I may say that the top heavy rod of the bureaucratic government cannot long stand erect and must fall down even when the mildest breeze blows. Democracy has been declared the goal of all government even by the most rigid bureaucrats. Bureaucracy had to play its part in the evolution of the human society and it has done its task. Perpetual it cannot be. On the other hand the forces of Democracy are so tremendous and overwhelming that one cannot but go in that direction. Democracy as described by Abraham Lincoln is a government of the people by the people for the people. The

future progress of civilisation lies in the universal triumph of this principle. For when it is fully established all the world

over, the long sought for millennium would arrive and the ideals would be materialised
Bareilly College. SHYAM BHARI LAL,

CORPORATE LIFE IN ANCIENT INDIA*

THIS is a thesis which has earned for Professor Majumdar the Doctor's degree of the Calcutta University this year. The scope of the work has been clearly indicated by the author in the Introduction. "The spirit of Co-operation was a marked feature in almost all fields of activity in ancient India and was manifest in social and religious as well as in political and economic life. The well known Jati (caste) and the Samgha (the community of the Buddhist monks) are the most notable products of this spirit in the first two spheres of life. The same spirit, however, played an equally important part in the remaining ones and its effect may be seen typified in Gana (political corporation) and Sreni (guild)." Dr Majumdar has reviewed the Economic, Political, Religious and Social life of Ancient India from the standpoint of corporate activity which supplies the unifying principle through the four isolated monographs embodying the thesis.

The work points to a field of Indian research where we find up to this time very few workers of the first rank. Analysis of the concrete archaeological data (e.g., of the domain of Architecture and Sculpture, Epigraphy and Numismatics) has no doubt advanced to a certain extent; but the synthetic presentation of any aspect of Ancient Indian life has met with few attempts and fewer successes. We have no doubt the privilege of recounting the works of two hoary veterans—we mean Sir R G Bhandarkar's monograph on *Indian Caste* and Dr Broyendroauth Seal's treatise on the *Positive Sciences of the Ancient Hindus*—but these master craftsmen have not as yet given us a single disciple who could apply their technique in the same field. So we leave these Bhimas of Indology to their inaccessible Himalayan heights! Of the next generation Mr K. P. Jayaswal is the most brilliant worker. By his penetrating historical vision he has not only thrown a flood of light on the political and socio-economic life of Ancient India but roused a genuine enthusiasm in the study of her institutional history. But this is a line of inquiry which is as fruitful for a genuine scholar as it is futile for unripe or over-ripe enthusiasts who are every day being lured into the discovery of false fundamentals and flimsy foundations of Indian life. Hence while in department of objective study we get really valuable monographs like Prof. D. R. Bhandarkar's 'Foreign Elements in Indian Population' and Mr R. D. Banerjee's 'Scythian Period of Indian History' the victories in the temple of *Culture history* are, with the single exception of Mr Jayaswal, as a

whole marked by a spirit of precarious self assertion that is anything but scholarly. Hence we have to watch painfully the materials for a short paper pulled up into a ponderous volume and cheap patriotism and premature generalisations parading under the cover of Indian culture history. Thus their Indian Politics is partisan, their Indian Economics ethereal, and their Indian Art polemical and problematic. Not that we do not believe in the reconstruction of Indian culture history but that we demand severer canons of criticism and profounder vision of synthesis. Before the establishment of the norms of Indian life and the valuation of those norms in the light of comparative culture history of Humanity we absolutely require the scientific descriptive survey and sound well grounded interpretation of the facts thus collected and co-ordinated. Unfortunately with characteristic oriental transcendentalism we are attempting to take our stand on normation and valuation of Indian life, neglecting the indispensable preliminaries of description and interpretation. Thus our descriptions are hasty and haphazard, our interpretations precarious, our norms arbitrary and our valuations parochial and false.

It is to such a crisis of our study of culture history that we welcome the desertation of Dr Majumdar. Since the publication of Jayaswal's brilliant "Introduction to Hindu Polity" in the pages of this Review six years ago (1913) we have had not the pleasure of presenting before the students of Indian culture history such a sober well balanced and stimulating treatise. With the characteristic candour and humility of an earnest student of the objective school Dr Majumdar says: "I have avoided, on principle, all philosophical disquisitions throughout this work. It has been my aim rather to simply present the facts in a connected manner with a view to illustrate, as far as possible the gradual development of the various institutions." Thus he disarms all criticism from the more ambitious school while he presents us with a really first class descriptive work on our Indian culture history. An acute student of epigraphy and numismatics as he is, Dr Majumdar has collected the data of our corporate life with a thoroughness and marshalled them with a critical acumen that would do credit to any scholar. Indeed in almost every page we feel the impress of the personalty of a dispassionate historian who examines an economic organisation (e.g., the *Sreni*) a political institution (e.g., the *Samiti*) or a social phenomenon (e.g., the *Jati*) in the same spirit of detachment and objectivity of judgment as is manifest when he decipher a mutilated inscription or analyses a rare numismatic evidence. Herein lies his strength as well as limitation as a historian of culture. We miss the subtle psycho-logical interactions that are at the genesis and progression of every phenomenon of culture history.

* *Corporate Life in Ancient India*. By Ramesh Chandra Majumdar M.A., Ph.D., Lecturer on Ancient Indian History, Calcutta University. Pp. viii—176. Price Rupees Four only (including postage).

we also miss the magic transfiguration of concrete facts by the synthetic genius of a social philosopher but we get a full and accurate description of our cultural structures and a thoroughly reliable reading of the fluctuations in their functioning—achievements which by themselves entitle him to the dignity of a Doctorate.

Apart from its scholarly worth the thesis chances to appear in a very opportune moment when we are struggling with reactaries in *politics* and *society*. By a curious coincidence it is a crushing answer to those who are at present struggling to establish against history that Self government is the chartered monopoly of the Western nations or that ethnic purity the monopoly of the Brahmanic hierarchy. Without the least tinge of political acrimony Dr. Majumdar completely demolishes the pretensions of both the schools of bureaucrats by his presentation of the wonderful picture of the self governing life of the Ancient Indians while with the relentless ness of a true historian he exposes the intricate ba-

story of the growth of Brahmanic pretensions and the fiction of their immaculate heredity. He proves beyond all doubt that *race mixture* was as much a fact of our social life as *self government* that of our political history.

There is only one criticism which we fear, would be found unanimously, by every reader of the treatise, to be absolutely damaging to Dr. Majumdar. The body of the book is marred all over by such an amount of typographical blemishes as to exhaust the patience of any reader. This is his maiden production and he has no right or an iota of historical authority to deal such a rude shock to the corporate instinct of the public by presenting the 'Maiden' so horribly disfigured by the Printer's Devil. In our judgment Dr. Majumdar ought to make an immediate and complete reparation by publishing an *édition de luxe* of this rich instructive and inspiring dissertation.

KALUJA

THE WORD SWARAJ IN THE RIG VEDA

BY KRISHNAKANTA HANDEQUI, B.A.

NOW that the demand for Swaraj looms large in the political consciousness of India, it may be of some interest to many of our countrymen to know how the word Swaraj fares in the Rig Veda, the oldest literary treasure of India, and for the matter of that, of the whole Aryan world.

The bases to which the different forms of the word can be traced are (1) स्वराज and (2) स्वराज.

(1) The most characteristic use of the word स्वराज is found in the 1st Mandala in the 80th hymn, addressed to Indra, where it occurs sixteen times, being repeated in each of the sixteen verses of the hymn. I shall quote only one verse—

नदि दु मादभीमवीर्यं को योरां रा ।

दक्षिणं यदुत जगु रीरा योजाति य दृष्ट

स्वराजं स्वराजं ॥ (1. 80. 15)

"We do never know Indra, going (everywhere) Who is greater in strength (than he)? In him the gods have stored up wealth, strength and might. He is honouring (i.e. displaying) 'his own regime'."

'His own regime' in this verse is स्वराज. It is very interesting to note here that the Latin root "regere" from which the word "regime" comes is allied to Sanskrit राज.

the Indo European form being REG. The word स्वराज cannot possibly be here explained as "kingdom," for, in Sanskrit, the primary meaning of the word is "the attribute (राज) or the vocation of a king" (Bhattoji Dikshita on Pan 6.1.128).

The word स्वराज occurs in some other places, in one place in three successive verses (1. 84. 10—12). Once it appears as an adjective of Agni (स्वराजमग्निं) which Sayana explains as "shining with his own (lustre)." There is yet another occurrence of the word in the form "स्वराजे" which deserves special mention. Here is the verse concerned—

महाभोवचक्षुः शिवं ययं च दृष्टम् ।

नचिदं मृदुपदं कोचिदं स्वराजे ॥ (5. 66. 6)

The word स्वराजे here presents some difficulty. The verse can be thus translated provisionally—

'Ye Mitra (and Varuna) with a vast outlook may we, who are your worshippers, strive for extensive स्वराज, which is to be defended by many.'

There are scholars according to whom राज here means 'kingdom' and स्व refers to Mitra and Varuna. According to Sayana, however, स्वराज means स्वराज "one's own rule," 'self rule.' I propose

to follow Sayana for two reasons. First, राज्ञ "rulership" preserves the primary meaning of the word as opposed to राज्य meaning a kingdom, and it is the primary meaning of a word, wherever appropriate, that we should look for in so ancient a collection as the Rig-Veda. Secondly, it would be idiomatic for the word स्व ("one's own") to refer to the speakers in the verse rather than those spoken to. "May we strive for स्वराज्य"—here, in my humble opinion, idiom would suffer if स्व be made to refer to Mitra and Varuna, and not to the speakers themselves. The natural meaning would be "May we strive for our own rule" instead of "for Mitra and Varuna's own kingdom," particularly as the word Mitra occurs in a different line, as vocative, not genitive.

(2) The other base of the word, viz. राज्ञ, appears in a variety of forms—राजा (nom. sing.), राजान् (acc. sing.), राजाने (dat. sing.) and राज्ञः (gen. sing. and nom. plural).

राजा means "one who shines with his own lustre" and in some places "one who rules of his own accord." (Cf. Latin Regere). It is an epithet of Indra. In one place, the poet sings—"One (Varuna) is called राजान् and the other (Indra) राज्ञः" (7. 82. 2). It would be tedious to trace each use of the word. Let us take only one instance:—

यस्य देव प्र विरिषे महिम्नं दिवस्य विश्वाः—
मयं तं विद्यात् ।

.....आ विश्वयुतः सविरिषसो वसते स्वया ॥

"It is he whose greatness surpasses the heaven, the earth and the sky.....capable of (doing everything), having worthy antagonists, and going (everywhere), he leads (his soldiers) to battle."

The passage left out here is "सराट् + इति देवे," "Indra is सराट् in his abode," i. e., he rules of his own accord there. In order to preserve the dignity of the idea implied in "सराट्," Sayana explains "देवे" as "इमं विदुः" in that which is to be subjugated. But the word इमं meaning "abode" is peculiar to the Rig-Veda. (Cf. Latin Domus). Moreover, in the Nighantu the word appears in this very form (देवे) among the synonyms of "house."

We should note in the above instance that the idea of ruling is particularly prominent there. The mention in 7. 82. 2 of राज्ञ along with the epithet राजा, applied to Varuna, the moral governor of the world, strongly points to the idea of ruling implied in the word.

To sum up, in the Rig-Veda, in some places the idea of shining (2.8.5, 1.36.7, etc.) and in some that of ruling (5.66.6, 1.61.9, etc.) appears to be prominent in the use of the word राज्ञ, and the idea of shining is always connected with that of ruling, for the root राज्, primarily means "to shine."

This is, in brief, the earliest career of a word, which has after thousands of years become a bye-word with educated Indians. All honour to Dadabhai Naoroji who gave it a new lease of life, a new interpretation with a new message!

The word राजदत्तमाला seems to be a fit companion to राज्ञ; the great commentator Sayana has in some places explained राज्ञ, as राजदत्तमाला.

THE INDIAN INDUSTRIAL COMMISSION AND RAILWAY WORKSHOPS

By RAI SAHEB CHANDRIKA PRASADA,
RETIRED ASSISTANT TRAFFIC SUPERINTENDENT, B. B. & C. I. RAILWAY.

AFTER reading the Report of the Indian Industrial Commission 1916-18, one is forcibly struck with the fact that India is sadly behind other civilised coun-

tries in the industrial line and in times of war its position becomes not only helpless but extremely dangerous. It seriously needs a thorough overhauling of its edu-

educational system and requires a number of Technical schools Engineering Colleges and Institutes of technology. The foundation for technical instruction and training should begin from the elementary schools where elementary drawing should be taught as a compulsory subject and physics and chemistry and carpentry and smithy included as optional subjects. In every town of importance we should have a technical school where theory and practice of all trades and industries should be taught to those who are likely to take the industrial line as their life's career. Larger cities or centres should have higher technical schools and engineering colleges while higher Institutes of Technology should be provided at selected centres.

The provision of new or independent technical schools etc. may take time and require large sums of money. In the meantime I desire once more to draw the particular attention of the public to the provisions which already exist in the Railway workshops in India in a large measure for the practical as well as theoretical training of the youth for mechanical and electrical engineering which require but a comparatively small amount of money for first equipment and for recurring expenses and are admirably suited for the purpose.

At pages 138-55 of the *Modern Review* for August 1917 the present writer dealt with the subject of practical training of officers and subordinates for the Technical Departments of Indian State Railways and pointed out the great facilities available in the Locomotive and Carriage and Wagon workshops of Indian Railways for the training of the Indian youth for technical work generally for railways and other industries. In October 1917 the Provincial Conference of the United Provinces held at Sitapur passed the following resolution—

XVI (a) The conference requests that the Locomotive and Carriage and Wagon Workshops of Indian State Railways whether worked by the State or through the agency of companies Government Dock Yards and other State Factories be made available for the practical training for Mechanical and Electrical Engineering that the existing Technical schools and Drawing classes attached to the Railway workshops be thrown open to Indians wherever they are reserved for European or Anglo-Indian apprentices and no form rules conditions rates of pay and educational qualifications applicable alike to apprentices of all races or creeds may be laid down and improvements where necessary may be

made in the teaching staff and appliances so as to make it as reasonably possible to turn out men of both the superior and subordinate grades to meet all normal requirements.

It is satisfactory to note that the main points urged in the above resolution have been brought out and supported by the Indian Industrial Commission whose report has been just published. The Commissioners state that by far the most important development of mechanical engineering in India is represented by the numerous Locomotive and Carriage building shops which are an essential adjunct to the Railway system. The Commission mention over seventy such shops. A score of them are of large dimensions and are well equipped with a variety of machinery needed for almost all classes of mechanical work (Page 25 of the Report). The Commissioners were much impressed by the great possibilities for training in mechanical engineering in these workshops which are so distributed as to form convenient centres in almost every major province of India (Page 116). Some of these workshops have been in existence for a period of over 50 years and if they were properly utilised for the training of Indians in mechanical work as ordered by Her Majesty's Secretary of State for India in 1870 we should have had to-day a large number of Indians properly trained not only as Chargemen and Foremen but also as mechanical engineers occupying positions in the superior grades of Superintendents and Assistant Superintendents. But what did the Commission find?—They were forcibly struck when visiting the large railway and private workshops throughout India with the complete absence of Indians from the ranks of Foremen and Chargemen (Page 118. The italics are ours). Very few Indians have been allowed to rise to the ranks of foremen and still fewer have been appointed to the superior establishment (Page 26).

In the early days of Indian Railways the usual practice was to import from England not only the officers of the superior grades but also subordinate mechanics such as Foremen Chargemen engine drivers etc. About the year 1870 a requisition was sent by the Government of India for 30 artificers upon which the Secretary of State drew attention to the great advantage of endeavouring as far as possible to train the natives of the

country in all those branches of handicraft that are necessary for the maintenance of Railways." It was pointed out that "every large work of the magnitude of a railway or canal, and every shop in connection with such, forms a training school for artisans; and from these there is no doubt that some suited for the position of foremen could be obtained." To ensure this result it was expressly enjoined that

"It will probably be necessary to attach a school to each large shop which likely men should be encouraged to attend and those that give promise of rising to the responsible positions should be helped and their practical knowledge supplemented with theoretical training and some instruction in drawing."

In circulating the above order to the Local Governments and Administrations, the Government of India added—

"The success of the experiment will of course depend mainly on the tact and judgment and energy of men at the head of the shops, but His Excellency in Council sees no reason to doubt the successful issue of the experiment, if the object is put before the supervisors as one to which the Government of India attaches much importance and if the Local Governments interest themselves in securing their accomplishment."

The orders were issued over 48 years ago, and the results so far are shown above in the words of the Industrial Commission. The orders of 1870 were expressly meant for the training of *Indians* in technical schools and drawing classes attached to the workshops, but they have been applied to *Europeans and Anglo-Indians* only. Asiatic-Indians have been almost entirely ignored. The schools and drawing classes are no doubt attached to each of the large workshops of the principal Indian Railways, but they are either reserved for non-Indians or Indians are allowed only a secondary place and this has been but recently allowed. The restrictions against Indians are still in force and in Appendix N. to the Commission's *Report*, to which a reference will be made hereafter, it is still proposed to keep Indians down in number.

Some of the European Officers in charge of the Railway workshops are under the impression that Indians do not like mechanical work, that they prefer clerical work, or are incapable of doing the former. These complaints are devoid of truth. The Commissioners have expressly discarded them. In fact Indians have not been allowed an opportunity of showing

their worth or exercising their choice. They have, on the contrary, been discouraged by these very critics. Whenever an educated Indian makes an attempt to take up mechanical work, he is discouraged by such low stipends and low prospects as no one would care to accept. They have thus been driven to clerical work which gives them at least a better start. They get 20 or 25 rupees a month to begin with in the clerical line, while Rupees 6 or 7 a month only is offered for the mechanical work. The Commissioners have but mildly put the case when they state that

"It is doubtful if sufficient inducement in the way of pay are yet held out to men to become a really first class artisan" (Page 117)

At another place they observe that—"the stipends and prospects offered are not of a nature to induce the better educated classes to spend a number of years as workmen." (Page 118).

Will Government see that sufficient encouragement is given to Indians and proper facilities are provided for their training? This is only possible when race or religious distinctions are completely removed.

The observations and recommendations in the Industries Commission are summed up in para 152 of their *Report* which is reproduced below :

"Railway workshops are, as we have stated, in many cases already receiving European and Anglo-Indian apprentices, to whom some degree of technical training is given with the object of enabling them to obtain posts as foremen, or, in special cases, even higher appointments. There is, however, a noteworthy absence of provision for the middle class Indian. We consider it of great importance that the conditions of training should be such as the educated Indian youth will consider consistent with his sense of self-respect; for if this is not satisfied, we shall be depriving ourselves of a most promising field of recruitment. The arrangement made for Indian apprentices are at present inadequate; and the stipends paid them during the period of training and the salaries offered on its completion are very much lower than the corresponding amounts in the case of Europeans and Anglo-Indians, a fact which is largely responsible for the failure of the better educated Indians to take advantage of these courses. As regards salaries, we consider that the principle must be adhered to that equal proficiency should be equally remunerated. The inequality of stipends is to some extent justified by the difference in the standard of living between Europeans and Anglo-Indians on the one hand and some classes of Indians on the other, though the stipends at present offered to Indians assume too low a cost of living to meet the case of the educated middle classes. We think the difficulty might be got over by allowing free board and lodging to all Europeans and Anglo-Indians, and to such Indians as prefer it. To other Indians, a stipend to cover board expenses based on the standard of living

of the middle classes should be given Apprentices of all kinds should receive a monthly sum once and above the expenses of their board and lodg- ing depending on the length of time they have worked and on their efficiency in the shops. We consider that every effort should be made to develop the training facilities existing in these shops, grants being given from Government funds for the establishment of technical classes, together with hostel accommodation and such other amenities as are necessary to attract educated Indian youths of the middle class. The precise allotment between Government and the Railways of the extra expenditure entailed will require further consideration. With the technical school alongside the workshop, it becomes possible to provide an almost ideal course of training. Almost equal possibilities for training can be made available in a few of the larger private workshops, and we do not doubt that the management of these would welcome the provision of similar arrangements for the technical training of their employees. In discussing the question of training industrial artisans we have suggested the adoption of an apprenticeship system and we think that a precisely similar system should apply to the more advanced class of students with which we are now dealing. The regulations for the admission of apprentices and for the working of the system generally should secure the admission of a proper proportion of Indians and the fair and equal treatment of all classes in their course of training while upholding the authority of the workshops management to the fullest extent. The indentures should be for a period of four or five years and as we have said already the apprentices should be paid wages. Apprentices of this class should start work usually between 16 and 18 years of age. If they enter the workshops at too early an age their physique will be insufficiently developed to stand the stress and the previous opportunities for obtaining the necessary education will be badly restricted.

An example of a scheme of this type worked out by officers of the East Indian Railway Company will be found as Appendix A.

Most of these recommendations are satisfactory. The only point to which exception may be taken is about the line drawn between European or Anglo Indian and Indian apprentices on the so called standard of living. The difference is mainly in the way or manner of living and should not be emphasized. The only fair and equitable arrangement would be to treat apprentices of all creeds alike and to give them equal terms, equal facilities, and equal training.

According to his custom of living, a European or Anglo Indian apprentice can live comfortably in a boarding house or hostel which an Indian sometimes cannot do. The proposal of the commissioners allows fully what is needed or is at present allowed to Europeans and Anglo Indians but it does not concede what is necessary for the Indians. Their proposal to allow Indian apprentices "a stipend

to cover board expenses based on the standard of living of the middle classes" would leave the matter still in an unsatisfactory state, for an Anglo-Indian Superintendent of Railway workshops may think that an Indian can live without any money. To place the matter on a satisfactory basis, equal rates of stipend and board allowance should be allowed without distinction of race, creed or colour. If the matter be left to the discretion of Superintendents of workshops, who at present are Europeans or Anglo Indians only, they will continue to "assume too low a cost of living to meet the case of the educated middle class" as has been the case so far.

Appendix N to the Report of the Industrial Commission embodies the scheme of a proposed Technical school in connection with the E I Railway workshops at Jamalpur. It shows that at present European and Anglo Indian apprentices are engaged on a five years' indenture, and Indian apprentices of two classes are also appointed, with stipends as under—

Europeans and Anglo Indians	Rs 30 rising to 50 in 5 years
Indians	
1st class	Rs 10 ; to 15 "
2nd class	Rs 4 ; to 9 in 6 years "

The proposed scheme provides for the training of 195 European and 50 Indian apprentices. Considering the large number of the Indian population, the numbers of apprentices proposed are very disproportionate. The stipends for both races are proposed at Rs 15 per month, but boarding allowance is proposed at Rs 34 per month for Europeans and at Rs 15 for Indians.

The rates should be equal for both. "For Indian apprentices a separate hostel would be provided but in other respects the boys would all work together and no distinction would be made between Europeans and Indians." This is as it should be.

In connection with railway workshops or large engineering establishments the Commissioners propose the establishment of ten schools each capable of dealing with about 200 apprentices. These schools would be located alongside suitable existing workshops, which would result in the following distribution—one each in

Madras, the United Provinces, the Punjab, Bihar and Orissa, Burma and Assam, and two each in Bengal and Bombay (Para 372, Page 268). So far as these provinces are concerned, the proposal is in the right direction, but the requirements of other important provinces have been left out. Take, for instance, Ajmer Merwara and Rajputana, Central Provinces, etc. At Ajmer we have two very large railway workshops equipped with extensive machinery, where Locomotive Engines and rolling stocks are entirely constructed out of raw material only. These workshops should certainly be utilized as a technical school established at Ajmer, would serve not only this industrial town but would also be extremely useful to the subjects of the surrounding Native States like Jaipur, Indipur, Bikaner, Udaipur, Indore, Gwalior, etc. These Native States will, it is hoped, gladly join a scheme for the establishment of a technical school or an Institution for higher technology at Ajmer.

The Commissioners note that in the Engineering Colleges at Roorkee, Madras, Shipur and Panna

Increasing attention has in recent years been paid to the provision of instruction in mechanical and electrical engineering but the measures adopted are inadequate and are conceived on altogether narrow lines to meet the needs present and prospective of a rapidly expanding industrial system. In Civil Engineers have done well in the Public Works Department and have established their claims to promotion to the highest ranks of the service but in mechanical engineering which outside the railway workshops is mainly carried on by private enterprise we find that in the absence of a proper system of training they have seldom attained to positions of importance or responsibility. In practically all the Engineering workshops which we have visited we found the same state of affairs existing with regard to the superior staff as we had seen in the case of Foremen. The former whether assistants or managers were men who had been trained as mechanical engineers in Great Britain. (page 154)

This state of affairs cannot be satisfactory and the Commissioners state that—

'The experience of the war itself has been responsible for a new attitude on the part both of Government and of leading Industrialists. They realize that it is necessary to create in India the manufactures that are indispensable for industrial self-sufficiency and for national defence and that it is no longer possible to rely on free importation of essential articles in time of war' . . .

Finally the attention of the educated public and in particular of the large industrial employers has been drawn to the inconveniences and dangers that arise from the entire dependence of India on imported personnel for the supervision of Engineering Industries' (Page 122)

The Commissioners recommend the adoption of the fundamental principles drawn up by the Council of the Institution of Civil Engineers for the United Kingdom. They are noted below—

- (1) That the average boy should leave school when he is about 17 years of age, that much depends upon the development of individual boys but the minimum age should be 16 and the maximum 18 years.
- (2) That the practical training should be divided into two parts and that the preliminary stage of practical training should consist in all cases of at least a year spent in mechanical engineering workshops.
- (3) That during workshop training boys should keep regular working hours and should be treated as ordinary apprentices, be subject to discipline and be paid wages.
- (4) That nothing should be done in the form of evening study which would impose unnecessary strain upon the boys.
- (5) That as a rule, it is preferable to proceed to a technical college on the completion of the introductory workshop course; but that, in the case of boys intended to become mechanical engineers it may be advantageous to complete the practical training before entering the college, but in such cases it becomes important that simultaneous education during practical training should be secured. Otherwise the boys would lose seriously during four or five years' suspension of systematic study, and would be at a disadvantage on entering the college.
- (6) That for the average student, the period of college study should be at least three years.
- (7) That at least three to four years should be spent in practical training inclusive of the introductory workshop course previously mentioned.

They note that the age of students when they join an Engineering College in India is from two to three years higher than that recommended. Indian boys are at a disadvantage inasmuch as they have to spend several years in acquiring a knowledge of the English language. To become an efficient mechanical engineer, one should possess sound brains and a sound body. Indians should acquire sufficient knowledge of English to understand technical books at the age of 16 or 17 years. The matriculation standard with special coaching in mechanical terms and expressions should do.

In order to compete with boys of other nations, Indians should have the instruction in their mother tongue. This emphasizes the need for national education in the vernacular and the production of necessary text books in the vernaculars of India, for that is the only way by which Indians can keep pace with the boys of other countries. Until this is done, they must bear the extra strain caused by the

study of the English language, which alone gives them access to the higher technical knowledge at present.

The Commissioners record that there is a very decided consensus of opinion among practical men that—

'The ideal method of training Mechanical Engineers is to combine workshop practice and technical instruction as closely as possible. To attain this end in India the workshop has been imported into the college, but the results have not been altogether satisfactory. The atmosphere of the workshop cannot be obtained in the school, and the importance of this is so great that we are convinced that mechanical engineers must be trained in the workshops receiving supplementary class instruction in technical schools alongside of which should of course be a more advanced nature than that which would be provided for foremen' (Para 158 page 124).

We need such a school at every town or city where large workshops are established. These are at the following centres already—

BENGAL		
1	Lilloah (Calcutta)	} E I Railway
2	Jamalpur	
3	Kanchrapara	
BOMBAY		
4	Parel	B B & C I & G I P Ry
5	Hubli	M & S M Ry
MADRAS		
6	Perambur	M & S M Ry
7	Negapatam	S I Railway
UNITED PROVINCES OF AGRA AND OUDH		
8	Lucknow	O & R Ry
9	Gorakhpur	B & N W Ry
10	Izatanagar	R & L Ry
11	Jhansi	G I P Ry
PANJAB		
12	Lahore	M W Railway
RAJPUTANA AND AJMER		
13	Ajmer	B B & C I Ry
14	Jodhpur	J B Ry
CENTRAL PROVINCES		
15	Kharagpur	B N Ry
16	Secunderabad	N G S Ry
KATHIAWAR		
17	Bhavnagar	B G Ry
ASSAM		
18	Pahartali	A B Ry
BURMA		
19	Insein	Burma Railways

Similar workshops are at many other places some of which may suit the purpose of training apprentices.

The recommendations of the Industrial

Commission are summarised as follows at pages 276-77 of their Report—

(31) Training for manipulative industries which include mechanical engineering should be given in the works themselves to which theoretical classes should be attached.

(32) The training for mechanical engineering as an example of a manipulative industry is discussed above in detail.

(33) At the large engineering shops practical training should be given to art and apprentices on an organised system with teaching in shop hours and the apprentices should be paid wages a part of which they might receive in the form of deferred pay on leaving.

(34) In the case of foremen a system of apprenticeship on condition that shall attract middle-class Indian youths is suggested with teaching in shop hours of a more advanced type than in the case of art and apprentices and providing for boys who would start at somewhat higher age.

(35) To the case of mechanical engineers also the large engineering shops should be used as the practical training ground but a greater proportion of the time should be devoted to the theoretical teaching of a higher kind than is necessary for foremen. Those students who desire it may, after completing their shop training, take courses in special subjects at an Engineering College.

(36) It is recommended that the engineering classes in the Victoria Jubilee Technical Institute Bombay should be adapted to meet the requirements of the apprentices in the railway and other workshops in Bombay and that the courses in the technology should be supplemented by two years' practical work before the full diploma can be given.

In this connection I would draw attention also to the recommendations of the Public Services Commission of 1912 as contained in para 32, pages 22-23 and in paras 5 and 9 pages 338-40 of their Report Volume I. The Commissioners in that Report also recorded their opinion in emphatic terms that the conditions which necessitated the importing of officers for the superior grades of the Loco and Carriage and Wagon Departments of Indian State Railways from England should not be allowed indefinitely to continue and that a determined and immediate effort should be made to provide better educational opportunities in India so that it may become increasingly possible to rely on that country (India) the staff needed to meet all normal requirements.

The central workshops of the large railways in India have already technical schools and drawing classes attached to them. All that seems necessary is

1. To throw them open to Indians as most of them are at present reserved for European or Anglo-Indian apprentices.

2. To widen and enlarge the courses of instruction so as to provide for the

superior grades as well as for the subordinate apprentices of the technical branches of railway services and industrial requirements generally.

It is recognised that the cost of training apprentices other than those required for railway work should not be borne by railways. The Industrial Commission have noted that "the precise allotment between Government and the Railways of the extra expenditure entailed will require further consideration." (Page 120).

It is hoped that the Government of India will be pleased, as announced by H. E. the Viceroy at the last Convocation of the Calcutta University, to pass only orders adopting the recommendations of the Industrial Commission, with the few modifications suggested herein, namely

that the stipends and board allowances of apprentices should be fixed on a uniform scale without regard to creed, caste or colour and that Indians may be admitted to the Railway Technical schools in due proportions. This will no doubt attract a large number of educated Indians who are at present driven to clerical work or join the legal or other professions which are over-crowded. I particularly draw the attention of educated Indians to this matter of vital importance to the country. It is hoped the authorities of Ajmer, Merwara and the ruling Princes of Rajputana will see that a suitable Institution of Technology is established at Ajmer in connection with the State Railway workshops there.

Jonesgaoi, Ajmer.

THE OFFERING

Where is the earth,
Rich with its ancient rest,
And full of light of sun
And glamour of flaming stars,
Grave of water—cradle of laughing life,
Transfused with the blood of heroes dying true,
And washed with the winds of the world,—
O, where is the Earth

These hands shall knead to a treasured form,
These fingers mould to an offering
For the Beloved,
For Her who watcheth over us unseen,
And sendeth love and rapture,
And leadeth our faltering footsteps in the dark?
B. E. SPEIGHT.

HON. MR. PATEL'S BILL—A DEFENCE FROM BIOLOGICAL STANDPOINT

MR. Patel's bill is being denounced by some critics on the ground that from the biological standpoint free intermarriage between the different castes of the Hindus will be productive of no good to the society, and in support of this passage is being quoted from G. Archdall Reid to show that the Brahmins, if allowed to freely intermarry with the Namasudras, will very soon lose their special characteristics just as "the speed of race horses can

not be maintained without continued stringent selection."

Analogy is not always a safe guide in biology. Biologically speaking, Brahmins cannot claim to have any special characteristics which are totally wanting in Namasudras. They belong to the same race (even the meaning of the word 'race' has undergone a radical change after the researches of such distinguished scientists as De Vries, Bateson, &c.). The difference

which we now see between them as classes is wholly due to economic social and political causes. Given the same opportunity and environment the Namasudras will not be found lacking in those special characters, which the critics claim as the exclusive possessions of their own caste. On this point, the attention of the critics is drawn to an interesting article by Prof Cattell, which appeared in Popular Science Monthly, May 1915. Moreover one thing must always be borne in mind, viz the triumph of the Biometricians was a short lived one. Now a days there is a general consensus of opinion among the biologists that genetic problems cannot be studied en masse. We must take individuals of known ancestry and study their offsprings. Thus, it will not prove anything if you can point out the bad results of cross breeding between such and such races or castes. These bad effects can be explained in another way. There is a very real tendency in human beings to prefer members of their own race. The fact called 'the race prejudice' is the expression of this preference. Indeed, Prof Karl Pearson's statistical studies have led him to the conclusion that this tendency goes much further, so that the tall people tend to marry tall and the brown eyed to marry the brown eyed. This general tendency for like to marry like is termed 'homogamy' by Karl Pearson. So long as this race or caste prejudice exists, sober minded persons on the average will not think of marrying outside their own castes for fear of social persecution. Thus, only among persons having morbid and undesirable forms of sex impulse, the greatest percentage of mixed marriages will take place with the result that a number of offsprings of such persons will inherit feeble mindedness which is a Mendelian recessive. If on the other hand, the different castes of India cease to be votaries of this 'idol of race', social and religious persecution will cease and a large number of normal and superior individuals will marry outside their castes and there will be, in these cases no reversion to lower forms.

The present caste system which favours a very close interbreeding is not a very healthy biological process. The attention of the critics is drawn to Prof W E Castle's book 'Genetics & Eugenics' when society becomes stratified and class distinctions arise with castes or families close

ly intermarrying, heredity is likely to bring Mendelian recessive defects repeatedly to the surface. Democracy is a safe remedy against such evils' (P 275). Further it is a biological fact, that inbreeding *unattended by selection* (as obtains in Hindu caste bond marriage) decreases physical and mental vigour. The reasons are two fold, viz, (1) inbreeding tends to the production of homozygous state which in many cases can be proved to be feebler than heterozygous state, (2) inbreeding brings to the surface the hidden or latent recessive defects such as albinism and feeble mindedness in man.

It is being pointed out by certain critics that large numbers of aborigines are finding their way within the pale of Hinduism, asking Can any good come of any inter marriages between them and the high caste Hindus? It is evident from the above quotation that the writer claims for his caste purity of race which any anthropologist will not do. Moreover, if you ask the latter to name one such pure race, he will reply that he cannot name one but that the nearest to such a standard are the lowest races he knows. To another question whether the mixture of the 'pure bred' Hindus with the aborigines will be productive of any good, it can safely be admitted that it will cause at least no harm so far as cultural inheritance is concerned provided such crosses do not disturb the agencies of social inheritance. As regards the physical vigour, such cross breeding will be of much good to the population by bringing together differentiated gametes, which, reacting on each other, will produce greater metabolic activity (Vide Castle's Genetics and Eugenics P 224).

I shall now quote three examples to prove that instances of human cross are not necessarily attended with untoward results. (1) The population of Pitcairn and Norfolk Islands originated more than a century ago by a cross between English men and women of Tahiti. The experiment has gone far beyond the F generation and would afford unique material for a study of effects of racial crosses uncomplicated by race antipathies. So far as present information goes the results have been excellent both biologically and sociologically (Vide Castle P 236).

(2) Another successful experiment in human racial crossing has been recently

studied and described by a German, who chronicles the origin of a tribe in German S. W. Africa of mixed Boer and Hottentot blood. Very likely the group as such will presently disappear but the experiment has progressed far enough to show that under conditions which do not interfere with cultural inheritance, crossing of racial stocks as widely separated as Europeans and Africans, has no evil consequence but produces a vigorous and sound race. (Vide Castle, P. 237).

(3) That the mixture of races is not necessarily disastrous is proved by the achievements of Anglo-Saxon race which is leading mankind in many particulars. No one can walk along the street, even in a provincial English town and fail to observe the extraordinary variety of human types and of human combination that confronts him everywhere. The Anglo-Saxon race is really an assemblage of individuals produced by the most extraordinary degree of 'mongrelisation' or intermixture; and perhaps the day may come when it will be possible to trace many facts of the national character and history of the Anglo-Saxon race to the great diversity of types which it comprises..... And if we look at the dominant

peoples of the world we find no evidence in favour of the view that inter-breeding involves degeneration of any kind. The reverse seems to be the fact. It is isolation that involves the degeneracy of a community. The lowest types we know, such as native Australian, the Tasmanian, the Patagonian and many others, are races of men marked by considerable physical uniformity who have been isolated for a long period and who have certainly not ascended in type by reason of their purity of race. (Vide P. 4254—Harmsworth Popular Science Series).

I think I have been able to prove that some of the critics of Mr. Patel's Bill have started with wrong assumptions and arrived at wrong conclusions. In this connection, I have one word to say to Mr. Patel. It is high time that he should withdraw his Bill. By this step he will at least save us from much nonsense that is being written or spoken against the bill which is coming as a very painful reminder to many a true lover of India that our love of freedom in all the departments of national life is in the inverse ratio of the fire-eating resolutions at congresses and conferences.

S. M. CHOUDHURI.

THE NEW PARLIAMENT AND INDIA

BY ST. Nihal Singh.

BY a strange irony of fate, the Parliament that, in all likelihood, will be called upon to settle India's immediate future has been elected on cries like "Kill the Kaiser," "Make the Hun Pay," and "No Hans Under This (the British) Flag." Problems pertaining to a just peace and to national and Imperial reconstruction that one had every right to expect would figure prominently in the election were swept aside by slogans born of the passions engendered by the conflict that raged for almost four and a half years.

In view of the time selected for the election, nothing else than what actually could have been expected. Had

the appeal to the country been made six months earlier or six months later, the electors would have been in different frame of mind, and the results might have been correspondingly different. No one knew that better, I am sure, than the Prime Minister, who is a shrewd judge of the moods and tenses of his people. The large majority with which he has returned to Parliament is due to the fact that he gauged, with precision, the sentiments of the nation and conducted his campaign along lines thoroughly in accord with British wishes. He is in power because the British felt that he has won the war, while Mr. Asquith has been heavily defeated, because

the people believe that had he remained at the helm of the nation the war may have been lost.

Perhaps never before were Britain's thoughts occupied with matters other than Indian than the time of the election. Any one who had been foolish enough to hope that, on account of the magnificent part that India had played in helping to ensure victory the immediate future of India in the British Commonwealth of Nations would constitute one of the live political issues of the campaign was therefore doomed to disappointment.

True Mr Lloyd George and Mr Bonar Law did not altogether forget India in their joint election manifesto. But the paragraph that they inserted was much too brief and colourless to rouse any body's enthusiasm. It read:

"The people of this country are not unmindful of the conspicuous services rendered by the Princes and peoples of India to the common cause of civilisation during the war. The Cabinet has already defined in unmistakable language the goal of British policy in India to be the development of responsible government by gradual stages. To the general terms of that declaration we adhere and propose to give effect."

No wonder that even the Coalition candidates who had the combined support of Mr Lloyd George and Mr Bonar Law in their constituencies paid little heed to that pledge.

Several of my friends, some of them British in no way connected with any special Indian movement, did their best to raise the question in the course of addresses by candidates. But they received, as a rule, disheartening replies. The answer given in a metropolitan constituency by a Coalition candidate was for instance, "India is far too big, far too complex, and too far away to warrant my taking up the time of the audience with the discussion of Indian problems."

Had a vigorous campaign in behalf of Indian Dominionhood been carried on during the election, some enthusiasm for India might have been roused. Unfortunately none of the societies interested in the Indian cause ran candidates, though Britons interested in the Home Rule for India League and the British Committee of the Indian National Congress contested seats on their own account. So far as I

know, only one Indian, Dr Tarachand of Nottingham stood for election. Though heavily defeated he was able to do good service to the Motherland by giving our cause publicity that could not be secured in any other way. While the British Committee of the Congress contented itself with issuing a small number of handbills bearing a question to be put to Parliamentary candidates to ascertain their opinion regarding the Montagu-Chelmsford reforms, the Home Rule for India League which, unlike the Congress Committee has from the beginning, been supported by British friends of India, the Home Rule of India League broadened a million copies of four leaflets calling prominent attention to India's war services and to the failure of bureaucratic rule in India, and asking the British to apply to India their own doctrine of freedom which they were applying to Bohemians, Sabians, Poles, Jago-Slavs and Czech-Slavs. If Indian propaganda is to be effective in Britain, it must be conducted on a large scale.

India was lucky inasmuch as a few British candidates gifted with imagination to understand the Indian psychology and sympathy to appreciate Indian culture and ideals took the trouble to direct the attention of their constituents to the Indian cause. For instance, Captain Sidney Mansom who spent several years in India mostly at the Theosophical Headquarters and whose wife, like him is keenly interested in Indian progress, declared, in his address to the electors of the Sutton Division of Plymouth:

"In the case of India, I am eager to see there a progressive realization of self governing institutions."

The programme of Liberalism printed at the back of his own address included a sentence reading:

"Liberals insist that Home Rule must be given to Ireland and that Self Government must be extended in India."

Similarly Mr George Lansbury, the great Labour leader, who is identified with so many progressive movements, among them Home Rule for India, stated in his address to the electors in the Bow and Bromley Division of London:

"I think a start must be made with self government for India. In that country there are 310 millions of human beings governed by British officials. They are

asking why India, whose sons have fought to enable the Nations of Europe to secure self-determination, should be denied the same rights for themselves."

In another place he declared :

"All political prisoners, both at home and in India and the Colonies, must be set free, no matter what may be the offence for which they are suffering imprisonment. We must restore Freedom of the Press, Freedom of Speech, and Freedom of Public Meetings."

Mr. John Scurr, Mr. Lansbury's able colleague, who stood for Buckingham, holds the same views in regard to India, and advocated them. Major David Graham Pole, who contested East Grinstead, who has visited India many times, who has the Scottish gifts of imagination and sympathy to comprehend and appreciate our difficulties, our ideals, and our aspirations, and who uses all his influence to further our cause, did not forget us during the election.

But fortune proved fickle, and all these candidates were defeated. Dr. G. B. Clark, of the British Congress Committee and Professor Sidney Webb, who has considerable sympathy with our cause, also were rejected by the electorates.

The defeat of all the women candidates with the exception of the Countess Marievitz, who, on account of her Sinn Féin tendencies, is not likely to sit in Parliament, kept many women out of Parliament who would no doubt have helped the Indian cause. Mrs. Despard, who lost by a rather narrow margin in Battersea (North, London), is, I know, very sympathetic. Mrs. Will Anderson, (Miss Mary Macarthur), is also a progressive woman. The Woman's party, which put forward Miss Chrystabel Pankhurst, declared in their programme :

"Any proposed change in the system of governing India to be submitted to the Imperial Parliament after it has been clearly explained to the British people in what way the system is to be reconciled with racial differences, the caste system, the peculiar position of Indian women, and Indian conditions and traditions."

Sir Herbert Roberts, Bart, who for years has been co-operated with the British Committee of the Congress and is at the head of the Anglo-Indian Tem-

Association, had, for some

reason or other, to withdraw his candidature. Nearly all the members of the last House of Commons who took an interest in Indian affairs failed to be returned. Mr. Ramsay MacDonald, Mr. Phillip Snowden, Mr. Charles Roberts, Mr. Geoffrey Howard, Mr. H. E. A. Cotton, Mr. Lees-Smith, Mr. O'Grady will not be found in the new House. Mr. J. Kier Hardie who, in the last Parliament, raised his voice again and again against official despotism in India and in defence of liberty of person, press, and platform in India, is, alas ! no more.

So far as I can see, only two of our old friends have been returned—Colonel (formerly Commander) Josiah C. Wedgwood, who, in his noble and fearless minority minute in the Mesopotamia report, did more to shatter the boasts of the British bureaucracy in India than any other single individual, and Mr. A. MacCallum Scott, who, I am told, has not attended any of the few meetings that the British Committee of the Congress has held during recent years.

Sir J. D. Rees, who has been returned as a Coalition-Unionist, would have us believe that he has abandoned his old ways of obstructing Indian reform, and if we were merely to judge him from superficial evidence we would gratefully admit his claim. But if I were Mr. Montagu I would pray to be delivered from such a supporter, for he very clearly brings out the fact that the Montagu-Chelmsford reforms do not go very far in conceding to Indians any effective control over their own affairs; and that they confirm and consolidate "the British bureaucracy in India." Speaking in the last House of Commons he said, for instance :

"... The greatest objection raised in this country (Britain)—and I have read most of what has been said about these proposals, and have studied them with great care—is that they give away a good deal of the power of our Government in India. I find exactly the contrary at every stage in the change which have been made in the provincial council ample power is safeguarded to the Governor to carry through any legislation that he wishes in the Viceroy's legislative equipment complete power is given to carry out what he and his colleagues think necessary for the good of the country. So far from the Report having the opposite tendency, I think it confirms and consolidates our position. I find towards the end the Report says that so far ahead as the authorities can foresee a substantial English element will be necessary to the administration, and the continued presence of English Civil Servants is vital to making India a self-governing entity. The authors

of the Report in their almost last words write that the presence of the British Civil Servants will be as necessary as ever for the people here in India. I am an old Civil Servant, and as one who has been actively concerned with the affairs of India all my life as actively as once I left as when I was there I can deliberately say I think the assurances which have been given are of the most satisfactory kind. (The Indians are mine)

Among retired Anglo-Indians re-elected to the House is Colonel Tate, who continues to judge India by his generation old experience in backward parts of our country. The Anglo-Indian ranks in the House have been strengthened by the election of Mr. T. J. Bennett, elected for Seven Oaks. He is one of the proprietors of the *Times of India* and, I am told, the partisans of the Montagu Chelmsford scheme are counting upon his support. Mr. W. Joyson Hicks, who in the last House championed the cause of the Indo-British Association, has been re-elected.

The heavy defeat of the Asquithian Liberals, who will number only 26 in the new House and who have lost all their leaders, including Mr. H. H. Asquith, Mr. McKenna, Mr. Runciman, Sir John Simon, Mr. Herbert Samuel, Mr. Charles Roberts, Mr. Geoffrey Howard, Mr. Masterman, Mr. J. M. Robertson, Mr. McKinnon Wood, Mr. H. J. Tennant, Sir C. Hobhouse, Mr. Gulland and Mr. Walter Rea, will undoubtedly alter the Indian situation in Parliament, for our leaders of the Gokhale school relied upon their aid. Indians will also miss the Irish Nationalists, whose number has been reduced from 74 to 12.

It is true, on the other hand, that Labour has increased its strength in the House from 34 to 64 members. But we must not forget that it has lost nearly all its leaders including Mr. Arthur Henderson, Mr. Ramsay MacDonald, Mr. Philip Snowden, Mr. W. C. Anderson, and Mr. F. W. Jowett. None of the three leaders—Mr. W. Adamson, Mr. J. R. Clynes and Mr. J. H. Thomas—who remain in Parliament, is I am afraid particularly well informed on Indian affairs, or has the leisure to undertake an intensive study of our problems.

The return of so many mining cardinals is I believe, a great gain to our cause. Unlike many classes of British labourers they have no selfish interest that comes in conflict with their desire to do the right thing by India. Three of my

friends who lectured on Indian self-government in many mining centres in Britain assure me that the miners are heart and soul with us in our struggle for free institutions within the Empire.

Young India, I find, is counting upon Labour in much the same way that old India relied upon the Liberals. I hope that in its instinct young India will be more right than was old India, whose demand for free institutions was met by the response from Liberal leaders that they could not foresee a time when India would be given a measure of self-government approaching that which has been granted in the Dominions.

The time for test will come when Labour in Parliament has to vote on the question of investing India with power to build up gigantic industries that will enable her to utilise her raw materials at home instead of shipping them abroad and depending upon the outside world (chiefly Britain) for manufactures. When that time comes I hope that Labour will have risen superior to selfish motives sufficiently to act otherwise than it did last year when the question of cotton duties came up before the House of Commons. Anyone who takes the trouble to look up the division list of that debate will find that the Labour Members of Parliament voted almost solidly against India among them being Philip Snowden, Mr. Ramsay MacDonald, Mr. W. C. Anderson and Mr. Jowett. I may add that Sir Charles Swann, for something like a generation a member of the British Committee of the Congress and still, I believe, technically a member of it, and other Liberals believed by us to be our friends voted the same way, because they belonged to the Manchester school of politico-economic thought, and some of them actually represented Lancashire constituencies.

I have discussed with many Labour leaders the question of Indian fiscal autonomy. Some say that industrialization is bad for India's soul and that it would be an infinite pity if her hand industries were to disappear. Others say that it is an anathema from the world point of view for a nation that is expert at growing raw materials but inexpert in modern industrialism to attempt to manufacture for herself, when she can get all the manufactured goods that she needs from

industrially advanced nations. All decried labour conditions in Indian factories.

Only one Labour leader have I met in all my years in Britain who recognized India's right to choose to be protectionist if she wished to adopt that course to foster her industries. He further conceded that so long as the policy of ruling India was dictated from this country and the pressure exerted for the improvement of factory conditions could be interpreted as a cunning device on the part of British capitalists to check the progress of Indian industrial expansion, such pressure could not but "put India's back up"—to use his expression. He admitted that not until the tremendous Indian energy that is now being poured into the Indian political movement to secure the most elementary rights was released by the grant of Home Rule, domestic reform would receive the attention that it deserves.

Instead of trusting to the generous instincts of Labour, we ought to make it our business to interest it in our ideals and aspirations. It ought to know what we have achieved in recent years in educational, social, and moral reform. It ought to be told what our progressive administrators have done in Indian States where the British could not elbow them out of responsible positions. While we are sleeping, our political enemies are hard at work seeking to mislead Labour in regard to India.

In my opinion, it would be as great a mistake for us to confine our educational efforts to the Labour party as it was to repose our implicit trust in the Liberal party. It is being freely said that Mr. Asquith will not recover from the blow that has been dealt to him, by Mr. Lloyd George, who has carried with him the bulk of Liberals elected to the House of Commons, and that the Liberal party has no

future unless it accepts Mr. Lloyd George as its leader. It is also being said that the Liberals with pronounced conservative tendencies will drift to the Unionist ranks while those who are really radical will join Labour—the party with which the future lies. Only the other day I was told by an eminent Englishman that when Mr. Lloyd George cannot get on with Mr. Bonar Law, he will turn to Labour. These are surmises which the future alone can prove or disprove.

In the meantime, the stark facts of the situation stare us in the face. Conservatives enjoy a large majority in the House of Commons, perhaps the largest in history, and our political enemies are using all capitalist agencies to prejudice them against educated Indians. So far as our past experience goes, the rank and file of Liberals have not been far ahead of the Unionists in their attitude towards Indian reform. Even the British minority Socialists are not, at present, prepared to go far in the matter of Indian reform: so great a democrat and friend of India as George Lansbury speaks only of making "a start" with "self-government for India." All sections of Britons—Anglo-Indians not excepted—know little of India that is not rank prejudice.

If Indians wish the new Parliament to endow our Motherland with free institutions, then let them do all in their power to make Parliamentarians acquainted with Indian aspirations, capacity, and promise. Indians who wish to see the Montagu-Chelmsford scheme drastically altered must bestir themselves and put their case before the British nation, or they will find that the bureaucracy, supported by officialised Indians, will ignore their wishes and carry the measure, perhaps in a somewhat whittled-down form, through Parliament.

NOTES

Philippine Independence.

In the *Japan Advertiser* for December 30, 1918, there is an article with the heading, "*Filipinos Trained in Good Citizenship*," and the subheading, "*Archipelago*

Ready Now. Thanks to Uncle Sam, to Acquire Full Independence." The Philippine Islands were ceded by Spain to the United States by the treaty of peace concluded between those two countries on April 11, 1899; and the Organic Act of the Islands

passed by the Congress of the United States on August 29, 1916, known as the Jones Law, has provided an autonomous form of government for the Islands. This one sentence may be said to sum up the good work done by the Americans for the Filipinos. The Japan Advertiser tells us —

For nineteen fruitful years the work of strengthening and unifying the Filipinos politically and industrially, has been going on under the tutelage of Uncle Sam and now, says Mr. Manuel Quezon, president of the Senate of the Philippines, the time has come when the Filipinos feel free and justified in asking that the independence long promised them by the United States be granted.

Mr. Quezon, who has been at the Grand Hotel in Yokohama for the past few days and who sails at noon today on the S. S. Shinyo Maru, is on his way to Washington, where he expects to see and confer with President Wilson on his return from Europe, and to gain from the American Executive the assurance that in the readjustments of the world brought about at the Peace Conference, the independence of the Philippines will not be forgotten.

Mr. Quezon is an experienced statesman.

Mr. Quezon is fortified with an experience of seven years as representative of the Islands in the United States Congress—1910 to 1917—and for nearly as long as member, and later as President of the Filipino Senate. Should the Philippines be made independent, it is more than likely that he will add to his honors that of becoming the first President of the Philippine Republic.

Mr. Quezon is naturally reticent about his trip and refuses to make any prediction as to its result, as his mission is really that of a herald, rather than an arbitrator or envoy. The Commission to follow him stands for the political and business interests of the Islands. It is comprised of members of the Cabinet, of the Senate, the House of Representatives, and important businessmen, and will leave the Islands about the end of January, to join Mr. Quezon, who will preside over it in America.

The Japanese paper gives us some idea of what the Filipino Commission will say in America.

In its discussions with the American Government, this Commission will point to the fact that in the sixteen years of American occupation, the education of the natives has gone on apace, so that a large proportion of its population of 15 millions has now been developed by education to the point of being able to organize and maintain a well balanced self government.

The Filipino of yesterday is no more, says Mr. Quezon, and the inhibitors of old methods and apathetic ease are no more. They are awake, they are eagerly grasping the knowledge that America has given them, so eagerly that compulsory education has not been necessary. On the contrary parents and the children themselves make all sorts of sacrifices for an education.

ECONOMICALLY INDEPENDENT

Today, the Philippines are economically better off than they ever have been. As in the case of new India

tries are springing up and the finances of the Government have been developed on a firm and stable foundation. Furthermore, the Islands have practically had an autonomous government ever since the enactment of what is called, the Jones Law, brought about partly through the efforts of Mr. Quezon when he was in Congress.

The only official representative of the United States in the Government is the Governor General, the Cabinet, Senate and Congress being composed of Filipinos. The program adopted by Governor General Harrison, who has just left the Philippines probably for good, was one of complete co-operation and understanding with the Speaker of the House Mr. Sergio Osmeña who is considered to be the leader of the people in all their political affairs. This policy made Mr. Harrison the most popular official in the Islands among the Filipinos.

That the Filipinos are thinking of independence, appears also from an editorial article in the *Philippine Review* for December, 1918, entitled, "The Matter of Philippine Independence." In the course of this article, the editor prints a letter received from Congressman Kraus, from Indiana, on the subject of Filipino independence, which runs in part as follows:—

Justice, under the portrait of President Wilson, that he is presented as the President during whose term of office and through whose sponsorship the Philippines may at last become a free, independent Nation.

I know that National Sovereignty is a commendable aspiration of all peoples, and I have nothing in condemnation of this spirit of your people, but nevertheless I wonder at it as a matter of expediency and welfare of the Philippine Islands. With such powerful aspirations as the Japanese have who are your neighbors, and considering the insecurity of the Philippines should they become isolated, or established as an independent nation I wonder at the latter a ultimate fate, and how you gentlemen with patriotism consider this aspect. I do not know, of course, but I assume that as an independent country the Philippines would have more of self government under the United States than under any nation in the world and I cannot help but believe that if absolute independence were granted to the Philippine Islands it would only be a question of time when they would fall under the domination of some strong power of the world. If this should be true, why should not the Philippine Islands be contented in its present relations to the United States when upon our part there is a warm friendship and a disposition to grant the broadest liberality to the Islands in self government.

I am interested in your subject in good faith and have presented my own superficial views, and would be extremely pleased to have you present the viewpoint as taken from the interests of the Islands.

It may be that in commercial circles there is a disposition to hold the Philippine Islands for their own business interests, but others, who are devoted to self-government, and in opportunity to a people, are disposed to be broad and liberal with the Philippine Islands, but I cannot understand why they should at such hazard to themselves, want to throw off the kindly protection of the United States.

I would sincerely appreciate a letter from you

disclosing in detail the entire subject from the standpoint of those in the Philippine Islands who desire separation, as I understand your position to be

In reply the editor says:—

In part our first two sub articles answer this letter which we are happy to publish now with due apology. In addition we should say that our independence would not mean separation—*physically*, may be, as we are separated now, but *morally and spiritually* the union will be closer and warmer and *gratefully eternal*. We are not concerned by the unfair "disposition to hold the Philippines for their own business interests." For we hope to be able to control and readjust said interests in the near future for the good of all. As to Japan, for obvious reasons we are entertaining no further worry about her after the war. She is an Oriental country, an Allied country, and a sister country, besides and we are confident she will go by the principles of justice to govern international relations hereafter, and that the happiness, uplift and prosperity of the whole Orient will be henceforth closer to her heart.

The old international policy must give its way to the Wilsonian one as demanded by the happiness and prosperity of Humankind.

We shall now give an idea of the "first two sub articles" referred to by the editor. The whole of the first sub-article is quoted below.

Two recent arrivals from States are authorities for the statement that the question of our independence would depend upon our own choice, and that a congressional committee would visit the Islands to determine the true will of the people as to protectorate or absolute independence for the Philippines. The matter of our independence is one now beyond the realm of doubt, insofar as we Filipinos are concerned. It is unnecessary for us here to mention that during the centuries we had been under the Spanish domination the undaunted spirit of the people for freedom from foreign yoke was distinct and unmistakable. It is true that we were not then strong or armed enough to face the handful of our so-called conquerors that first invaded the country. But the death of Magellan, the death of our own heroes and the revolutions then successively occurring in the Islands were the best evidence of that unflinching liberty spirit.

As to our political relationship with the United States, we doubt if it could in any way be improved upon. Although our progress could have been faster up to about 1913 no doubt we have wonderfully advanced since that year, particularly since the passage and under the Jones Act whereby we were given very much greater, almost complete legislative and administrative responsibility. But as we had stated once and again, no matter how pleasant and relationship may be, no matter how wonderful our present progress may be, the longings of the people of the Islands can only find their full satisfaction in a complete political independence. It is our long-ago-made self-determination. For to live one's own life the worthy way one wishes to, and in accord with and within the limitations of law, order, peace and mutual respect, is the one supreme aspiration of a people or an individual, that cannot be curtailed or alienated. It is so self-evident that whoever may feel otherwise should ask himself if he would find true satisfaction in a different way.

So with the Philippine Nation.

In the course of the second sub article the Filipino editor says:—

Then the Philippines, if given her independence at an early date, will be instrumental in starting, if she has not already started it, her share in a new community life in the Orient, to be the beginning of the independence of other Oriental countries. In Java, for instance, with her 35,000,000 inhabitants, now still in an almost enslaved condition, Holland should no longer continue to shut the doors of the country to the light of true civilization as conveyed through an efficient, up to date public educational system, under the pretext that "the Javanese are not like you, they are very loath to it." The Moros and Mountain people are enjoying better—their full—chances. Indeed, it is helpful for us to see 35,000,000 people held in dependency by such a small nation like Holland, through a few thousands of soldiers. Java should now be free from her present ignominious yoke, which should arouse the indignation of the rest of the Orient. For we Orientals have no separate fate. We are all one people, all one racial community, no matter what others may say. And we are bound to that union which should make the Orient respected in every way by all men. Oriental people. Has Holland any further justification any longer to continue in Java? We Orientals can accomplish the task better. It is this great undertaking of the complete liberation of the Orient that Japan should start, through the necessary negotiations with Holland and other European powers, particularly with the sympathetic, moral and material support of America. European colonization of the Far East must come to an end through diplomatic channels. Wars or revolutions must no longer be resorted to. Their purpose can now be attained, perhaps more efficiently, through the force of reasoning and logic at a table conference. The Orient, as much as Europe, is entitled to an independent life, free from any further dependency, of which it has had enough for centuries. The Orient must have its chance. And it is time now for it. We are glad to read in the papers that India is soon to get a more substantial form of self-government. It is gratifying for us to note that in this the labors of America have not been altogether unavailing. But that is not enough. 315,000,000 people, exceeding in bulk the size of Europe's population, are certainly entitled to it and much more. They must be fully qualified factors of present day civilization and usefulness in the World. Great Britain, we also notice with gratification, is determined to bring about self-government in India, possibly independence later. But, as we have said in one of our previous issues, she would profit more greatly with a free India, thankful to her and bound to her by the bonds of gratitude, than with an India held through the bonds of armed political dependency. So the other countries in the East.

The independence, therefore, of the Philippines is a world wide conscience, highly advisable from the standpoint of Oriental politics, as well as from the standpoint of European politics. During this war, the acknowledgment of the rights of small countries, down trodden by Germany, has always been the moving ideal of the Allied Powers. If this is true, no European or other colonization has any further reason to exist. And the issue immediately to follow is the extension of that recognition to every people outside of Europe, West and East, in Africa, and elsewhere. Then East and West

could meet together and face each other as friends or brothers or allies for the cause of universal good. This may not sound pleasing to all concerned. But no member of the Allied Powers could loyally antagonize this plea for the welfare of small nations which is the ultimate result of this war.

The Republican party in America has not been very favorable to the idea of Filipino independence. But, as the Filipino editor rightly points out, that party is an integral portion of the great American nation, whose guiding principles of justice and liberty are the same for all and every American.

Besides the Philippine case has already passed the party line, and both the parties and America herself are looking forward to that day when the great task they had so brilliantly initiated in the Islands shall be an inspiring success. The contribution of a republic in the Orient out of a dependent people now ready to join the leaders and toilers of Democracy as a nation and the tremendous influence to be exercised by the Filipinos in the promotion of the welfare and civilization of the so-called backward peoples in the Far East—backward because they are still denied that opportunity they need so badly for themselves to acquire the instruments for a national life—should be a source of deeper gratification than party selfishness. The future relation, therefore between the United States and the Philippines is good doubt, will be forever most cordial. We will always look on America as our protector, as our deliverer from our former dependency, and as our guide and inspiration. We will always need her and we hope, however small, the Philippines will never cease to be of service to her, either as an Allied nation in the Orient, or as a trade center in the Far East. And we will be of greater service to her in an independent status and as a friend, than as a dependency.

Once more we will say. Our future will be one in which our union will be still closer than today, warmer than ever in the furnace of gratitude and mutual love and sympathy. Not separation.

Such will be the eventual result of our independence.

We will add a few observations of our own to what the Filipino editor has written. There are independent states in Europe which are smaller in area or population or both than the Philippine Archipelago, as will appear from the following table, which does not furnish an exhaustive list—

Country	Area in sq miles	Population
Philippines	114,400	10,000,000
Denmark	15,582	2,940,979
Holland	12,582	6,583,227
Norway	121,612	2,391,780
Sweden	173,035	5,757,566
Switzerland	15,976	3,480,500
Portugal	34,490	5,957,985

Why do not these countries require "protection" at the hands of some great power

or powers? It cannot be said that each and all of these European countries have sufficient military strength to preserve their independence unaided if some "great power" or powers were to attack any of them. The reason why it is thought that "coloured" peoples of non-European extraction (except the Japanese who possess mailed fists) require "guardians" or "protectors," is that they are considered fair game. When the strong "civilised" peoples of the world are able to rise above the barbarous predatory stage in their international sentiments and dealings, then non-European peoples, small or big, will be able to enjoy freedom without requiring "protectors." But so long as any people, big or small, show by their conduct that they are satisfied with their position of dependence, no altruism or liberal political principles of strong nations, can enable the former to taste the blessing of true independence. For, though they may not have foreign despots they will have swadeshi tyrants. Moreover it is in the long run a partially beneficent law of nature that the weak must go to the wall, because it provides an incentive for the weak to be strong. In order that freedom may reign all over the world, unorganised peoples must be organised and the psychology of all peoples must undergo such a change that, should they be unable to strongly survive they would prefer strongly to be extinct.

It is mere hypocrisy to say that any European nation ever conquered or occupied any country with the sole or chief motive of maintaining law and order there; selfish gain has always been the main motive. If western nations be impelled by altruistic considerations, why do they not send all their armies to Russia, for example, to establish law and order there?

Economic Aspect of Philippine Independence

The Philippine Review has published a table of the revenues, expenditures, and surplus of the Philippine Islands, from 1907 to 1919. The figures, in pesos for 1908 were in round numbers, 23 millions, 22 millions and 13 millions respectively, and those for 1919 (estimated) are 71 millions 77 millions and 22 millions. This tells a story of remarkable expansion in revenue. The Filipino editor is justified in observing

It would be well to notice here that up to 1916 our total Insular Treasury assets available for yearly appropriations remained stagnant at an average of about only 33,000,000 pesos while since the inauguration of the Philippine Legislature (we mean to say both Houses of the Legislature) in accordance with the Jones Act, or in two years we have doubled said assets and the prospects of the following years look very much brighter indeed.

Autonomy has also enabled the Filipino people to attain to a condition of great financial prosperity, as will appear from the yearly balance of their National Bank—practically owned by the people through their Government—from its inauguration

TOTAL ASSETS

May 23, 1916	Pesos 11,800,000.00
July 15, 1916	" 29,300,000.00
December, 1916	" 50,700,000.00
June 30, 1917	" 88,033,000.00
December 31, 1917	" 138,276,000.00
March 31, 1918	" 161,093,000.00
June 30, 1918	" 210,942,000.00

These figures fully justify the following observations of the Filipino editor:

We doubt if anywhere the world over any bank has made such a wonderful stride forward in hardly two years and six months of existence. Without, and before the grant of, our present legislature could it would have been impossible for obvious foreign business and political reasons for us to think of owning a bank. In fact the establishment of the National Bank was bitterly opposed. We were absolutely dependent on local branches of foreign banks established in the Philippines not for the avowed purpose of helping to develop our resources, but to finance and for the advancement of, their nationalities. No real help was given us and we were forced to accommodate ourselves, the best we could with our own means, which in no wise were enough fairly and properly to meet such an organized competition. The Filipino producers were thus practically helpless at the mercy of foreign buyers. It was simply impossible to think of co-operation or of sugar centrals of commercial and shipping companies of oil companies of intensive farming, etc. That was not our gift as it is now. However with the establishment of our National Bank these banking discriminations came to an end the Bank at once becoming a most powerful factor to finance Filipino enterprises which only now are beginning properly to live. On the other hand in a government of our own our independent economic life our resources will be scientifically developed more in accord with our national needs—and it should be borne in mind that our natural resources are as yet almost 90 per cent untouched and that it is only now that we are beginning to touch them although in many cases in a way rather medieval as a result still of the recent past. Then we are confident we will be able to carry a five hundred million peso budget in the future if necessary and thereby have all the instruments of public happiness and prosperity—greater avenues of business direct business relations with the rest of the world simpler education and chances for the masses modern extensive

and intensive farming and development of our other natural resources, an adequate army and navy if needed etc. The appropriation of Japan was only in the neighborhood of this amount a few years ago, and during the pre-war era, and worse still after it, but many nations could or can very well afford to carry so large a budget.

Furthermore, if there is to be a League of Nations, efficient enough to put an end to wars and the ravages of the stronger upon the weaker, exemplarily to punish war provokers as now justly intended to do with those of the recent war, and to make international community safer, and life in it much easier and less burdensome and the world a decent place to live in for all alike, we are confident our independence will not be a failure from the economic standpoint.

"Independence Can Never Be Given From Outside"

Along with other messages of good will, *The Independent*, the new daily of Allahabad, prints the following from Sir Kalidranath Tagore:

Independence can never be given from outside. Slavishness has its roots in our fear and self distrust, in the treacherous meanness of our self-seeking ambitions, in our intellectual timidity which shuts its eyes to truth and seeks shelter in the dark holes of sophistry, and our moral cowardice which feels itself safe in the abject acceptance of all impositions from tyrannical power that resides in society or outside it. Those who are always ready ruthlessly to crush all signs of independence in their own community where they have authority to exercise their power, and are never ashamed loudly to denounce the helpless minority's claims for freedom of conscience will never be able to retain the doles of independence given to them in their beggar's bowls, full of cracks, and any accession to power will give them freedom for tyranny which is another aspect of slavery, like the prickly aspect of the cactus born in the desert soil.

Sir William Meyer in Philippines.

Sir William Meyer, the late finance minister of the Government of India, has been on a visit to the Philippine Islands for the purpose of studying political and economic conditions. We learn from a clipping of a statement of his printed in one of the Manila morning dailies that Sir William thinks that "there are two main parties in India, the extremists who are in favour of immediate home rule while the moderates are fairly well content with the rate at which self government is being extended." What Sir William has said is false. The Hon'ble Mr. V. S. Srinivasa Sastri is one of the very ablest of the moderate leaders. He showed in his presidential address at the Bombay Provincial Conference that our legislative councils, constituted in 1853, "worked for eight years before the first

Indian found entry into them by nomination."

"Thirty years passed before the next step was taken a period within which other peoples have found it possible to begin and consummate their political evolution. This step consisted of a slight increase of non official Indians, some of whom came in by a subsidiary process of election, not recognised in law. Seventeen more years passed before election became a reality and the provincial legislatures had a majority of non officials which has proved a delusion and a snare. What is the next step to be and when will it be taken? Perhaps we should get an elected majority in two years more that is ten years after the last reform. Of course this majority would be bare and utterly ineffective. To make it decisive at least one decade would be necessary. Our mentors would then take us in successive decades through such fractions as two-thirds three-fourths four-fifths till in another half a century we might have a wholly elective legislature in the advanced provinces. Of course a longer period would be required for the Indian Legislative Council and the councils of the backward provinces to reach this level."

Referring to our progress as regards the public services Mr. Sastri showed that

"Eighty four years after statutory affirmation of our equality we are still looking forward to getting something between a fourth and a third of the chief administrative posts in our own country. And the whole history is marked by noble sentiments and promises backsliding, bitter recrimination and paltry and graceless concession. Can a people who have endured this sort of thing be accused of seeking to introduce catastrophic or revolutionary changes or to effect a "sudden upheaval" and startling transfer of political authority into ignorant and inexperienced hands?"

It was a notable fact Sir William said that the politicians who had made no personal sacrifices for the causes of the allies in the war were eager to make capital of what their fellow-countrymen had done in the Indian armies which fought in Flanders Mesopotamia Palestine and East Africa, and to insist that greater measure of home rule should be extended as a just reward. The men who actually took part in the campaigns however are for the most part satisfied with the present state of affairs under British rule and exhibit confidence that Britain will proceed wisely in the gradual extension of self government.

In Great Britain and Ireland some 8 million additional men and women have been given votes by the Reform Act of last year. Did they all "actually take part in the campaigns" or make other "personal sacrifices"? What "personal sacrifices" did the British politicians and capitalists make during the war, that they now seek to gain various advantages by the annexation of territory or other ways of exploitation? Moreover, it is not true that Indian politicians and others who did not in any way take part in the campaigns, made no personal sacrifices. Many con-

tributed to war funds and war loans, some helped in recruiting soldiers, many co-operated by public speech and writing in creating and maintaining friendly feelings towards the Allies and thus keeping the country quiet, and all Indians, except a few rich men, have been up till now suffering from various kinds of economic distress caused by the war.

But the strongest and, in fact, the only vital argument in favour of self-rule is that it is every nation's and every people's birth right. Whether we made any sacrifices or not, it is our right to have self-rule. And we mean to have it.

Sir William says that "the men who actually took part in the campaigns are for the most part satisfied with the present state of affairs under British rule." &c. Indeed! How did Sir William, or any other bureaucrat, ascertain the opinion of these soldiers? Was any pleb-scite taken? Have the fighters issued any manifesto? When it suits the bureaucrats to say so, they speak of our dumb millions knowing nothing of and caring nothing for our politics and therefore not sharing the views of our politicians. But when a different purpose has to be served, these same bureaucrats imagine that the dumb millions have become vocal and have given expression to opinions supporting the bureaucratic position! So far as our information goes, neither the civilian nor the military population of India are "satisfied with the present state of affairs under British rule."

Sir William Meyer has stated that "some British residents of India are of the opinion that Mr. Montagu's recommendations are too liberal, although they by no means satisfy the hopes of the extremist party of native politicians." As if "some British residents of India" did not in the past oppose as revolutionary every administrative or constitutional "reform," however delusive or unreal!

Neither give one admission from Sir William Meyer which, though there is nothing new in it, possesses some importance, and which we have italicised.

One phase of the question which Sir William touched upon was the clamour on the part of the Indians for some sort of a protective tariff in order to allow them an opportunity to develop native industry along manufacturing lines. This proposition does not meet a responsive chord in England, especially among the merchants, since British commercial policy has been based traditionally on free trade lines and since

manufacturers at home no not care to see de 'c'opien' in India along manufactur'g lines. The Indians, however, argue, their chances for great industrial and economic development are lessened if there is not an opportunity to utilize at home the raw materials which they produce.

The Chamber of Commerce of the Philippines gave a banquet in honor of Sir William, at which Mr Gregorio Nicera, editor of the *Philippine Review* made a speech from which the following paragraphs are taken:

To a certain extent, there is actually some parallel between Indian and Philippine affairs, particularly as regards the destinies of the two peoples in the Far East. India and the Philippines cannot feel themselves as different peoples because of the place they hold on earth, and because both come under the common term of "Oriental peoples." Their aspirations are very much similar, and, however different one country may physically seem from the other, such dissimilarity dwindles to insignificance in the broadening horizon of the Orient. On the other hand, India has been, during the last century and a half, under the dependency of the Power that has unflinchingly been the mother of small nationalities in Europe, while the Philippines has had the very great fortune of being, during the last two decades, under the guidance of that power which is now at the head, effectively and wholeheartedly, of world Democracy, and of the new idea of binding the World together with the bonds of sympathy and friendship—America. Thus you see that there is really some parallel between India and the Philippines as well as between America and Great Britain. And while it is not yet all the parallel we wish it should be, we feel confident their purpose, and their aims, and their motives will at last become all one and the same at one time. And this is important to the promotion of public welfare in the Far East, and to the happy creation of that new psychology and that new atmosphere so strongly, so devotedly advocated by our President. Of this the Philippines furnishes a very gratifying evidence. During the three distinct stages of our existence under the glorious flag of America that is so nobly leading us to full independent nationhood, one under purely American administration, one with the co-operation of the former Philippine Assembly, and one, lastly, under our almost exclusive legislative and administrative responsibility,—all three in less than two decades—the commerce and revenues of the islands have steadily grown up fully in proportion to the growth of our political institutions. This would lead us to affirm that the commercial resources of the Far East would reach their full or gradual development according as the still dependent countries of the Orient are fully or gradually released from European colonial tutelage. Thus their usefulness to the cause of universal welfare would be complete.

Such is, to our mind, the logical basis of, and requisite for, a great commercial boom in the Orient. For commercial intercourse in the east could only be carried on on a due scale between one country and another, and between Europe and the Orient, that day, to which we are anxiously looking forward, on which the East and the West could meet each other, not the one as a dependency or expansion field of the other, but as true friends in the enjoyment of equal international rights,

and we trust God that day will come with the opening of the new age and the inauguration of the new statesmanship to come and stay forever and for good. No doubt the great European powers will soon realize that this is worth their true, earnest effort, for the promotion of intensified business intercourse in the Orient.

Mr. Nicera writes: "We believe that notwithstanding present conditions in India as seen by foreigners, all that India needs to advance, very much more rapidly than heretofore, is chance and active leadership."

Lord Morley and the Press Act.

On May 28, 1908, Lord Morley as Secretary of State wrote to the Viceroy Lord Minto:

'In the Cabinet, Ripon was very resolute, remembering his own reversal of Lytton's Press policy. I do believe that our introduction of a judicial element at every stage is an improvement, apart from general principles of a Free Press on the one hand, and the maintenance of Law and Order on the other.'

In the Indian Press Act of 1910, which is Act I of 1910, we do not find a judicial element at every stage. It is only when a security, a publication, or a press has been forfeited that an appeal lies to a High Court, and we know how futile such appeals are. When a press is established, or when a newspaper is started, security may be and is usually demanded. Security may be and has in many cases been demanded from presses and newspapers established before the passing of the Press Act. Then, at any time security may be enhanced and increased security demanded. When a press changes its premises or its printer, or when a newspaper changes its publisher, and consequently new declarations have to be made, security may be and has often been demanded for the first time or a previous security enhanced. There is no judicial element at these stages; an executive order, narrowest which there is no appeal, is quite sufficient. And in passing such an order, no hearing is given to the printer or the publisher. It is, therefore, difficult to see why Lord Morley wrote that a judicial element had been introduced at every stage. Did he really at first introduce such an element at every stage in the first draft of the bill, which was afterwards altered for the worse? Or was he mistaken? In any case, if there had been a judicial element whenever security was demanded or enhanced, and if there had been an appeal against the

executive order at every stage, that would certainly have been a distinct improvement upon the Act as passed. The introduction of these changes even now would be an improvement. But it is not improvements which will satisfy us now or meet the needs of the situation. It is the ending of the Act that is needed, not any mending.

The Inquisition and the Rowlatt Bills

The Inquisition is a hated name which still gives people the nightmare. And why? Because of the horrible cruelties for which it was responsible, and of which the following lines from *Chambers's Encyclopedia* will give some idea.

The number of victims as stated by Llorente the popular historian of the Inquisition is positively appalling. The affairs that during the sixteen years of Torquemada's tenure (1493-1517) nearly 9000 were condemned to the flames. The second head of the Inquisition, Diego Drax, eight years according to the same writer put above 1600 to a similar death; and so for the other successive inquisitors general. But Catholicism protests against the greed of these fearful autocrats. It is impossible not to see that Llorente was a violent partisan, and it is alleged that his work on the Basque provinces he had already proved himself a usual and outrageous fabricator. Although therefore he has made it impossible to disprove his accuracy by appeal to the original papers which he himself destroyed, yet his Catholic bias is proved from his own work. Many examples of contradictory and exaggerated statements. Presottin's *Ferdinand and Isabella* (1846-70) has pointed out many similar instances, and *Saunders* (1. 242) to impede his honesty still, with all the deductive which it is possible to make the working of the Inquisition in Spain and its dependencies even in the New World involves an amount of cruelty which it is impossible to contemplate without horror.

We do not make or suggest any comparison between the Inquisition and the Rowlatt Bills as regards cruelty and horror, but we do wish to point out some similarities of procedure and to say that as the operation of the Defence of India Act and similar laws has been self-responsible by public opinion directly or indirectly for the suicide, insanity and death from disease of some men and also for the heartless treatment of some men, the operation of the Rowlatt Bills if passed into law would probably be attended with similar undesirable results. We also assert that the procedure proposed to be adopted and the powers with which the executive and the police are proposed to be vested by these repressive bills would be responsible

for these results just as the procedure of the Inquisition was mainly responsible for its horrors.

Let us see what the procedure of the Inquisition was. We quote from *Chambers's Encyclopedia*.

The procedure of the Inquisition deserves a brief notice. The party suspected of heresy [in the case of the Defence of India Act it sometimes was and in the case of the Rowlatt Bills it would sometimes be put at heresy—L. M. R.] or denounced as guilty was liable to be arrested and detained in prison, only to be brought to trial when it might seem fit to his judges. The proceedings were conducted secretly. He was not confronted with his accusers nor were the names even then made known to him. The evidence if an accomplice was admissible and the accused himself was liable to be put to the torture in order to extort a confession of his guilt.

The procedure of the Inquisition is thus described in the *Encyclopedia Britannica*.

The procedure was secret and in the highest degree arbitrary, a subject being to averted not so much particular offences as tendencies, and on the other hand external acts of pity and verbal professions of faith were held of no value. Moreover the Inquisition was not bound by the ordinary rules of procedure. It is against the accused was suspended by a sudden summons and as a rule imprisoned on suspicion. All the accused were presumed to be guilty though being at the same time the accused. Absence was usually considered as confession and only in cases the presumption of guilt was seen not to admit it. The accused had the right to demand a written account of the offences attributed to him, but the names of the witnesses were withheld from him so that he could not know who had denounced him, nor what he was attacked by the judges to the denials. He made again not him. The utmost that was allowed him was the unsatisfactory privilege of the recusationes for a certain time, at his first examination he was asked for the names of any enemies of whom he knew and the names of the family. Heretics or persons of disreputable character (a name) were admitted as witnesses in cases of heresy. Women children or slaves could be witnesses for the prosecution but not for the defence and cases are rare to be found in which the witnesses were only ten years of age. Langbein's work states that a witness who should retract his hostile evidence should be released and have his fall effect on the sentence. No witness who should retract his hostile evidence should be punished for false witness, but his evidence should be retained and have its effect on the sentence. Witnesses might refuse to give evidence and a punishment of imprisonment for guilty of heresy. The prosecution went on in the utmost secrecy. The accused swore that he would tell the whole truth and was bound to do so—although those who were party to his recovery or whom he knew or suspected to be heretics. If he confessed and denounced his accomplices, relatives or friends he was reconciled with the Church and had to suffer only the banishment or imprisonment by the canon law. If further examination proved necessary it was continued by examination. Bernard's Canon Law contains many ways of obtaining confessions, some by means of moral subtleties, but sometimes also by a process of weakening the physical strength.

And as a last expedient torture was resorted to. Canonically the torture could only be applied once, but it might be continued. The next step was the torture of witnesses, a practice which was left to the discretion of the inquisitors. Moreover, all confessions or depositions extorted in the torture chamber had subsequently to be 'freely' confirmed. The confession was always considered as voluntary. The procedure was of course not litigious, any lawyer defending the accused would have been held guilty of heresy. The inquiry might last a long time, for it was interrupted or resumed according to the discretion of the judges, who disposed matters so as to obtain as many confessions or denunciations as possible.

In Jack's *New Encyclopædia* we are told;

"The judicial procedure of the Inquisition was quite different from that to which we are accustomed. The accused was assumed to be guilty. He did not know who had accused him, and all proceedings were in secret. Hardly a case is known of complete acquittal, but if the prisoner confessed, he had to suffer various pains and penalties, such as scourging, penance, imprisonment. Torture was frequently used to extort confession and every effort made to induce the heretic to accuse others also."

It is necessary to make another extract from the *Encyclopædia Britannica*

Two features of the Spanish Inquisition are especially noteworthy, the prosecutions for 'speeches suspected of heresy' and the censure of books.

The censure of books was established in 1502 by Ferdinand and Isabella as a state institution. In 1547 the Suprema produced an Index of prohibited books, drawn up in 1548 by the University of Louvain. It was completed especially as regards Spanish books in 1551, and several later editions were published. Moreover, the *revisores de libros* [the revisors of books] might present themselves in the name of the Holy Office in any private library or bookshop and confiscate prohibited books. In 1558 the penalty of death and confiscation of property was decreed against any bookseller or individual who should keep in his possession condemned books. The censure of books was eventually abolished in 1812.

Rowlatt Bill No. 1, which provides for the amendment of the Indian Penal Code and the Code of Criminal Procedure, 1898, has a section which is an "improvement" upon and more drastic than the way to which the Inquisition dealt with books. Section 2 of the Bill runs as follows—

In Chapter VI of the Indian Penal Code after section 124-A the following section shall be inserted, namely—

"124-B. Whoever has in his possession any seditious document intending that the same shall be published or circulated shall, unless he proves that he had such document in his possession for a lawful purpose, be punishable with imprisonment which may extend to two years or with fine or with both."

Explanation.—For the purposes of this section the expression "seditious document" means any document containing any words, signs or visible representations which instigate or are likely to instigate whether directly or indirectly—

(a) the use of criminal force against His Majesty

or the Government established by law in British India, or against public servants generally or any class of public servants or any individual public servant,* Or

(b) the commission or abetment of anything which is an offence against sections 121, 121 A, 122 or 131.

The Inquisition punished meo for being in possession of published books which it had already prohibited and condemned and of which the names could be found in the Index prepared by it, and successive editions of the Index were published, making it available to the public. Any individual member of the public who valued safety more than freedom of thought and conscience could, therefore, easily ensure his safety by knowing the names of these books and not being in possession of any of them. Rowlatt Bill No. 1, proposes to punish men for being in possession of both published and unpublished books, and also published and unpublished pictures, of a "seditious" character. Unlike the Inquisition, the Rowlatt Bill does not, as it cannot, provide the public with any Index of "seditious documents", but, instead, it gives an "explanation" of "seditious documents," making use of such comprehensive, vague and elastic words as, "which instigate or are likely to instigate, whether directly or indirectly." It was, therefore, easier under the Inquisition not to possess prohibited or condemned books than it would be under the proposed law not to possess "seditious documents." In justice, however, to Rowlatt Bill No. 1, it must be said that, whereas the Inquisition prescribed the penalty of death and confiscation of property for the offence of possessing prohibited and condemned books, Rowlatt Bill No. 1 prescribes a punishment only of imprisonment which may extend only to two years or with fine or with both.

Let us now point out some similarities between the procedure adopted by the Inquisition and the procedure proposed to be laid down for the Investigating Authority by Rowlatt Bill No. 2. Roughly the points of similarities are these. (1) Sudden arrest without warrant on mere suspicion, and detention without trial, (2) Conduct of the proceedings secretly in camera, (3) The person under trial ignorant of the name, &c., of his accusers or of the witnesses

* Including police constables and village chowki dars—F. M. R.

against him, (4) the accused not confronted with his accusers or the witnesses against him, (5) The accused not enjoying the right of defending himself with the help of lawyers, (6) The accused having only the right to a written account of the offences attributed to him, (7) No witnesses allowed in defence, (8) Judicial procedure quite different from that to which we are accustomed, (9) Trial or investigation of indefinite duration * The Reader may establish other points of resemblance for himself in order to enable him to judge whether the points of resemblance enumerated above really exist, we print below two sections of Rowlatt Bill No 2 to be compared with the accounts of the procedure of the Inquisition quoted above from three *Encyclopædias*

23 (1) When the Local Government makes an order under section 21 such Government shall as soon as may be forward to the investigating authority to be constituted under this Act a concise statement in writing setting forth plainly the grounds on which the Government considered it necessary that the order should be made and shall lay before the investigating authority all material facts and circumstances in its possession in support of its action.

(2) The investigating authority shall then hold an inquiry in camera for the purpose of ascertaining what in its opinion having regard to the facts and circumstances adduced by the Government appears against the person in respect of whom the order has been made. Such authority shall in every case allow the person in question a reasonable opportunity of appearing before it at some stage in its proceedings and shall if he so appears explain to him the nature of the charge made against him and shall hear any explanation he may have to offer and may make such further investigation (if any) as appears to such authority to be relevant and reasonable.

Provided that the investigating authority shall not disclose to the person whose case is before it any fact the communication of which might endanger the public safety or the safety of any individual.

Provided further that nothing in this sub-section shall be deemed to entitle the person in question to appear or to be represented before the investigating authority by pleader nor shall the Local Government be so entitled.

(3) Subject to the provisions of sub-section (2) the inquiry shall be conducted in such manner as the investigating authority considers best suited to elicit the facts of the case and in making the inquiry such authority shall not be bound to observe the rules of the law of evidence.

(4) On the completion of the inquiry the investigating authority shall report in writing to the Local Government the conclusions at which it has arrived.

(5) If the investigating authority has not completed the inquiry within the period for which the duration of the order is limited by section 24 such authority may recommend to the Local Government that the period of duration of the order shall be

extended for such period as it may consider necessary and on an recommendation the Local Government may extend the duration of the order accordingly.

It is necessary to quote section 33 also

33 (1) Where in the opinion of the Local Government there are reasonable grounds for believing that any person has been or is concerned in such area in any scheduled offence the Local Government may make in respect of such person any order authorised by section 21, and may further by order in writing direct—

(a) the arrest of any such person without warrant

(b) the confinement of any such person in such place and under such conditions and restrictions as it may specify and

(c) the search of any place specified in the order which in the opinion of the Local Government, has been or is about to be used by any such person for any purpose prejudicial to the public safety.

(2) The arrest of any person in pursuance of an order under clause (a) of subsection (1) may be effected at any place where he may be found by any police officer or by any other officer of Government to whom the order may be directed.

(3) An order for confinement under clause (b) or for search under clause (c) of sub-section 1 may be carried out by any officer of Government to whom the order may be directed and such officer may use any and every means to enforce the same.

We have seen above that the Inquisition resorted to the 'process of weakening the physical strength' and to torture, as means of obtaining confessions. In connection with the operations of the Defence of India Act and Regulation 3 of 1918, there have been allegations of torture and of weakening the physical strength by such means as depriving the suspect of food, of sleep and rest, &c. The truth of these allegations has not been established by legal evidence, nor have they been disproved by open inquiry in due legal form. The suicide and insanity of several suspects and the hunger strike of many detainees and State prisoners lend colour to these allegations. The irresponsible and arbitrary powers proposed to be given to executive and police officers by the Rowlatt Bills give rise to the well grounded apprehension that the possession of these powers would make the resort to the above Inquisition methods possible with impunity.

The *Encyclopædia Britannica* observes that the 'object' of the procedure of the Inquisition was 'to ascertain not so much particular offences as tendencies.' The fact that as a rule, internecine and State prisoners are not brought to trial for any particular offence and that many have been released support the

* Cf. Bill No 2 Section 23 (5).

presumption that a large proportion of them must have been deprived of their liberty not for any particular offence but for the suspected "tendencies" of their lives,—of their casual conversation, their letters, the company they kept, &c. The two repressive bills under criticism appear to have for their object, in part, the penalising of "tendencies." In support of this view, we quote the following sections of Bill No. 2.

20 If the Governor General in Council is satisfied that movements which are in his opinion likely to lead to the commission of offences against the State are being extensively promoted in the whole or any part of British India, he may, by notification in the *Gazette of India*, make a declaration to that effect and thereupon the provisions of this Part shall come into force in the area specified in the notification.

21 (1) Where, in the opinion of the Local Government, there are reasonable grounds for believing that any person is or has been actively concerned in such area in any movement of the nature referred to in section 20 the Local Government may, by order in writing containing a declaration to that effect give all or any of the following directions namely that such person—

(a) shall, within such period as may be specified in the order, execute a bond with or without sureties to be of good behaviour for such period not exceeding one year as may be so specified

(b) shall notify his residence and any change of residence to such authority as may be so specified,

(c) shall remain or reside in any area in British India so specified,

provided that, if the area so specified is outside the province, the concurrence of the local Government of that area to the making of the order shall first have been obtained,

(d) shall abstain from any act so specified which, in the opinion of the Local Government is calculated to disturb the public peace or is prejudicial to the public safety, and

(e) shall report himself to the police at such periods as may be so specified

(2) Any order under clauses (b) to (e) may also be made to take effect upon default by the person concerned in complying with an order under clause (a).

32 If the Governor General in Council is satisfied that scheduled offences have been or are being committed in the whole or any part of British India to such an extent as to endanger the public safety, he may, by notification in the *Gazette of India*, make a declaration to that effect and thereupon the provisions of this Part shall come into force in the area specified in the notification.

Section 33 which has been quoted before, should be read here again.

Section 5 of Bill 1 also requires to be quoted in this connection.

5 After section 510 of the said Code of Criminal Procedure, 1898, the following section shall be inserted namely—

510A. On the trial of an offence under Chapter VI of the Indian Penal Code, the following facts shall be relevant, namely—

(a) that the person accused has previously been convicted of an offence under that Chapter, and

(b) that such person has habitually and voluntarily associated with any person who has been convicted of an offence under that Chapter.

Provided that such facts shall nevertheless not be admissible in evidence under the provisions of this section, unless written notice of the intention to call evidence thereof has been served on the accused at least seven days before the commencement of the trial, together with reasonable particulars of the conviction or association intended to be proved.

The Star-Chamber and the Rowlatt Bills.

The Star Chamber has been branded with infamy in history; but originally it was neither meant to be nor was it in fact an instrument of oppression.

"The statute conferred on the Chancellor, the Treasurer, and the keeper of the Privy Seal with the assistance of a bishop and a temporal Lord of the Council and chief justices or two other justices in their absence a jurisdiction to punish, without a jury, the misdemeanours of sheriffs and juries, as well as riots and unlawful assemblies Henry VIII., added to the other members of the court the President of the Council, and ultimately all the privy councillors were members of it. The resulting tribunal was, during the Tudor age, of undoubted utility as a means of bringing to justice great and powerful offenders who would otherwise have had it in their power to set the law in defiance. It was independent of a jury, and at that time juries were too easily terrorised by the nobles."

The form of proceeding was by written information and interrogatories, except when the accused person confessed in which case the information and proceedings were oral, and out of this exception grew one of the most flagrant abuses of this tribunal in the later period of its history. Regardless of the existing rule that the confession must be free and unconstrained pressure of every kind, including torture was used to procure acknowledgments of guilt; admissions of the most immaterial facts were constrained into confessions, and fine, imprisonment, and mutilation inflicted on a mere oral proceeding, without hearing the accused, by a court consisting of the immediate representatives of prerogative. The proceedings of the Star Chamber had always been viewed with distrust by the commons, but during the reign of Charles I. its excesses reached a pitch that made it absolutely odious to the country at large, and in 1641 a bill was carried in both Houses which decreed the abolition of the Star Chamber and the equally unpopular court of High Commission. Chambers's Encyclopedia.

We learn from the *Encyclopædia Britannica* that

"By an act of 1529 an eighth member, the president of the council, was added to the star-chamber, the jurisdiction of which was at the same time con-

* The Rowlatt Committee's Report, section 181, recommends the exclusion of juries and assessors on similar grounds. It says, 'We think it necessary to exclude juries and assessors mainly because of the terrorism to which they are liable.' But history shows that the Star Chamber became an engine of oppression, because, among other reasons, there was no jury associated with the judges.

fewed. At this time the court performed a very necessary and valuable work, a punishing powerful offenders who could not be reached by the ordinary courts of law.

Its procedure was not according to the common law. It dispensed with the encumbrance of a jury, it could proceed on rumour alone. It could inflict any penalty but death. It was thus admirably calculated to be the support of order against anarchy or of despotism against individual and national liberty. During the Tudor period it appeared in the former light under the Stuarts in the latter.

The reader cannot fail to have observed the points of resemblance between Star Chamber proceedings and the procedure laid down in the Rowlatt Bills for the special court of three high court judges and the investigating authority. The Star Chamber had amongst its members men of learning and piety and of judicial training and experience—bishops, Chief Justices and other judges of the highest courts and at one time it performed a useful function too. Why and how did it then fall into disrepute, become oppressive and unpopular and was not length abolished? The answer is to be found in the last two sentences quoted from the *Encyclopædia Britannica*. It was thus admirably calculated to be the support of order against anarchy or of despotism against individual and national liberty. During the Tudor period it appeared in the former light under the Stuarts in the latter. We contend that as there is no anarchy in India the Rowlatt Bills would only be admirably calculated to be the support of despotism against individual and national liberty.

For more than a decade, so far as arbitrary methods go, we have been living in the Stuart period of our history. Hence we are justly afraid of the proposed coercive laws. Of course in case there be an outbreak of anarchy in the near future which is improbable, the laws would be an effective weapon against it for the moment but they would also be an effective weapon for the destruction of individual and national liberty. Government ought to devise some means which will prevent the rise of anarchy and will at the same time foster the growth of public spirit and the increase and expansion of civic freedom. This means can be found only in the direction of an adequate liberalisation of our political institutions. And the time is very opportune for making India free because Government can do so without there being the least cause for

anybody thinking saying or suggesting that India's liberation has been achieved by terrorizing its government.

Even if we accept as correct all that has been officially said regarding the existence and degree and extent of prevalence of anarchy in India before the Defence of India Act was passed and enforced we are deliberately of the opinion that, without the aid of any special law, it was quite possible to cope with the evil with the aid of the ordinary laws of the land, an efficient police and a liberal measure of constitutional reform.

The history of the star chamber brings home to the minds of students of history one important lesson. It is that if a people are so weak and cowardly that they can not protect themselves against the oppression of bold bad men, be they lawless powerful nobles or lawless anarchists it is futile to think of giving them lasting protection with the help of lawless courts or laws. In the history of England the star chamber certainly cruelly and unjustly oppressed many more persons than it saved from oppression. The Defence of India Act and Regulation 3 of 1918 may have saved some persons from death or plunder at the hands of 'political' assassins or dacoits but can anybody positively assert that their enforcement and operation have not been the direct or indirect cause of the death and insanity of some men and of blasting the lives of a considerable number of others? If a people be so cowardly that it cannot produce jurors who cannot be terrorized, it is certain that it will also furnish a large number of men who can be very easily and with impunity oppressed by courts, the executive and the police. That was the case in England, that is and would be the case here, too. It was not the star chamber which could give permanent protection to the people. That fearless public spirit of the people which abolished the star chamber also afforded them protection against lawless men. So for permanent protection against tyranny whether practised by 'political' dacoits and assassins or by police and other officials we must look not to Rowlatt Bills but to fearless public spirit securing civic freedom and civic freedom stimulating fearless public spirit. An enlightened government should make conditions favourable for the unfettered growth of public spirit and the expansion of civic freedom.

Nothing is truer than the Sanskrit saying that he alone is truly protected who is protected by himself. Coercive or repressive laws are calculated to terrorise and cow down not only revolutionaries, anarchists and the criminally disposed, they terrorise and emasculate the law-abiding and peaceful population too, and perhaps this effect is produced on the latter to a greater extent than on the former. It is, therefore, quite unreasonable to think of securing the lasting safety of a timid population by laws which tend to make them still more timid, seeing that self-protection alone ensures lasting protection, and none but the brave are capable of self-protection.

Apotheosis of Irresponsibility

The executive and the police are not at present responsible to the people, either directly or indirectly. The repressive bills are calculated to increase their irresponsibility to its maximum. Section 23 of the second repressive bill lays down that

23. The Local Government and every officer of Government to whom a copy of any order made under section 21 may be directed by or under the general or special authority of the Local Government, may use any and every means to enforce compliance with the same.

Similarly section 33 (3) says

(3) An order for confinement under clause (b) or for search under clause (c) of subsection 1 may be carried out by any officer of Government to whom the order may be directed and such officer may use any and every means to enforce the same.

We cannot think of a more arbitrary and dangerous law,—one which is the negation of all law. What heightens its lawless character, if that were possible, is section 41, which runs as follows—

41. No order under this Act shall be called in question in any Court and no suit or prosecution or other legal proceeding shall lie against any person for anything which is in good faith done or intended to be done under this Act.

The orders under section 21, to which reference is made in section 23, are to see that a person against whom section 21 is to be enforced,

(a) shall within such period as may be specified in the order execute a bond with or without sureties to be of good behaviour for such period not exceeding one year as may be so specified.

(b) shall notify his residence and any change of residence to such authority as may be so specified.

(c) shall remain or reside in any area in British India so specified.

(d) shall abstain from any act so specified which, in the opinion of the Local Government is calculated

to disturb the public peace or is prejudicial to the public safety, and (e) shall report himself to the police at such periods as may be so specified.

It may be asked whether the officer entrusted with enforcing compliance with order (n), may keep the person in question in confinement, standing for 24 hours or more, without food, sleep, rest, or natural conveniences, or beat or torture him, in order to make him execute the bond in case he be unwilling to do so. For, "any and every means" do not exclude these means. And should the officer use such or similar means to enforce compliance with order (a) or those which follow it, would section 41 quoted above protect him or would it not? One does not know definitely what may or may not be done in India in good faith. It is generally presumed that officials act in good faith. In enforcing compliance with order (c), would the officer be justified in keeping the person in question in solitary confinement? In enforcing compliance with order (d), would an officer be justified in making a person physically incapable of using his organs of speech and his hands? Well may people tremble to think to what lengths of oppression and cruelty unscrupulous and tyrannically disposed officers may be encouraged to proceed by the immunity promised by sections 23, 33 (3), and 41. We cannot imagine how in the 20th century in a country governed by a civilised nation such shocking and irresponsible powers can be proposed to be given to any man in quite an unashamed manner?

"All the Accused were Presumed to be Guilty"

We have seen in the descriptions of the procedure of the requisition quoted before that all the accused brought to trial before it were presumed or assumed to be guilty. In section 2 of the first repressive bill a similar assumption is made, for it is laid down there that "whoever has in his possession any seditious document intending that the same shall be published or circulated shall, unless he proves that he had such document in his possession for a lawful purpose, be punishable with imprisonment which may extend to two years or with fine or with both." So the burden of proving that the possession of the document is for a lawful purpose is thrown on the accused, or in other words, it is to be assumed that the possession is

for an unlawful purpose unless the opposite is proved by the accused. In the assumption of the guilt of an accused person which is contrary to the principles of civilised jurisprudence the first repressive bill is therefore akin to the Inquisition.

Another section of this bill also appears indirectly to assume to some extent the guilt of an accused. On the trial of an offence under Chapter VI of the Indian Penal Code section 5 makes the fact of a previous conviction of the accused under that Chapter and of his habitual and voluntary association with a previous convict under it relevant evidence against him. In other words the guilt of an accused who is a previous convict or habitual companion of a previous convict is indirectly presumed. This section also therefore proves the truth of the first repressive bill with the Inquisition.

The First Repressive Bill

This bill is meant to have a permanent place in the Indian statute book. It ought not to have even a day's lease of life as it is dangerous to the liberty of the subject.

Section 4 runs as follows —

4. To section 343 of the said Criminal Procedure Code the following proviso shall be added namely —

"Provided that a promise of protection to an accused person against arrest or any promise properly incidental to a promise of such protection shall not be deemed to be the use of influence within the meaning of this section."

The words "or any promise properly incidental to a promise of such protection" require careful consideration. The question is what is and what is not properly incidental to a promise of such protection. An accused who by his confession gives away his fellow accused may if he lives in a thatched house profess to be afraid of being killed by his house being burnt down at night. Therefore it may be argued that a promise to give him a pucca masonry building to live in is a promise properly incidental to a promise of protection. Further it may be argued that he would require for his protection a body of armed retainers and sufficient income to pay them and that as if he moved from place to place on foot, he might be easily assaulted he ought to have a protected conveyance and an assured income for its upkeep. Would the promises of a masonry house, a body of retainers, a good con-

veyance and sufficient income for their maintenance and upkeep be considered properly incidental to a promise of such protection? If so in what respect would such promises differ from bribing or holding out illegal inducements? If not is it not indispensably necessary to make it quite clear by many illustrations what is meant by the words "or any promise properly incidental to a promise of such protection"?

The material portion of section 5 is that on the trial of an offence against the State (Chapter VI of the Indian Penal Code)

the following facts shall be relevant namely —

(a) that the person accused has previously been convicted of an offence under that Chapter and
(b) that such person has habitually and voluntarily associated with any person who has been convicted of an offence under that Chapter.

This section has been drafted ostensibly in accordance with the last paragraph of section 177 of the Rowlatt Committee's Report which runs in part as follows:

Lastly we think that in all cases where there is a question of sedition or of offence of previous conviction for seditious crime or association (of an accused with kind of course) with persons so convicted should be admissible. What we have called sedition we would of course have to be accurately defined.

The reader will notice that section 5 does not mention that the association with a previous convict must be of an incriminating kind of course. By the omission of these words a great safeguard has been taken away. Any kind of association provided it is habitual and voluntary might thus suffice to damn a man which is quite unreasonable. A man convicted of an offence against the State (which may not necessarily be an offence against morality and may be only a technical offence) would therefore be precluded from having friends, playmates, employees, employers, co-workers, teachers, pupils or relatives living with him in the

* For example, consider section 124A of the Indian Penal Code which defines and provides punishment for sedition. It has been judicially held that absence of all criticism and seditious [But Gangadhar Das 27 B.L.R. (134)] and to excite or attempt to excite sedition is some form of sedition. Strictly speaking therefore most journalists, British and Indian and most public speakers are guilty of sedition though they may never have been brought to trial and convicted. A man of the highest character may be brought to trial and convicted of sedition and the First Rowlatt Bill proposes in effect to make him "untouchable."

Defence of India Act was meant to be in force for the duration of the war and six months thereafter. Has that fact stood in the way of the Government trying to give it a longer lease of life in another and a more drastic form and under new names? Similarly, if after three years, the men then constituting the Government of India consider it necessary to introduce a new bill similar to the present one, they would certainly not be bound by the promise made by the present Government. Moreover, the very fact of there being in the country a law like the present bill for three years, may produce political conditions which in the opinion of the bureaucracy may justify the forging of new weapons to combat them. The vital and essential objection to the bill is to its principle and methods, not to the length of its life.

The bill is professedly meant to supplement the ordinary criminal law, but in reality it will, if passed, to a great extent supplant the ordinary criminal law. Section 3 says:

3 If the Governor General in Council is satisfied that scheduled offences are prevalent in the whole or any part of British India and that it is expedient in the interests of the public safety to provide for the speedy trial of such offences he may by notification in the *Gazette of India* make a declaration to that effect and thereupon the provisions of this Part shall come into force in the area specified in the notification.

The scheduled offences are briefly as follows: waging war or attempting to wage war against the king, conspiracy for the same, collecting arms for the same, assaulting Governor General, Governor, &c., sedition, waging war against allied Asiatic power, abetting mutiny, and the following offences, if connected with any movement endangering the safety of the State, namely, rioting armed with deadly weapon, promoting enmity between classes, murder, culpable homicide attempt to murder attempt to commit culpable homicide, voluntarily causing grievous hurt by dangerous weapons or means, voluntarily causing hurt to extort property or to constrain to an illegal act, voluntarily causing grievous hurt to extort property or to constrain to an illegal act, voluntarily causing hurt to deter public servant from his duty, voluntarily causing grievous hurt to deter public servant from his duty, putting person in fear of injury in order to commit extortion, extortion by putting a person in fear of

death or grievous hurt, putting person in fear of death or grievous hurt in order to commit extortion, robbery, attempt to commit robbery, voluntarily causing hurt in committing robbery, dacoity, dacoity with murder, robbery or dacoity with attempt to cause death or grievous hurt, attempt to commit robbery or dacoity armed with deadly weapon, preparing to commit dacoity, belonging to gang of dacoits, belonging to gang of thieves, assembling for purpose of committing dacoity, mischief by injury to public road, bridge, river, or channel, mischief by fire or explosive substance with intent to cause damage, &c., mischief by fire or explosive substance with intent to destroy house, mischief with intent to destroy or make unsafe a docked vessel or one of 20 tons burden, mischief committed after preparation made for causing death or hurt, making house trespass or house breaking in order to commit offence punishable with imprisonment, the same after preparation for hurt, assault or wrongful restraint, the same by night in order to commit offence punishable with imprisonment, the same after preparation for hurt, assault or wrongful restraint, grievous hurt caused whilst committing house trespass or house breaking, and criminal intimidation. The following also come under the schedule: any offence under Explosive Substances Act, 1908, any offence under section 20 of the Indian Arms Act, 1878, any attempt or conspiracy to commit or any abetment of any of the above offences.

The above list, which is not exhaustive, will show how large and varied are the offences whose prevalence will warrant the Governor General in Council to exercise emergency powers under Part I of the bill and supplant the ordinary criminal law. It would not at all be difficult for the C. I. D. to satisfy the Governor General in Council that they are prevalent or that they are connected with any movement endangering the safety of the State, seeing that the safety of the State or public safety has been held to be so very "trifle a thing as to be liable to be endangered by the mere presence or speech of some public men in certain areas." Practically, the law may come into force at the sweet will and pleasure of the Governor General in Council, for most of the offences included in the schedule are not rare but ordinary forms of crime, and

there is no definition given in any law book or lexicon which lays down the number of offences per month per thousand square miles which would justify one in holding that they are prevalent. This law moreover is only ostensibly and apparently meant for the trial of the scheduled offences. In reality and in actual practice it may be used for punishing any offence mentioned in the Penal Code. For section 15 provides that

15. If in any trial under this Part it is proved that the accused has committed any offence whether a scheduled offence or not the Court may convict the accused of that offence although he was not charged with it.

We have shown below how taking advantage of this section the court may punish any accused person for any offence scheduled or not without his having the opportunity of self defence. So this bill is really intended to supersede the ordinary criminal law.

After section 3 has come into force in any area a person may be tried for any scheduled offence according to the provisions of Part I where the local government is of opinion that he should be so tried. Nothing more is required than the mere opinion of the local government. Executive authorities being generally in favour of shortcuts to the punishment of accused persons local governments would generally be in favour of the trial of persons according to the provisions of Part I. This consideration shows in how large a number of cases accused persons may not have the advantage of trial under the existing ordinary laws of the land.

The courts for the trial of offences under this part will be constituted by the Chief Justice and will consist of three High Court Judges. But the Chief Justices are Englishmen resident in India having for the most part the bureaucratic bias against the dependency of India having freedom and it would generally be easy for them to choose three bureaucratic judges. But even such a court would have been a welcome improvement upon the present state of things if it tried only those accused who had been sent up for trial by a magistrate after the usual public preliminary investigation if the trial were fully public and open if the accused had the right of being tried by jury and if he had the right of appeal. But the bill takes away all these usual safeguards.

The special court consisting of High Court judges formed for the purpose, may sit for the whole or any part of a trial at such place or places in the province as it may consider desirable. It should be considered whether and how this may prejudice the accused. Do these words mean that the court may sit in other than a public building or in a room (in a harem for example) not accessible to the public? That would do away with the least semblance of a public trial. The special courts will no doubt consist of High Court judges. But away from the atmosphere of the High Court they may not inspire as much confidence as they do in the High Court or they may themselves be unconsciously affected by local conditions. Moreover, in High Court towns it is easier for the accused to obtain the services of good lawyers at moderate fees than elsewhere. For these reasons the special courts should sit only in High Court rooms.

The court is bound to grant only a maximum adjournment of 10 days and that only when a charge is framed not afterwards. But this may not in many cases enable the accused to make all necessary preparations for defence.

As the judgment of the Court is to be final and conclusive and there shall be no appeal it may seem perhaps that it does not much matter that the court shall be required to make a memorandum only of the substance of the evidence of each witness examined. But even during the trial should there be a difference of opinion between the judges and the lawyers for the defence as to what a witness has said how are the different impressions of the lawyers and the judges to be reconciled and a just decision arrived at in the absence of a full record of evidence? Much depends on the exact words used by witnesses. The difference of or in a single word may make all the difference between justice and injustice. Therefore it is imperatively necessary that all evidence should be taken down in full. The memory of neither judge nor counsel is infallible. No law should assume that in trials speed or ease of passing sentence is of greater importance than the ends of strict and impartial justice.

Section 11 provides that the Court may at its discretion conduct the whole trial or any part of it in strict secrecy in the public interest or for the protection of

same house, without the possibility or probability of his jeopardising their safety. He would thus be made a modernised specimen of an "untouchable," "unapproachable," and "uncomprisable" creature, — a most shocking punishment.

The Rowlatt Committee say "What we have called seditious crime would of course have to be accurately defined." But the bill under comment does not define seditious crime either accurately or inaccurately. It merely takes it for granted that all offences against the State dealt with in Chapter VI of the Indian Penal Code are seditious crimes, and it is well known that so many things can be construed as sedition that it is seldom that anybody accused of sedition has escaped conviction.

As regards making the previous conviction of an accused under Chap. VI of the Indian Penal Code a relevant fact against him, this change in the law is proposed to be made only as regards offences against the State. But, to use the words of the Rowlatt Committee's Report, "there can be no justification for making" this change in the law "in order to facilitate prosecutions in cases of sedition if in other cases the law is allowed to remain" as it is "a proper safeguard against injustice." The proposed change is neither fair to the accused nor reasonable. Every fresh offence ought to be proved independently and a previous conviction for the same offence may be considered as enhancing the guilt of the accused, only when the offence for which he is being tried has been independently established. The English law does not allow evidence of a previous conviction until a verdict of guilty has been given. There is no reason why the law should be particularly hard on alleged political offenders by the omission of existing safeguards against injustice, unless it be intended that even those who have recourse to constitutional agitation and other constitutional means for the attainment of an increasing degree of civic freedom should be terrorised and emasculated in countries which are not governed by the representatives of the people. Many laws against offences against the State may in one sense be considered as partisan laws that is to say, laws which the party or persons in power have enacted in order to prevent the people or their representatives from securing the right and the power

to manage their own affairs. Some offences against the State are statute made, because what was no offence formerly may be made an offence afterwards, and what is an offence in one country is not an offence in another. And practically the party which makes these laws is also the party which tries offences under these laws. Therefore, in the trial of political cases, there ought in fairness to be greater safeguards against injustice than in ordinary trials. But the repressive laws under consideration propose to take away even some of the existing safeguards. This attempt must be opposed by all constitutional means in our power, and whoever will not join in this opposition will brand himself as a slave or as disloyal to his country and his nation.

Section 6 is of a most dangerous character. It relates to persons convicted of an offence punishable under Ch. VI of the Indian Penal Code, whom we will briefly call political offenders or political prisoners. We will quote its material portions.

6. After section 565 of the said Code the following section shall be inserted, namely:—

565 A (1) When any person is convicted of an offence punishable under Chapter VI of the Indian Penal Code the Court may if it thinks fit at the time of passing sentence on such person order him on his release after the expiration of such sentence to execute a bond with sureties for his good behaviour so far as offences under Chapter VI of the said Code are concerned for such period not exceeding two years as it thinks fit.

(2) An order under sub-section (1) may also be made by an Appellate Court or by the High Court when exercising its powers of revision.

(3) If the Court makes an order under sub-section (1) it shall further direct that until the person who is the subject of the order furnishes the required security such person shall notify to the Local Government or to such officer as the Local Government may by general or special order appoint in this behalf his residence and any change of residence after release for the period for which security is required.

(4) Where any person is under an obligation to notify in accordance with the provisions of sub-section (3) his residence and any change of residence after release the Local Government may by order in writing direct that such person—

(a) shall not enter, reside or remain in any area specified in the order;

(b) shall reside or remain in any area in British India as specified and

(c) shall abstain from addressing public meetings for the furtherance or discussion of any subject likely to cause disturbance or public excitement or of any political subject or for the distribution of any writing or printed matter relating to any such subject.

(5) Any person refusing or neglecting to comply with any direction under sub-section (3) or any order under sub-section (4) shall be punishable as if he had

committed an offence under sect. 176 of the Indian Penal Code

In cases of a second conviction with imprisonment for 3 years or upwards for offences like counterfeiting coins and Government stamps, theft, robbery, dacoity receiving stolen property, cheating house breaking, Section 563 of the said [Criminal Procedure] Code gives power, at the time of passing sentence, to add an order that the offender's residence and any change of residence after release be notified to the police for a term not exceeding five years from the date his release.

Political prisoners generally belong to the educated class and are men of a higher order of society than common thieves, dacoits, burglars, &c. The first Rowlett Bill shows its kindness to political prisoners in various ways. First it places them in the same category with thieves, burglars, &c. Secondly whereas thieves, &c., may be required only to notify residence, &c. if convicted a second time and sentenced to imprisonment for three years or more political offenders, even when convicted for the first time and sentenced to imprisonment for less than three years, may be required to execute a bond with sureties for good behaviour for a maximum period of two years, and, until the security is furnished, also to notify residence, &c., for the period for which security is required. Thirdly, —and this is what thieves, &c., are not subject to,—political offenders may be ordered, in addition, (a) not to enter, reside or remain in any area specified in the order, (b) to reside or remain in any area in British India so specified, and (c) to abstain from addressing public meetings for the furtherance or discussion of any subject likely to cause disturbance or public excitement, or of any political subject or for the distribution of any writing or printed matter relating to any such subject. And fourthly,—and here the bill surpasses itself in its tenderness for political prisoners—as no period is fixed or definitely mentioned in the section for which the orders marked (a) (b) and (c) may be passed and remain in force they may be meant for the remaining period of the lives of these unfortunate men. Thus, it may be the power of the Local Government to blast their whole lives and subject them to a kind of civil death in a state of solitary confinement in a house. There is no subject

religious, social industrial economic, political, and even philosophical or scientific, of which the discussion may not occasionally cause public excitement or which may not be held likely to cause public excitement or disturbance. This section, therefore, practically gives powers to the local Government to prevent any and all kinds of public discussion and activity on the part of persons who, whatever the purity of their character or their integrity and record of public service, may have unfortunately been convicted of sedition. They may not for the rest of their lives discuss or write on any political subject. How drastic and how barbarous such a law would be can be understood by those who know how easy it is at present to get a man punished for sedition. That many are not so punished is not due to the state of the law but to the policy pursued for the time being by the powers that be. That is no freedom or security which is not enjoyed by a man as a matter of right, but only as a matter of favour or political forbearance. Any Indian who has heard of these repressive bills and would be content to have such laws is either perfectly fitted to be a slave or is a traitor to his country.

The Second Coercion Bill

Owing to the sturdy opposition of the Indian non official members of the Imperial Legislative Council, Government has promised that the second coercion bill will be in force for only three years, following in this promise the precedent of the Irish Coercion Bill. Regarding coercion in Ireland Lord Morley, by the by, has made the following remarks in his *Recollections*.

As for legislation on the lines of the Irish Crimes Act it is pure nonsense. He seems to refer to Forster's Act (not Balfour's of 1887) and that was about the most egregious failure in the whole history of exceptional law. If I know anything in the world it is the record and working of Irish coercion since 1881.

In another passage he speaks of himself as possessing a spotless character as an anti-coercionist in Ireland.

The limiting of the duration of the second repressive bill to three years ought not to conciliate or deceive anybody, and it is satisfactory to find that it has not in the least diminished the opposition to the bill in the country. It is to be hoped that the opposition would be continued even if and when the bill becomes law. The promise of limitation has no meaning. The

Defence of India Act was meant to be in force for the duration of the war and six months thereafter. Has that fact stood in the way of the Government trying to give it a longer lease of life in another and a more drastic form and under new names? Similarly, if after three years, the men then constituting the Government of India consider it necessary to introduce a new bill similar to the present one, they would certainly not be bound by the promise made by the present Government. Moreover the very fact of there being in the country a law like the present bill for three years may produce political conditions which in the opinion of the bureaucracy may justify the forging of new weapons to combat them. The vital and essential objection to the bill is to its principle and methods not to the length of its life.

The bill is professedly meant to supplant the ordinary criminal law, but in reality it will if passed, to a great extent supplant the ordinary criminal law. Section 8 says

3. If the Governor General in Council is satisfied that scheduled offences are prevalent in the whole or any part of British India and that it is expedient in the interests of the public safety to provide for the speedy trial of such offences he may by notification in the *Gazette of India* make a declaration to that effect and thereupon the provisions of this Part shall come into force in the area specified in the notification.

The scheduled offences are briefly as follows: waging war or attempting to wage war against the King, conspiracy for the same, collecting arms for the same, abetting Governor General, Governor, &c. sedition, waging war against allied Asiatic power, abetting mutiny, and the following offences, if connected with any movement endangering the safety of the State, namely, rioting armed with deadly weapon promoting enmity between classes, murder culpable homicide attempt to murder, attempt to commit culpable homicide, voluntarily causing grievous hurt by dangerous weapons or means, voluntarily causing hurt to extort property or to constrain to an illegal act, voluntarily causing grievous hurt to extort property or to constrain to an illegal act, voluntarily causing hurt to deter public servant from his duty, voluntarily causing grievous hurt to deter public servant from his duty, putting person in fear of injury in order to commit extortion ex-

by putting a person in fear of

death or grievous hurt, putting person in fear of death or grievous hurt in order to commit extortion, robbery, attempt to commit robbery voluntarily causing hurt in committing robbery, dacoity, dacoity with murder, robbery or dacoity with attempt to cause death or grievous hurt, attempt to commit robbery or dacoity armed with deadly weapon, preparing to commit dacoity, belonging to gang of dacoits, belonging to gang of thieves, assembling for purpose of committing dacoity mischief by injury to public road, bridge, river, or channel, mischief by fire or explosive substance with intent to cause damage, &c., mischief by fire or explosive substance with intent to destroy house, mischief with intent to destroy or make unsafe a docked vessel or one of 20 tons burden, mischief committed after preparation made for causing death or hurt, making house trespass or house breaking in order to commit offence punishable with imprisonment, the same after preparation for hurt, assault or wrongful restraint, the same by night in order to commit offence punishable with imprisonment, the same after preparation for hurt, assault or wrongful restraint, grievous hurt caused whilst committing house trespass or house breaking and criminal intimidation. The following also come under the schedule: any offence under Explosive Substances Act, 1908, any offence under section 20 of the Indian Arms Act, 1878, any attempt or conspiracy to commit or any abetment of any of the above offences.

The above list, which is not exhaustive, will show how large and varied are the offences whose prevalence will warrant the Governor General in Council to exercise emergency powers under Part I of the bill and supplant the ordinary criminal law. It would not at all be difficult for the C. I. D. to satisfy the Governor General in Council that they are prevalent or that they are connected with any movement endangering the safety of the State, seeing that the safety of the State or public safety has been held to be so very brittle a thing as to be liable to be endangered by the mere presence or speeches of some public men in certain areas. Practically, the law may come into force at the sweet will and pleasure of the Governor General in Council, for most of the offences included in the schedule are not rare but ordinary forms of crime, and

there is no definition given in any law-book or lexicon which lays down the number of offences per month per thousand square miles which would justify one in holding that they are prevalent. This law, moreover, is only ostensibly and apparently meant for the trial of the scheduled offences. In reality and in actual practice it may be used for punishing any offence mentioned in the Penal Code. For, section 15 provides that

15. If in any trial under this Part it is proved that the accused has committed any offence whether a scheduled offence or not the Court may convict the accused of that offence although he was not charged with it.

We have shown above how taking advantage of this section, the court may punish any accused person for any offence scheduled or not without his having the opportunity of self defence. So this bill is really intended to supersede the ordinary criminal law.

After section 3 has come into force in any area, a person may be tried for any scheduled offence according to the provisions of Part I where the local government is of opinion that he should be so tried. Nothing more is required than the mere opinion of the local government. Executive authorities being generally in favour of shortcuts to the punishment of accused persons local governments would generally be in favour of the trial of persons according to the provisions of Part I. This consideration shows in how large a number of cases accused persons may not have the advantage of trial under the existing ordinary laws of the land.

The courts for the trial of offences under this part will be constituted by the Chief Justice and will consist of three High Court Judges. But the Chief Justices are Englishmen resident in India having for the most part the bureaucratic bias against the dependency of India having freedom, and it would generally be easy for them to choose three biased native judges. But even such a court would have been a welcome improvement upon the present state of things if it tried only those accused who had been sent up for trial by a magistrate after the usual public preliminary investigation if the trial were fully public and open if the accused had the right of being tried by jury and if he had the right of appeal. But the bill takes away all these usual safeguards.

The special court consisting of High Court judges formed for the purpose, 'may sit for the whole or any part of a trial at such place or places in the province as it may consider desirable'. It should be considered whether and how this may prejudice the accused. Do these words mean that the court may sit in other than a public building or in a room (in a bazaar, for example) not accessible to the public? That would do away with the least semblance of a public trial. The special courts will no doubt consist of High Court judges. But away from the atmosphere of the High Court they may not inspire as much confidence as they do in the High Court or they may themselves be unconsciously affected by local conditions. Moreover, in High Court towns it is easier for the accused to obtain the services of good lawyers at moderate fees than elsewhere. For these reasons the special courts should sit only in High Court rooms.

The court is bound to grant only a maximum adjournment of 10 days and that only when a charge is framed not afterwards. But this may not in many cases enable the accused to make all necessary preparations for defence.

As the judgment of the Court is to be final and conclusive and there shall be no appeal it may seem perhaps that it does not much matter that the court shall be required to make a memorandum only of the substance of the evidence of each witness examined. But even during the trial should there be a difference of opinion between the judges and the lawyers for the defence as to what a witness has said, how are the different impressions of the lawyers and the judges to be reconciled and a just decision arrived at in the absence of a full record of evidence? Much depends on the exact words used by witnesses. The difference of or in a single word may make all the difference between justice and injustice. Therefore it is imperatively necessary that all evidence should be taken down in full. The memory of neither judge nor counsel is infallible. No law should assume that in trials speed or ease of passing sentence is of greater importance than the ends of strict and impartial justice.

Section 11 provides that the Court may at its discretion conduct the whole trial or any part of it in strict secrecy if the public interest or for the protection of

a witness' But public interests are served by secret trials, as the history of the Inquisition and the star chamber shows, and the secrecy maintained to 'protect' witnesses would most probably encourage lying scoundrels to perjure away the lives and liberties of political suspects or of those against whom they had a grudge, and it would also encourage unscrupulous police officers to fabricate evidence. It is the accused whom the law is ought to be the most anxious to protect. If he be in danger of being punished with the help of fabricated evidence, he ought at least to have that moral support of public opinion which publicity secures and lying witnesses also ought to be kept in check by that social opprobrium which publicity may bring on them. Neither a court, nor an accuser, nor witnesses ought to enjoy immunity from public reprobation if they do wrong. There is no kind of evil imaginable which secrecy may not breed. These observations apply also to the following provision in section 25

Provided that the investigating authority shall not disclose to the person whose case is before it any fact the communication of which might endanger the public safety or the safety of any individual

Section 12, subsection 3) (a) deprives the accused of the usual safeguard that a witness need not answer a question which may incriminate him

Sections 15 and 16 are most dangerous to the accused. They say

If in any trial under this Part it is proved that the accused has committed any offence whether a scheduled offence or not the Court may convict the accused of that offence although he was not charged with it

The Court may pass upon any person convicted by it any sentence authorised by law for the punishment of the offence of which such person is convicted and no order of confirmation shall be necessary in the case of any sentence passed by it

So in reality these Courts, whose proceedings may be made entirely secret, may in reality sentence a man for any offence whether scheduled or not, and therefore this Bill No 2 of 1919 practically in fact may supplant the ordinary criminal law of the land. If in the course of any trial for a scheduled offence, after the days of adjournment are over, in surprise is sprung on the accused and evidence is brought forward to prove some other offence, whether scheduled or not, he would be unprepared to rebut the charge by calling witnesses or by other means, and

he would not have the right to demand an adjournment to have time for preparation for self defence. For, according to section 9, the court is bound to grant an adjournment at the request of the accused only at the time when a charge is framed. Thus an accused would very often be bound to be punished, either for the scheduled offence for which he was being tried, or for some other offence. If such a law be passed, the people of India, particularly those who have liberty and openly write or say that they long to have it, must be prepared for a reign of terror, for nobody who was suspected by the police or against whom spies and informers had a grudge, would be safe.

Section 18 supersedes the Indian Evidence Act as regards evidence given by persons who have not been cross examined.

Such statement may be admitted in evidence by the Court if the person making the same is dead or cannot be found or is incapable of giving evidence and the Court is of opinion that such death, disappearance or incapacity has been caused in the interests of the accused.

But may not the disappearance of some witnesses be sometimes caused by police action? Suppose a witness says something very damaging and incriminating against an accused. His disappearance may be presumed to be caused by the friends of the accused, but it may also be caused by police action. Far should he be a lying and tutored witness, cross examination may expose the lies, and the police may bring about or report his disappearance to prevent such exposure.

Part II of the Bill is preventive. Section 20 says how it shall come into force.

If the Governor General in Council is satisfied that movements which are in his opinion likely to lead to the commission of offences against the State are being extensively promoted in the whole or any part of British India he may by notification in the Gazette of India make a declaration to that effect and thereupon the provisions of this Part shall come into force in the area specified in the notification.

No offence need be committed by any one to bring this Part into force. If the Governor General in Council is satisfied that movements which are in his opinion likely to lead to the commission of offences against the State, then every man and woman may be placed at the mercy of Local Autocrats. Imperial Autocrats who are timid, panicky, afraid of and opposed to popular freedom, innocent of first hand

knowledge of the country and who see things through the eyes of the C I D, may be easily satisfied that the most innocent and legitimate movements are likely to lead to the commission of offences against the State. The way in which the Press Act and the Defence of India Rules have been misused shows that our apprehensions are not unfounded.

Section 21 has been reproduced and partly commented upon in a previous Note in this issue, as also section 23. Sections 25 and 26 have been so framed that the Local Government may keep a political suspect deprived of liberty for as long as it likes, practically condemning him even to life long confinement. Section 25 has been quoted before. Here is section 26—

26. (1) On receipt of the report of the investigating authority the Local Government may discharge the order made under section 21 or may pass any order which is authorised by the terms of that section.

Provided that—

(a) any order so passed shall recite the finding of the investigating authority and

(b) a copy of such order shall be furnished to the person in respect of whom it is made.

(1) No order made under sub-section (1) shall continue in force for more than one year from the date on which it was made, but the Local Government may (if it is satisfied that such a course is necessary in the interest of the public safety, on the expiry of any such order again make any order in respect of the person to whom it related which is authorised by section 21.

(2) No order made under sub-section (2) shall continue in force for more than one year from the date on which it was made, but on its expiry may be renewed by the Local Government for a further period not exceeding one year.

Provided that any order so made or renewed may at any time be discharged or may be altered by the substitution of any other order authorised by section 21 and in that case no further reference to the latest gazette authority shall be necessary.

Section 25, quoted before, prescribes how 'the investigating authority' shall conduct its inquiry. The methods resemble those of the Inquisition and the Star Chamber. To our previous comments on this section we will add a few observations on the following portion of it—

Such authority shall in every case allow the person in question a reasonable opportunity of appearing before it at some stage in its proceedings and shall, if he so appears, explain to him the nature of the charge made against him and shall hear any explanation he may have to offer and may make such further investigation (if any) as appears to such authority to be relevant and reasonable.

In the memorandum submitted to the Bengal Government by the Advisory Com-

mittee appointed by it, consisting of ex Justice Sir N G Chandavarkar and Mr Justice Bheerappa, we read that these experienced judges did not allow any detenu or state prisoner to appear before them in self-defence. One reason which they gave for the course adopted by them is as follows—

From our judicial experience we have found that if an accused person is not defended by counsel, he generally speaking spoils his case when he conducts his own defence or in answer to questions from the trying judge either gives irrelevant answers or makes vague protests of innocence or makes unwittingly admissions against himself or by his demurral in answering questions prejudices his defence by producing an unfavourable impression on the mind of the judge.

Now if according to two judicial authorities chosen by Government to enquire into the cases of suspects such are the dangers of defending oneself personally, why is a law going to be made depriving a suspect of the right of defending himself by counsel and allowing him to appear in person before the investigating authority, only to spoil his case?

Lawyers on either side are to be allowed to appear before the investigating authority and the inquiry shall be conducted in such manner as the investigating authority considers best suited to elicit the facts of the case, and in making the inquiry such authority shall not be bound to observe the rules of the law of evidence. It is easy to see what kind of justice a suspected person is likely to have under such conditions. The bill is famous for giving a carte blanche. It has been pointed out before how the bill gives a carte blanche to various officers by sections 23, 33 (3), and 41. To these should be added the above mentioned words giving the carte blanche to the investigating authority. Probably Government has discovered in the carte blanche an infallible means of securing 'public safety', 'the safety of the state' and 'public interests'. But this infallible means was tried by the Inquisition and the Star Chamber, by various bodies and persons in France before and during the Revolution and also in Russia of the Tsars—but always with the same ultimate result, disaster.

Sir William Vincent has said in council that the period of orders under parts II (section 26) and III is limited to one year in the first instance and three years

in all. But this is nowhere clearly and definitely mentioned in the bill, which gives one the impression that Government can deprive any suspect of his liberty for life.

Sir William has himself said that "Part III is more drastic." The only thing that is necessary for this part to come into operation is that the Governor General in Council should be "satisfied that scheduled offences have been or are being committed to such an extent as to endanger the public safety. In such circumstances, the Local Government, where there is reasonable ground for believing that a person has been concerned in a scheduled offence, may direct the arrest of such person [without warrant], his confinement [without trial] in such place and under such conditions as may be prescribed." It will be noticed that both in section 32 of this part and in section 21 of Part II, there is no time limit. According to section 21, a person who is or *has been* (in some past time) concerned in any movement, &c., shall come under its operation, and according to section 32, Part III, shall come into force if scheduled offences have been (in some past time) or are being committed, &c. So this unparalleled law can bring within its clutches both the Past and the Present, the Future alone still enjoys immunity. Whatever is said in any section of the two bills about the Governor-General in Council or the Local Government being satisfied or being of any opinion, &c., simply means the satisfaction or opinion of the C. I. D., which again very often rests merely on the information supplied by such incarnations of truth as the spies and informers employed by the police. From this one can understand, how much the life and liberty of Indians would be worth when the bills became law.

Part IV applies the provisions of Part III automatically, without reference to the investigating authority, to persons suspected to have been "concerned in revolutionary crime" and who are under restriction under the Defence of India Act, Regulation 3 of 1918, the Ingress into India Ordinance, &c. Part V is ancillary, but is not of all unimportant. It closes all loopholes of escape for the accused and, by section 41 gives complete immunity to all officers concerned in enforcing the bill for anything that they may have done "in good faith."

The Promised Reforms and the Rowlatt Bills.

If the promised reforms be adequate, discontent may be allayed and "the matter of sedition" disappear to a great extent, making the enactment of drastic laws unnecessary. Let us take it for granted that the reforms would be adequate. In that case why do not the bureaucracy allow these a chance to conciliate the country? Are they afraid that should such a chance be allowed and should it produce the effect desired by the people, it would be proved to demonstration that the unrest in the country was due to the inefficiency of the bureaucrats and their arbitrary and wrong ways of governing the country? Is it for this reason that they are eager to pass draconic laws, in order that they may be able to say that it was not the reforms but the repressive laws which kept the country quiet? Whether the people of India consider the proposed reforms adequate or not, certainly the foreign rulers ought to consider them adequate. They should, therefore, give the reforms a fair chance. But their great eagerness to pass coercive measures shows that they are not willing to give this chance.

But it is probable that the foreign bureaucrats know and believe that the proposed reforms would not satisfy the people, and there would consequently be agitation for further reforms. They also know that there would be thorough exploitation of the country by British capitalists and there would be agitation against it. They know further, that the present economic distress is not only not likely to be temporary, but that it may deepen and spread over a wider area and last for years, causing agrarian and labour troubles and intensifying political unrest. Is it for these contingencies that they are arming themselves with arbitrary and irresponsible powers beforehand? If that be so, they are merely sowing the wind, depriving us of the consolation which might have been derived from the words of courage and confidence uttered by the Viceroy in Council.

✓ 'Do not let it be supposed for one moment that I fear that this country lies in any danger of falling a victim to those disruptive forces best suggested by the name Bolshevism.'

Sir William Vincent said in council "It may be suggested, as it has been suggest-

ed before, that all their [revolutionaries] activities will be reduced by the introduction of the Reforms scheme. My Lord, I should like to say that these men are as much opposed to the Reform scheme as to anything else." In support of this assertion Sir William referred to an anonymous circular. But how is it proved that the circular represented the view of the majority of the "revolutionaries"? Many leading men have seen the letters written from the Andamans by Barindra Ghosh and Savarkar to their relatives in which these transported men have expressed themselves favorably disposed to the reforms. We are not personally acquainted with any man who has been proved to be a revolutionary and cannot pretend to know their views, but from his speech itself it seems to us that Sir William never shot the mark when he said that "These men [the revolutionaries] are really enemies of civilisation, they are enemies of progress and enemies of any form of organised government, whether European or Indian." Now who are "these men"? In the very speech from which we quote these words, Sir William speaks of the detenus as "persons known to have been concerned in revolutionary crime." Now, if these men be really enemies of civilisation, progress and any form of organised Government, how is it that, according to Sir William's speech, "out of 1038 detenus 677 have already been released on guarantees" and "of the rest, 383 are subject to restrictions of domicile only, 125 being domiciled in their own homes"? Are we to believe that Government has let loose on the people so many tiger-like enemies of society?

According to Sir William, "from 1906 up to the date of the [Rowlatt] Report [1918] there were no less than 311 offences and attempts at offences connected with this revolutionary movement, in which 1038 persons were known to be implicated." Taking these figures to be correct, there were 26 such offences per annum on the average, in a country having an area of 1,802,629 square miles and a population of 315,156,396. We have no desire to minimise the gravity of these offences, but surely it is too much to expect people to support most draconian laws, endangering the lives and liberties of individuals, at a time when the country is quiet and at peace, when, for whatever

reason, there is no anarchism or revolutionary crime in the country,—simply because in twelve past years 1038 persons out of 315,156,396 committed 311 offences.

Punjab Soldiers and the Rowlatt Bills

The Rowlatt Bills are professedly based upon the Rowlatt Committee's Report. That Report gives many reasons why 'legislation' of a drastic character resembling martial law, may be "required." One of the reasons is that "there will, especially in the Punjab, be a large number of dishanded soldiers, among whom it may be possible to stir up discontent." And, therefore, there must be draconian laws to put down this possible discontent! Why not provide against such possible discontent by just and generous treatment of the dishanded soldiers? We know there is and has been discontent among demobilised and other British soldiers of the United Kingdom but there has not been and will not be any martial law there for coping with that discontent. On the contrary, efforts are being made to remove the grounds of discontent by finding employment for these men, improving their housing conditions, making grants of land to them, &c.

India and the New House of Commons

In the present number we print two important articles on India and the new House of Commons. One of these is by the Hon R O Denman—a brother of the Right Hon Lord Denman (lately Governor General of Australia). Mr Denman was in the last Parliament. He is a Liberal and is very sympathetic towards Indian aspirations. The other article is by the reputed Indian journalist Mr St Nihal Singh. It is unnecessary to try to bring home to our readers the lesson of these articles. Political propagandist work on behalf of India was never more urgently needed in England than now. It is so doubt necessary to tell the people of England what exactly we want. But what is, and always has been still more necessary is the removal of Englishmen's colossal ignorance of India, past and present, and their low opinion of Indian capacity, character, achievements and civilization, due to interested misrepresentation, conscious or unconscious, by Anglo-Indians and Christian missionaries, and thereby to make them favor

ably disposed towards India. The task is stupendous and requires efforts and preparations of a colossal character. But the magnitude of the work which lies before us must not paralyse our energies. For just as the work is difficult, so are we a big people with a great past and a greater future. If we could only husband and utilise all our resources we should certainly be able to do what is required of us. We ought to use all available means and persons. We ought not to wait for the Home Rule deputation, the Congress deputation and the Moderates' deputation to reach England before commencing propaganda work there on an adequate scale. No doubt, Mr Baptista has been doing such work for months and latterly Mr Tilak and Mr Karandikar have been making earnest efforts in the same direction. And Mr Saint Nihal Singh has been in England from before the commencement of the war, and has before and during the war written much in the London and provincial periodicals and newspapers to tell Englishmen of our achievements, needs and aspirations. Having been on the spot for years and being an able and skilful journalist of international experience and reputation, he knows just what facts would appeal to the British people in particular and occidentals generally. It is to be regretted that the capacity and willingness of men like Mr Singh have not been utilised as they should be. But there is time yet to bind in an active organisation all capable persons who love the Motherland in the service of her suffering children. Party and personal prejudices must be given up. Every one must make and have the opportunity of making the special kind of contribution which he is capable of.

It is of the greatest importance that when the Congress, the Moslem League and the Moderates' Conference deputations reach England they should be able to arrive at an understanding among themselves. Their self-sacrificing efforts may be to a great extent frustrated if they quarrel among themselves there.

The League of Nations Covenant

A London cablegram, dated February 14, states that the text of the League of Nations Covenant has been published and then proceeds to give full summaries of some of the more important articles.

From these it appears to us that the probable effect of the League may be to establish over the non-white races of the earth a more powerful despotism of the white races than any that the world has yet seen. The future of the non-white races is indeed gloomy. The only non-white nation which has obtained real recognition is Japan, but what can her one vote do against the European and American votes? And it is doubtful whether Japan will care or dare to advocate the cause of the Asiatic and African peoples. There are some Japanese who even deny that the Japanese are an Asiatic or "coloured" people, and the *Globe* newspaper of England once seriously wrote that the Japanese were a white race!

The preamble states that the Powers signatory to this Covenant adopt this constitution of the League of Nations in order to promote international co-operation and secure international peace and security, in part, by the maintenance of just and scrupulous respect for all treaty obligations in the dealings of *organised peoples* with one another. *Unorganised peoples* are to be kept in tutelage, professedly for their good, but really, it is to be feared, for being ruthlessly exploited.

Each contracting party at the meeting of delegates shall have one vote but not more than three representatives. The Executive of the Council shall consist of representatives of the United States, the British Empire, France, Italy, Japan, and four other States who shall be selected by the delegates. States which are not signatories to the Covenant can be admitted to the League only with the assent of not less than two thirds of the States in the body of the delegates, and this admission is limited to fully self-governing countries, including Dominions and Colonies. Thus Ireland, India, Egypt, &c., cannot be members of the League and cannot have its benefits. So the League of Nations would not consist of all nations, not even of all self-governing notions, and practically it would be a League of White Nations.

By Article eight the high contracting parties agree that the private manufacture of munitions and implements of war lends itself to grave objections and they direct the Executive Council to advise how the evil effects attendant on such manufacture can be prevented, due regard being

had to the necessities of countries which are unable to manufacture for themselves the munitions and implements of war necessary for their safety. In Article 10 the high contracting parties undertake to respect and preserve against external aggression, the territorial integrity and the existing political independence of all members of the League. The Executive Council shall advise how this obligation shall be fulfilled where aggression is carried out or threatened. In Article seventeen it is laid down that the League is entrusted with the general supervision of the trade in arms and ammunition with countries in which control of this traffic is necessary. These agreements and undertakings are calculated to prevent breaches of international peace, but they would also prevent the independence or liberation of subject races, except with the consent of those who hold them in subjection. We are as anxious as anybody else that wars, including wars of independence and liberation, should not break out in future. But as the League of Nations Covenant has tried to adopt means for the prevention of war, it should also have taken steps to see that all nations, organized or unorganized, white or colored, dependent or partly self governing, should, by fulfilling certain definite conditions, be able to avail themselves of the principle of self-determination without fighting. It was trampled all over the world for more than four years that the recent war was a war for world-freedom and world-democracy and many other high sounding things. Are all these fine phrases to end in making provision for rivetting for ever, if that were humanly possible, the chains of slavery on all those who are not now free?

The permanent court of international justice for the establishment of which provision shall be made, shall be competent to determine any matter submitted for arbitration. But the court will obviously deal only with disputes arising between the members of the League, who must all be independent or fully self-governing nations. Therefore the establishment of such a court does not inspire a single ray of hope in the minds of enslaved and oppressed peoples.

Article 19 deals with 'colonies and territories which in consequence of the late war ceased to be under the

sovereignty of State formerly governing them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world. The principle should be applied that the well being and development of such peoples should form a sacred trust of civilization and securities for the performance of this trust should be embodied in the League's Constitution. The best method of giving practical effect to this principle is that the tutelage of such be entrusted to advanced nations who by reason of their resources, experience or geographical position can best undertake this responsibility, and that this tutelage should be exercised by them as mandatories on behalf of the League. The character of the mandate must differ according to the stage of development of each people, the geographical situation of its territory, its economic conditions and other similar circumstances.

That this paragraph refers to the quondam German colonies and the former Turkish provinces is evident from their description and from the paragraph which follows.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognised subject to conditions which guarantee freedom of conscience or religion and subject to rendering administrative advice and assistance by a mandatory Power until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the mandatory. Other peoples, especially those in Central Africa, are at such a stage that the mandatory must be responsible for the administration of territory subject only to the maintenance of public order and morals and the prohibition of abuses such as slave trade, arms and liquor traffic, the prevention of the establishment of fortifications of military or naval bases, and military training of natives for other than police purposes and the defence of territory and will also secure equal opportunities for trade and commerce of other members of the League. There are territories such as South-West Africa and certain Pacific Islands which owing to the sparseness of population or small size or remote news from centres of civilisation or geographical contiguity to a Mandatory State or other circumstances, can best be administered under the laws of the Mandatory State as integral portions of it subject to the safeguards above-mentioned in the interests of the indigenous population. The Mandatory State shall render to the League an annual report with reference to the territory committed to its charge. The degree of authority, control or administration to be exercised by the Mandatory State shall if not previously agreed upon by the high contracting parties in each case be explicitly defined by the Executive Council in a special act or charter. The high contracting parties further agree to establish at the seat of the League a mandatory commission to receive and examine the annual reports of Mandatory Powers and assist the League in ensuring the observance of the terms of all mandates.

It was not very long ago that President Wilson vigorously denounced the theory of national trusteeship and guardianship. His

he really been a sincere convert to it now? or is he deceiving himself? We do not know how to explain the following passage from his speech at the Peace Conference explaining the covenant:

We are done with the annexations of helpless people. In all cases of this sort it shall be the duty of the League to see that the nations assigned as tutors, advisers and directors of these peoples shall look to the interest and development before the interests and material desires of the Mandatory Nation itself. There has been no greater advance than this. The great Power which has happily just been defeated put intolerable burdens and injustices upon the helpless people of some of the colonies it annexed; its interest being rather their extermination than the development and its desire being to possess the land for European purposes and not to enjoy their confidence in order that mankind might be lifted in those places to a higher level. Now the world says: There is an end to that. Under the tutelage the helpless peoples of the world will come into a new light and a new hope. I think, I can say of this document that it is practical and humane and that there is a pulse of sympathy in it. The conscience of the world has long been prepared to express itself in such a way. In the administration of the affairs of more than one of the great States represented here the humane impulse has already expressed itself in dealings with their colonies whose people were yet at a low state of civilisation. We have had many instances of colonies being lifted into the sphere of complete self-government.

Unctuous sentiments and eloquent speeches cannot alter the facts of contemporary and past history. History does not say that it is only the one great defeated power which abused its "trust". How have the "civilised", the organised, the Christian, the white, and the powerful races hitherto generally, but not of course in all cases or always, treated their wards, the uncivilised, the unorganised, the "heathen", the coloured, and the weak peoples? Speaking generally, the history of the contact of these races and peoples may be summed up in one or more of the words (total or partial) extermination, enslavement, emasculation, degradation, exploitation, and impoverishment, of the weaker party. Incidentally and in a subsidiary way, certain advantages have accrued to some peoples who have not been exterminated, but in their case, too, one or more of the descriptive words mentioned above hold good. One is both astounded and amused at the self-righteousness, the hypocrisy and the arrogance of the powerful nations which coolly ask the world to believe that they are all fit by their previous history and present character to be the guardians, benefactors and de-

vellers of backward peoples. They have no doubt the might to do what they like. But what right have they to reduce other peoples to "tutelage," which really means the position of hewers of wood and drawers of water? Many an uncivilised race would prefer to be left alone. Why are they not to be allowed to find the right way after blundering on for as long as may be necessary? Why compel them to accept the position of the under dog?

Article 10 says that "certain communities formerly belonging to the Turkish Empire," like the Armenians, "have reached a stage of development where their existence as independent nations can be provisionally recognised, subject to conditions which guarantee freedom of conscience or religion and subject to rendering administrative advice and assistance by a mandatory power until such time as they are able to stand alone." It is easy to understand what this administrative advice and assistance would really mean. It would really amount to dictation. Still there is a ray of hope in the words, "until such time as they are able to stand alone." Until that time, however, the mandatory Power would practically be the lord and master of these communities. And, therefore, what the Nation of London wrote in connection with General Smuts's scheme of the league of nations, seems, to us, very apposite here, and perfectly just.

We realise that the actual state of the world, the Allies will certainly have to take over as "mandatory" and "trustees" the administration of some disturbed, derelict or immature areas. They will do well, however, to make as much as possible of American co-operation and we think that some neutrals, like Sweden or Norway, might also perform some of these tasks. The conditions which ensure disinterested trusteeship require more drastic definition. Some of these areas, like the mine-fields of Siberia and the oil-wells of Mesopotamia, are fabulously profitable. The profits ought not to go to British concessionaires. They ought to go to repair the world's havoc. There will be a big "unearned increment" from all the blood and bravery that have gone to make international Government possible. It ought to go to pay for the restoration of which the world stands in need, and not to the companies which extract the ore and sink the wells. An international super-tax might well be imposed in "trustee" areas on these ventures.

There is fine unconscious irony in the admission that certain communities, formerly "misgoverned" by the Turks, "have reached a stage of development

where their existence as independent nations can be provisionally recognised," "until such time as they are able to stand alone." Evidently Turkish misrule has produced results which British, French, Dutch or other good rule has not produced in any of their dependencies; for the Covenant does not recognise the fitness of any of them for provisional independence, leading to perfect independence when they are able to stand alone. The dependent peoples are left to their fate.

As regards Germany's quondam colonies, the Covenant practically votes for their annexation by the neighbouring British and Boer colonies. These South African Colonials are not in the least fit to be the teachers and guardians of any African or Asiatic race. They are too unjust, grasping and heartless for such a high trust.

A people possessed of arms and military training can exert at least moral pressure against oppression by their rulers. But the natives of Central Africa and South-West Africa would be helpless in this respect. For according to the Covenant, whoever may rule them most prevent arms traffic and "military training of natives for other than police purposes and the defence of territory."

Commenting on General Smuts's scheme the Nation observed:—

There is thus no body, provided which could at need say in the name of populations to the dominating Great Powers, "you are over-doing this 'mandate' business. You are governing the world by your majority of six Governments (two or three of them may be such States as Turkey, Portugal, or Panama, incapable of real independence). You have made a close oligarchy, and you are using your trust for a camouflaged imperialism: a modern capitalist variation of the old Holy Alliance." To say anything like that Switzerland or Holland or Norway might have to wait twenty years till by rotation their turn came to sit on the Executive. Or imagine a case in which America and Britain were always in a minority on the Council against the other five, who might all chance to be Land Powers or possibly all Powers with a Socialist Government in office. Take the cleavage alternately either way, and it is to our thinking, clear that some body there must be more representative of all civilization, and much more free to debate, question suggest, and initiate than General Smuts's Conference of all the Governments. With food and raw materials, as well as peace and war, dependent on the Executive Council, there must be a body which can speak for consumers and producers, for conscripts and their parents, as well as for Great Powers.

The Covenant no doubt says that a

mandatory commission shall be established to receive and examine the annual reports of the Mandatory Powers and assist the league in ensuring the observance of the terms of all mandates. But these reports would be pictures of the lion painted by himself for the admiring gaze of his kinsfolk. There is no provision for receiving and considering complaints from the people placed under the mandates. And supposing by some means the mandatory commission is convinced that a mandatory power has neglected its duty or has turned oppressor, what provision is there for bringing it to book, and deposing and replacing it, or, failing any such course, setting the people under it free?

The final Article 26 provides for the effectiveness of amendments to the Covenant when ratified by the States whose representatives compose the Executive Council and by three-fourths of the States whose representatives compose the body of Delegates.

When the world has outgrown its present stage of predatory nationalism and cannibalistic civilisation, this article may enable the representatives of the then highest civilisation to try to ameliorate the lot of the dependent peoples and of those placed under mandatory powers.

Article 20 states that the high contracting parties shall endeavour to secure and maintain fair and humane conditions of labour for men, women, and children in their own and all countries to which their commercial and industrial relations extend, and agree to establish as part of the organisation of the League a permanent Labour Bureau.

The League is appointed the instrument to secure and maintain freedom of transit and equitable treatment for the commerce of all its members.

All international bureaux henceforth constituted shall be placed under the League's control; also existing bureaux if the parties to it agree.

It is to be hoped that in the name of humanity this article will not be used to hamper the growth of or destroy indigenous industries in dependent countries. Apart from this apprehension the object of this article is highly commendable, as explained by Dr. Wilson:—

It is not contemplated that this should be merely a league to secure the peace of the world. It is a League which can be used for co-operation in any international matter. That is the significance of the provision introduced concerning Labour. There are many ameliorations in Labour conditions which can be effected by conference and discussion. I anticipate that there will be very great usefulness in the League's Bureau of Labour. While men, women and children who work, have been in the background through long ages

and sometimes seemed forgotten, now there comes into the foreground a great body of labouring people of the world upon whom the great burden of sustaining the world must from day to day fall, who go to bed tired and wake up without the stimulation of lively hope. These people will be drawn into the field of international consultation. There is a very great step in advance in the mere conception of that.

That "no treaty or international agreement hereafter entered into by a member of the League shall be binding until registered with the Secretaries of the League who shall publish it as soon as possible," is a very wise and necessary provision. Secret treaties have worked great mischief in the past.

The Peace Conference.

Sir Frederick Smith, a member of the Lloyd George ministry, said in the course of a speech before the recent general election :—

"I will tell you perfectly plainly, and with responsibility as a member of the Government, that it is our intention if we are returned to power, that not one yard of the former colonies shall go back to the Germans (Cheers) Why, for instance, should we give up Mesopotamia? That is so rich a country that it might almost pay for the war."

That Germany is not to have back her former colonies in Africa or elsewhere may be taken for granted. But may it be hoped that the spirit which breathed through the last two sentences would not be the spirit in which the mandates of the League of Nations would act?

Dr. Nilratan Dhar and Physical Chemistry.

In the January issue of the *Modern Review* we gave an account of the remarkable contribution in the domain of Physical Chemistry by Mr. Jnanendra Chandra Ghosh, M.Sc. The credit of being the initiator of the systematic study of Physical Chemistry in India must be assigned to Dr. Nilratan Dhar. To quote from the published "Essays and Discourses" of Sir P. C. Ray (p. 43):

"Physical Chemistry is yet in its infancy, but thanks to the labours of Ostwald, Arrhenius and others it is beginning to assert itself. To Mr. Nilratan Dhar, one of the most brilliant amongst our late pupils, belongs the credit of initiating work in this branch in our country, and it is gratifying to note that a monograph on complexions recently published in England quotes him as an authority."

It gives us sincere satisfaction to learn from the issue of *Nature* to hand that at a special meeting of the Faraday Society under the presidency of Sir J. J. Thomson

Dr. Nilratan Dhar.

held to discuss "the present theory of Ionisation" Dr. Dhar has been asked to take part in the proceedings along with other eminent specialists including Arrhenius, the father of the dissociation theory.

We understand that Dr. Dhar besides being a D. Sc. of the London University has recently become a State Doctor of the University of Paris, on the presentation of an elaborate thesis which will entitle him to be a Professor of French Universities. Dr. Dhar has been studying at the University of Paris, as a State scholar.

In the Report of the Indian Industrial Commission (p. 255) under the heading "Chemical Research," there is a recommendation for engaging the services of 8 chemists of the superior staff including two physical chemists. Elsewhere, in Sir P. C. Ray's article (pp. 225-6) will be found his authoritative opinion on the supreme necessity of engaging *none but Indians* for these posts. It is sincerely to be hoped that whenever the occasion arises Dr. Nilratan Dhar and Mr. Jnanendra Chandra Ghosh, both of whom have won laurels in this field, will be the first occupants of the two posts earmarked for physical chemistry.

While going to the press we are gratified to learn from papers received by this week's mail that Mr Jnanendra Chandra Ghosh's contribution on the 'dilution law' naturally formed the subject of discussion at the meeting of the Faraday Society referred to above. Professor Partington, a well known authority on the subject, devotes six pages to a consideration of the various conclusions deducible from Ghosh's Law. We can only make room for the introductory remarks.

Whilst the present communication was in course of preparation, a series of very interesting papers on the dilution law [by J C Ghosh] appeared, in which the problem is treated from a novel standpoint.

It must be a source of supreme gratification to Sir P C Ray that the researches of two of his brilliant pupils should figure conspicuously and simultaneously at the Faraday Society's special session. Indeed the highest compliment that may fall to the lot of a teacher is that paid by Nature (Nov 21, 1918), namely 'Dr Ray's most important work has been the foundation of the Indian Chemical School and the establishment of the Bengal Chemical and Pharmaceutical Works now a flourishing concern.'

Bengali Lecturer of Philosophy at Oxford

Sometime ago Renter announced that Mr Kiran Chandra Mukherjee had been elected Lecturer in Bengali at Oxford. We learn from the same source now that he has been appointed Lecturer in Philosophy also at that University. Mr Mukherjee passed the Entrance and F A examinations of Calcutta University from the Dacca College with scholarships and graduated from the Presidency College, Calcutta in 1908, with triple honours, in English, Sanskrit and Philosophy, standing first in English. In 1910 he took his M.A. degree from the same College standing second in English and soon after left for England where he joined the London University and studied Medieval English for sometime. Thence he migrated to Oxford, where he passed the 'Greys' (final honours) Examination in classics (Literæ Humaniores) standing second in order of merit. In 1917 he finished his academic career most brilliantly by carrying off the John Locke scholarship and thereby earning a fellowship, which however he declined,

as the terms did not suit him. He scored highest in all the papers, which consisted of such subjects as classical scholarship, philosophy, political sciences

Mr Kiran Chandra Mukherjee

anthropology, &c. The Board of Examiners reported of him as follows: 'Mr Mukherjee is an acute thinker with very considerable powers of expression and an extraordinary capacity for mastering the thought and language of European authors in various languages of both ancient and modern times. His papers showed specially his knowledge of Plato, Plotinus and Bergsson. He is a real scholar who should some day produce original work of real value.' &c.

Mr Mukherjee has been called to the Bar. In a letter to a relation dated December 20, 1917, he wrote that he had been offered a professorship in Philosophy in the Indian Educational Service, but that he had refused the offer as he wanted to enter public life. 'My intention,' he wrote, 'is to do some work however humble, to raise the political status of my country.' Mr Mukherjee is said to be engaged on a work on Greek philosophy. Having regard to his mastery of Sanskrit, Latin and Greek, and of various modern European languages, his work is expected

to be an original contribution to the subject, in which, for the first time, perhaps, Indian philosophy will receive the consideration which is its due from one with real first-hand knowledge of both Eastern and Western philosophy.

Mr. Mukerjee's education began in the village pathshala of Birtarn, pargana Vikrampur, in the district of Dacca, where he secured a scholarship in the Middle Vernacular Examination. His father, Pandit Saradakanta Vidyaratna, was Head Pandit (since retired) of the Dacca Collegiate school. Mr. Mukherjee is at present about thirty years of age.

A "Boat-Bride"

It is only in very recent years that in East Bengal, particularly in pargana Vikrampur Brahmins of some sub-castes have ceased to marry "boat-brides" belonging to non-Brahmin castes and sometimes even to Musalman families. Some "boat-brides" are still alive as housewives. *Kulin* Brahmins used to marry dozens and scores of wives from Bangsaj Brahmin families who felt honoured thereby. The result was a scarcity of brides for Bangsaj Brahmin bridegrooms. They had often to pay as much as a thousand or 1,200 Rupees for a bride. So many could not marry at all. Hence there sprang up a clandestine traffic in brides. Young low caste widows, Musalman young women, girls born of illicit unions, fallen women—all were induced by various means to pass themselves off as Brahmin maidens in distant villages, to which they were conveyed in boats, because these parts had not yet become accessible by railway and steamer. They were known as *Bharar Meye*, or "boat-brides." Arrived at a village, they were offered for marriage to Bangsaj Brahmin bridegrooms for comparatively small amounts. The men who married them did not pray into the secrets of their personal or family history;—they could guess what it was. *Persoons* who married these boat-brides were often subjected to social obloquy and persecution, but none of them ceased to be Brahmins. The frontispiece to the present number is an imaginary portrait of such a boat-bride. It is reminiscent of the kind of inter-caste Hindu Marriages which were current in East Bengal until very recent years. Some say that a few such marriages still take place occa-

sionally. There are many amusing anecdotes told of such brides, and there is a well-known humorous song current in Bengal relating to them, composed by that well-known reformer, the late Bahu Rosh Bihari Mukhopadhyaya, who did his best to strike at the root of *Kulin* Polygamy and succeeded to a great extent.

Have We Enough Doctors?

In the course of the speech which the Viceroy made in opening the Delhi session of the Indian Legislative Council, His Excellency referred to the influenza epidemic and observed:

Two lessons we may learn if indeed they have not already been sufficiently impressed upon us by the ravages of plague and other diseases. The defects of sanitation in India are fully recognised, and in June last we addressed Local Governments on this subject, and especially on the necessity for sanitary organisation in rural tracts, and we placed before them the recommendations made by an informal conference of Sanitary Commissioners which had been held here. In the second place, it is incumbent on us to increase our facilities for research. The Medical services in India have a proud record in this respect, a record which should encourage us and give us confidence in making a bold advance in the establishment of research institutes to investigate those ailments which are particularly prevalent in India.

It is surprising that the Viceroy should have spoken of only two lessons, and not of three. Is he unaware that the number of trained doctors in the country is woefully small? There can be no sanitary organisation without a sufficient number of men and women trained in medical schools and colleges; and however much the facilities for medical research may be increased and whatever the value and number of researches carried on, unless there be an adequate number of physicians to treat patients according to the results of these researches, they would be fruitless. Therefore the first thing to do is to increase the accommodation in all the existing medical institutions and to establish a large number of medical schools and colleges all over the country. There is no sense in shirking this duty.

"Place of the Services in the Future Scheme of Things."

The way in which the Viceroy discoursed on "the place of the services in the future scheme of things" ought to satisfy the members thereof, particularly the exalted civilians. They are to continue to-

be the real rulers of the country, and the Indian ministers are to a great extent to play the second fiddle to them and be ornamental figure-heads. But let us quote the Viceroy's exact words, "My first proposition," as he calls it, is enunciated in the following words: "If we set up ministers, ministers must administer, and the permanent services must execute. That is so well accepted a maxim of our British polity that no one will dispute it." This is quite an unexceptionable proposition. Not so the second proposition, which runs thus:

"But to suppose as has been alleged that we propose to place the services as a whole in helpless subordination to inexperienced and possibly hostile ministers; that we intend not merely to deprive them of power, but to require them blindly to execute policies which they cannot reconcile with their self-respect is very seriously to misconceive our purpose. Let me explain at once why that is impossible. Progress to further constitutional growth in India is to come not by a process of drift, not by the English Departments or Governments throwing up the sponge out of weariness or a sense that they are fighting a losing game, not by our taking back our hand from the plough, but by the response made by Indians to the great opportunity now offered them—by the measured verdict of the highest outside impartial authority upon their performance. It is recognised at the present moment that the time is not ripe for Indians to take over the entire management of the country. Every moderate and thoughtful Indian admits that truth himself. And government believe me, is not the simple thing it may sometimes seem. The help of the services, trained efficient impartial, with their high standards of duty, of character of the public interest, is absolutely essential if this vast experiment is to succeed. We cannot afford and we do not mean to lose them until India acquires what she has not got at present something approximately as good to put in their place. That is my second proposition."

We do not at all admit that the services cannot almost entirely be manned by competent Indians in the course of a decade or so, nor that even at present they cannot be largely manned by our own men quite successfully. As for the impartiality of the services, as between British and Indian interests, the less said the better. The Viceroy thinks that from the indigenous human material India may in course of time acquire only something approximately as good as the British members of the services! The high standard of the latter is so unapproachable.

British rulers always manage to ignore the economic aspect of the very highly paid foreign personnel of the British administration in India. India cannot afford

to have such unapproachably efficient men, and their salaries are all going to be increased very appreciably.

The Viceroy went on to say in very authoritative tones:

"The Secretary of State and I have declared our intention to protect the services in the defence of their rights and the discharge of their duties. I see that apprehensions have been aroused by the general character of his phraseology. Let me now, speaking for myself and my Government endeavour to give precision to the undertaking. In the first place as regards the pay and pensions. I propose that the pay, pensions, leave and conditions of service generally of the services recruited from England shall be guaranteed at least by statutory order of the Secretary of State, which no authority in India will have power to disregard or vary. My idea is that the all India services are to be retained as in a mould cast by Parliament and the Secretary of State as an exemplar to all the services drawn exclusively from India. In this respect therefore I see no cause for dissent."

It is perfectly true that no authority in India will be able to reduce the pay, pensions and allowances of the British-manned services. Indians will only protest ineffectually by dying prematurely in large numbers of malnutrition, famines and pestilences.

In the last place, His Excellency tackled the "difficult question" of "the position of the services who are under Indian Ministers." It is not quite clear why it should have been deemed a difficult question, for the Montagu Chelmsford scheme of diarchy has been so devised as to place as few Englishmen under Indian ministers as possible,—in any case in most provinces at least for the first ten years of "responsible government." However, the Viceroy's solution of this difficult question is very simple. "Responsible men," that is to say, men who have the good sense to know their place and understand who is master and who are consequently not possessed of backbone and a stiff neck, must be got as ministers. Secondly,—but let us quote His Excellency:

In the first place we hope to get as ministers responsible men who will realize how greatly the services can help them. There is more in this than a pious hope. We may look to what has happened elsewhere. It has often been the case that men going in fresh to office full of prejudice against the public services have found them their best ally and protector against the critics which every administrator encounters and have ended by gaining the full confidence of the service and giving the service the reins. Secondly we do not intend to leave that handling of the services wholly to the minister. We propose to instruct the Governor,

in a public instrument that we lay on him a personal responsibility for securing the welfare of the services. He will disallow proposals that aim or tend towards the re-disintegration. The head of every department under ministers will have access to the Governor. He will be in a position to represent difficulties to him before they become acute and it will be for the Governor to deal with them by influence and persuasion, and finally by tactful exercise of authority. Lastly we propose to secure all existing rights of appeal to the Government of India and the Secretary of State whenever an officer is prejudicially affected as regards emoluments or pension by a minister's order.

It may be that even more provisions will be required. I will merely add that the Government of India will always regard this question of the fair treatment of the services as one of the cardinal tests by which our great experiment will be judged.

The Viceroy's words are so explicit that no elucidation is necessary. He has only stated explicitly what could have been guessed by intelligent men. The British officers will have the ear of the British Governor, as the Indian ministers cannot; and full advantage will be taken of this natural advantage, increased by all requisite artificial aids. And if the Indian ministers cannot keep the British services in good humour, why, it would be proved to demonstration that Indians are unfit for "responsible government." What would the Indian minister will not feel his stature grow by two feet or more at the prospect of the great dignity awaiting him?

British Commercial Interests and the Reform Scheme

Having placated the British manned services, the Viceroy addressed himself to the task of soothing the ruffled temper of British capitalists and men of business. He only made explicit what we understood and explained to our readers at the first opportunity on a perusal of the Montagu Chelmsford Report. It is that all essential legislation necessary to preserve the practical British monopoly in the administration and exploitation of India has been reserved, as at present, in the hands of the Government of India, and the Government of India is to continue to have power to carry any legislation in the teeth of even solid opposition on the part of the people's representatives. His Excellency began by observing "It would distress me profoundly if I thought that we could with justice be accused of under-rating either the colossal financial interests at stake, or the enormous part which British non-official energy, character and

brains have played in the task of making India what she is." The Viceroy here refers only to the bright side of the shield. But critics of the British "development" and exploitation of India, including some men of British race, believe that there is a dark side, too. The words which we have italicised will serve their purpose as well as they have served their purpose of the Viceroy. His Excellency explained the position as he saw it, in the following words:

The legislation on which British commerce in the main depends is mainly all India in character. Some of it is embodied in the great commercial codes some of it deals with matters of peculiar interest to industry like railways, factories, Petroleum, explosives or mines. Now inasmuch as these will remain with the Government of India, who will, as I have laid down more than once, retain indisputable authority, there is surely no reasonable ground for apprehension. Commerce can make its voice heard just as effectively as heretofore. It may be said however that, in the future, Provincial Councils will exercise more freely the power of amending all India Acts. But that they can only do with the previous sanction of the Governor-General. In any case there is the safeguard of the triple veto of the Governor, the Governor-General and the Crown and this applies to all provincial legislation.

'It seems to me indeed that the control of the matters of peculiar interest to European commerce is to a great extent concentrated in the hands of the Government of India. I am thinking of the tariff and the currency, of banking, railways, shipping, posts and telegraphs. In these respects no existing measure of security is being diminished, and therefore apprehension is surely groundless.

'But evidently it is in the minds of some people that in the provincial sphere it will be possible in the future to affect the commercial community. Say, for instance by special interests being singled out to bear the burden of provincial taxation or by rival interests being artificially stimulated by bounties. What protection will there be in such cases? Well the Secretary of State and I have pledged ourselves in paragraph 344 to reserve to Government power to protect any industry from prejudiced attack or privileged competition. To speak for myself, I believe this can be secured by embodying this undertaking in the instrument of instructions given to the Governor on appointment wherein he will be informed that His Majesty's Government lay on him a responsibility for seeing that the pledge is made good. With such a public document in his hands the Governor, with the Government of India and Secretary of State behind him would be in a very strong position to resist all proposals of his ministers which appeared to him to be acts of hostility to British commerce. There will moreover be representatives of that interest sitting in the provincial chamber and I cannot do them the injustice of supposing that they will fail to bring any just grievance effectively to the Governor's notice, or if need be to remind him of his responsibility.

These paragraphs ought to satisfy all

British merchants and industrialists in India that they will not lose any of the fair and unfair advantages which they at present enjoy, when India comes to have "responsible government." There is no doubt that national governments have in all countries, and particularly in industrially backward countries, given and still give more encouragement, protection and advantages to indigenous capitalists and merchants industrialists and entrepreneurs than to foreign men of these classes. But in India "responsible government" is not going even approximately to mean a national government. Therefore, for the satisfaction of foreign administrators and foreign exploiters, prospective Indian ministers have been sought in advance to be brought to a suitably timid frame of mind, so that they may not even dream of doing for their country's commerce and industries what the ministers of self-ruling countries have done and still do for theirs.

But are we down hearted at the prospect? NO Our soul is not conquered or killed. We should firmly resolve to find a way to be in our country for its good what any other men are in theirs.

The Source of India's "good sense"

In the concluding paragraph of his speech the Viceroy said—

"Nor would I have you suppose that I have an axe to grind in regard to the Indian masses for each year I have spent here has strengthened my confidence in the good sense of India as a whole. The bulk of the Indian masses may live the lives remote from affairs lacking in education still wanting in most of the paraphernalia of progress. They may perhaps in some sense be voiceless masses. But the good sense of India springs from a deep political instinct from lessons learnt in a harsh school perhaps learnt in ill-rewarded labour, in pestilence and famine and under the drums and trampings of many a stern conqueror but still learnt and not to be easily unlearned. In that instinct lies a solid foundation for our public life. There lies our ultimate source of strength."

It may be that the Viceroy wanted to pay India a compliment.

But is that "good sense" really worth much which is, in plain language, synonymous with ingrained timidity due to the repeated and age long thrashing and cruel treatment which the people have received at the hands of "many a stern conqueror"? Or is that "good sense" either really worth much which is synonymous with the stolid insensibility and despondency born of ill-rewarded toil and of

sufferings from famine and pestilence? That good sense alone is worth the name which teaches the courageous, hopeful, healthy, capable and educated person to be honorably peace loving and sober. The kind of good sense which the Viceroy spoke of cannot be a solid foundation for public life of any sort, though it may be a solid foundation for the stillness of public lifelessness. When the Viceroy said "There lies our ultimate source of strength," what did he mean by 'our'? Did he mean the strength of the foreign bureaucracy? If so he was right. For the greater the lifelessness of the Indian public born of timidity, indifference to worldly affairs and despondency the stronger would the bureaucracy remain. But if he meant the strength of the Indian people, he was wrong. For a people who are timid, indifferent and despondent owing to causes mentioned above can never be strong in any sense or in any direction.

A Queer "Test of Capacity"

There is a very amusing passage, a passage which takes it for granted that the Indian people and the Indian members of council are fools, in the speech which Sir William Vincent made in introducing the Criminal Law (Emergency Powers) Bill, known as Rowlatt Bill No 2. He said—

I ask the Council very earnestly to realise their own responsibility in this matter. There are many here who claim responsible government for the country, some sooner some later are they willing to accept the responsibility which responsible government inevitably connotes—are they willing to face the inevitable criticism which must frequently be expected when action is taken in the public interest? My Lord there are many who are watching the conduct of this Council on this occasion with great interest it will be regarded by many as a test of capacity—whether the Members of the Council have the courage to do what is right in assisting the Government in its first duty the maintenance of the public tranquillity. Will the Members be found wanting and give a right to anyone to say that their attitude on this question indicates their unfitness for responsible government? I earnestly hope that no such occasion and no such material will be furnished to those who are opposed to political progress in this country.

One may ask the Government of which Sir William is a member a plain question. If all the Indian members vote for the two Rowlatt Bills will Government and British officials admit in practice our fitness for responsible government? Will the non-official British community in India, which

in this matter as in most others view things from the same angle as the officials admit in practice our fitness for responsible government? That is to say will Government and the official and non official European communities, cease to put obstacles in the way of our getting responsible government, and try their best to help us in getting it as early as practicable? Certainly not. They will find out a thousand and one other excuses for delaying the grant of responsible government. What Sir William said was a trick, a dodge, a trap. No one is so foolish as to be taken too good fall into the trap.

Sir William spoke of the Indian Member's responsibility to the matter. It must be a very curious kind of responsibility which does not enable the Members to promote the welfare of their countrymen even by complete unanimity, but which enables them only to injure their countrymen by weakly siding with the bureaucracy. Responsibility implies Right. It implies controlling power. Those who have no controlling power have no Responsibility to the sense in which Sir William used the word. That is to say the Indian Members are not responsible to a greater extent than any ordinary citizen for the maintenance of law and order in the country. It is the bureaucrats who are responsible. Our representatives will be responsible when there is Home Rule.

Sir William asked those Members who claim responsible government for the country are they willing to accept the responsibility which responsible Government inevitably connotes? Are they willing to face the hostile criticism which must frequently be expected when action is taken in the public interest? Every advocate of self government will certainly reply in the affirmative. But what is the responsibility which responsible government inevitably connotes? It is the responsibility which comes *simultaneously with or after the acquisition of responsible government*. It cannot be connoted where there is yet no responsible government. Those who do not possess and exercise the right of responsible government cannot be asked to make themselves responsible in the same way as those who possess this right.

The responsibility then which responsible government connotes rests with

those who are actually in possession of the right and power of responsible government. Having made this position clear, let us see what this responsibility means. And first let us see what it does not mean. It does not mean the surrender of one's own judgment to the foreign bureaucracy or oligarchy in power. On the contrary it implies the possession of the power to judge for oneself and to firmly act according to that judgment. The next thing which this responsibility implies is that the responsible man is to have perfect freedom to consider all possible means and measures for the attainment of a certain object and to choose the best of these. Suppose the object is to prevent the growth of sedition, anarchism and revolutionary tendencies in India. A responsible Indian, we mean one who has the power which responsibility implies would consider all the circumstances which in different countries have given rise to these evils and he would first of all try to remove the social, political and economic causes thereof. If necessary, he may also think of and have recourse to repressive measures. In any case his hands would not be tied to the adoption of only one course and that at the dictation of outsiders. Sir William's idea of responsibility is quite ludicrous. He seems to say in effect, I say you must coerce, because that is my decision if you don't agree you are unfit for responsible government. Or, in other words the only person who is fit for responsible government is one who is such a fool that he cannot think and judge and devise means for himself but agrees slavishly to acquiesce in the judgment of others.

Sir William's second question was 'are they willing to face the hostile criticism which must frequently be expected when action is taken in the public interest?' Considering the powers and position of the Indian Members and the present constitution of the Government of India this was a supremely puerile and ludicrous question. Any Indian Member might well reply, Why do you expect me to face the hostile criticism which is expected because of the action which you SAY you are going to take in the public interest? I shall certainly be prepared to face hostile criticism when being in a position and having the power *freely* to do both what is pleasant and what is unpleasant to the public,

machinery in your hands, can the Government complain that the people have not loyally co-operated in dealing with this sort of grave crime? It is not the fault of the people that they have not succeeded in enabling the Government to secure a larger number of convictions. It is the fault of the administrative machinery. Therefore, if you ask for a remedy, the remedy is to make the police in general, and the Bengal police in particular, more efficient.

Another argument advanced by the Rowlatt Committee, namely, that the convictions have not been able to repress crime, was subjected to criticism by Mr. Sarma. He asked:

Have they repressed crime in the case of murder? Have they repressed crime in the case of dacoity? We find that the number of crimes has been increasing year after year throughout India. This state of things is not confined to the case of sedition alone; it is to be found in the case of all grave crime. 3,340 reported murders in 1903 and 4,770 in 1915 with 1,103 and 1,401 convictions and 2,339 and 3,738 dacoities with 443 and 733 convictions. I shall not weary the Council with further figures, but that is the state of things.

His practical suggestion was:

Just as you stamped out the Thugs by a special department, if need be create a special department and stamp out this crime. If a province is so beggarly as not to be able to find money for it, take the money from the other provinces, if necessary, in order to be able to finance that province but in the name of common sense do not deprive the people of other provinces of their rights and liberties, or at any rate do not subject them to the risk of losing their rights and liberties simply because you find one administration unable to cope with crime of a particular character.

"Well, therefore my first position is that the statements upon which the Rowlatt Committee has based its recommendations that the forces of law and order have been found not to be equal to the occasion and that convictions have not been able to repress crime are only partially true, and that if we are to follow up the logic of the proposals, we shall have to discard judicial administration in the case of all grave crimes also in order to be able to attain the ends we have in view."

Higher Pay for the I. M. S.

A Reuter's telegram reads thus:—

LONDON, FEB. 12
The Secretary of State for India informed a deputation from the British Medical Association that improvements in pay for permanent officers of the Indian Medical Service, both military and civil, approximating to thirty three per cent. on the present rates of military pay, had been approved of from December 1st last. "The object of this measure was to attract European candidates of the highest qualifications." Mr. Montagu said he was of opinion that it was desirable that medical men should enjoy as fully as

possible opportunities for private practice. No further restriction in this connection was contemplated. The deputation expressed satisfaction, and promised cordial co-operation in securing recruits.

Money can always be found for increasing the pay and emoluments of British officials. But for the spread of education, improvement of sanitation, &c., we must pay fresh taxes.

Every British-manned service is going to have its salaries so increased that there is sure to be no monies left for adequate expenditure on education, sanitation, &c., without fresh taxation!

Case of Babu Jyotish Chandra Ghosh.

The reader remembers the case of Babu Jyotish Chandra Ghosh, M. A., State prisoner, who has been lying in a state of stupor since 1917 in the Lunatic Asylum at Berhampore. His mother petitioned the Bengal Government praying that her son might be brought to Calcutta, placed under proper medical treatment, and she and other members of her family allowed to live with him. She received the following reply from Government on February 1st:—

Srimati Dakshayani Dassi is informed that Government are now in a position to make special arrangements for the accommodation of her son, State Prisoner Jyotish Chandra Ghosh and herself within the Berhampore Lunatic Asylum. The quarters provided would consist of 2 rooms, 3 outhouses and a courtyard fitted with a watertap and latrine, all surrounded by a high wall and affording privacy.

Srimati Dakshayani Dassi is invited to say whether she is prepared to accept this offer and if so, which if any, of her immediate relatives or domestics she would wish to accompany her. It should be understood that if the offer is accepted, the rules of the Asylum must be strictly complied with, and also that no visitors of any kind from outside can be received within the Asylum except under orders of the Superintendent or of Government, and in accordance with such conditions as may be imposed. Her son will continue to receive from the authorities of the Asylum the same medical attention as he is at present receiving.

The official reply is heartless, and unnecessarily so. The prisoner has been lying in a senseless condition and is incapable of any mischief. Government would lose nothing by even setting him unconditionally free. Under the circumstances, why ask the poor mother also to reduce herself to the condition of an imprisoned lunatic for her son's sake. She has again petitioned Government, praying

Titled or Title-hunter?
MR. TINDRAEVNAR SEN,

By the courtesy of the artist

(a) that he may be brought down to Calcutta with proper arrangements as to nursing and feeding etc., where to my mind he may be properly treated and nowhere else.

and (b) to place him under the necessary supervision of the Government but in a condition in which he may feel that he is in familiar environment under constant attendance and care of his near and dear ones and not under the present restraint.

It is a very reasonable prayer and ought to be granted.

We understand that at a public meeting held on Feb. 16 in the Hooghly town hall, under the chairmanship of the Hon. Rai Bahadur Mahendra Chandra Mitra, M.A., B.L., the following resolution was carried—

"That this meeting places on record its deep sense of regret at the manner in which the Government have treated the unfortunate Jyotish Chandra Ghose state prisoner lying in a state of absolute stupor and insanity in the Berhampore Lunatic Asylum for about two years, and for the sake of justice and humanity urges upon the Government to accede to the prayer of his mother for his transfer to Calcutta for medical treatment."

It was moved by Babu Jyotish Chandra Banerji, a respectable merchant of the place, and seconded by Babu Mihir Lal Das, a local senior pleader.

It would be an act of justice and humanity if some member of the Bengal Legislative Council moved some such resolution as the following—

"That in consideration of the long period for which Babu Jyotish Chandra Ghose has been lying in a state of absolute stupor and insanity and of the shattered state of his health and mind this Council requests the Government to recommend to the Government of India that he be released from detention, or allowed to live with his mother with necessary arrangements as to feeding and nursing under Government supervision."

We also think that, with reference to the provisions of Regulation 3 of 1818, questions like the following ought to be asked by some Hon. Member of Council—

(i) Have the Govt. received regularly "periodical reports on the conduct, health and the comfort" of Babu Jyotish Chandra Ghosh, under sec. 3 of Reg. III of 1818, "from the officer in whose custody" he has been placed?

(ii) If so, will the Govt. be pleased to state whether "the grounds of the order for his detention came under revision from time to time," particularly during the period of insanity and stupor?

(iii) If so, will the Govt. be pleased to state if the grounds of continuing in force the order for his detention after he became insane and stuporous were made known in writing to the state prisoner or to his mother or to any of his relatives, so that any of them might "bring to the notice of the Govt. all circumstances relating to those grounds?"

In the above draft of questions, the words within inverted commas are taken from Regulation 3 of 1818.

Mr. Aurobindo Ghose on Mr. Patel's Bill.

Mr. Ranabodas Lotwalla, the managing director of the *Hindustan*, has received the following letter from Mr. Aurobindo Ghose containing his opinion on Mr. Patel's bill for validating Hindu intercaste marriages.

In answer to your request for a statement of my opinion on the intermarriage question, I can only say that every thing will have my full approval which helps to liberate and strengthen the life of the individual in the frame of a vigorous society and restores the freedom and energy which India had in her heroic times of greatness and expansion. Many of our present social forms were shaped many of our customs originated in a time of contraction and decline. They had the utility for self defence and survival within narrow limits but are a drag upon our progress in the present hour when we are called upon once again to enter upon a free and courageous self-adaptation and expansion. I believe in an aggressive and expanding not in a narrowly defensive and self-contracting Hinduism.

Whether Mr. Patel's bill is the best way to bring about the object intended, is a question on which I can pronounce no decided opinion. I should have preferred a change from within the society rather than one brought about by legislation. But I recognise the difficulty created by the imposition of the rigid and mechanical notions of European Jurisprudence on the old Hindu Law which was that of a society living and developing by an organic evolution. It is no longer easy or perhaps in this case possible to develop a new custom or revert to an old—for the change proposed amounts to no more than such a reversion. It would appear that the difficulty created by the legislature can only be removed by a resort to legislation. In that case the bill has my approval.

The Budget.

Sir James Meston presents the Finance Statement to-day (1st March) and discussion thereon, in the Imperial Legislative Council, comes off from the 7th to the 12th instant. The Budget for 1919-20, in its final form, will be presented to the Council on the 21st idem. Reserving our comments thereon, till then, it will be in the meantime interesting to know what the word "Budget" signifies and how it came to be first used in Great Britain. "Budget" is derived from the old Irish word "bolge" or "bole"—a sack; but it has come to its place in the English language in rather a tortuous way. It was adopted into the Latin tongue in the form of "bulga," meaning a leathern bag or wallet. On

its entry into the French language "bulga" became "bouge," and it is from "hougette," the diminutive of "honge," that we get the English word "hudget." Six hundred years ago "hulga" was used in England to denote a saddle bag. Then the French form replaced the Latin. Lord Berners, about 1530, writes of a "hoget" "with leteers hangyng at his sadel bow," and Udall, in 1542, of a "pourse or n hougette." In his French-English Dictionary, published in 1650, Randle Cotgrave gives as the meaning of "hougette" "a little coffer or trunke of wood covered with leather," and adds, "Now gentlemen calls so both any such trunke and the box or till in their cabioets whereia they keep their money." Later on "hudget" came by a natural process to mean not the leather covered trunk but its contents, and when the Chancellor of the Exchequer took from his leather-covered despatch box the papers relating to his financial proposals he was said to "open his Budget." This usage had become firmly established in 1733, for in a pamphlet entitled "The Budget Opened" Sir Robert Walpole was compared, *apropos* of his forthcoming Excise Bill, to a mountebank opening his wallet of quack medicines and conjuring tricks. "At length," says the writer, "the Mountain is delivered. What is revealed? Nothing but what has been known, confuted and exploded long ago.

The Budget is opened, and our State Emperick hath dispensed his packets by his many couriers through all parts of the kingdom." Thus the word "Budget" gained its first footing in the political vocabulary in England as a term of abuse. In the "Gentleman's Magazine" in 1764 there occurs the following passage referring to the financial statement for the year:—"The Administration has condescended...to explain the Budget to the meanest capacity," and in the *Annual Register* for 1785 we have—"on the 30th June Mr. Pitt opened the national accounts for the present year, on what is generally termed 'The Budget.'"

To Intending Subscribers.

We printed 5,000 copies each of the January and February numbers. As these have been exhausted, and there will not be a second edition, these two numbers will no longer be available. We have printed 5250 copies of the present March number. New subscriptions may begin from March or any subsequent number. The March number, too, is expected to be exhausted during the month. Owing to the high price of paper we are not making any provision for supplying back numbers of the current year.

LIGHTNING

By the courtesy of the artist Mr M D Natesan

tate to say "we differ", when, after a careful and respectful consideration, we do differ from her. I am certain that she does not want us to follow her blindly. She lays no claim to infallibility.

Indian publicists have a duty to perform. They are planning the future of their nation, which is at the present moment in a state of transition and is undergoing a process of transformation. So much depends on education.

Education is the most vital question for us. It is the most important of all our problems. In a way it is the *fundamental problem*. We cannot afford to have loose and confused ideas about education, the aims and ends of education, and the methods of education. Our whole future hinges on it. It behoves us, therefore, to devote all the mental energy, which we possess, to the right understanding and the right solution thereof. It would not do to be carried away by prejudices and mere sentimentality. The decision must be arrived at by deep, careful and critical consideration of the whole question. A hastily arrived at decision or one that is founded on prejudice and sentimentality, may materially hinder our progress or, at any rate, slow down the rate of progress.

The national mind is just now in a fluid condition. It needs wise and thoughtful guidance. Like wax, it will take such impressions as those whom the people love and respect, and in whose wise leadership they have confidence, decide to give. Tendencies created, prejudices reared, sentiments disseminated, when they go deep into the psychology of the nation are difficult to uproot. To create national tendencies, sentiments, prejudices, impressions and preferences in haste under the idea that they can be corrected, later, when found to be wrong, involves so much waste of energy and opportunity that no wise leader ought to do it lightly or heartedly. This essay is only a plea for careful critical consideration, as well as broad, thoughtful planning. There is no intention to indulge in petty or destructive criticism, nor to pose as an oracle.

III

Firstly, we should come to a clear understanding of what our national ideals are. Do we want to be an integral part of the "civilized world", making our con-

tribution to its progress, by thought and action, or do we want to be an isolated national unit, happy in our retirement and isolation? Of course, we want political liberty, economic independence, social solidarity and religious freedom, but for what ends? Are these things ends in themselves or only means to some other and higher end? If so, what is that end?

Some will say that salvation is the ultimate end we desire. But what is meant by "salvation"? Is it the *Nirvana* of Buddhism, the merging of the individual soul in the supreme soul of the *vedanta*, the temporary bliss of the Arya Samaj, the *mukti* of the Christian, or the paradise of the orthodox Moslem? Or are these after all only delusions? The real salvation lies in freedom from misery, poverty, disease, ignorance and slavery of every kind, in this life, now and here for ourselves, and hereafter for our successors. There are religions which enjoin on their followers the duty of suffering all the pangs of misery, poverty, disease, ignorance and slavery, in order to have the certainty of bliss and happiness hereafter in the life to come. In fact, this is more or less the tendency of all religions which have been systematised.

From the earnestness, which all classes of Indians are displaying in fighting out misery, poverty, disease, ignorance and slavery, it appears that they have made up their minds on one question at least, whatever be the ultimate salvation, *mukti* or *nyat* or *nirvana*. Our people do not want misery, poverty, disease, ignorance and slavery either for themselves or for their children. Hindus (Santamists, Arya Samajists, Brahmo Samajists, Vedantists and others), Moslems, Christians, all are agreed on this point. Everyone is trying to explain his own dogma or creed, in such a way as to make a pursuit of happiness in this world by the righteous acquisition of wealth and health and knowledge, a desirable end. The natural bent of the human mind is also in the same direction. But priests, prophets and reformers are not dead, nor do they show any signs of death. They are just hiding their heads and biding their time. With the least encouragement and stimulus they come out into the open and start their poisonous propaganda.

Varagya, a life of renunciation and poverty, is still the ostensible goal of every

religion *Sannyasis* *Dervishes* and Monks, are still our ideals among men. Even the most rational and liberal minded reformer respects and reveres them. Men of religion we call them, and hence our instinctive, impulsive deep rooted sentiment in their favour. What is worse is that some modern educated men, who are neither priests nor monks, and who in most cases do not themselves lead a life of asceticism are holding up the same ideal for their younger countrymen.

Every religion contains some beautiful and sublime principles which save its followers from utter annihilation in the struggle for life be it individual or social, but the bulk of every religion's teaching and its literature as ordinarily understood, lays emphasis on the negation of life, as distinguished from its assertion and intensification.

Higher Hindu religion teaches that salvation lies in *gnan* (knowledge) — not mere knowledge, but realised knowledge. It insists that those who aspire to this kind of knowledge, must live a full life albeit a controlled life before they can acquire that kind of *gnan*. They must do their full duty to society and learn all that has to be learnt by social amenities, relations and sensations. Then they can renounce certain phases of life in favour of certain others. A vow of poverty did not in ancient times involve an exaltation of poverty over wealth but only freedom from the obligations of property at a certain stage of one's life. In fact the most ancient literature of the Hindus makes no mention except by far fetched implication of *Sannyasis*. All the great *Rishis* and *Munis* of the past had property, as well as families. They preferred to live away from crowds only for purposes of research, for *Yoga Samadhi*, and concentration of mind on the problems of life. That condition was not an end in itself, but a social means for a social end.

It was not a desire of *Mukti* alone that led them to do it, but the very social and admirable desire of helping humanity by a rational solution of the problems of life. Look how this ideal was degraded in later times until we came to exalt a life of mere *tyag* (renunciation) as such, and to place it at the top of life's edifice — as a goal an end and a lighthouse. It is true the whole nation never practised it, but that was because it was impossible to do so. As

many people as wished to adopt it, did adopt it, until we find that to day a good part of the nation having abandoned all productive economic work, engages itself in preaching the virtues of *Sadhuism*, and in making the people believe that next to becoming a *Sadhu* himself, the best thing for a man to do to avoid damnation is to feed and maintain *Sadhus*.

I am afraid what I have said of Hinduism is also more or less true of Mahamadanism and Christianity. So deep rooted is the sentiment, that even iconoclastic reforming agencies like the Arya Samaj, the Brahmo Samaj and the Vivekananda Mission among the Hindus so often drift in the same direction. Their hymns and songs and prayers are still brimful of that spirit. At the time when English education began to be imparted in India, this fatal tendency towards the negation of life was a substantial part of our national character. We may defend our respective religions against the charge of having actively taught this negation as an ideal but we cannot with any honesty deny the fact of the prevalence of this spirit to an alarming extent among our people. Nor can we conceal, that more or less the whole of our literature breathes this tendency. We may call it on addition of degenerate times but there it is. No one reading that literature can evade the subtle influence of this tendency which pervades it. Our Epics are the most human documents we possess. Yet, even they are full of that spirit.

Now it must be owned that the present awakening the protest against this tendency, owes its birth to foreign education, however godless it may have been. Sometimes I feel thankful for its being godless. But for this education there may have been no awakening or, to be more accurate, the awakening might have been indefinitely delayed. To my mind the first need of India is the absolute destruction of this tendency. This tendency is the fundamental basis of all our national weakness. Christianity, too has that tendency and if the Christian nations had stuck to true Christianity, they would have made no progress at all. It is not Christianity that has produced the modern improvements in life. Progress in Europe has been made in spite of Christianity. The most important work before us, then, is to change the general psychology of

our people in this respect, to create in them an interest, a zest in real life

The general prevailing idea of life in India is that of a necessary evil. That life itself is a misery, and a misfortune from which it is desirable to escape is so deeply written on the souls of our people, that it is not easy to efface it. What India needs is an earnest, widely spread, persistent effort to teach and preach the gospel of life. That life is real, precious, earnest, inviolable, to be prized, preserved, prolonged and enjoyed, is not so obvious to our people as it should be. Not that the Indians do not value living, not that they have no respect for life as such, nay in fact some of them care for mere life, so much as to preserve inferior lives even at the sacrifice or the detriment of human life. The vast hulk of them prefer mere living to honourable living.

The ancient Hindus seem to have had a clear idea of the amount of energy that had been expended by the race in the evolution of man. The idea is so deep-rooted that every Hindu rustic will tell you what a privilege it is to be born a human being. So far he is all right. The trouble begins when he starts to consider the aim of life. As to that, he is being told, day in and day out that supreme merit lies in killing desire, in escaping from the life of senses so as to escape from the pain of rebirth. This necessarily leads him to shun life, to belittle it, and eventually to escape from it, if he can. I admit that this is a perversion of the original doctrine and that there is not sufficient sanction for it in the ancient scripture, but then that is the prevailing belief which finds ample support and justification from the language of the sacred books. The first aim of a national system of education should be to destroy this belief. This cannot be achieved by a promulgation and perpetuation of that literature in its present form which is overfull of this false view of life's aim. Personally I have a great affection for the Sanskrit language and the literature contained in it, but in my judgment any attempt to make it a medium of general education and uplift is bound to fail and deserves to fail.

Its value for the purposes of historic research is obvious. Its aid to enrich the vocabulary of our vernaculars is indispensable. Its cultivation for purposes of

scholarship may be assured, but its use for the practical purposes of life to the ordinary citizen is more than problematic.

Arabic and Persian are more advantageously placed in this respect than Sanskrit. Both of them are living languages still spoken by whole populations of men, though, of course, their modern forms are considerably different from the ancient ones. Sanskrit occupies the same position in India, which Greek and Latin occupy in Europe. Sensible Europe is dropping the study of the latter, except for the limited few who aspire to a career of literature, and India will have to do the same if she wants her children to employ their time and energy in the solution of the practical problems of life.

The attempt to live in the past is not only futile but even foolish, what we need to take care of is the future. If India of the future is to live a full, healthy and vigorous life commensurate with the importance which belongs to it, by virtue of its human and other resources, it must come into more close touch with the rest of the world. If it is to occupy its rightful place among the nations of the globe, it must make the most profitable and the most effective use of its intellectual, mental and general human potentialities.

Sanskrit is a perfect language, having a great record of valuable literature, and so are Latin and Greek. They are all sisters. Just as Europe and America are discovering that for the ordinary boy, not aiming to devote his life to literary or historical research, the study of Greek and Latin may be profitably displaced by the study of the other modern languages, so will the Hindus have to do.

That, intelligent Hindus already realize that, is proved by their conduct. My personal experience (of the last 36 years in connection with the D A V College) justify my saying that of all those who founded the D A V College and afterwards nursed it with energy and devotion, there were and are only a few who ever wanted their own children to follow the courses of Sanskrit which they prescribed for others. Of these perhaps there are still fewer, whose sons are using their knowledge of Sanskrit for any effective purpose. Some of them have given up all study of Sanskrit and consider the time spent in acquiring it as lost. Of all those pious donors, who make endowments for

popularising the study of Sanskrit or for imparting religious instruction in creeds and forms, there are very few who make their own sons and nephews devote much of their time to either

Personally I yield to none in my respect for the ancient Aryans. I am as proud as any one else of their achievements. They advanced human knowledge to an extent that has made it possible for the moderns to advance. I am proud of their wisdom, their spirituality, their ethics and their literary achievements, but I cannot shut my eyes to the fact that in knowledge the world has since then advanced much further. And if knowledge is wisdom then we must presume also that the world is wiser to-day than it was 3 000 years ago.

That advanced knowledge and its resultant wisdom is at present embodied in foreign languages. Every year, every month, nay, every day in the year it is making further progress. So much so that a book dealing with sciences becomes almost out of date within a year, unless a new edition is produced with up to date improvements. No one who does not want to fall behind can afford to neglect these sciences, which can only be studied effectively for a number of years, at least in these foreign languages.

Besides, it should not be forgotten that modern scientific inventions including the use of steam and electricity for transportation purposes have destroyed the barriers of space and distance. No nation however ideal in its desires and ambitions, however spiritually inclined in its standards and values of life can live a life of isolation, even if she desired to do so. Intercourse with other nations for purposes of trade and commerce is no longer optional. It is compulsory. If India's trade and commerce is to be carried on by Indians, and not by foreigners, and if the Indian people are to profit therefrom, it is necessary that our traders and commercial men should know as many modern languages as may be possible for them to acquire first in school, and then out of it. The hulk of the nation must be engaged in agriculture, or manufacture or business. For all these purposes a knowledge of the modern languages is almost a necessity. Under these circumstances to compel boys to devote a greater part of their school time preparatory to entering life, in study

ing a complicated difficult ancient language like Sanskrit is such a flagrant misuse of energy that it is bound to harm the general efficiency of the nation if we persist in that course. So, it is high time that the nation should make up its mind that like other luxuries the study of Sanskrit is for the few and not for the many. Sanskrit must be studied by the few for the purpose of research and culture and for helping the nation in enriching the vocabulary of the vernaculars. For the many the study of foreign modern languages must be insisted on, accompanied by a good knowledge of the modern languages of India. I intend to say something more on this subject later. At present I am making these remarks only to clear the ground for the consideration of what would be the aim and scope of any national system of education for India.

Descending from national literature to national methods of education I must say at once that it will be a folly to revive the latter. They are out of date, and antiquated. To adopt them will be a step backward and not forward.

The present school system is atrocious, and there is no doubt that the ancient system was in certain respects (mark in certain respects only) much better. The system actually followed at the time of the introduction of British rule had lost the best features of the more ancient one. We are mighty glad that the system then prevalent was rejected in favour of the Western school system. The emasculation which has resulted from the latter, would have been greater and much worse, if the former had received the sanction of the State and been adopted.

The subject is so vast and complicated, that it is impossible to discuss it at any length here but one cannot make himself fully intelligible without making some more observations on the point.

The ancient system which emphasised the personal relationship of the *Guru* and the *Chela* was good in certain respects and harmful in others. The personal relationship supplied the human element which is now missing. This was a guarantee of greater attention being paid to the formation of habits which compose character. On the other hand it had a tendency of enslaving the pupils' mind. The aim of education should be to qualify

the educated to think and act for himself with a due sense of responsibility toward society. Did the *Gurukula* system achieve this? In my judgment, it could not. The very oath administered to the *Brahmachari* and the benediction administered by the *Guru*, if properly analysed, will show that the ideal was to reproduce the *Guru* in the person of the *Chela*. The aim of every parent and every teacher should be to enable their children and pupils, to be greater and better persons, than mere copies of themselves. I shall be glad to be corrected if I am mistaken in this belief. The discipline enforced was too strict; too mechanical and too empirical. The religion taught was too formal, rigid and narrow. A disproportionate amount of time was devoted to the memorizing of rules of grammar and texts. It seems that the relations between the teacher and pupil were possibly freer in the time of the *Upanishads* than in the period or the codes. The system inculcated in the codes is a system of iron and fire.

It was not peculiar to India. The Arabs, the Greeks, and the Latins also had similar systems.

The fact that in spite of these drawbacks, the Hindus, the Greeks, the Romans, the Arabs and the Catholic Christian institutions of medieval Europe produced so many eminent scholars, philosophers and jurists is in no way proof of their excellence. It only establishes the capacity of the human mind to transcend its environments and to rise above the limitations imposed on it by authority, be the authority that of the parent, the *Guru*, or the State.

The *Gurukula* academy at Hardwar has attempted to remove some of these defects, but I am not quite sure that the segregation insisted on in that institution, was ever so complete in the ancient times as it is represented to be. The name implies, that the pupil lived with his *Guru* as an adopted member of the latter's family. In every way he was treated as a child of the family. In that case, the number that each *Guru* could take must have been extremely limited. There must have been larger *Ashrams* and *Parishads* too, where a number of *Gurus* co-operated in teaching and training large numbers of pupils, but whether these ^{her} and *Parishads* insisted on the

pupils being so completely cut away from society in general is problematic. At any rate the pupils had daily opportunities to see and talk to women, when they went for *Bhiksha* (alms).

I am extremely doubtful if the system of education advocated in the Codes, was ever followed universally. I have reason to think, that it was mainly devised for the children of the Brahmins. However, be that as it may, I have no doubt that it is impossible to be re-introduced as a part of the general scheme of education in India of to-day. I am also positive that it is detrimental to the sort of character we want to develop, nay we must develop, in our boys and girls, if we are to keep pace with the rest of the world, in their march onward. Our boys and girls must not be brought up in hot-houses. They should be brought up in the midst of the society of which they are to be members. They should form habits and learn manners which will enable them to rise to every emergency. They should learn to rise above temptations and not shun them. The world is a "temptation." It is a place to enjoy, so long as by doing so, one does not injure oneself and others. So long as one is loyal to the society in which his lot has been cast and towards which he has social obligations, one commits no sin, by taking to the pleasures of life in a moderate degree.

Boys and girls must learn their social obligations, when in their teens. To segregate them at such a time is to deprive them of the greatest and the best opportunity of their lives. The idea of having schools and colleges and Universities in localities far away from the hustle of city life and from the temptations incidental to it, is an old idea which is being abandoned by the best educational thinkers of the world. The new idea is to let the boys and girls be surrounded by the conditions of life in which they have to move and which they have to meet in after life. To let boys and girls grow in isolation, ignorant of the conditions of actual life, innocent of the social amenities of life, with no experience of the sudden demands and emergencies of group life is to deprive them of the most valuable element in their education. The aim of education is to fit men and women for the battle of life. We do not want to convert them into archerites and ascetics.

The boys and girls of to-day are the citizens of to-morrow. From among them must come our statesmen, administrators, generals, inventors, captains of industry and manufacturers, as much as, our philosophers and thinkers and teachers. Even sound thinking to be useful for practical purposes of life must be based on a full knowledge of the different phases of social life. All life is social. We are beginning to realize, that the best social thinkers of the world have been those who were brought up in the full blaze of the social conditions of the time and who had personal experience of how men in general lived and how they acted and reacted on each other.

In my judgment, it is not a sound idea to make an anchorite of a boy or a girl. Boys and girls should have every opportunity of seeing life, moving in life, experiencing the shocks and reactions of life. Boys brought up in isolation and girls brought up in *Purdah* make very poor men and women. Often they have been seen succumbing to the first temptation they came across. They wreck their lives from want of experience and want of nerve. I am speaking from actual experience. Not that men educated in ordinary schools and colleges are always better, but that at least the former have not shown any superiority in handling situations which arise of being thrown into social conditions to which they were strangers before. My experience justifies me in saying that the former go to greater extremes in laxity of character and looseness of behaviour than the former. They lack the power of adjustment. It is my desire to impress upon my countrymen with all the earnestness I possess and with all the emphasis I can lay, the absolute desirability of giving up the antiquated idea of bringing up boys and girls in an atmosphere of isolation. Boys and girls should be treated more as comrades rather than dependents and inferiors and slaves. We should extend to them our fullest confidence and encourage absolute frankness in them. Instead of keeping the sexes away we should bring them together. In my judgment greater harm is done by keeping them apart than by bringing them together. I know I am treading on delicate ground. Prejudice and sentiment accumulated by centuries of restricted life is all against it. The

thing will come by degrees. But come it must and come it will.

It will be so much waste of energy not to profit by the experience of other peoples. Our ideas of morality and decency must undergo change. Our boys and girls must grow in an atmosphere of frankness, freedom and mutual confidence. Away with suspicion and distrust. It breeds hypocrisy, sycophancy and disease. The future teachers and Gurus of India must learn to set aside the tool of command and authority to which they have hitherto been accustomed. The boys and girls are not clay in their hands to be moulded into patterns of their choice. That was a stupid idea if ever it existed. They are living beings, products of nature, heredity and environments. They throw with the same impulses and desires and ideas as we do. These impulses and desires require some guidance. They cannot be regulated by mere authority, or mainly by authority without inflicting awful injury on their manhood and womanhood. We command them to do things, of the righteousness and value of which they have not been convinced. The result is a habit of slavish submission to authority. I recognize that we cannot perhaps eliminate the element of command altogether from the education and bringing up of boys and girls. They must, sometimes be protected from themselves. But the command should be the last step, taken with reluctance and out of a sense of unavoidableness which comes by having otherwise failed to arouse an intelligent understanding in the child.

Parents and teachers must learn to respect the child and to have a feeling of reverence for it. No Japanese ever strikes a child yet the Japanese children are models of reasonableness. The Japanese maintain an attitude of respect towards their children. They treat the children as their equals and always address them as such. They never criticize them. The use of the rod is absolutely unknown in Japanese homes. Harsh language towards children or an expression of anger is very rare. The Japanese code of life is very strict in certain respects. It exacts strict obedience and strict discipline from every citizen. Japanese soldiers have earned a name for their high sense of duty and for strict discipline but that comes more out of a traditional love for the country and

its sovereign, than by enforcing authority and penalties in childhood. In short the system that stresses the authority of the teacher or the parent, which is based on a suspicion of human nature and human tendencies, which is distrustful of childhood and youth, which is openly out for control and discipline and subordination, which favours empirical methods of pedagogy, which has no respect for the instincts of the boy and the girl is not an ideal system to produce self-reliant, aggressive (in order to be progressive), men and women that new India wants. I come to the conclusion, therefore, that any widespread revival of the ancient or medieval systems of education is unthinkable. It will take us centuries backward and I am certain that the country will not adopt it. Mrs. Besant of course does not advocate it. But I know that there are groups of people in India who are in love with that system. They are sometimes carried away by a partial praise of certain features of their system, by eminent foreigners and educationists. A system may be "fasci-

inating", without being sound. It may be highly interesting as an experiment. It may be good for Governmental purposes, yet harmful from the citizens' point of view. It may be good for producing certain types but harmful if adopted for the nation as a whole. I would beg of my countrymen not to be carried off their feet, by the praises which the foreigner, sometimes, bestows on our literature and on our system. Some of them do so, out of sheer disgust with their own systems of life. They do not wait to make proper comparisons, but rush from one extreme to another; others only mean to pay a generous compliment. Some perhaps mean mischief. We should not be affected either by their praise or by their condemnation. We are in a critical period of our life, and it behoves us to weigh things in their true perspective, before laying down policies and making plans for constructive upbuilding of the nation. What is required is a sober study of the situation before making plans.

LALPAT RAI.

THE REAL POEMS

Surely all this world is a fair garden,
With poems springing up as plentiful
As leaves in summer, or stars in winter time.
For when I overhear poor people's tales,
Or children chatting, or schoolboys' eager shouts,
It seems to me they who forget themselves
Talk poetry.

But if I told them so
They would but laugh; for poetry, they think,
Is a great mystery.

And so it is,
And good it is that all the world is full
Of this mysterious beauty life creates
Unknowingly, as flowers that bloom and pass
Beyond their prime ungathered; good it is
That common things should be this mystery.

E. E. SPEIGHT.

THE EYES OF THE BLIND

YESTERDAY, at Shantiniketan Asram, we received a welcome visit from four young Russian pilgrims, who had come to see the poet and the poet's school. Three of these had, quite recently, successfully attempted a long journey from Petrograd and Moscow, through Persia and Mesopotamia, to the Persian Gulf. They had met with great hardships on the way and described the state of Russia as very bad indeed, but not so full of horrors as the papers made out. One of these three had been secretary to Mr Kerensky, who, for a time, had been the leader of the Russian Revolution. His wife was accompanying him, — a pale silent lady, who seemed to have passed through great suffering. But the one who interested us most of all was a blind Russian, whom the three travellers had met in Calcutta, on his way from Burma. He was quite young, with a childlike face and wavy, flowing, flaxen hair. From his infancy he had been quite blind, but he seemed blithe and gay, the brightest of all the company. As we walked round, he showed a wonderful instinct for free movement and he rarely stumbled. He was most keenly interested in everything that I described, and, in the evening, he listened most eagerly of all to the poet, when the latter talked with all his guests, and he asked the most intelligent questions. On leaving Bolpur, late in the night the blind Russian put into my hand at the station, a paper which he had written and asked me to make what use of it I chose. As it appeared to me to be a document of great human interest, I felt certain that I might offer it with acceptance to the readers of the "Modern Review." The paper runs as follows:

writers have attempted to answer them. I knew a good worker for the Blind in Russia. She gave all her life to the work and with bitter feeling she wrote in an article on the 'Psychology of the Blind,' that they are more selfish and more cruel than the sighted.

"Some writers speak of the immorality of the blind as one of their characteristic features. In western Europe complaints are always made of the weakness and helplessness of the blind. In order to eradicate this evil swimming, cycling, skating, rowing and other sports are taught at many schools in the West. All this of course, should make the blind physically strong but very often the workers go much further. In the compounds of many schools, the paths are arranged in such a way, that the blind may easily know where there is a turning, where there are steps where there is an entrance and so on. A sighted person is sent with the blind when travelling on a railway or by tramcar. In a new and well known home for blind soldiers in London, it appears that mat paths are arranged, even indoors, so that the blind may walk freely from one room to another. I should not wonder, if, after living in such a well accommodated dwelling, the blind were unable to walk alone not only in the streets of London, but even in their own compound.

'But if the blind of Western Europe are helpless, we cannot say the same of those in the East. The Japanese blind person, from his childhood, has to earn his living by *massage*. He goes about here and there among the people in the pursuit of his profession. The greater number of the blind are obliged to attend ordinary schools, in the same way as sighted students do, and they walk in the streets of Tokyo as freely as in their compounds.

"If the Russian blind are selfish and immoral, we cannot say the same of the English blind. Moreover, if it is true to say that the blind of Europe look dull, it would be quite wrong to say this of the

"What does blindness mean to a blind man? In what way does it affect his physical faculties? These questions are always before society, and many while

blind to the East. There are writers who think that blindness, by putting a man in a peculiar position towards the outside world, strengthens his psychical faculties, develops the senses more intensely, and enables him to create for himself new and original worlds full of beauty and splendor. I remember a story of a blind man in Switzerland. From his childhood, he used to hear about the beauties of the Alps, their fantastic valleys full of wonderful flowers and glorious lakes surrounded by majestic rocks. He enjoyed all these things as much as the sighted did. At length one of his friends, a doctor, restored his sight by means of an operation. The first thing which the man wanted to see was the mountains and their beautiful scenery, but, as he gazed he grew sad and finally, throwing himself on the ground, he cried out 'Give me back my mountains! Give me back my valleys!' The reality was nothing so comparable with that which he had imagined.

'What, then, does blindness actually mean to the blind man himself? Does it mean that we are put in a dark place, where we know nothing of the things around us, or which way to go? Or does it mean that we are placed in a dream land, without any limits to our imagination? Does blindness by isolating a man from the outside world, make him somewhat like a idiot, as is commonly supposed? Or, on the contrary, does blindness, by the very fact that it separates him from his surroundings thereby strengthen the inner side of the blind man's nature? And does his imagination consequently attain a miraculous power and flexibility?

"I do not consider that personally I have enough experience to answer these questions. But whatever blindness may mean to the blind man, in whatever way it may affect his capabilities we must emphatically maintain that education, or instruction of some kind is more essential for the blind than for the sighted. This fact cannot be denied by any one, it is self-evident. But how many people fail to realize this! How many Governments fail to recognize the necessity of education for the blind! Is it not a pity and shame that this should be the case in our enlightened Twentieth Century?

"Now I shall speak a little about myself. I left Russia more than 3 years ago, in order to study a few subjects in

the East, one of these being the state of the blind in Asia. I stayed in Japan for two years, and then I went to Siam, with the intention of starting work for the blind there. I stayed in Siam for 6 months, but I was unable to do anything for the blind in that country, the chief reason perhaps being, that a richer and more energetic and capable man than myself was needed for this work. The Siamese Government, however, as well as the Christian missionaries, promised to think over the matter carefully, when they had more time.

"From Siam I came to Burma. The first thing which struck me, in the Moulmein Blind School, was the poverty of the students. There are thirty-three boys, of whom about two are orphans and about ten have only one parent. The remainder belong to the very poorest class, hence none of the boys receive any assistance whatever from their homes, but depend entirely upon the School for food and clothing. If they were even sighted children, they would have the right to ask society to help them. Nevertheless the whole work of the Blind School is carried on by a few noble persons, who are left to their own devices. Society is quite indifferent to their work. Society, it seems, forgets the blind. Even women, who take such a great interest in the blind of Europe, forget their existence here in Burma. Perhaps it is not the business of Society to enquire how many fatherless or motherless children there are in the School, or how many have nobody in the world to help them. But this attitude does not do credit to European Society in Burma and it is a great shame that the Burmese people themselves should leave their blind to the care of a few persons. If the Buddhist people have so confidence in the School let them take up the matter themselves. There are thousands of Pongyi schools all over the country supported by the people. Could not a few schools for the blind be arranged on the same lines as these? I mean that schools might be instituted, where the blind would be under the control of good sighted Pongyi teachers, who would instruct them in the Buddhist Scriptures, the method of treating various diseases, and other useful occupations. The Burmese people should supply them with food, clothing and other necessities of life,

in the same way that they do for sighted Pongyis. If this were done, there is no doubt that blind Pongyis would be as useful to Society as the sighted ones. There is a considerable number of blind Christian Preachers in the West, and I do not see any reason why the Buddhist people should not also have their blind Preachers. The first thing to be done is to accept the Braille system, so that the blind may be able to read and write for themselves.

"Another thing, which I would like to suggest, is that a Colony for the blind should be instituted. This could easily be done in Burma. My idea is that a piece of land should be set apart for the blind, and they should be taught to cultivate paddy fields, vegetable gardens, coconut trees, rubber trees, sugarcane and fruits of various kinds. They could also keep cattle and fowls. They could learn how to row, how to catch fish, how to make or repair boats and nets. They might learn how to preserve fruits, vegetables, fish. Blind girls should learn weaving, spinning, sewing and knitting, as well as cooking, washing clothes, rearing of domestic animals and other household duties. There is no doubt that such a Colony, under the control of sighted teachers, would flourish, if it were well managed. In a few years, it would gain the confidence of the Government and the sympathy and love of all people. Such a Colony would be a brilliant example also for the West. Every year millions of pounds are spent for the blind in Western countries and as a result the blind are helpless, they are continually asking for assistance. This helplessness is due not to the blind themselves, but to the blind leaders of the blind who hitherto have not realised their fatal mistake. But I will not speak of them here. In the Colony which I have suggested, the sciences and arts would also be taught to the blind, their bodily and spiritual hygiene would receive proper attention, and the blind man would become a useful citizen. Who knows but that he might take a great part in arousing the jungle people to rid themselves of their old prejudices and their enormous superstitions? Who will dare to say that the blind man may not become a leading light in the dark night of the forest, a blessed guiding star on the path of jungle people

leading them from the darkness of their ignorance to the true lights of civilisation?

"How much could be accomplished, and yet how little is actually done! And all this because Society is quite indifferent to the matter. But the less attention Society pays to the blind, the greater are the admiration and gratitude due to those who, in spite of being overburdened with other work, endeavour to promote their education. I hope that, in the future, more interest will be taken in the blind, and that before long not the blind of Burma only, but the blind of neighbouring countries such as the Malay States, Malaya, Archipelago, Siam and Annam, so that these will also enjoy the privilege of education and become useful to their fellow countrymen. I hope that the blind will no longer be regarded as people who are punished for their sins in a former existence or for the sins of their parents. I hope that the blind will be recognised as people by whom, as Christ said of a blindman, the 'works of God may be made manifest'."

With this quotation from St John's Gospel the paper ends. It is signed "V. FROSHENKO Russian blind man."

The opinions of the young Russian, when I read them, gave me much to think about. The time has surely come for a united Indian effort,—claiming in the name of common humanity the sympathy and support of all sects and creeds,—which may help to work out, on the best and soundest lines, the problem of giving eyes to the blind. Each province, through its own education department and through voluntary effort, (liberally aided by the authorities) should try to cover the whole ground of blind child life. Mr V. Froshenko's words should be carefully remembered,—*"We must emphatically maintain that education is more essential for the blind man than for the sighted."*

Speaking generally the faculty of touch, in India and the Far East, is so much more delicate than in Europe, that it may be possible to do without many of the aids and props which European Institutes for

the Blind have used, at the cost (as Mr Eroshenko asserts) of making the blind more blind than before. It will be quite feasible to avoid many of the mistakes of the training of the past.

It should be possible also in time, to do away with that disgraceful exploitation of blind people which now goes on in many cities—the blind being used, as mere tools by the sighted in order to excite the pity of the charitable and bring money to themselves. This is frequently done by parents who have blind children and it is to be feared that sometimes the children's blindness remains unhealed because of the cupidity of the parents.

The cases of individual blind beggars are well known to the police, and if a sympathetic inspecting officer were appointed, who would work in conjunction with a voluntary citizen's Committee, it might be possible to rescue at an early age many blind boys and girls from a life of sordid beggary.

I do not wish, however, in this brief article, to do more than ventilate the whole subject for the careful consideration of the *Modern Review* readers, in the light of the statements made by my Russian blind friend, Mr V. Eroshenko.

Shantimuketan C. F. ANDREWS

AUGUSTE BARTH

By PROFESSOR A. FOUCHER, TRANSLATED WITH THE AUTHOR'S PERMISSION
BY PANDIT RAM CHANDRA KAK, B.A., M.R.A.S.

FEW lives have been more calm and more simple than that of the solitary scholar, who spending his last years without any company except that of his old housekeeper, conjured for us the living counterpart of the pensive 'Philosopher' of Rembrandt. Perhaps even after having passed his whole life bending over his books he would never have written any—our opinion is based on the authority of his own statement—if an unique but terrible catastrophe had not overthrown with a single stroke all the habits of his life. We refer to the Franco-German War of 1870-1871 which, in tearing him away from the joy of living in his native town of Strasbourg, revealed to him his gifts of a critic and an author and ended by making him the universal and uncontested arbiter of Indian studies. Without this profound convulsion his intellect and knowledge would at the best, have been of use to himself and to those friends of his infancy, whom he met at the 'brasserie' and whom his deafness did not

dissuade from conversation with him. How many talents, which would have left their mark on the world, has our old provincial life of France through an over-wise absence of ambition combined with the nonchalance of easy circumstances kept entirely within its own confines!

We have been allowed to have a look in the family register which was begun by his father and which he continued carefully keeping up to date, noting down, with the invitation cards attached, the births, marriages and deaths, which he happened to hear of, in all the branches of his family. There we read that Marie Etienne Auguste Barth was born at Strasbourg on the 22nd of March 1834, in the Bader Cafe house, at the corner of the Rue de l'Ancre, that he was the son of Etienne Barth and of Marie Wilhelmine Stoeber, that he was baptised on the 15th June in the church of St. Thomas by the pastor Brunwald and that his godfather was Jean Michel Stoeber, his maternal grandfather, and his godmother was Anne Marie Strohl, his maternal grandmother. His father was a Catholic and his mother a Protestant brought up in the religion of his mother, he always evinced the highest respect for that of his

Extra du Bulletin de la Commission Archéologique des Indo-Chinois 1914-1916

* A brasserie is a public beerhouse where people meet, drink beer and spend their time in chitchat.

father. No one was ever more exempt from intolerance and more hostile to all forms of persecution. It was on the occasion of a public letter, which came straight from his conscience and in which, while declaring himself a Protestant, he raised his voice against the shutting up of some convents in Brittany that we learnt to which Christian persuasion he belonged, and it was only after his death that an old Alsatian friend of his revealed to us the fact that in politics he adhered to the most traditional ideas. We, certainly, knew that in conversation he was not always tender to the Republican Government of France, but such was the innate liberalism of this faithful reader of the *Debats* that we have been able to visit him constantly during nearly thirty years without his having ever felt in our long conversations the need of making or asking for a profession of political faith.

Of his education, which he obtained first at the Protestant Gymnasium and then at the "*Faculté des Lettres*" of Strasbourg we find only the results recorded: Bachelor of Arts, the 15th July 1852; Bachelor of Sciences, the 3rd August 1853; Master of Arts, the 29th July 1856 and Professor of Logic and Rhetoric in the College at Bonxwiller, the 13th May 1857. As such he obtained leave of absence for the college term of 1861-62, which he passed at Paris, *rue Jacob*, No. 25. This leave he extended for the term of 1862-63 and again, passed three months there, for preparing his theses for Litt. D. He was admitted a member of the Asiatic Society of Paris on the 12th December 1862.

Two years later, 'A Study on the Bhagavadgita', very accurate in matter and highly finished in style, was published by the *Revue Germanique et Française* (1864) and revealed that he had definitely found his way 'towards this light which sprang up from a remote corner of Asia to throw light on the origins of the West.' What was it that led his steps to Sanskrit and made the man who eventually became the patriarch of Indian studies? This question, which was throbbing on our lips for a long time was so interesting that we could not but take the liberty, one day of putting it to him. Doubtless our readers will be glad to hear the notes which we jotted down, the same day on the conclusion of this improvised 'interview'.

'What did I do during the time that elapsed between the conclusion of my studies in 1856 and the commencement of my collaboration with the *Revue Critique* in 1872? Nothing more simple to explain. You must only keep in mind that I have the temperament of a poodle always doric and ready to follow him who cares to lead me. After obtaining my degree I had not the least inclination to devote myself to teaching, but I allowed myself to be wheedled by the then rector M. Delavossé, my old professor of Latin Literature at the Faculty, and found myself suddenly posted to the college of Bonxwiller where I stayed five years. I was in charge of the two upper classes of logic and rhetoric (and in the first year I had an extra class also the one next below). I taught a little of everything: philosophy, Greek, Latin Literature etc., but as a compensation for this I was excused from all turlurage over the classes which was not the case with my colleagues. These latter were not very interested. They did their duty honestly and knew their textbooks well but were not possessed of any general culture. All their leisure hours were spent at card parties or in playing billiards. This could not suit me. I deemed it necessary to take up a study to which I could devote my leisure time. I was for a moment thinking of taking up Mathematics but on second thoughts I decided for Sanskrit. I imply not officiously because it was new. Of course there could be no question of earning out a career for myself in it and as for the Academy I no more thought of setting my foot in it than of visiting the North Pole. Moreover it was the last thing that would ever have occurred to me and when Breal proposed it for me I was thunderstruck.

Thus I took up Sanskrit. It was then more difficult to learn than it is now. In the absence of text books now available the only course left was to struggle on as best as one might, especially in a hole like Bonxwiller. In the Faculty of Strasbourg there was a good man M. Bergmann by name who was a professor of foreign literature and who knew a little Sanskrit but it was of no use to him except in enabling him to indulge in etymological speculations not much help could be expected from him. However if this study then presented difficulties which have today disappeared it possessed on the other hand an attraction which it has since lost. It was limited in scope and one could hope to grasp it in its entirety. Now a days it has become much too vast. It is an ocean which the stomach of Agastya alone could swallow.

Leaves laborious and pleasant. How resolutely I struggled on! Moreover the ease with me was not so bad then as it is now. I found time for every thing. First of all I had to take the classes (twenty-five to thirty pupils in all) and to correct their copies. Then three times a week I met a student of theology who had been sent to the college as an usher and who really possessed some knowledge. He however did not turn out well. We read together all Aristophanes and three-fourths of Plato. Furthermore one even again in the week and not without the complement of a big pot of beer the turn came of a teacher in the High School my Friend Z., whom I coached for the first time and who has since become a professor in France. Together we studied English and read the whole of Shakespeare up to the sonnets. And a book read a book learnt no taking down of any notes. In addition to this we made long excursions on Thursdays and Sundays which enabled us to go into the bargain to have the pleasure of making drawings.

We may refer in this connection to the unobtrusive personal remembrance which crept into the pathetic notice, dedicated in 1873, by Auguste Barth to the memory of Eugene Easfelder, one of his fellow students, who was two years his junior. The latter was a born artist but his family insisted on making him a clergyman. In 1870 he became the Vicar of Bouxwiller, where he found his friend already established. He had not renounced his art, which was to become his sole occupation, and he spent his leisure time in executing drawings direct from Alsatian life. "These rural studies," wrote Auguste Barth, "led him naturally to landscape drawing which, as a true townsman, he had, hitherto, totally neglected. I have had the good fortune to be his humble companion in this new apprenticeship. Many Thursdays were thus employed in trudging on hill and plain, from Liechtenberg to Saverne. We left early in the morning and did not return till late in the night, I, bringing back with me, some frightful daubs and he, some beautiful and judicious studies." The writer is, indeed, too modest, he was far from being without artistic talent and till lately, as long as his sight permitted him, he continued in his holidays to paint landscapes.

Presumably his growing deafness induced him to leave the University and take this "renewable" leave which was to be extended indefinitely. Better equipped, thanks to the libraries, first at Paris, and then again at Strasbourg, which he had no idea of ever leaving, he continued the study of Sanskrit for the mere pleasure of mastering it, without any idea of making a show before the public of what he had learnt. The article in the *Revue Germanique*, which we have just mentioned, had been 'drawn out of him,' he said, by a family friend. These studious leisure hours mixed with intervals spent at the 'brasserie' and varied by some journeys, glided away peaceably in the midst of his relatives. His father, formerly a tradesman's clerk became in 1897 cashier of the 'Canal du Rhone au Rhin' and, submitting his resignation in 1867 at the age of sixty, finally retired from business. No thing seemed likely to disturb the easy life of a family so well united. But the time of the great ordeals approached. On the 3rd

November 1869 his mother's long illness culminated in her death. The following year took place the war and the year after, the exile.

The siege of Strasbourg quite naturally found him there, in his native town, for the defence of which he readily took up arms. He once told us, how on the days the besieged made a sortie, his father waited for him on the threshold of his door to have a glimpse of him from a longer distance, in case he ever came back. In an encounter of patrols on one of the isles of the Rhine, he killed in single combat a Pomeranian fusilier, who had first fired at him and who, he wrote to us on the 7th of August 1914, "had never weighed heavily upon his conscience." As early as the month of August 1871, Etienne Barth left Strasbourg with his two sons and all three, unwilling to submit to the German occupation, went to settle together at Geneva. Their father had two old friends there, but the elder son found time hang somewhat heavily upon his hands. There was then at Geneva a reading room, which still exists and where we know his memory is faithfully preserved up to the present day. It was there that he had the occasion of reading the *Revue Critique*, founded four years before the war. One day when he had just completed the perusal of *Bhramini vilasa* of A. Bergaue, it occurred to him to note down his thoughts on it and the account, which was the outcome of this idea, he forwarded to the *Revue* which published it on the 4th May 1872. Such was the commencement of a collaboration which was to be so fruitful in its results. Geneva was, however, nothing but a stage on the route to Paris, but here, it is much better to let Auguste Barth speak for himself.

"Meanwhile my father, my brother and myself went on a journey to England and returned via Paris. On leaving the P. L. M. station my father suddenly addressed me saying, 'After all we might as well be here as at Geneva.' Always obedient I assented and thought no more of it. But my father, kept on nursing his idea. And so on the death of one of his old Geneva friends and soon after, of my brother Edmond we came to settle ourselves in Paris. For a long time we searched for a lodging. My father insisted on having a house not more than two stories high. He was still very vigorous and active and I believed it was only a hobby as old people occasionally have. We used to run up the ascent of Mt. Saleve and at Geneva we lived in the top storey of a big house which commanded a superb view. But my father had taken a violent dislike for the staircase. I understand his reasons better now. We eventually installed ourselves at No. 6 of the

me du vieux-Colombier and I would still be there if the books which kept on accumulating had not chased me away.

It was at the commencement of July 1877 that they were, thus, fixed up at Paris. Against this date, we read in his family register, "My father lived there two and a half years longer, showing signs of weakness but without any of those infirmities which usually accompany old age. In the rigorous winter of 1879, he contracted pleuresy which, much to my sorrow, carried him off, after two weeks of illness, on Tuesday, the 20th January 1880, at half past six in the morning, two days before his 73rd birthday." Auguste Barth was left alone, he continued to live so to the end, more perhaps through the will of destiny than by any desire of his own "Vae soli!" (woe to loneliness) he exclaimed again and again in his old age.

The rest of his life story should properly speaking be sought for in his bibliography. It is above all illustrated by the contributions which he kept on furnishing to the *Revue Critique*, *Melusine*, the *Revue de l'Histoire des Religions* and later to the *Journal des Savants*, the *Comptes rendus de l'Académie des Inscriptions et Belles lettres*, the *Bulletin de l'Ecole Française d'Extrême Orient*. These numerous articles bore witness to such an extent of impartiality, erudition and insight as to speedily establish his paramount authority. They are, moreover, written in a language which was as vigorous as it was sober. But, when we have said that their style is excellent and their list considerable, we find we have nothing else to add. He who had read and criticised many books did not properly speaking, write a single one. Even his *Religions de l'Inde* was no more than an article in an encyclopædia and his *Inscriptions Sanscrites du Cambodge* only a collection of essays. The circumstance is curious, and it is perhaps still more curious to hear him argue on his own case. The funeral panegyric of the dead often affords a pretext for the living to examine their own conscience or even to plead for their own shortcomings. If we refer to the obituary notice that Auguste Barth dedicated to the memory of Gustave Garrez (*Revue Critique*, the 28th January 1889), we cannot but observe that he has there replied beforehand to the reproach which he knew very well

would be levelled at him with equal force. Immediately after giving the list of the few works published by his friend, either with his signature or anonymously, he at once adds, not without a suggestion of self-examination—"All these papers, as is quite evident, have been written as reviews of the works of others. Several are of large dimensions almost as big as memoirs, some of them are papers that Garrez alone, in all Europe was, perhaps, capable of writing, all of them are replete with the justest and the freshest views exhibiting the most profound knowledge without any show of pedantry. And, how, one feels that all this is drawn out of full wells, and that on each point the author has done no more than pushed forward the heads of the columns, which he could, in case of need, support with large reserves! All the same, they were nothing but single articles, only modest reviews. Abroad, however, there was no mistake about their worth. From the very beginning, Garrez was given a place in the front rank, amongst the masters, and his authority was in several matters largely recognised. But things did not appear quite in the same light amongst us, for we feel much more than we think, a superstitious awe for a book, especially if it is a big one, as if one could not be profound, original and useful except in a volume and under a special cover. We must, here, confess that Garrez was not appreciated, amongst us, at his high value and that only by the masses who are out of the consideration in such a matter, but even by the learned public.

"He was not appreciated and, plainly speaking, he was not even recognised except by his friends and a small number of specialists, particularly the faithful adherents of our *Société Asiatique* to which he was for a long time so devotedly attached. There, at least, justice was always rendered to him thoroughly and well."

Death, more merciful to Auguste Barth, stayed its hand until his fame emerged from the small circle of the initiates; but the universal reputation that he enjoyed, he never owed, to use his own expression, to anything but to the "simple articles," when it entirely rested with him to yield to the pressing entreaties of the editors who were only too eager to publish any book from his pen. But to him, as he speaks of Garrez, truth alone was of prime

importance and not the advertisement of the fact that he was the first to discover it. As for writing a book simply to prove that he was capable of doing so, it was the very last idea that would ever have entered his head.

Here, we must specially refer to his magisterial *Histoire des Religions de l'Inde* written for the *Encyclopédie des Sciences Religieuses* (1879) and continued by his famous *Bulletins des Religions de l'Inde* (1880-1902) which threw such a flood of light on the problems connected with the religions of ancient India. He also took a considerable part in the foundation of the Sanskrit Epigraphy of Indo-China. To him we owe the first fasciculus of the *Inscriptions Sanscrites de Campa et du Cambodge* (1885) and it was, again, he who after the death by accident, of A. Bergaigne assured, with the assistance of Messrs. Émile Senart and Sylvain Lévi the publication of the *Inscriptions Sanscrites de Campa et du Cambodge* (1893). He took upon himself the task of deciphering the Sanskrit and Pali inscriptions collected in Siam by Lucien Fourneron (*Le Siam ancien* t. I, 1895) and to complete the second volume left unfinished of the same work (1908). When the archaeological commission of Indo-China undertook its first great publication, that of the photographs brought back from the Bayon d'Angkor Thom by the mission of H. Dufour and Ch. Carpeaux, it was again, he who was entrusted with its direction. Finally he hailed with joy the establishment in 1898 by M. P. Doumer of l'Ecole Française d'Extrême Orient. Not content to collaborate with Messrs. Bréal and Senart in drawing up the chart of its foundation, he traced, in a letter to its first director M. L. Finot, a programme of work which was at the same time both ideal and practical. For, of all of qualities of his intellect that which perhaps is the most astounding, is the extraordinary penetration with which this sedentary scholar could imagine at a distance and without having actually seen them the minutest details of the Asiatic life. On this point, the testimony of all competent persons is unanimous. "One day," writes M. P. Oltramare, "in a conversation which I had with Mr. Aurel Stein the illustrious traveller told me that, in his opinion, no one had the right to speak of things Indian

who had never set his foot in India. I thought of invalidating this judgment by citing the example of Barth 'M. Barth,' he rejoined, 'but this is just the exception which confirms the rule.'"

Meanwhile the titles and honours which he never courted, came to seek Auguste Barth in his studious retreat. Member of the *Société Asiatique* since 1862, of the *Société de Linguistique* since 1873 he was successively nominated and elected honorary member of the Genootschap van Kunsten en Wetenschappen of Batavia, on the 8th June 1886, titular member of l'Académie des Inscriptions et Belles Lettres on the 3rd February 1893, Grand Officer of the Royal Order of the Cambodge on the 10th March 1894, honorary member of the Royal Asiatic Society of London on the 7th May 1895, member of the committee of the *Journal des Savants* on the 19th December 1895, Chevalier of the Legion of Honour on the 31st December 1895, foreign member of the Koninklijk Instituut voor de Taal, Land, en Volken Kunde van Nederlandsch Indie associate member of l'Académie Royale des Sciences of Amsterdam (section of literature and historical sciences) on the 13th April 1896, honorary member of the American Oriental Society on the 14th August 1898, Commander of the Order of the Dragon of Annam, on the 10th February 1899, corresponding member of the Imperial Academy of Sciences of Petrograd on the 29th December 1902, member of the *Commission archéologique de l'Inde-Chine* on the 18th January 1908, doctor *honoris causa* of the University of Louvain on the 10th May 1909. When his eightieth birthday drew near, his friends could not think of a better way of serving at once and the same time, the well merited renown of the scholar as well as the interests of science except by bringing together in one comprehensive publication his works which were scattered about in many reviews. At their instance, he consented to draw up the list of his works himself, but on the condition of making drastic suppressions. In spite of these dreadful loppings off the works of Auguste Barth do not fill less than five volumes in octavo. In the course of a very

* *Quarante ans d'indianisme. Œuvres d'Auguste Barth recueillies à l'occasion de son quatre-vingt-euxième anniversaire.* Paris E. Leroux 1914. The first four

simple and very touching ceremony the first and second volumes containing the reprint of the *Religions de l'Inde* and the *Bulletins de Religions de l'Inde* were in the name of the subscribers presented to him at his house by M. B. Snart on the 22nd March 1914.

In a noble and affecting speech his "old comrade" brought to the scholar and to the man the tribute of admiration of his conferees throughout the world and gently pointed out how the chronological order of this collection, while thorough, was the best picture of the scientific activity of its author, retraced the whole history of Indianism during nearly half a century. Very much touched Auguste Barth replied with his usual bonhomie and modesty, standing on the very spot where two years later, the last prayers were to be pronounced before his coffin.

It is there, in his spacious working room on the first storey of No 10 rue Garanciere where he received visitors from all quarters of the world that our imaginations continue to conjure up the broad shouldered grand old man wearing the moustache and beard on the chin after the fashion of the second Empire who was always ready, with great good humour to allow himself to be disturbed from his constant reading. It was also from there that he maintained a considerable correspondence with his numerous friends and with the greater number of his conferees in Indianism. It is devoutly to be wished that this correspondence were collected and some extracts at least, of it published, for he wrote his private letters with the same alert pen that he wrote his articles with and we find him there as in his familiar conversations always full of inspiration and competency handling every subject with out a shadow of pedantry but with a incisive reasoning power which is the heritage of the best traditions of French intellect. Each summer regularly, he passed his vacations in the little port of Audierne the only shelter in the whole expanse of the wild sandy shores between

the rocks of Penmarc'h and the granite cliffs to the Raz de Sein, which is accessible to boats. He always occupied the same little fisherman's cottage, at the end of the jetty not far from the light house. He wore a sailor's cap and passed the greater part of his sojourn there, on the beach lounge, reading, painting and bathing. He was in his youth an excellent swimmer and remained so in his old age. Side by side with the entries regarding his University degrees we have found noted carefully, in his own handwriting, that he had been awarded a medal by the Humanae Society on the 20th December 1855 and again a diploma on the 7th May 1876. And he himself has shown us the distant buoy in the roads of Audierne which was the ordinary goal he aimed to reach each time he took his bath. Of these swimming excursions he—always a methodical man—carefully noted the number in pencil, year after year on the walls of his cabin. The country people, comparatively ignorant, could not easily guess what 'the old hermit of the jetty' as he was pleased to call himself might be by profession. As he had been decorated on the centenary of the French Academy they wrongly supposed him to have retired from some mysterious office in the navy. But their simple souls were not mistaken in their estimate of the kindness of his heart and the beauty of his character and he was as universally loved and respected amongst the fishermen of the Breton Coast as amongst his colleagues of the Palais Mazarin.

Meanwhile the years passed and little by little dug many gaps around him. He saw disappear, one after another his friends of infancy. When the last companion of his youth had passed away he sighed to think that he was left alone to recollect how joyous and gay some sixty or sixty-five years earlier, had been such and such a particular round of marbles or of top this or that swimming party adrift on the waters of the Rhine. In vain his eyes searched around him for some one with whom to rake up these old memories. 'People often speak', he said, 'of the egotism of old age, but is not the major part of this egotism due to loneliness?' The younger generations of Indianists intimidated by his prestige and perhaps kept at an arm's length by his extreme deafness did not know him well or knew him scarcely at all. After Michel Bral who

volumes are out. The fifth contains, after the index a complete bibliography which will serve at the same time as the general table of contents to all the five volumes. The first volume has as a frontispiece a portrait of the author which is worth seeing and as preface a letter of Michel Bral and a speech of M. Snart which are worth reading.

was two years older than him and who died a few months earlier and after Messrs. Senart and Sylvain Lévi, we have been nearly the last—Finot for whom he had a special predilection and ourselves—to profit by his intellectual intercourse. In his case, however, the mental powers were preserved intact to the last, though he whimsically complained of "having no more memory left than a rabbit and no more brain than a chicken." But already his hitherto excellent health was giving him cause for complaint and in 1905 it was at such a low ebb that on bidding him farewell before our departure for Indo-China, we did not expect to see him again. He appeared to recover, but—a sign of the changed times—his scientific output, hitherto so regularly plentiful, began henceforth to slacken until it definitely ceased in 1911.

His constitution, however, was so strong that he would, undoubtedly, have been preserved to us if the war—his second Franco-German war—had not broken out. It took him by surprise as it did us all though perhaps a little less than it did most of us. As early as July, he had, as usual, gone back to Audierne. When, on the 14th August, he came to know of the entry of our troops in Mulhouse he wrote to us: "What a momentous occurrence this! How quickly hearts must have beat in Alsace! The bones of my father must have stirred in his grave, and for myself, I never before regretted so much that I am not some 40 or 50 years younger than I might be over there, in the ranks with my knapsack on my back....." Let it not for an instant be supposed that he abandoned himself to a blind optimism: his critical sense is always wakeful and he immediately adds, "But to ensure that the moral effect may be lasting it is necessary that the operation also should be lasting. It should be a really strategic move, striking across the passes of the High-Vosges mountains, menacing the rear of the Germans in Lorraine and obstructing their communications with southern Germany. Otherwise, it would be only a repetition on a grander scale of the attack of Saarbrück in 1870." But if his intellect sees clearly, his heart is fluttering with excitement to the breaking point. "The immobilisation," he adds, "is being carried on without any fuss or ado. The parents weep and acquiesce when their sons leave them for the front;

but the latter prepare themselves joyously to face all dangers. When I see this or read of this, it makes my blood literally boil to feel that I am so useless and incapable even for mounting guard somewhere or serving in an ambulance which I could enter only as an invalid and not as an attendant. This thought makes my bones ache and perceptibly tells on my health." These outbursts of his were rare. Such was the reticent diffidence, of his feelings that, even on so exciting a day as this, he felt, in concluding his letter, the need of apologising, "Pardon me, my dear friend, for this long epistle. I have nobody here but you to whom I can unburden myself." After all these terrible sensations of the first months the trying prolongation of the war eventually exhausted the remnants of his strength. During the summer of 1915 he gave up for the first time in his life his cherished country holiday at Audierne. The disease he incessantly suffered from went on constantly increasing. He had already been obliged to have himself carried, several times before, to the private hospital of St. Jean-de-Dieu. It was there that he breathed his last on the 15th April 1916 at about five o'clock in the afternoon. Two days before he had requested us to make enquiries about the timetable of the trains to Brittany. His body rests in a vault in the cemetery of Pere-Lachaise till—in obedience to his will which we found written on the first leaf of his address book—it may be carried over to Strasbourg for final burial in the family sepulchre. May it be, as was his ardent desire, that it may repose there in French soil.

No one should seek in this notice anything but the truthful narrative of a witness who knew Auguste Barth well during the last thirty years of his life but who does not flatter himself that he knew all about him. This will be our excuse for being obliged to have mixed, up some personal reminiscences with the information which we have endeavoured to collect for the sake of the future historians of Indianism. As to some consideration of his role as a scientist and his moral portrait as a man, the question cannot be taken up here. The judgment of masters is not the business of pupils; and moreover, we lack at the present moment the breadth of margin and the distance of horizon which is necessary for making a just estimate and conveying a definite appre-

cation of the work as well as the work man. We loved him for his little faults, as for his great qualities for his occasional fits of obstinacy as for his habitual breadth of wisdom, for his causticity of wit as for his benevolence, for his carping criticisms of the Government as for his profound attachment to his country. Above all we admired, unreservedly, his marvellous lucidity of intellect which in all matters went straight to the core, his universal mastery of knowledge which was an inexhaustible fountainhead open to all other seekers his height of disinterestedness and impartiality where the independence of his modest fortune had placed him from the first and where the thorough honesty of his nature maintained him to the last. Such were the most marked features of his physiognomy so complex and so richly modelled these are also apparently those which the forgetful future will remember. But how many delightful traits and delicate tints,

how many details of light and shade are destined to be lost when the few memoirs wherein he still survives will have in their turn disappeared. M. Senart has admirably expressed it in his farewell address—gushing straight from his heart—which he delivered on behalf of the *Société Asiatique* in the meeting held on the 12th May 1916. There we can read, formulated by the voice of a peer, the judgment here missing.

For a long time doubtless in surveying this precious gallery of the scattered essays of Barth the new generation of workers will find something of that strengthening joy which we inhale in the serene atmosphere of a silence so vast and so precise so bold and so alert. But we alas who knew him and loved him we shall carry with us the greatest part of his secret. We alone shall have been able to measure how much the nobleness of an antique character the amplitude of an intellect equal to the accomplishment of all tasks the soundness of an incorruptible judgment the active and prompt sensibility of a heart of gold, combined with the quality of a scholar in achieving a figure truly rare. It has vanished and in vanishing has bequeathed to us a melancholy which both of us will console.

THE WEDDING DRESS

'Rangadidi!'

'What is it Ranu?'

'Don't you know that to-day is Sushy's birthday? So they are going to hold a fancy dress party at their place. I intend to go dressed as the goddess Lakshmi. But I have not got a red sari. So mother has sent me to you. She said that you had got lots of beautiful saris of Benares silk.'

'My dear, we are old-fashioned people, our things would not be to your taste, you are very modern and have taken to going to the Mem-Sahib's school.'

'There now Rangadidi, how can you talk to be sure! What if you are old-fashioned? Pray, is not Lakshmi even more old-fashioned than yourself? Now please do open your trunk and let me see what you have got.'

'I had to sit up at the nursery of my little granddaughter's manner. I unlocked my trunk and took out nearly twenty or twenty-five saris. Waves of red blue green and pink rolled along the

floor of my room, with glittering golden and silver flowers and leaves but none found favour with the critical little girl. As soon as I took out one she turned up her nose and exclaimed, 'This won't do Rangadidi. Lakshmi won't look right in it.'

I gave it up in despair and said, 'Then darling, I am afraid I shall not be able to suit you. You must try elsewhere.'

'My little darling stood there with a sulky expression on her pretty face and showed not the faintest sign of moving. Suddenly she exclaimed, 'But Rangadidi, what do you keep in that box of white stone, there by the side of the big iron safe? Something like gold is glittering between the fretwork.'

'That marble box! I had quite forgotten it. It must be about forty years since that day, when I first put my foot within the threshold of this room, dressed in the red silk of a bride with tinkling anklets on and anointed with sandal paste. That little box stood then

in that very place. Its colour was then like the fresh sea-foam, that crests the waves of the blue ocean: now it has taken on a yellowish tinge with the passage of time. I have gone on seeing it nearly every day of my life, but somehow it has escaped out of my memory.

I turned to Rann and said, "Rann, that was a fortunate reminder of years. You might get the very thing you wanted in this marble box. It contains my wedding dress. I put it there the day I first made my appearance in this house and I have not touched it ever since. So long as your aunt Kalyani was alive, she used to take it out frequently, shake and fold it and make no end of it. But after her death nobody paid any attention to it any more. I will take it out for you, if the worms have left anything."

The box was secured by a small old-fashioned brass lock. I picked out its key after a good search among my large bunch of keys. I was doubtful whether the lock would yield to this rusty little key, but my fears proved to be false. I pulled up the lid.

Ranu cried out aloud in her delight, "Oh what a beauty! Rangadi, I have never seen the like of you! What do you mean by neglecting such a fine thing? It is a mercy that the worms have spared it. I see only two or three small holes. But it is still quite wearable. But how is it, that the box smells so beautifully of camphor?"

"Your aunt Kalyani used to keep chains of camphor beads in it."

"But what kind of an ornament is this, Rangadi? It looks like a chain of golden jasmynes. Such a thing, too, you have left uncared for in this old box? You do neglect your things, I must say that. I have a good mind to run away with it, but I know mother would give me a good slap if I took away such a costly thing. Do you know, ever since I lost that ugly old brooch of mine, mother does not let me touch a single thing. So Lakshmi will have to be content with tinsel ornaments this evening. But I must hurry, else I should be late for the party."

My granddaughter danced off the room, with the red sari. I remained seated on the floor, in front of the open box. Somehow I felt a great disinclination to get up.

Do not scorn it because it is an old

woman's life history. I too was young once. And do you know, my beautiful lady readers, that I too had a time, when peoples' eyes clung only to me, even if I stood among a thousand pretty girls?

(2)

I was born in an ancient aristocratic family. Looked at from the outside, we wanted nothing. We had, unbounded wealth, a great ancestral house, retainers and servants innumerable. I was born after four brothers, so the usual want of notice and care, which a girl gets as her birth portion, never fell to my lot. For long time I enjoyed all the wealth of affection which an only baby among a family of grown ups had a right to expect. When my little nephews and nieces made their appearances, I assumed the role of aunt with due dignity and importance. My grandmother had named me Vidyut (Lightning). Many people give the name 'Lotus-eyed' to their blind children, but everybody with one accord declared that I had fully justified my name. You may be sure that I was quite conscious of the fact. I was as proud as anything of my brilliant complexion and beautiful face. My mother had a large mirror in her bedroom, and whenever I found her absent from her room, I went and stood before that mirror, admiring myself. I used to lean back my head and make the mass of my dark wavy hair touch the ground or dress it in as many fashions as I possibly could. Sometimes I held up my beautiful arms, white as alabaster and rounded as the stalk of a lotus to the golden morning light and gaze at them with eyes of wonder. From my very childhood I refused to put on any colours except red or dark blue—I was quite aware of the fact that these two colours enhanced the beauty of my fine complexion. My grandfather was alive then. He used to be greatly amused at my pride and say, "My dear, it will be a hard job to find out a suitable bridegroom for you, great beauty that you are. To my knowledge, there is only one person worthy of that honour, that being, my own humble self."

Though the scion of an old conservative family, my father cherished many modern theories and ideas. But as my grandfather was alive, he was unable to carry most of his theories into practice.

A great agitation was then going on in Bengal about the education of women. My father sided with the modern party, who stood in favour of it, but not daring to send any girls of his family to the new girls' school, he himself began to teach me and my two sisters-in-law. But the last mentioned young ladies favoured card playing and gossiping much more than they did their studies. They had to make a show of studying so as not to fail in proper respect to their father-in-law, but they could never keep to it for more than half an hour. There never was any want of excuses—either their babies began to cry or some household duty required their prompt attention. But I took to my studies from the beginning. I finished all the books my father had brought into the inner apartments, then began to make inroads at night upon my father's library which was situated in the outer apartments.

It was the custom of our family to marry the girls very early. My sisters-in-law too had been married in their childhood. But the old order changed in my case. As I was the only daughter of our house, neither my mother, nor my grandmother could live without me a single day. If anybody asked any questions about my age, they always gave me out to be three or four years younger than I really was and never failed to remark, "We give our girls in marriage early, not because we must but because we will. Nobody would dare to object if we did otherwise. We are a great Hindu family, many daughters of our house had remained unmarried their whole lives and nobody had anything to say."

So I was growing up, without any thought of my marriage. My grandmother sometimes reminded others that it was high time to think of my marriage, but she received but scant hearing. I used to hear that a suitable bridegroom was being sought for, but nobody seemed to be very energetic about it. As the people around us were mostly our tenants, they never said anything to our faces and if they said anything behind our backs, nobody brought it to our notice.

My eldest brother's marriage had taken place even before my birth, my second brother too had been married when I

was quite small. My third brother was considerably younger than the elder ones and now his marriage was about to be solemnised. My grandfather wished it to be a very grand affair, as he was doubtful whether he would live to see any other festive ceremony of the family.

The bride-elect was the daughter of a poor house, but as she was reported to be supremely beautiful, my grandfather consented to the match. After the bride had been formally seen and chosen, he came to me and said with a smile, "My dear, you think that your beauty stands unrivalled so you do not condescend even to look at this old fellow. As I am quite tired of your imperiousness, I am bringing home a greater beauty than even you."

I laughed at his words but somehow I felt a little uneasy in my mind. Was she really more beautiful? Well, let her come then I shall be able to judge.

The wedding itself was to be a very simple affair as the bride's father was a poor man. But the preparations that were being made for the reception of the bride in our house were meant to make up for all want of magnificence in the wedding. A great feast was to be given in our house then all the family together with an enormous number of friends, relations and guests, was to go out to a villa situated on the banks of the Ganges, and spend a festive week there. Ample provisions had been made for entertaining the guests with dance, music and theatrical performances.

The day of the home-coming of the bride arrived. The festal clamour in our house was great enough to be almost deafening. A band had struck up near the outer gate, and all the children had assembled there to listen to the music. My mother and my eldest sister-in-law were busy taking counsel together over the proper management of the various rites and ceremonies. Nobody seemed to have any time to spare and those who really did the least went about with the most anxious faces.

But what was I doing all this time? You would laugh if you knew. I was in my own room, taking out all the pretty saris I had and trying on every one of them to find out which suited me most. I was determined not to own defeat to another woman. At last I decided upon

a silk, whose colour was that of the clear autumnal sky and it was embroidered all over with golden stars. I let down my hair, which reached down to my necks and kept it from blowing over my face, with a chain of sapphires tied across my brow. I did not put on many jewels as I was quite confident that my beauty needed but few aids. It took me a long time to finish dressing. Then coming out of the room, I mingled with all the girls and young women assembled near the entrance to the inner apartments.

Suddenly the sound of loud music broke upon our ears. The procession must be quite near. What a deafening uproar! The huge procession came as slowly and stopped before the outer gate. The silver palanquin, which bore the newly wedded pair, entered the inner court. I pushed my way to the front of my companions, as I was determined to have a good look at the bride. My mother advanced to receive the bride. I still see her in my mental vision, as she then appeared. She looked like the veritable queen of Kailasa, Parvatee herself, with the child Lakshmi in her arms. The girl bride was indeed beautiful! Her face seemed to be moulded out of fresh churned butter, her eyes were those of a startled fawn.

I was gazing at the bride in open-mouthed wonder and had forgotten even to be envious. One of my numerous cousins, named Kamalini, had been standing by me. All of a sudden, she remarked aloud "Well, I admit that the bride's face is beautiful, but as to complexion, she cannot hold a candle to our Vidyat. How grandfather exaggerates!"

Why, so it was! I came back to myself with a jerk. However pretty the face of the bride might be, I stood far superior to her in brilliance of complexion and wealth of hair. I now joined in the festive ceremonies with a tranquil mind. As I bowed down to the new bride, she looked at me with her big eyes full of wonder.

The old people of that district still talk about the magnificence of my third brother's wedding. It was truly unsurpassed there. After the great feast in the ancestral house, we started for the riverside villa in great state. A number of bullock carts started with the luggage, for my brother and his friends elephants were procured, and last of all the ladies

came in their closed carriages. A crowd of servants brought up the rear.

It was already dark, when we reached our destination. We were unable to have any of the good outdoor walks, we had planned beforehand, as my mother insisted upon our having supper and retiring early. I and Kamalini shared one room, my sisters-in-law occupied the adjacent rooms.

Quite early in the next morning, I was suddenly roused by a good shake from my second sister-in-law. As I opened my eyes, she cried out, "Now denr, do get up. Have you come here to sleep and eat? I heard that the garden had been much added to, many new beds have been planted and many fountains and marble seats have been made. Let us go and have a look at them."

Kamalini, who was already sitting up in her bed, now put in, while rubbing her still sleep-laden eyes: "But do you intend to start in the night? Why not go during the day? The garden won't run away you know."

My sister-in-law gave me a good tug as she replied, "My dear madam, do you think the men would vacate the garden in the daytime for your good pleasure and go and sit out in the fields? Not if I know them. If you want to see the garden, you must come now, while they are still asleep."

Komalini gave way, and we got out for our walk. It was still chilly, so I wrapped myself in a green shawl and went out.

The garden was a very large one, and in no way resembled the small enclosure heavily loaded with flowering plants in earthen jars, which we used to call a garden in our town house. This garden extended far and wide and I felt a bit afraid at first when I stepped into it. A wealth of flower appeared on every side, the pearly dew drops of the early dawn still fresh upon them. As we passed under the avenue of trees, our hair and faces and mantles became profusely sprinkled as from the wet skirts of the wood nymphs, who had just left their baths.

We had not advanced far, when Kamalini suddenly threw herself down upon a bank of green grass by the side of a fountain of coloured water and said in a decided manner, "I cannot walk any more, you may go on, but I shall return

to the house from this place, after I have rested a bit."

Our pleadings were in vain, so we two left her and moved on.

A small hillock of jet black stones stood near by. It was covered all over with flowering creepers and shrubs, and a tiny stream of sparkling water had sprung out of its heart and was flowing down its side. It had formed into a little rivulet at the base of the hillock and had at last merged itself into a miniature lake, all aglow with a host of red lotuses.

We went and stood by the side of the hillock. My sister-in-law sat down upon a rustic bench which stood close by and said, "Kamlini was right after all. We should have gone back with her. My feet are aching all over and I am very tired. But look there sister, what glorious lotuses! Of all flowers, I think, they are the most beautiful."

I had run into the habit of expressing an opinion upon every earthly subject so I at once put in, "Whatever you may say sister, I think *jesamine* the most beautiful. The lotus is, of course, superior in outward beauty, but as to sweetness of smell it must give way to the *jesamine*."

"Oh indeed! so outward beauty is so much for the inward one? That is something new from you. Up to now you were the greatest advocate for outward beauty, but now it seems "

My sister-in-law left off in the middle of a sentence, and looking round at her I saw her veil her face with the end of her sari and rise from her seat as in a hurry. Astonished at her behaviour I turned my eyes to the spot whence the surprise seemed to have come. Oh dear, some one had been sitting on the other side of the hillock, now he had risen up at the sound of our voices.

As I was the daughter of the house, I was quite unaccustomed to veil myself, as my sister-in-law at once did. And to tell the truth, even if I had been, it would never have entered my mind then. The moment, which stands as the *One Moment* of my life, was not to be wasted in that manner.

So long the word beauty denoted to me but my own beauty, but now I looked at the beauty of another. What a wonderful face it was! To me it seemed to

be even more beautiful than the face of the Greek statue which stood in the garden. To you it would be surprising that an ordinary Bengalee youth can possess such beauty. But remember that it was the first time that I looked at a man with the eyes of a woman. The rosy colour of the maiden's own heart lends the man a beauty which no man ever really possessed. So long I had been the petted and spoiled child of a wealthy house, and the men I had looked upon were but my brothers, uncles and other relations. But now had come the first Young Unknown, and as I gazed at him my childhood seemed to drop from me and was lost for ever.

He looked at me with no less wonder than I suppose I did. I thought of it later on, but not then. It was but for a moment, that we looked at each other. An almost imperceptible pressure of the hand from my sister-in-law, made me recover myself and I turned away with a start. He too at the same moment vanished behind the dark deodar avenue. Just then the eastern sky heralded the approach of the sun with its rosy blush. There was also another sunrise, in the sky of my young life, and I returned home steeped in the glory of its wonderful effulgence.

Entering my room, I went and stood before the mirror, almost unconscious of what I was doing. Vague and indistinct thoughts kept rushing into my mind, but I was unable to put them into shape. Suddenly a voice cried from behind me, "My dear young lady, you need not study your appearance so anxiously. It was stunning enough for that poor fellow. He is sure to fall down in a swoon after he reaches his room."

With a start I drew back from the mirror. Was it really for that purpose, which my sister-in-law so clearly defined that I had been standing before it? I cannot wholly deny it.

The great rejoicings and festivities of our house were unable to claim my attention. I did not fail to notice that Kama-hni and my second sister-in-law were having a good laugh at my expense, but in spite of many efforts I was quite unable to compose myself and appear like every one else. It is certain that none except those two above-mentioned ladies had any attention to spare for my unusual

behaviour, but I continually dreaded exposure before everybody.

A great feast had been arranged for that evening. The friends of my newly married brother sat down to it with him, along a long corridor in front of the kitchen. The elders took themselves away, so that the mirth of the young people might be unrestrained. Suddenly they proposed that the new bride must serve some food to them, otherwise they would decline to touch anything. Were the family preceptor and priest alone to have that privilege and were the friends of the bridegroom of no importance whatever? My mother and grandmother laughed at their clamour and said, "Very well, let the new bride serve a bit. It is quite proper for a new bride to appear before menfolk."

The bride was brought in, she was glittering all over with jewels and silks. A large silver ladle was handed to her, which she at once dropped in her nervousness. She was all a-tremble. My mother became anxious and said, "It would never do to send her alone before so many people. She will drop down of sheer nervousness, somebody must go along with her."

But who was to go? All the daughters-in-law of the house drew back, veiling themselves copiously. Kamalini, on being requested, cried out in dismay, "Oh dear, I could not do that for anything!"

Nobody moved. The clamour among the guests became uproarious. My grandmother jestingly said to mother, "Why not send me along with the new bride? The two brides of Beogal may very well serve together."

My mother laughed and answered, "That would be the best arrangement, if it only could be done. But we are getting late." Suddenly her eyes fell upon me and she called to me, "Come here dear, you go with the bride. Take firm hold of her, do not let her fall down."

"And take firm hold of yourself too, dear, see that you do not fall down yourself!" whispered Kamalini from behind.

I had been feeling nervous, but I pulled myself together in anger at her sarcasm and went out with the bride. The young men were seated in a long row, talking and laughing aloud. A sudden silence fell upon them as we appeared. The new bride served with the silver ladle and

I moved along with her. My legs were trembling with nervousness, and my face seemed to be on fire. But yet, in the midst of that overwhelming sense of shyness, I could not help looking up once. Another person, too, just looked up at that very moment.

My mother signed to us to come back as soon as we had passed along the whole row once.

The joyous festive week went on, but it had very little attention from me. Kamalini and my sister-in-law went on making jokes for a day or two, then they forgot everything about it.

A great musical performance was held on the last day of the week. A famous band of professional singers had been engaged for that purpose. The ladies took their seats behind silken curtains, while the friends of my brother sat down in front of them, so as to keep a bit apart from the older folk.

The ladies went on feeding their babies and taking stock of one another's dresses and ornaments as they listened to the singing. I too did not pay undivided attention to the music, but neither to the small talk around me.

A great shout of approval went up as a song came to an end. My grandmother threw his own shawl on the singer and others followed suit with many rich gifts.

Such unexpected good luck made that man greedy. He turned round to the ladies in an expectant attitude with joined palms. My mother gave me two golden 'mobars' and requested me to throw it out to him. I tied the two coins in my silk handkerchief, so that they might not get lost in the crowd and putting out my hand from behind the curtains, I threw it out in the direction of the singer.

But as good or bad luck would have it, the handkerchief, instead of falling before the singer, fell down among that crowd of young men, who had been sitting in front of us. One of them picked it up, and untying the coins presented it to the singer. But somehow the handkerchief remained in his own hands. Need I tell you, who it was? People grieve over lost property, but the joy I felt at losing that handkerchief, still remains unportaled in my life. How long I had been gazing at that appropriator of other's

goods I cannot now tell but I came back to myself as the singing began again.

The party broke up the next day. The guests and relations departed to their homes and we too came back to our usual residence.

But one marriage seemed to have reminded the whole family about the urgency of another. Everybody became quite energetic all of a sudden to arrange a good match for me. Professional match makers went in and out all the day long. As I had arranged a match for myself I felt disgusted at their presence. I did not know anything about that secret bridegroom of mine who he was where he lived or what he did but somehow a conviction had sprung up in my heart that to him and to none but him would I be given in marriage. My knowledge amounted to this alone that his name was Manndru and this much too I had to wrest from Kamalini at the expense of a whole day's teasing.

One evening I was seated before the window of my room and a single star was shining above the large neem tree which stood in front. Suddenly my sister in law rushed laughing into the room and cried out, I have brought a piece of great good news. What are you going to give me as a reward? You need not remain staring at the skies any longer a time is coming when the earth will have sufficient attraction for you.

I understood quite well what she meant but as she was many years my senior I did not give any answer to her repartee and she went off laughing. A feeling of mingled joy and fear arose in my heart causing a tremor in my whole body.

A scene of immense bustle and noise began once more. Jewellers goldsmiths carpenters and clothes merchants poured into our house from all quarters. Mother one day remarked while talking to the ladies of the house. This is my only daughter I will send her to her father in law's house with such a trousseau that the mother in law however clever she be would have a hard job of it trying to find out defects.

Day after day passed on and the auspicious day approached. But did not I have any fear or doubt? To whom was I going to trust myself? But as the first streak of light in the sky dispels a world of darkness so a single line which came to my

ears from the next room drove away all my doubts and fears. An aunt of mine was talking to my mother. Suddenly she asked. But sister have they seen the bride? My mother laughed and said. No sister we won't have to show the bride formally. The bridegroom himself has seen her and chosen her while he was here as a guest in the wedding party of Bimal. Need I tell you any more why my mind was free from any doubts?

A silk merchant came to our house to take orders for my wedding dress. My mother called all my sisters in law to talk over things with. We are old fashioned folks our tastes might not suit young people. The young ladies gathered round the man in great enthusiasm. I too was hauled along by them to be a member of their committee. After a great deal of talking my eldest sister in law decided upon a deep crimson silk covered all over with gold embroidery which flashed as streaks of lightning. It was specially to their liking as it matched my name. I too liked the thing immensely and escaping to my room sat down hugging the thought to my bosom that the grievance I had of appearing in an ordinary dress before a certain person was likely to be soon remedied.

On the day of the maiden's feast in our house a large number of presents arrived from the bridegroom's house. My sister in law while praising their taste and liberality remarked aside to me, You are lucky my dear your husband's family does not seem to be any poorer than your father's family.

A large number of friends and relations soon arrived and I was scarcely left to myself even for a moment. Then too I had to go about every day as I was constantly being invited by others.

The day arrived at last. A woman never loses the memory of her wedding day however old she might be. Neither have I.

From the morning I had been sitting on a seat of sandal wood which was covered all over with leaves and flowers of *alpana**. Of that numerous gathering I alone was silent that day. Now and then one of my sisters in law or cousins would peep in and go off smiling. Nearly all the relations we had in every part of

* Ceremonial drawings on auspicious occasions on the floor wooden seats &c.

the world, had arrived, but fresh ones still poured in. At the sound of approaching footsteps I looked up and saw my mother entering accompanied by an old lady. Mother came near and said, "Vidut, this is my nunt, bow down to her." I did as I was bid; the old lady blessed me fervently, then turning to my mother, asked her, "The bride is truly called Vidut, my dear, but how is the bridegroom? I hope they will be a well-matched pair?" I laughed in my heart how should that old lady know how supremely handsome the bridegroom was?

My mother answered, "What does outward beauty matter, dear aunt? My son-in-law Prasanna is not much to look at, but I tell you my daughter is lucky to get such a husband."

Prasanna! And not much to look at! What is this? The daylight suddenly became pitch dark in my eyes and the furniture of the room began to swirl round and round. The old lady shrieked out in alarm. I suppose I must have looked rather strange. My mother threw her arms about me and said, "She has been fasting all the day, she is feeling weak I think; come along with me dear and lie down, you need not sit here any longer." She went away after putting me to bed.

The joyous clamour around me sounded in my ears like the shrieks of the damned. I wished to cry out, but no tears came, instead something heavy as iron settled down upon my heart. It was a drama, worth seeing. The flash of lightning was seen admired by all but who knew where the thunderbolt struck? Truly, a woman's heart is hard, otherwise how did I hear, what I had to hear? A Hindu woman has at times to suffer in silence torments that would heat records of hell.

It was already evening, when a crowd of young girls hurst into the room, and pulled me up from the bed. The bride must begin her toilette now. They went on dressing and adorning me to their hearts' content, while I sat like a statue. After chattering and toiling for nearly two hours, they finished their work. My eldest sister-in-law dragged me before a large mirror and cried out, "Now have a good look, see whether you like your own appearance, never mind about mother's likings."

I looked up at my own image, reflected in the mirror. Yes, I was fittingly adorned. I seemed to be wrapt about in flames, and flames too, raged in my heart. My dress shone and sparkled as if steeped in liquid fire, my wristlets, and necklet of diamond shot sparks of fire. I wished that the fiery borders of my silken cloth would truly become a flame and wrap me in its fatal embrace. I moved away from before the mirror. "Don't fall in love with your own image," mocked Kamalini. Fine indeed was my image! A great pang shot through my heart, as I remembered with what joyous lips I had looked forward to this bridal toilette.

The bridegroom arrived. The women's rites, the reception of the bridegroom, all danced before my eyes like so many shadowy pictures. At the time of the "Auspicious Look," a large red silken cloth was thrown over our head. All requested us to look at each other and impelled by a sudden curiosity I looked up. A dark face was before me and eyes full of ecstasy and love looked into mine. I dropped my eyes at once.

The marriage was over at last. We then took our seats in a large room, lighted up with great hanging lamps and chandeliers and crowded to the full with girls and women. Their laughter and jokes knew no bounds. A flood of joyousness seemed to have swept over the assembly. The friends of the bridegroom were waiting outside and constantly sending to ask permission to come in and have a look at their friend's bride. At last they got the required permission. The ladies for the most part drew back with veiled faces behind the giant bedstead and a few escaped out of the room and peeped through the windows. A large number of young men hurst into the room with joyous shouts. They had their fill of jests and jokes, then began slowly to retire one by one, as the wedding supper was about to commence. When nearly all had departed, some one suddenly pushed into the room and came and stood before us. I looked up. I felt as if I would drop down from my seat in a swoon and my hands and feet turned cold as ice. Somehow I recovered myself. My third brother came forward and addressing my husband said, "Prasanna, Manindra has come to see you." My husband looked at the visitor with a

smile of welcome Maodra came nearer and taking out of his pocket a parcel wrapped in flimsy blue paper, said, 'Friend, I have brought a little present for your wife I did not put it down with the other presents, as it would be quite lost in that magnificent array.' Saying this he took off the wrapping and taking out a chain of gold put it into my trembling hands. It was a garland of esamoes, some cunning work maobad copied nature very faithfully in gold. My husband answered back laughingly, but I did not bear what he said. I looked up once more. He too, spoke his farewell in a long look, then disappeared in the rapidly thinning crowd. The traveller who had first stepped into my young life in the rosy blushing dawn, now went out of it for ever to the red glare of festive lamps and through a noisy festal crowd.

The ladies again thronged into the room. Kamalini took the golden chain off my hands and put it round my neck remarking, "It is certainly of Cuttack workmanship. Our goldsmiths are not up to such work."

It was already midnight, when we at last found ourselves alone. My husband tried to make me speak but in vain, and at last laid himself down to sleep. The hanging lamps went out one by one flickering and spluttering. I sat still on my bed throughout that long night. Sleep refused to come to the aid of my tortured heart.

The next day I left the home of my childhood and stepped out with a stranger for a strange home. The most auspicious and joyous day in a woman's life ended for me in a flood of tears.

A warm welcome was waiting for me in the new home. But I seemed to have become an unfeeling automaton, I moved about as others made me move, and heeded without answer the thousand remarks and questions which flew about me. The gladness and joy which I witnessed in others served only to petrify my heart more and more.

The haste and noise subsided a little in the evening. Two or three girls of the house then conducted me to my bedroom and kindly left me there to rest. As soon as they were out of the room, I tore off my wedding finery and putting out the single lamp which was burning in a corner I

flung myself down on the bare cold floor of the room.

How long I had been lying there I have no idea, but somebody's sudden entrance into my room made me sit up. It was a young girl of about eighteen dressed in the white garb of a widow. Her face was beautiful though she was dark in complexion. Her loose curly hair blew about her face, her eyes looked like veritable springs of sadness. It seemed as if this young maiden had just stepped out of the arms of the goddess of evening with her calm and sad beauty.

She bowed down to me and then sat down by me. She took my hand in hers and said, 'I am one of your numerous nieces, my dear aunt. I am named Kalyani. You did not see me till now, because I have lost the right to show my face at auspicious events. Your husband sent me to you thinking you must be feeling lonely. But why are you sitting in the dark and on the floor? Please get up and sit on the bed.'

The laughter and light all around had been only increasing the burning pain in my heart. The sad face of this girl, some what comforted me. The tears now came, I wept and wept and could not restrain myself at all.

Kalyani put her arms about me and began to comfort me. 'Don't cry dear,' she said, 'the pangs of separation from one's parents are keen indeed, but you will get accustomed to it. Women have to suffer far harder things I, too, thought once that I shall not be able to rise up from the earth any more, but see I am going about now like everybody else.' Then suddenly she stood up and cried, 'But let such things go. We must not talk about them on this auspicious day. Let me arrange your room. Why have you put out the light?'

Kalyani lighted the lamp again and moved about the room putting every thing in its place. Suddenly she came upon my wedding sari, thrown upon the floor. She picked it up and cried 'Why have you flung it here dear? Well, I will put it up for you. The old women here say that one must not wear one's wedding dress twice. It is to be kept in a box and when torn, should be thrown into water.'

She folded the thing carefully and then pointing out a box of marble to me, said, 'Do you see that box over there, by the

side of the big iron safe? I put it there in the morning. It is my present to you. I have got nothing else. That one was given to me by my husband. Will you keep your wedding dress in it? It will then remain apart from your other things."

I assented. Kalyani put the dress there and went out. After a few minutes, she re-entered with a few chains of camphor beads in her hand. These she arranged about the rich crimson silk. Suddenly I got up and snatching that garland of jessamines from my neck, flung it into the box.

"Why do you put it there?" asked Kalyani in astonishment. "It should go into the jewel box, you will have to take it out frequently."

"No," I said, "let it remain there. I will never take it out again. When I fling the wedding dress into water, this too shall accompany the dress."

Kalyani looked at me for a minute, with her wonderful eyes, then said, "Very well, let it remain there."

(3)

"Rangadi!"

Young Vidyut, with her slender graceful figure and wristlets and necklet of diamond, vanished into air. Oh dear, it

was already dark and the lamps had not yet been lighted. I have been dreaming with my eyes open. I have forgotten too about the children's supper. Ranu too has come back from her friend's house.

I got up from the floor and asked with a smile, "Now darling, how many persons lost their senses over the entrancing beauty of Lakshmi?"

"There now Rangadi, you have begun again. Who is to faint at my sight pray? I don't think there is any one idiotic enough for that purpose. Now take back your sari, I have folded it so carefully that not the faintest sign appears of its having been worn. Let us go and put it back in that box."

We went and stood before the box. "See here Rangadi," cried Ranu, while putting back the sari, "the smell of camphor has nearly disappeared. It was but a little while ago, that we opened the box. How fast it went! The camphor beads have gone long ago, the fragrance too now follows in their wake, but see, the box of marble is still the same."

"My darling," I answered, "fragrance stays with us only for a brief while, then it becomes one with the air. But the stone knows no change, it remains for ever."

SEETA DEVI.

COMMENT AND CRITICISM

The Problem of the Indian States.

The article recently contributed by Mr K. M. Panikkar to the 'Modern Review' is a very opportune one and draws the attention of the public towards a very important question. For one reason or another, political bodies like the Congress and the League have treated the States with a sort of studied indifference or neglect; nor has the Press, except when it means to read a sermon to the British Government by trotting out the administrative efficiency of certain States, been more generous.

This is not as it should be. The destinies of British India are indissolubly bound up with those of the States and whatever happens in one part of the country cannot but profoundly affect the other. Hence, if the people of what is at present called British India mean to make any considerable political advancement, they cannot afford to let the States lag behind.

The people of the States are generally extremely

nervous for political rapprochement with British India. But they cannot voice their wishes. As has been aptly remarked, there is no Arms Act in the States but at the same time there is no liberty of the Press. As was recently remarked by the Viceroy at the installation of the H. H. The Maharaja of Bharatpore, the fact of their protection by the British Government gives the rulers of these States an immense power over their subjects. This naturally makes them very autocratic and experience shows that so long as a Ruling Prince can manage to retain the good will of British political officers, he can do pretty much as he likes. Thus the subjects of a State, if they mean to make their voices heard, have to deal not only with their own immediate ruler but the British Government as well. This is why Indian India presents the appearance of a politically inert mass. There is plenty of seething, surging life beneath this dead calm. Let the political leaders of British India, experienced in the ways of public life, turn their attention to this as yet

untapped reservoir of potential energy and they will be doing an immense service to the whole country, Indian and British.

I shall now consider the solution which to Mr Panikkar's opinion will probably commend itself to the National Executive when British India finally gets Home Rule. Obviously, we cannot afford to retain all the seren hounded and odd States in their present status, at the same time, Mr Panikkar considers any attempt to follow the Italian policy of 'political dispossession' impolitic. He, therefore, proposes to mete out differential treatment as regards the bigger and the smaller states. He does not exactly define what he means by the former, nor is such definition easy. Mysore, for instance, notwithstanding its obvious importance, is in some respects far below many States which are inferior to it in area, population revenue etc. Since the Rendition of Mysore, the British Government has expressly retained for itself the right of intervention in internal administration which it has equally expressly denied to itself in the treaties which regulate its political relations with most other States. Again States whose treaties were negotiated previous to 1813 have generally a higher status than those whose treaties were negotiated after that date. The former class of treaties approximate somewhat to international rules and the word 'protection' does not enter into them.

But when the final re-adjustment is taken in hand such distinctions will have to be ignored and all Treaty States—their numbers not large—will have to be placed in the same class. Mysore, though properly only a Sannad State, will go with them. Some of the other Sannad States, for instance, those whose rulers are at present entitled to a salute of 11 guns or more and consequently styled Their Highnesses, will also form members of the same group. These will have absolute internal autonomy, as Mr Panikkar suggests, it being understood that sovereignty will in every case be taken to be vested in the people who may, on the principle of self-determination, elect to retain the Ruling Houses as essential parts of their constitutions.

Now we come to the smaller or Non Treaty States. Mr Panikkar suggests that they should be 'mediatized'. His use of this term is unfortunate and calculated to cause some confusion. As a matter of fact, the smaller States include among their number Sannad States, mediatized States, guaranteed chiefships and so on. Technically, a mediatized State is one whose immediate Suzerain is not the British Government but some other State with which all the political relations of the former are carried on through the British Government. For instance Narasinggarh in Central India is a mediatized State. It pays a tribute of about Rs 50,000 to Indore but all political relations between the two States are carried on through British political officers. There are several States of this kind, specially in Central India and Gujarat. Many of them are fairly big and important so far as area, population and revenue go. The only peaceful and practical solution seems to be to put them in the same class as the former and get the questions of suzerainty and tribute waived aside on terms which, while honourable to the smaller States, should be equitable as well and somehow or other recompense the bigger States for the financial losses they will have to undergo.

Guaranteed estates are simply jagirs whose owners have been guaranteed by the British Government against alienation by the States under which

the jagirs are. This is clearly an unjust arrangement. They should all be made over to the States concerned the healthier public life and public control over State acts introduced by the new arrangements will be guarantee enough against improper alienation and confiscation.

Even when all this is done, there will be left a fairly large number of small Sannad States, estates, jagirs, which have no direct suzerain but the British Government which guarantees them the exercise of such sovereign powers as it thinks compatible with their feudalistic territories. In essence such territories, which are, for political reasons, treated as foreign dominions are nothing but glorified Zemindars and the sooner this fact is realized and acted upon, the better it will be for all concerned. The patentates of those minor chiefships should be bought off, if I may say so. Let them retain their hereditary titles and personal property; let them moreover be acknowledged as the Zemindar proprietors of their so-called States but let them be divested of all ruling powers except such honorary ones as the supreme Government may choose to delegate to them in virtue of their social position and local influence.

If this plan were adopted our problem would be much simplified and I think further simplification would come of itself when once the ball is set rolling. It is quite possible that in the near future the people of some States with contumacious frontiers and great animosities religious racial or historical may evince a desire to unite under a common government. Under the new scheme of things we are contemplating they would be quite free to do so. Similarly the people of certain States might not improbably wish to be joined to what are now British provinces. We may confidently anticipate such adjustments in Rajputana, Central India, Kathiawar and Gujarat if nowhere else.

But in any case we shall, so far as we can see, be left in the end with a number of large autonomous provinces and larger number of comparatively smaller but fairly important autonomous States who are to adjust their mutual relations and carry on business of national importance in the name of the country as a whole.

The most reasonable plan seems to be that the Supreme council, no matter what name it has should consist of members chosen by a system of direct election from all parts of the country. The drawbacks can be worked out very easily. The States will have to contribute towards Imperial or National funds just like the provinces and, naturally, should be in a position to make their weight felt in the council of the country. The Supreme Executive will also then be representative of and responsible to, the country as a whole and have the right, in its dealings with other countries, for instance the Imperial Government of Great Britain to speak in the name of the whole country.

Much space work will no doubt have to be done before we can arrive at anything like the peaceful solution outlined above. The people of backward States have to be roused from their torpid apathy and those of advanced States taught the principles and practice of constitutional public life, the body of Ruling Princes and Ruling Chiefs has to be convinced that in these days of democratic triumph their best interests lie in falling in with this plan which while it safeguards all their dignities personal properties and actual status and gives them an important place in the body politic, relieves

them of many responsibilities which it is now humanly impossible for them to undertake. All this will have to be done by leaders of public opinion in British India and done soon.

But the task is not so difficult as it seems. The great public leaders, men like Mahatma Gandhi, for example, have a very strong following in the States, though perhaps, they themselves are not aware of this fact. Many of them are respected by prince and peasant alike and a few, if this be any criterion of leadership, are apparently as much objects of dislike to certain Princes as they are to certain

Government officers. A good deal of work has been unostentatiously done by newspapers, specially vernacular newspapers, and intercourse with British India for religious, commercial and other non-political purposes is another educative agency. All that is required is the turning of public attention towards this question. If this is done, I have no doubt a statesmanlike solution satisfactory to all parties concerned, will be arrived at in the near future.

SAMUEL NAND, BSC, L.T

REVIEWS AND NOTICES OF BOOKS

ENGLISH

POTATO CULTIVATION IN WESTERN INDIA

It is a nice little illustrated brochure issued by the Union Agency in Bombay. This Agency deals in seeds, manures and implements. The brochure contains useful informations about the crop, methods of securing good quality of seeds, their storage difficulties, etc. One gets really puzzled at the long list of the enemies of the crop both in the field as well as in the storehouse. Mr Keatinge, Director of Agriculture Bombay Presidency, has very truly said in his address (Appendix III). Even taking the skilled agricultural practice of the cultivators for granted their welltilled and carefully levelled fields, their energy and industry in the irrigation and treatment of the crop, there still remain a large number of complex problems for the chemist, mycologist and entomologist to solve before the crop can be grown and marketed with success. The aim of the Agency in starting their potato work is to tackle these problems from various standpoints. Though this special business of the Agency was planned sometime ago the immediate cause of its development was due to an order for a very large quantity of seed potatoes which were needed by Government for cultivation in Mesopotamia at the end of the last year. Government have been very liberal in their help in the shape of financial grant as well as of expert advice from an authority like Dr Mann. Mr Keatinge, the Director of Agriculture, did everything that lay in his power for the furtherance of this work. This work comprises fumigating chambers, sorting houses, storage chambers, etc. it has so far cost over Rs 24,000 and a further sum of Rs 25,000 have been spent by the firm on organisation and research. A seed testing Laboratory is shortly to be added to the works. Besides tackling the above problems the authorities are also designing improvements in the implements used in Potato cultivation and are experimenting with various manure mixtures with the assistance of Dr Mann and Government have just provided funds to pay the salary of a chemist to assist the firm for a period with their manure business. It is interesting to know that in course of a few months only 800 tons of seed potatoes and 600 tons of other seeds have passed through this section of the Agency. If each firm sprang up in large

numbers in a Province its Agricultural Department is greatly relieved of much of its quasi-commercial work and can thus liberate its energy for research and further propaganda work in new tracts.

Mr Keatinge has paid a high tribute to Mr A. D. Modak, the energetic proprietor of the firm. Mr Modak was a student of the Poona Agricultural College and has happily devoted his education to a new sphere. We wish him and his business all success.

DEBENARANATH MITRA

A SHORT ACCOUNT OF THE WANDERING TEACHERS AT THE TIME OF THE BUDDHA, by Bimalacharan Law, M.A.

It is a short paper which originally appeared in the *Journal of the Asiatic Society of Bengal*. We were glad to read Mr. Law's article on the six heretic teachers in Buddhist literature, but his present paper is not so good. The subject matter has been treated very lightly or superficially and it does not show that the author has studied the subject adequately. We are not satisfied with what he has given us here. It is said that philosophy with the Brahmins was "a mere Lokayatra (way of life)" and in support of it Kantilya's Arthashastra, p. 6 (Eng. trans.) has been quoted, but it will be evident from both the original text and its translation that the passages referred to have been misunderstood. The only useful portion of the article is the Appendix giving the list of wandering teachers and their topics of discussion. Some light on a few points of the subject may be had from the introduction pp. (49), (55) to the *Bhikkhū* and *Bhikkhuvā* Patimokkha by the present reviewer.

SEARCH OF OLD SANSKRIT MANUSCRIPTS, by K. A. Shastri, Baroda Central Library.

It is an article reprinted from the "Library Miscellany" of Baroda. The author is possessed of personal experience of twenty-five years throughout India regarding the subject dealt with in it. It furnishes useful informations and gives good suggestions.

V BHATTACHARYA

PRESIDENT WILSON THE MODERN APOSTLE OF FREEDOM. Published by Ganesh & Co., Madras.

This collection of some of Dr. Woodrow Wilson's

speeches on world's freedom will be appreciated by all lovers of liberty. Dr Wilson is undoubtedly at present the least nationally selfish statesman in the world. He leads the van of the world's democracy and possesses a moral ascendancy with which no other statesman is blessed. The book is embellished with a portrait of the American president, and contains a foreword by Dr S. Subrahmaniam and a biographical sketch by Mr K. Vyasa Rao.

C.

SAMKHYA SYSTEM, by A. B. Keith D.C.L., D. Litt., Published by Association Press, Calcutta. Pp 199. Price—Paper edition Rs 8, Cloth edition Rs 15.

This book belongs to "the Heritage of India Series" which is being published under the joint editorship of The Right Reverend V. S. Azariah, Bishop of Dornakal, and J. N. Farquhar M.A., D. Litt. (Osou).

We have been given to understand that this series has been planned by a "group of Christian men. Whenever a non-Christian book is edited and published by a 'group of Christian men', our countrymen have reasons to believe that it will be characterised by the rarity of Christian charity. But here there is an exception to the general rule. The book under review is sympathetic as well as scholarly. And this is what we expected from the translator of the *Taittiriya Samhita* and a joint author of the *Siddhi Indu*.

The book is divided into 8 chapters. viz.—(i) Samkhya in the Upanishads (ii) The Samkhya in Buddhism (iii) The Philosophy of the great epic and the origin of Samkhya. (iv) Samkhya and Yoga. (v) The Sāṅkhya sāstra. (vi) Greek Philosophy and the Samkhya. (vii) The Samkhya Sāṅkhya (viii) The Later Samkhya.

All the chapters are well written and should be carefully studied. It is a valuable production and is recommended to our countrymen.

EARLY INDIAN THOUGHT, by Dorothea Jane Stephen, S. Th. Published by the Cambridge University Press. Pp 176.

According to our learned author, "The love of money has been the besetting sin of the Brahmins from time immemorial" (p. 17). *The lady is a keen observer!*

Addressing a rishi she says—"Alas poor chanter of hymns! Like all Indians he is confused by his own metaphors" (p. 30). *The lady is compassionate!*

Commenting on the mantra—Indra and I am Prana meditate on me as the conscious Self as Life as Immortality, she remarks—"we cannot help wondering what has come over our old friend Indra whose merry days by Soma rats seem here to have become strangely remote" (pp. 46-47). *The lady is witty!*

Commenting on the quarrels among the seers described in the Upanishads she writes—"We can scarcely suppose that we are not meant to be amused at the dilemma of the quarrelsome seers, their six years of comfort and the final catastrophe when they find themselves on the point of 'suicidation'" (p. 45). *How perfect her understanding!*

She continues—

"This is a sample of playfulness that meets us

continually in the Upanishads and in all Indian writings. *How vast her reading!*

She goes on—

"It is not the attitude of men engaged in a search for the end of which is life or death to them; a seeker after truth may be playful and generally is so, over side issues, he may be humorous with a somewhat bitter irony over the main issue and a wonderful perversity of things." *How beautifully she moraliseth!*

Then she concludes—"But this vein of gentle mockery at the heart of religious speculation is a peculiarly Indian characteristic" (p. 48). *How charitable!*

It is a pity that the Cambridge University Press should have undertaken the publication of such trash.

SHRI RUPELA by A. B. N. Sinha. Published by Khagga Press Bankipur. Pp 191. Price. Library edition Rs 1-8, People's edition Rs 1.

It is a short sketch of H. S. Hol near Shri Valsha varanasi Swami Sri Sitaran Sharan Bhagwan Prasadji Rupela of Ayodhya, written by his disciple Mr Sinha.

The book contains 11 chapters viz.—(1) A devout family (2) The Adyartha (3) The Householder (4) The Bhakta (5) The Author (6) The Miracles (7) The Uraht. (8) A day at Rupela Kunj (9) Shri Janki Navami (10) A wonderful personality (11) Some personal Reminiscences and an appendix containing Mr Justice Jwala Prasad a tribute to a saintly life.

JOURNAL OF THE INDIAN INSTITUTE OF PHILOSOPHY, AMALNER Vol. 3 July 1918 Pp 141-205. Annual Subscription Rs 4, Price per copy Rs 1.

The journal is published by an Editorial Committee of which the President is Mr S. K. Mitra M.A. and members are Pandit Sriyada Sastri Mr G. R. Malkani M.A. and Mr N. C. Ghosh.

This number contains the following articles—(1) Nietzsche and Tolstoy concerning Morality and Religion by A. G. Widgery. (2) The Rhythmic Romanticism of Hegeler and the Poetic Romanticism of Bitter by S. K. Mitra. (3) Mysticism by D. R. Malkani. (4) Some parallels between Plato and Sankara by N. C. Ghosh. (5) Advaitism and Nihilism by A. R. Nikant. (6) Thoughts preceding and leading up to Plato by N. C. Ghosh besides reviews, notes and one vernacular essay by Pandit Sriyada Sastri.

We wish the reviewer a long and useful life.

THE INDIAN PHILOSOPHICAL REVIEW, edited by Professors A. G. Widgery and R. D. Ranade. Published for the Indian Philosophical Association by A. G. Widgery, the College, Baroda. Vol. 11 No. 3 January 1919 Pp 193-233.

This issue contains—(1) Samkhya Philosophy by Dr R. G. Bhandarkar. (2) James Ward's Pluralistic Theism by Professor S. Radha Krishnan. (3) Hindu Epistemology by V. D. Mehta. (4) History of Conservation of values by A. G. Widgery. (5) Conception of the Vaidya by Fazl Shah Gilani followed by critical notices and short reviews.

It contains useful articles and should be patronised. The annual subscription is Rs. 6 (10s. 6d) and a single copy Rs. 1-8 (2s. 6d).

MANEY CH. GHOSH.

SANSKRIT-HINDI

RIGMANTRAYAKHYA by Bhagarat-datta Model Press, Anarkali, Lahore Pp 344 Price Annas 5

Swami Dayananda Sarasvati, the illustrious founder of the Aryasamaj could not complete his commentary on Rigveda, it being written by him only up to the 61st Sukta of the Mandala VII. Some of those remaining Mantras of the Rigveda have been explained here in Hindi by the author strictly following the Swami's and collecting the material chiefly from his commentaries upon both the Rig and Yajurveda. We fully appreciate it that think that it will interest none but the Arya Samajists.

SANSKRIT.

SANNYASANIRNAYA Of Vallabhacharya with Eight Commentaries and Gujrati Translation edited by Mulchandra T Telvala B A LLB, and Dhurajlal V Sankalia, B A LLB Vakil, High Court Bombay Khakhar Building C P Tank Girgaon, Bombay Pp 8+53+32 Price One Rupee

Of the sixteen sacred books of Vallabhacharya, Sevaphalam and Nirodhakshanam edited by the present editors have already been noticed by us in this Review. The book lying on our table forms the fourteenth volume of the great teacher's works referred to. The circumstances under which sannyasa (renunciation) may be taken by the aspirant are discussed here, as the very title of the book implies. We heartily thank Messrs Telvala and Sankalia for this publication which should be read by all who are really interested in the Bhaktimarga.

PANDAVAVIJAYAM by Hemachandra Ray, Kavibhushana, M A Professor of Sanskrit, Edward College, Patna (Bengal) Price—Re 1

As regards knowledge of Sanskrit the graduates of the Calcutta University are generally, we believe, inferior to those of the Bombay or Madras University. In this state of things it is very gratifying to see a kavya like the present one from the pen of a graduate of that university. It appears from what we see in it that in writing Sanskrit or in composing kavya is it, Prof Ray has perhaps no equal among his fellow graduates. The book under notice is a Mahakavya of twelve cantos according to the rules laid down by the Sanskrit rhetoricians. The subject matter may be known by the title, i.e., Pandava-

Charitam, the Adventures of the Pandavas. Prof Ray is the author also of other five kavyas. We admire him.

SHREKRISHNA DHAKTI by Gandarao Harumanlarao Talapadaloor, Kamanakalla, House no 3007, Dharwar Pp 85 Price—Re 1-4

There is a book named 'Nine-fold Devotion' (नवविधा भक्ति) by Lkshmana Ramachandra. The characteristic of devotion as given therein is, according to Pandit Gandarao, not sufficient and that has led him to write the present treatise in refutation of the former. Our author is an acute dualist follower of the Madhva doctrine and from that point of view he has advanced his argument as usual, there being nothing new. The book is written unsystematically and the language is defective as regards grammar.

VISHUSHEKHARA BHATTACHARYA

GUJARATI.

(1) **PRANAYA LILA** (प्रणयलीला) by Balkat published by Lakshmishankar Mahashankar Jethi, proprietor of the Lakshman Sahitya Granthalaya, Bombay, printed at the Shujapura Luhana Steam Printing Press, Baroda Paper cover pp 43 Price—As 8 (1918) (2) **RAJALTO RAJMANSA** (રજલતો રાજમંસ) by Do Do Paper cover pp 184 Price—1-12 (1918)

These are two novelettes of the most ordinary kind, stuffed with impossible and emotional incidents sure to delight the masses, if they care to buy them at these exorbitant prices.

SWAMI RAMTIRTHA NA SADUPDESHA (શ્રામી રામ તીર્થ ના સદુપદેશ), translated by Kripashanker Bicharlal Pandit and two others, published by the Society for the Encouragement of Cheap Literature, printed at the Diamond Jubilee Press, Ahmedabad Second Edition, Cloth bound, pp 462 Price—Rs 2 (1919)

This is the second volume of the speeches &c. of Swami Tirtha. The very fact that it has run into a second edition shows the popularity that the publication has attained and the hold it has taken of the people's minds. The translation is well executed.

K M J

A NOTE ON THE HISTORY AND ANTIQUITIES OF BISHNUPUR

(Concluded)

THE late Babu Bahndranath Singh of Indas, a scion of the Raj family and a finished scholar, enumerates the following causes of the decay and downfall of the

Bishnupur Raj. (1) The Maratha raids, (2) the famine of 1770, (3) the imposition of a crushing land-tax by the British Government, (4) family dissensions. These are the

Boat with armed soldiers for Banga Temple Bishnupur

immediate causes of dissolution but the following are according to him the indirect causes which hastened the catastrophe (5) the adoption of the Vaishnav cult and its corollary (6) the construction of costly temples putting a heavy strain on the financial resources of the kingdom. He observes The adoption of the Vaishnavite creed though it marked a brilliant epoch in the history of Mallabhum did not fail to exercise an enervating influence upon the royal followers. Of all religions the Vaishnavite creed is the most incompatible with sword and sceptre pagantry and pride bloody strife and fierce justice. There were indeed monarchs great in arms and in piety. But before long symptoms of imbecility which could be attributed only to a religious frame of mind made themselves manifest. He attempts to prove the truth of this observation by citing instances from the royal family of Bishnupur after their conversion to Vaishnavism. This short account of the Bishnupur

Ray may be fittingly brought to a close by one or two extracts from the accounts of Abbe Raynal and Governor Holwell but it is fair to add that Mr Grant in his *Analysis of the Finances of Bengal* written in 1787 doubted the existence of a state which seemed to realise the fable of the golden age.

The singular situation of this country (Bishnupur) has preserved to the inhabitants their primitive happiness and the gentleness of the character by securing them from the danger of being conquered or subjugating their hands in the blood of the fellow creatures. Liberty and property are sacred in Bishnupur. Robbery either public or private is never heard of. A stranger as any stranger enters the territory he comes under the protection of the laws which provide for his security. He is furnished with guides at free cost who conduct him from place to place and are answerable for his person and effects. These maxims of probity are so generally received that they direct even the operations of Government. Out of between seven and eight millions (about 330,000 on an average) it annually receives without injury to agriculture or trade what is not wanted to supply the unavoidable expenses of the State is laid out in improvements. The Raja is an

Peacock and Creeper outer wall Radha Shyam Temple Bishnupur

Duck poses Madan Mohan Temple Bishnupur

abled to engage in these humane employments as he pays the Moguls only what tribute and at what times he thinks proper (Ahbe Raynal translated from the French by J Justamond 1777)

Holwell in his *Interesting Historical Events* printed in 1765 says much to the same effect, and adds

from the happiness of his situation he [the Raja of Bishnupore] is perhaps the most independent Raja of Indostan he can hardly be said to owe any allegiance to the Mogul or Subah he some years deigns to send to the Subah an acknowledgment by way of salaamy (or present) of 15 000 rupees some times 20 000 and some years not anything at all as he happens to be disposed But in truth it would be almost cruelty to molest these happy people for in this district are the only vestiges of the beauty partly petty regularity equity and strictness of the Indostan Government -There are in this

precinct no less than three hundred and sixty considerable Pagodas or places of public worship erected by this Rajah and his ancestors Bishnupore the capital and chief residence of the Rajah and which gives a name to the whole district is also the chief seat of trade the produce of the country consists of Sal timbers (a wood equal in quality to the best of nor oak) dammer lacca an inferior sortment of raw silk and coposs and grain sufficient only for their consumption it is from this district that the East India Companies are chiefly supplied with the article of shell lacca

The city was strongly fortified by a long connected line of curtains and has tions measuring seven miles in length, with small circular ravelins connecting many of the curtains Within this outer line of fortifications lies the citadel, and

Women playing on Gaitars Madan Mohan Temple Bishnupur

with it again the Raja's residence an insignificant pile of brick buildings surrounded by majestic ruins. The following is a list of the twelve dated temples in chronological order —

Date in Malla Year	Date A D	Name of Temple	By whom built
923	1621	Malleswar	Br (Hambir) Sagh not probably com- pleted by him who reigned in that year
949	1643	Shyam Rai	Ragbunath Sagh son of Br Hambir
961	1655	Jor Bangla	— Datto
962	1656	Kala Chaud	— Datto
964	1658	La	— Br Sagh son of Ragbunath
971	1665	Madan Gopal	Sroman Queen of the last Raja
971	1665	Mural Mohan	Datto (called Chura- man) the secret out
1000	1694	Madan Mohan	Durgan Sagh
1032	1726	Jor Mandir	Probably Gopal Sagh
1033	1729	Radha Govinda	Br Shyam Sagh son of the last Raja
1043	1737	Radha Madhava	Churaman Queen of the last Raja
1064	1758	Radha Shyam	Chaturanga Sagh

According to Dr Bloch these temples are the most complete set of specimens of the peculiar Bengali style of temple

architecture. The temple consists of a square building with a covered roof with one tower rising in the centre either alone or surrounded by other smaller corner towers. According to the number the temples are called *pancharatna* (*navaratna* (five towered nine towered) &c. The temples face the south and are decorated on the front with carved brick panels and the other walls are also similarly decorated on the front with carved brick panels and the other walls are also similarly decorated in some cases. There are open galleries around and inside the temples is the sanctuary with the altar of the god. Steps lead up to the towers of the roof. Four distinct types may be distinguished. The first has a single square tower and is represented by the Malleswar temple. The second has a single tower resting on a square building with the curved Bengali roof the best examples of this type in brick are Madan Mohan and in laterite Lalji and Radha Shyam. Of the *pancharatna* type with five towers on the same building the best example in brick is the Shyam Rai temple and in laterite the Madan Gopal temple. The fourth type is the Jor Bangla (Double Bungalow) type so named because two buildings shaped

Gateway Sculptures—Radha Madhav Temple, Bishnupur.

like Bengali huts are joined together, surmounted by a small tower. A fine bird's-eye-view of the park-like scenery around, with the lakes and the river Dwarakeswar in the distance, may be had from the roof of this temple. The Shyam Rai is perhaps the oldest specimen of the *pancharatna* type that exists in Bengal. Nowhere outside Bengal has this style of temple architecture been found, and owing to the late date of all the existing specimens, it is difficult to decide whether it existed at all in pre-Muhammadan times. The Shyam Rai and the Jor Baagla have also the finest specimens of carved tiles, the walls being richly covered with carvings in brick. Some of the floral designs on the southern front of the temples are exceedingly beautiful, and in the group of temples on the south of the Lal Bandh a few specimens of the Gandhar style of sculpture are to be met with. The Rush Mancha, outside the fort, consists of a square chamber surrounded on each side by three galleries with arched openings and covered by a large pyramidal roof. The tradition is

that all the local deities used to be brought here for the celebration of the Rash carnival of the Vaishnavs. There are, or were, Bhog-mandirs or kitchens attached to all the temples where food for the deity was cooked and distributed among all the Brahmias of the town.

The carvings represent religious scenes taken from the Ramayana and the Mahabharata, e.g., episodes from the life of Rama and Krishna and of the eight other Avatars or incarnations of Vishnu, and there are also hunting and wrestling scenes, royal and religious processions, Vaishnav Sankirtan parties, warriors, ascetics, women dancing and playing on various musical instruments, Krishna and Radha sailing on pleasure-boats, and all the varied incidents of the social life, sometimes gay, sometimes warlike, more often religious, of a Royal Court in the forest-clad outskirts of mediæval Beagal. Animal life in various life-like poses has been well represented in these carvings—elephants and horses gaily caparisoned, bulls, tigers, monkeys,

Pleasure Boat—Jor Baigia B shaupur

wild boars, duck, etc. There are animated scenes portraying animal fights. Chariots drawn by horses and bulls are met with here and there. Battle scenes are not forgotten, and the peculiar armour and weapons used by the soldiers and the trappings of the horses and elephants may be studied on these carved temple walls. The dress worn by men and women, and a variety of other facts of sociological interest, too numerous to mention will be noted by the observant visitor.

The fort is surrounded by a high earthen wall and has a broad moat round it. The approach is through a fine large gateway built of laterite, with arrowslits on either side of the entrance for archers or riflemen. There are a few pieces of cannon lying on the high rampart just outside the front gate, the muzzle of one being shaped like a tiger's head. They are of wrought iron, about five feet long and varying in thickness from six inches at the muzzle to a foot at the breach. But the most remarkable piece of iron ord-

nance is the cannon named Dalamardan popularly called Dalmādal lying half buried by the side of the Lalbandh lake. It is apparently made of sixty three hoops or short cylinders of wrought iron welded together, and overlying another cylinder, also of wrought iron, the whole being well welded and worked together. Though exposed to all weathers it is still free from rust, and has a black polished surface. Its extreme length is 12 feet $5\frac{1}{2}$ inches, the diameter of the bore being $11\frac{1}{2}$ inches at the muzzle, and $11\frac{1}{4}$ inches throughout the remainder of its length. It is the same cannon which, tradition relates, was fired by the god Madan Mohan when Bhaskar Pandit attacked Bishnupur at the head of the Marathas. There is a Persian inscription, which has been variously interpreted to mean one lakh or three lakhs, which may be taken to stand for either the cost of the cannon, or its murderous capacity.

Some of the Bandhs or picturesque lakes of which seven can be traced, have

Hunting scenes Jor Bangla Temple Bishnupur

now silted up, either wholly or in part. They were made by taking advantage of the natural hollows and building embankments across them to confine the surface drainage. They served to furnish the city and the fort (on one of the walls of which there is a well preserved square brick built reservoir for the storage of water) with a never failing supply of good fresh water, and also helped to flood the moats round the fort, adding greatly to the strength of the place. The gardens and pleasure grounds of the Rajas were laid out along the Lal Bandh.

It only remains to add that many of the temples at Bishnupur including those that are most famous as well as the Shandes war temple previously mentioned, have been preserved by the Government under the Ancient Monuments Preservation Act of Lord Curzon,—a piece of legislative enactment which constitutes one of his best titles to fame.

A pall of darkness has now fallen over the city and its ruins, and

“—far and wide
Temple and tower went down, nor left a
site,
Chaos of ruins' who shall trace the void,
O'er the dim fragments cast a lunar light,
And say, 'Here was, or is,' where all is
doubtly night?
The double night of ages, and of her,
Nights' daughter, Ignorance, hath wrapt
and wrap

All around us——”
but under the influence of the modern times this dense veil of ignorance is once more being lifted and the prosperity which left the city with the downfall of the Raj is again showing signs of return. The Railway has connected the town with the capital of the province and the centres of civilisation, and the arts and industries are slowly reviving, and we may be permitted to conclude with the hope that more spacious days are in store for the people of Bishnupur in common with every other part of the province.

Animal Fight (Horse and Elephant) Jor Bangla Temple Bishnupur

The last member and representative of the Bishnupur Raj, Kumar Ramchandra Singh, who used to study in the Bankura School with the help of a pension from the British Government, has breathed his last

from an attack of influenza, on 25th February last at an age of 17 only. With his death thus ended the line of the Bishnupur Raj family

BISHNUPUR

THE 'PERSONAL RULE' OF INDIAN RULERS

I

The characteristic features of all of them (the Native States) including the most advanced are the personal rule of the Prince and his control over legislation and the administration of justice

—Montagu Chelmsford Report

SO much and such frequent emphasis is laid on the principle of 'Personal' Government in connection with the Native States of India that an impression appears to be gaining ground that autocracy is a fundamental characteristic of the indigenous state polity of India. Whatever may be said in support of this view, to those who know Hindu life and

society as they are, not to say anything of the current Hindu traditions and Hindu law this theory seems to be so opposed to facts, that a Hindu is naturally tempted to ask how this strange anomaly has arisen

When the British were founding their empire in India, they probably thought the *Rulers* of Native States autocratic. And it does not seem to have occurred to the British Indian Historians to enquire whether the revolutions and counter revolutions, the downfall of dynasties and principalities, the wars, plots and bloodshed, which characterised the centuries

'Hunting scene, Madan Mohan Temple, Bishnupur.

that preceded the assumption of the Indian Government by the British Crown, had any deeper significance than that they were the manifestations of the ambition or rivalry and lust for power of princes and adventurers, which to a great extent they undoubtedly were, and whether these phenomena had any bearing on the changes in the indigenous form of Govern-

ment. To the then British authorities in whose foot-steps their successors have evidently followed, it must have been a political necessity to confine their dealings and attention to the rulers alone, dissociating them from the people. And the rulers, Hindu or non-Hindu, so divorced from the ruled must have naturally appeared despotic, to the European mind.

There appears to be a further reason for this dissociation. It is to be found probably in the dualistic standpoint familiar to the West, where the king and the people are separate factors and where the king is so easily dispensed with or so often put to death by the people themselves. The Hindu or the monistic view of polity could not strike the Western. And inasmuch as *apperception* is a law that every human mind obeys in more ways than one, the European could not but read Indian facts in the light of his previous European experience. He, not infrequently, though unconsciously, read European History into Indian. He probably thought that a king in India must be like a king in Europe, exercising almost the same powers, that the king could do no wrong and that he was above the laws of the people. Enquiry as to whether the relation of the king to the people in India was the same as elsewhere, does not seem to have been seriously made. He was satisfied if the relations of the European with the Indian king were favourable to the European. What was the people's actual political creed in India? For what form of government did the Hindu civilization fit its people? These are questions to which comparatively less

Moulded Brick Panels—Madan Mohan.

attention appears to have been paid in the then political circumstances.

Whatever may have been the European's reading of the Hindu civilization at the time the Western nations first came in contact with the people of India, no calm and dispassionate critic, even of the West, with any authentic knowledge of India's past now believes that despotism or autocracy was the type of government that the Hindu genius developed. But what is urged is that however enlightened the form of Government in the golden age of the past, it has little value for the practical politician.

The practical politician's business is not with the dead curiosities of ancient history, but with the living conditions of the present. He has to look the facts of the present in the face and deal with them as they are. The question therefore is, whether the India found by the European was not or is not autocratic?

Now, in the whole world of Hindu Sanskrit literature, is there a single indigenous word corresponding to 'subject' conveying the idea of 'being thrown under' or 'ruled over' by a despotic or autocratic sovereign? The word 'Prajā,' which is the one used for 'people' from the Vedic times to the present day, means "wellborn." It never conveyed the idea of 'subjection.' Slaves are indicated by other terms. But the free people of the

The Pillar Sculptures—Madan Mohan Temple, Benares.

State are always the 'Prajā.' Again, the king is considered the 'father' of his people. But the father is the father in the Hindu sense, not in the European. In Europe the father's will was law and the son's life and death depended on the father's will. But in India the father was and is a shareholder, though a governing shareholder. In the family commonwealth every son has an equal share. In the Hindu polity, the king and the people are coparceners. In fact the Hindu idea is,

Ascetics—Radhamadhar Temple

as has been already said, non-dualistic: the king and his people are one. If there is, in this connection, one idea on which almost every Sutrakara and Smritikara has laid special emphasis, it is that the king and the people go shares in their sins and merits.

Again, it has been a hundred times pointed out by competent oriental scholars, that neither the law nor the legislature was under the control of the king. The codes handed down from time immemorial were interpreted and added to not by the king, nor by any individual either, but by a body (*Parishad*) of the wise or the learned. He could not dispose of the revenues of the State as he pleased. He could not levy taxes except in accordance with the laws. The land was but the property of the people. He could only appropriate, without payment, the lands of the heirless and such other citizens. Unlike the European king, the Hindu king, it was said, might do wrong like all other men, and was therefore subject to the law of the land. And the people exercised their right of placing upon the throne a better successor, when necessary. Has all this any place in modern Indian History of the European period?

Let us first look at a type of a Hindu

king that has been last influenced by European or Mohomedan civilisation. In Nepal the ruler controls neither the laws nor the legislature. And even the minister who exercises all the powers of the king is not, according to the constitution, autocratic. There is a council which he is bound to consult, though the efficiency of the personnel of this body has not always been all that could be desired. Nepal is certainly not the ideal of Hindu polity. But there is enough there to show that in the indigenous form of government the Hindu king is not constitutionally autocratic. And the Hindu as such has hardly in the history of his race repudiated or deviated from the basic principles of his civilisation, whatever the local difference in the application of those principles to suit the variations in local conditions, customs and usages.

Then, leaving for a moment the ruler who is detached and dealt with by Europeans, let us turn to the polity of the great body of the people, as it existed not only in the earliest times but also in the days when the British settled in India and as it has persisted all along up to the present time. I shall not describe here the too often quoted 'village autonomy or the panchayat system,' though it shows that the communal spirit is in the blood of the people even in the lowest strata of Hindu society. Suffice it to say that no system of 'Panchayat' recognised the 'Personal' rule or authority of anybody, but that it only followed the laws of the land, the customs and usages of caste. Here and there people did not appeal to a higher authority in addition to the Panchayat, but that they did only to satisfy themselves that the Panchayat was formed and conducted in accordance with the established customs and usages.

This brings us to the most characteristic feature of Hindu Polity, its caste system, which even at this moment binds alike the prince, who also belongs to a caste, and the peasant, however insignificant his caste, and which has bound them, from the earliest times to the present day. Ignoring for a moment the social aspect of this institution, let us view it from the standpoint of national polity. Each main caste has had from time immemorial its own Dharma, i.e., its own laws and usages, unlike the social divisions of classes in the West, which have no separate

special laws, etc. Within the caste there is a characteristic sense of democratic quality. It may be noted that among Brahmans the master of a house on many a ceremonial occasion washes the feet of his very cook, treating him as his superior which even to the enlightened and democratic European or American must still be repugnant. It is the 'Mahajans' or the Panchayats of the caste that are its governors. What preserves the caste is not the personal voice of the ruler but its own written or unwritten laws and its own public opinion. No ruler in the history of India has ever had a place in the caste code or constitution except as the upholder of the caste laws and usages particularly those of the new castes formed. The caste principle has led to the development of powerful republics. The last and the latest as yet known to History appears to have been as a recent article in the *Modern*

Pillar Sculpture—Jo Baugla Bhaupu

Review pointed out the Sengar State of the Kshatriyas or Rajputs which was in existence till very recently. Above all the ruler himself belongs to a caste and he dare not overrule even his own caste customs and laws. *The basic idea of the caste is the subordination of the individual to the community to which doctrine the king himself has had to swear allegiance.*

Each caste viewed by itself is nothing if not a republic or democracy. Viewed from the standpoint of the relation of one

caste to another the system is but a federation of republics or democracies all castes being perfectly equal in their right to manage their own internal affairs. The king is the connecting link. It is the king's duty to maintain not only the caste laws but also caste harmony. Whenever differences arise and whenever new laws have to be made it is laid down in Apastamba that all the castes concerned may even women should be consulted by the king. With the king caste is a democracy,

Horse (with rider) in full gallop, Jor Bangla Temple, Bishnupur.

without the king, it is a republic. It is true that one republic sometimes quarrelled with another. And they paid the penalty for such differences. All the same, the spirit of democracy was and is there in each caste. What writers like Nair, Chesney and others of their persuasion contend is only tantamount to this, that the non-Brahmin castes protest against the possible tyranny of the Brahmin caste. Thus, in other words, is only a quarrel between republics or democracies. It is the democratic instinct in the non-Brahmin that rebels against the Brahmin democracy, but not the love of 'Personal rule'.

Let us for a moment look at some other aspects of castes. Were not rulers like Rama and Krishna, Non-Brahmins? And were they not and are they not 'deified' and worshipped by the Brahmins forgetting all their caste arrogance? While some non-Brahmins may not hesitate to abjure their faith in their own Rama and Krishna, the Brahmin clings to them as though they were of his own flesh and bone. Coming to modern history, the most audacious and the most powerful of Brahmins were the Peshwas. They exercised the powers of the king but they dared not style themselves kings. And why? Because it was opposed to the caste Dharma deeply rooted in the people's heart. Scores of such instances could be

cited if only space permitted. And this reveals another important feature of caste. While it permitted of any amount of difference or hostility in matters social, it made the people forget it all in their Democratic world of politics. The rulers Rama and Krishna have been as much the Brahmin's men as they are the Non-Brahmin's. And wherever the social feeling got the better of the political, the democratic federation so divided naturally fell.

This system, as has just been said, is one of the methods of federating republics of communities of different kinds

and levels of culture and thought. Western republics or democracies have no idea of such a federation, for theirs are only federations of peoples of culture and intellectual enlightenment of a harmonious character. They cannot tolerate and include in their body politic a republic of the coloured races. The Indian caste polity, on the other hand, readily recognises any community as a sister by treating it as a caste, allowing it to manage its internal affairs as best it can. Even the 'depressed' classes who, in matters social, have been generally treated with great harshness, have their caste rules, which are likewise respected by every other caste. Any new community may come into the body politic and be treated as a part of the whole. So have innumerable new castes formed themselves and forming themselves even to-day. The Parsis came and they were allowed to live as a caste republic. The Mahomedan, the Christian, the European and every fresh community that came into the national body is viewed by the Hindu as a sister democratic community or new caste. In fact, in popular language 'caste' is used to indicate the Mahomedan, the Christian and the European and every other new body of men. Such has been the principle from pre-historic times. The new castes, however, not infrequently resorted to their old practice of appealing

to an individual head. But they also adopted the 'Panchayat' imbibing the democratic spirit of the caste system.

The one principle and that the greatest obeyed by every one who is a Hindu is that the caste rules of an other should on no account be interfered with each caste being bound to respect the autonomy of the other though this is often misinterpreted as apathy and antipathy. In this sense all castes are perfectly equal. And this theory of equality, it will be remembered is upheld by an important school of Ethical and Political philosophers of the advanced West even now.

This is not all the difference between Indian Democracy and the Democracy of Europe and America. In those countries the king loosely hangs by the people. Removing him is a matter of no great consequence. But in Hindu India the king and the people are one like father and sons. Patricide and Regicide are offences so heinous in the eye of the Hindu that there is perhaps only one instance of the people having killed their own king though there have been cases in which the rulers have been changed by them. The sovereign contributes to the well being of the commonwealth like every other citizen though he has a higher status like a father in a Hindu family. Hindu democracy is like the English in that it recognises the king as a part of the constitution. But the Hindu king is more, he is one with the people. In a word the Hindu political notion of Democracy is non-dualistic and has a spiritual basis. What is meant by spiritual we shall presently discuss.

It is not the object of this paper to vindicate the vagaries of the caste system or to justify the wickedness and tyranny perpetrated in the name of caste in the social world, individuals or bodies. Untouchableness for instance is no doubt a sore point. But the political disabilities of the untouchables have to be traced to their poverty and to their want of education the birthright of every human being which unfortunately

has been denied to them. Mere touchability cannot improve their economic or political condition.

Arabesque Sculpture Madanmohan Temple Benares

It should not however be thought that there exists no recognition of the equality of the untouchables with the Brahmin or other castes. At least a thousand years ago Sankara proclaimed in Benares that his greatest teacher came of the lowest of the untouchable classes and to this day we find no untouchability attaching to any Hindu in the temple of Visvanath and in the ghats. In Southern India Ramanuja canonized many a Panchama who are revered as saints by the Brahmins and to this day the untouchables are free from this disability for some days in the year in the temple at Melkote. The reforms thus initiated would have rapidly proceeded but for the arrest of their progress during the period of foreign invasions.

II

Now if Hindu polity was Democratic was there no autocracy in the country when the British took it in hand? Was it all a misreading of Indian life by the British authorities? No there were then

Gandhar style—for Maandir, Bishnupur.

this notable expedient, most successfully warded off many a revolution and many a possible usurpation. It will suffice here to mention that that State is no other than Travancore.

If the age of the Vedic Brahmanas and of the Dharma Sutras is anterior to that of the Greek democracies, so far as historical evidence goes, India is clearly the birthplace of Democracy. And India is the one country that has preserved not only the democratic instinct but also the democratic life to this day, in its caste polity. The modern democracies of Europe and America are but children of yesterday by the side of the Indian. And now what shall we say to those who tell us that India has yet to be trained to a democratic Government? Is this not an attempt, if a somewhat rude colloquialism would be pardoned, at teaching the grandmother to suck eggs?

Will the critics of Hindu political institutions give us without following the caste plan, a constructive scheme for federating republics of peoples whose levels of thought, life and civilization differ as the poles asunder?

India has sometimes been compared to Russia, and arguments are advanced to show that in the absence of a high percentage of literacy democratic government would be impossible, nay injurious. Perversion of reason could go no further, though there is great truth in the fact

for comparison?

It is not argued that the Hindu has developed already the most perfect form of Democracy and that no further improvements are needed to adapt his old polity to present needs. All that is claimed is that the material, *the spirit*, the sense, is there and it has only to be wrought into the shape we require, as in the State of Mysore.

Evidently, then, a mistake was made in reading India by the early Europeans. The kings were detached and dealt with by themselves, a process, which from the Hindu standpoint is similar to decapitating a body and treating the head as the whole man. And in times of confusion and war, this did not matter. With the advent of peaceful times, the truth has again forced itself to the view. The people who form a no mean factor in the constitution are seeking to make themselves heard. And this phenomenon is to some foreign minds, which were accustomed looking only at a part, i.e., the ruler, but not the whole, is an enigma. And this apparent mystery has evoked the most ingenious explanations and fantastic theories from some European writers, even of the level headed Morley school, on Indian affairs.

What a Hindu wonders at here is the strange inconsistency of such European critics. The Hindu admires the scientific spirit of the Western and acknowledges

that for the working of the modern methods of democratic government, literacy is of the utmost value. All the same, was literacy higher in Mysore thirty years ago than it is in India at present? Have not the people of this state adopted themselves to the change readily? Have there been any revolutions, as in Russia? The truth is that democracy does not need the help of 'letters' so much as of the 'spirit'. Do the people possess the democratic sense or spirit in them? That is the point. Russia has had no village panchayat, no democratic caste system, Russian kings and people were not the spiritual unity that the Indian kings and their people have been. Where then is the ground

the greatness of the white man's love of truth and fact in all scientific investigations. But the Hindu cannot understand the European's inability, if not unwillingness, to look at facts and truth in matters political. Instead of allowing his mind to be obsessed by the Greeco-Roman prejudice that because the Hindu is thought a conquered man, he must be a barbarian, if the critic imbued with true scientific spirit only sifts facts he will find items worthy of his consideration. And of such items, not the least is the 'spiritual' democracy of India.

The European politician usually discards Hindu philosophy and proceeds upon the presumption that all metaphysics is only *speculation* which concerns only dreamers but not those who have to deal with the stern realities of life. It may be mere speculation in Europe but metaphysical belief in India profoundly influences religion, and religion influences life, life includes political conduct. To understand Hindu society, one has, therefore, to go to Hindu philosophy, which is its foundation. That this is deliberately so planned is evident from the Hindu works on law and constitution which invariably declare the ultimate philosophical beliefs upon which they take their stand. The Dharma Sutras and Smritis aver that the basis of all laws and political institutions is in the words of Manu, the aim at realizing in one's own self Supreme (Universal) self (XII 12) i.e., realizing that every one is the divine self. The king is divinity, the people also are divinity. All the same, and all are one. This is the conviction of even the Mahomedan Sufi who in spirit is one with his Hindu brother. And this is the meaning of the Hindu 'spiritual' Democracy.

It is not that every Hindu or Moslem has realized the meaning of "All this is Brahman" (*Upanishad*) or of "Wherever thou turn there is the face of Allah" (*Quran*). Nor even that everyone knows it. But whether or not one knows it or believes in it, the fact is there, says the

Hindu Philosopher, that the world is moving towards the realization of oneness, which is the goal of all political life, nay of all life. And this is what is known as 'spiritual force'. The wise, the Hindus say, know it, act according to it and direct people to follow it, as is laid down in their great laws. And they have been actually practising it, by adhering to caste polity these several thousand years. There are no doubt dualistic and other interpretations of this principle. But all Hindus cling to the caste organisation and the democratic Dharma underlying it.

It was only yesterday that President Wilson gave to the world his famous dictum of the equality of all men in the memorable words 'The interest of the weakest is as sacred as the interest of the strongest'. But whence comes this notion of equality and whence the sacredness? The answer is not found in his words. But the Hindu gave it thousands of years ago. He said that the weakest and the strongest are not different. They are one. The injury that one causes to another is an injury to one's own self, the harm done by one nation to another recoils upon itself. If it is only a question of time. This idea of oneness or non-difference has been the staple not only of the thought but also of the life of the Hindu from time immemorial.

This is the Dharma to which the Hindu has been clinging under all vicissitudes of fortune and which is being misinterpreted in various ways by those who do not understand it. And this belief which recognises the oneness of all creatures which recognises the same divinity in all and which has recognised the divine teacher in the very lowest 'untouchable', the divine prince in the 'Non Brahmin', Rama and Krishna and the divine soul in the Brahmana saint and which therefore holds the interest of the meanest as sacred as the interest of the highest, admits of no division of interests between the king and his people and of no theory of 'Autocracy' or 'Personal Rule'.

THE PROPOSED LEAGUE OF NATIONS AND RIGHT VS. MIGHT

TO prevent future wars, and to ensure stable peace of the world, President Wilson is earnestly engaged in establishing a League of Nations. The idea is, of course, not a new one, and it would not have now captured the imagination of the people so much, were it not for the intense and extensive suffering caused by the terrible world war. There is no good or evil in the economy of Nature that is not accompanied or followed by, its corresponding opposite, either manifest or disguised. The greater the evil, the greater is the resulting good.

It is not at all creditable to the much vaunted modern civilisation that an International High Court for settling international disputes has been so long overdue, and that a devastating world war continuously for four and a half years was necessary to convince the civilised West, that war is really too bad to be further tolerated. Before, however, suffering humanity can congratulate itself on the prospect of an enduring peace, let it not be deluded by catch phrases and commonplaces. The idea, for instance, of substituting *Right* for *Might*, is very captivating indeed; but on examination it will be found that this, as understood by the "Great Powers", is "distinction without a difference." There is a hardly any material difference between what are commonly known as *right* and *might*. The methods of *might* are of course primitive, rude and naked, but they have the advantages of being natural, open, direct and quick in decision. The methods of *right*, on the other hand, are conventional and disguised under civilised or legislative garb, but both are essentially the same in substance; and like *force*, *motion* and *heat* are but the different forms of one and the same thing. Just as currency is the convenient and conventional equivalents of crude commodities, so is *Right* the conventional and convenient equivalent of *Might*. *Right* is the stamped coin, issued from the Legislative Mint of which *Might* is the metal. If a mint cannot turn genu-

ine coins out of base metals, how can a League of Nations be expected to manufacture *rights* out of the existing base materials? The evolution of an International Jurisprudence would no more be an indication of improved international morality, than the evolution of the medical science is an indication of improvement on the primitive rustic health. Courts of law have never been known to have done duties of reformatories. Legal institutions can, at their best, minimise only the outward expressions of primitive warfare and other criminal activities; but so long as the brute in man is not killed or extinct, these old evils are sure to survive, thrive and appear in various other forms disguised in scientific and civilised garbs. We are not quite sure, that in spite of our civilisation, the proportional sum-total of human criminality and immorality is less to-day than it was in the ancient days. Good and evil, as we call them, are both equally subject to the same universal Law of Evolution. In the natural order of things there is no such thing as evil in existence. There is evolution of the so-called *evil* going on side by side with the evolution of what is known as *good*. Courts of law more often create than cure crimes. The League of Nations may suppress or minimise visible expressions of militarism, but human nature remaining as it is, the League would be powerless to prevent the natural, open and blunt military form of *might* evolving and appearing in civil, refined and unobtrusive disguises of various kinds, such as bribery and corruption in more or less subtle forms.

If *right* is to replace *might*, what would become of the scientific theory of the "survival of the fittest"? The scientists might have laid down—"Survival of the best", but they used the word "*fittest*" instead of the word *best* for a very good reason; and that is because of the fact that the *best* is not always under present conditions the *fittest* to survive. *Right* of title to a possession may be either acquired or inherited. In either case it is a trans-

mitted and latent form of what was originally gained by *might*. How did the European settlers in America, Africa, Australia and Asia establish their respective rights over the helpless aborigines of those continents? Were the methods employed by them morally justifiable? On what moral principle can a *wrong* be converted into *right* after a certain period? Can a person guilty of, say, murder be converted into an innocent man after a certain number of years arbitrarily fixed by human legislators? In international ethics has any, and if so what, time limit been fixed up to now that can convert *might* into *right*? Let us take for instance, the quarrel over the provinces of Alsace and Lorraine. These two provinces must have been in existence since the creation of the world and they had been lying there long before the present disputants were born and they would remain there long after these disputants vanished from the face of the earth. The warring nations do not realise that none of them have any moral right to be the landlord. Before them countless races in prehistoric days, appeared and occupied these two bits of territory in succession and then disappeared. How then is *Right* to be defined and determined? In a word what ought to be the criterion or test of *Right*? Rulers punish their poor subjects when they fail to pay their rents and taxes but these rulers never recognise the fact that they themselves are only 'tenants at will' of the unseen but *Real* Landlord of the Universe. It is not that these rulers do not believe in His existence, as they offer victory prayers, but they do not recognise that rent or obligation in any kind or shape is at all due to Him! Is President Wilson or any of the afflicted nations sure that these dreadful wars are not the Supreme Landlord's punishments for recovery of arrears of rents due to Him? Have these suffering nations and their rulers ever cared to fulfil their obligations due to the Universal Landlord who, though unseen is manifested in the world organism? Wars are only punishments of defaulting rulers and nations.

There are many scriptural and moral precepts such as— "Do unto others as you would that they should do unto you," "Freedom of everybody limited by like freedom of others"—These are no doubt excellent ethical principles but these do

not go deep enough. As a general rule people will not give up their selfishness or make sacrifices for the sake of others unless and until they are assured that such sacrifices are more paying in the long run, unless and until they are convinced that their true self-interests lie in the interest of their *Real Self*. All individual and national interests should be subordinated to and co-ordinated with the interests of that Highest Self. If peoples can submit themselves to amputation of any of their injured limbs for the preservation of their whole being why should not people readily submit to immediate temporary sacrifices for the sake of achieving the highest objective, the *Real Self*? We find this enunciated in the *Mahabharat* thousands of years ago in a form of expression still unsurpassed by any even at this enlightened age. Speaking to *Dhritrashtra* regarding his ill-fated son Duryodhana, the wise Bhishm said —

एक व्यजेत् कुटुम्बाय दानं क्वाये कुत्र व्यजेत्.

एवम जनपदस्यापि चात्मानं वृत्तिरेव जनतः ।

One (who is mischievous) should be forsaken for the sake of the whole family. One family should be forsaken for the sake of the village. A village should be forsaken for the country, and the whole world should be forsaken for the sake of the *Atman*, the Supreme Self or Soul."

Selfishness had been condemned *ad nauseam* long before President Wilson appeared on the scene. He is neither the first nor the foremost person to have condemned selfishness. If the whole world is giving him so much attention and prominence, it is not because his gospel is a new one, but because he wields more *might* now than he ever did before, and also because, after the disastrous world war peoples are now in a mood to listen to his message in spite of its being very old and commonplace. His conception of *right* praiseworthy though it is is not founded on any universally accepted basic principle. *Right* determined by a majority, actuated more or less by self-interest, is only a veiled form of the supremacy of *Might*. That the delegates will invariably be the true representatives of the peoples and that the majority will always be on the right side, are the most common, yet the most unsound assumptions. In spite of evolution of civilisation and moral conceptions man cannot help being selfish. Selfishness

is the natural spring of life and as such there is nothing to be condemned. It is an altogether untenable proposition that individuals and nations should give up their selfishness and that wars are the results of such selfishness. The truth is all the other way about. As a matter of fact wars are not the results of national selfishness as is commonly believed, but no the contrary they are the results of want of true selfishness. It is the ignorance of the true self that is the root of the evil. The real remedy lies in removing this fundamental ignorance in *knowing and realising the true self*. The whole Vedanta stands out in bold relief as the one serious endeavour ever made in finding out the true and essentially permanent self by analytical dissections of the human being known as "I". It is the knowledge and not the knowledge only but the realisation of the true self that can alone eradicate the false, the impermanent, and the delusive selfishness and implant the conception of the Real Selfishness.

According to the science of Sociology, society is a big animal and its component parts are all harmoniously interrelated for the fulfilment of the whole organism, and that one part cannot live and flourish at the expense of another is a truth now universally admitted but not adequately realised. The proposed League of Nations with all its imperfections at the initial stage, will prove really a step forward if all the component members recognise and realise their true self-interests harmoniously with the rest for the eventual evolution and fulfilment of the world organism as a whole. This is the basic principle on recognition of which the success of the League entirely depends. We cannot expect much out of a League as it is going to be constituted. Delegates representing only a false notion of self-interests can hardly be competent to serve the great purpose. On the contrary, there is the fear that there is the possibility of an evil being legalised and perpetuated.

Neither precepts nor laws are necessary to induce capitalists to invest their money in the most profitable concern possible. The greater the profit the greater would be the attraction. When the nations are enlightened enough to realise that they are but the different limbs or organs of one whole world animal they would not

require any League to enforce sacrifices of their immediate and temporary interests for the sake of the remote but best interestment. The whole world is badly in need of the knowledge of the true Self. The pursuit of the impermanent and false interests will only lead them more and more in the wrong direction. "Knowledge" is the highest sense of the term is the only remedy for all the ills, individual and international, humanity is heir to.

There can possibly be no inter-organism rivalry between say the liver, the spleen and other organs, they perform their respective functions mechanically, quite unconscious of their inter-dependence. The evolution of the world organism—the ideal of the science of sociology—is progressing gradually and will certainly be advanced by the inevitable sequences of this great war. International jealousy and rivalry ought not to have arisen amongst the different nationalities that are supposed to be self-conscious. Rivalry and conflict of interests among nations are caused by competition, which, again, is due to very imperfect adjustment and unintelligent distribution of functions among the component nations. In a perfect or rather healthy society there should be perfect coordination and not competition or overlapping of functions. In an ideal society there should be as many different "self-determined" nationalities. And thus there should be no room for conflict of interests, jealousy, and rivalry.

The determination of international rights, is purely a judicial function and the League of Nations, as it is proposed to be constituted, can hardly be regarded as a competent judicial tribunal. It should serve the functions of the Brain in the world organism. And as such it should be constituted by the best intellects and moral philosophers of the whole world. It should be so constituted as to form the Supreme Legislature of the whole world. To be able to discharge its functions impartially it is essential that its members should be altogether free from and above the influences of narrow national and sectarian local interests, and that they should be regarded as fit to view international questions of right and wrong from the highest stand point of Humanity as a whole. In the ancient East, it was the seers (Rishis) who legislated, and not the representatives of commerce

trades and various industries. The kings were merely the Executive Heads, they had no power to make laws, but had to administer with the help of interpreters or ministers, laws that had been laid down for them by the disinterested ascetic Rishis on universal spiritual principles as known by them in their time.

"Justice" is a Divine Ordinance, and far higher than politics. President Wilson's ideal, high and noble though it is, falls far short of the true concept of "Justice." That the League of Nations should be composed of not the spiritual but the political representatives of the Powers, and that the Great Powers should have the prepondering voice, are practically the same old motto—"might is right" put in another form. The world has no spiritual heads or representatives to come forward and take up their legitimate functions at this most critical moment. The Church as a spiritual force and the highest tribunal for deciding questions of "international justice" is quite impotent.

This shows the extent of the spiritual and intellectual degeneration of the world. International justice is going to be dealt with not by the wisest and the best men in the world, but by a band of interested politicians of certain powers and predominantly of the "great powers." Only self governing powers will be represented. That is to say those powers that are strong enough to protect themselves will be protected. The smaller powers will be practically in a minority, and the rest of all the subject nations and peoples, will be left out altogether. In an international Court constituted as above, *might* will be more in evidence than *right*. Mr Wilson felt for the helpless peoples more than for the more powerful. His League of Nations will not help the helpless. There ought to be in future at least a 'League of the Subject peoples' established side by side with the League of Nations so that the unrepresented subject peoples may represent their wants and wishes.

KAPILSWAR BHATTACHARIA

GOVERNMENT SCHOOL OF ART, CALCUTTA

EXHIBITION OF STUDENTS WORKS

THE Exhibition of the Works of the Students of the Government School of Art held during February and March 1919, raises from the standpoint of the public many points of interest. The work of the School deserves more attention and encouragement from the public by way of intelligent interest in its work and active relationship with respect to the opportunity it affords for a training in art. For if the institution has not proved more useful than it has been up to the present, the fault lies it is said, more with the public than the institution. Indeed it is very discouraging to think how few students go in for admission to this School, as compared to the crowds which flock into institutions for general education. As a rule the sweepings from the Matriculation schools or the 'ner-do-wells' of the family are sent to the School of Art. The boy who is good for nothing else, is, in this country, thought good for qualifying as a student of art. From such material, neither Yivakarma nor the Goddess of Learning herself could turn out a good artist. Yet this is the impossible task which the School of Art is called upon to perform. For very few students with a real talent or inclination for art ever think of choosing art as a calling or profession in life—because having regard to the poverty of public interest and encouragement of art the career of the student who chooses the profession of an artist is led a life of extreme precariousness. And apart from portraiture there has been little consistent patronage of the

Fine Arts on the part of the Indian public. Even with regard to commissions for portraits the patronage has been of such insignificant, squalid and eccentric character that it has done more harm than good to the artists whose lot has been to attempt to cater to this squalid demand. With the recent growth of Bengali literature and the production of illustrated books, a demand for the talents of artists has been called for but generally the conditions of publication have been so discouraging as to preclude a provision for anything like living wages to illustrators of books. The collections or connoisseurs of pictures, as such who would take interest in art for the sake of art are so few in this country that their patronage is quite insignificant and does not call for the employment of any large number of artists. Art as a form of culture and an indispensable part of a man's education has unfortunately no attraction for the modern educated Indian who still continues to look upon art as a fruit forbidden by his university curriculum. There are very few artistic trades in the Bengal Presidency as there are in the Punjab and the Madras Presidency. So that the artist is not required here even in the field of what is known as Applied Art. It is said that many new industries are coming into existence in Bengal and if such industries can get on without calling in the aid of artists they must be of that "brutal" stamp with which Ruskin labelled all industries without art. And the state of that society must be perilous indeed in which there is no occupation for an artist. Yet it is difficult to believe

that circumstances are quite as bad as that. For some years past a local pottery work has been turning out tea-cups, porcelain dolls, &c., with execrably bad design and decorations without any apparent protest on the part of the public which patronizes them. Yet we know that the enormous sales which Japanese tea sets command in this city, could never be rivalled by local products unless the talents of artists could improve the colour and design of the latter. There are several classes of artisans and craftsmen who are not influenced or trained by any method of art teaching. They are goldsmiths, carpenters, house decorators. The design of furniture making is regarded as fine art in many Western countries. And though in the majority of cases the Indian householder buys ready made furniture, there has arisen, during the last few years, a fairly good demand for distinctive designs for furniture for daily use. The art of the goldsmith is still the most highly patronised branch of artistic crafts in this country. The patronage of the goldsmith's work is still of a very uncultivated and barbaric character and unless there be a demand of artistic jewellery of good designs, the goldsmith could never think of sending his son or pupil to the Art School for training. The function of the Government School of Art is therefore necessarily circumscribed by the conditions of artistic patronage in this country. And the painting of portraits, land scapes or subject pictures seems to be the only branch of art to which the teaching equipment of the institution is mainly directed. Having regard to the nature of the talents which drift into the school of art, it is impossible to expect a high level of production of art pictures. This seems to be emphasized by the large number of landscapes exhibited chiefly of garden scenes rendered in very loud pigments. The Indian stage craft is still in its infancy and one is inclined to ask if some of these students could not be specially trained to treat theatrical scenes and stage accessories. A few years ago an student of Sir J. J. School of Art, Bombay, was taken into a Parsi Theatre Company whose activities have since introduced many new improvements in Indian stage craft. It is notorious that the Indian stage in Calcutta is in a deplorable condition. Why could not some students trained in the Government Art School improve the level of Indian stage scenery?

These reflections are suggested by a study of the pictures exhibited in the small room of the Government School of Art. Out of about 80 pictures representing nature scenes only one piece 'Cascade' (No 76) attempts at a distinctive and individualistic point of view, the others are works so much in the same groove that they seem nothing but repetitions. The 'Cascade' by P. Maxmudar has unfortunately missed the prize which it very well deserved. A rather striking river scene, badly hung 'No 132,' follows the style of the talented Vice-Principal in the sincerest form. Imitations such as these may well be discouraged, as they only help to prevent the student from finding his own way of expression. The 'Trees' (No 80) is an excellent piece of work deserving warm commendation. The portraits, though some of them display a few good qualities, do not tend to attain a high standard of students' work. Even a really good artist in portraiture is born and not made and it is futile perhaps to expect teachers to turn out one, out of mediocre talents; still a sterner form of training may perhaps yield better results. Of the black and white work Panda's

'Portrait Study' (No 132) shows conscientious work and one regrets, more examples have not been exhibited. The same remark also applies to the examples of wood blocks which, as a form of expression, have reached a very high level of excellence in Japan and also in England during recent times. Good colour prints from wood blocks offer a very interesting medium which may rival in many cases the commercial tri-colour blocks which seem to be much in request in India.

The Indian department in which the indigenous methods of painting are taught is now in charge of Mr A. K. Haldar. The exhibits from this department are not many but have suffered most from the bad position allotted to them. Although they do not reach a very high level, they have one distinction as compared with the exhibits of the European department: they reveal a tendency to dig out an individualistic channel of idea and expression and are far less conventional than the other group of exhibits. Special mention must be made of J. Gupta's 'Dance of Krishna', said to be the first sketch of a new student, which, in spite of its crude technique, displays quite original method of presentation. The traditional methods of Moghul and Rajast portraits of which such excellent examples are in the collection of the Government Art Gallery, might be studied to advantage and exploited for the purpose of evolving a modern school of Indian portraiture. Some of the works exhibited in the Indian section, particularly those by Mohanur Prosad Varma, show that there are talents which may be usefully directed to this branch.

The examples of work showing the effect of teaching of design, as such, are not quite evident in the studies exhibited. This is a very important branch of art teaching and is of vital interest to the progress of the application of art to industry and the growth and development of Indian industries. We are so many miles behind the progress attained by other countries in the study of Art and its application to industry that it is useless perhaps to remind us that many American Universities have assumed responsibility for the special teaching of design and the Harvard University has chairs endowed for Lectures on the Theory of Design. Yet one is tempted to quote from Mr Brown's report in which he outlines the aim of the School: "The object of the School is to guide, direct and encourage the special artistic tendencies of the people." Its work is to restrain, control, and instruct the art workman in the preparation of his designs and to develop his technical skill. Its aim is to provide a wholesome art education for all classes of people and to instil into the mind of young India the good there is in the country's art. Not the least important part of the School's work therefore consists in a resuscitation of the indigenous artistic sense."

Owing to ill health, the Principal had been away for a time and it is not fair perhaps to scan what actual advance he has been able to effect in the course of a year on the work of the School which he guides with great care and sympathy. On the whole the works of the students offer a very interesting collection and ought to awaken on the part of the public greater attention to and interest in the useful work that the School is doing under very difficult conditions not the least of which is the apathy of the general public.

PROFESSIONAL BEGGARY IN CALCUTTA

BY CHUNIL BOSE I.S.O., M.A., F.C.S.

দ্বিতীয় অর্থ সীল যম্মা প্রবন্ধ দ্বিধা ।

স্বাধীনস্বাধীন পথ সীলস্বাধীন ক্রিয়াদি ।

Help the poor O son of Kunti do not abuse charity by helping those that have plenty The sick only need medical care, what will medical care do for those that enjoy good health?

As this question is now engaging the attention of the Government of Bengal I lay before your readers a few suggestions which might be found useful in the solution of this difficult social problem.

I shall confine my remarks to Indian beggars only. They may be broadly divided into the following three classes—

A Street beggars

B House to house beggars

C Distressed "bhadrakal" class

As an old resident of Calcutta, and being in close touch with some of the charitable organisations for the distribution of relief among the poor of this city, I am of opinion that begging has generally been on the increase and that the increase of beggary in the streets of Calcutta has grown to a serious extent.

A Street beggars—The street beggars generally consist of infirm, old and diseased persons and boys and girls of tender age who station themselves at prominent places in the streets generally at the tramway junctions the bathing ghats the markets and other places where people usually congregate in the course of the day. Some of them beg for themselves others (mostly the crippled and the children) are placed there by people who profit by their earnings. Among them are also found able bodied persons some of whom are religious mendicants. Lepers and persons suffering from other filthy and contagious diseases are also to be found among them and this must be considered as a source of great danger to public health.

B House to house beggars—This class includes religious mendicants the aged and the infirm poor, and also professional beggars.

C Distressed "bhadrakal" class—Owing

to hard economic conditions, distress among the respectable poor is increasing. The daily growing number of applications for relief from this class of people to the different charitable institutions of the City, such as the Indian section of the District Charitable Society, the Sohabazar Benevolent Society, the Calcutta Orphanage etc., go to confirm the above observation. The breaking down of some of the old Hindu social institutions, principally the Joint Family system, is responsible for this state of things.

Remedies Suggested

I am of opinion that we need not at present deal with the beggars included in classes "B" and "C", for the simple reason that they do not constitute a public nuisance in the sense that the class "A" is. Our efforts should, for the present, be directed to minimise the nuisance of street begging.

The existing law in force (Police Act Sec 70 and 70A) is quite capable of dealing with this evil, and in my opinion, the law need not be made more stringent. The reason why the law cannot be effectively enforced is because there is at present a place where all the old, infirm and incurably diseased beggars who are taken before Magistrates could be sent. The Magistrates are after all human beings and they can hardly be expected to take so hard a line as to send these people to jail for the simple reason that they cannot earn their living in any other way. Eighty per cent of the beggars are, therefore, simply warned and discharged by the Magistrates, and it is no wonder that the existing law exercises no deterrent influence on the evil practice.

(1) The real remedy to stop the evil lies in the establishment of an institution where the aged, the infirm and the incurably diseased beggars could be sent by Magistrates and sheltered and taken care of during the period of their detention. Temporary provision may be made for the admission of these people in some of the existing institutions in the city (such as

the *Refuge*) until a new home is organised and started outside the city for their detentioo. An Infirmary and a Reformatory School should be attached to this institution.

(2) To carry out the above, the approximate number of street-beggars in Calcutta should be ascertained through the help of the Police, so that provision may be made in the New Homes for the requisite number.

(3) All lepers with sores, found begging in the streets, should be detained in a Leper Asylum. The Police has power under the act to do this at once.

(4) All beggars suffering from curable diseases should be sent to the Infirmary attached to the Home; and when discharged, they should be helped in finding suitable employment by an organisation, to which a brief reference will presently be made.

(5) The cost of the maintenance of the "Home" should be borne jointly by Government and the Corporation of Calcutta, aided by subscriptions raised from the charitably-disposed public. The Poor box Funds at the disposal of the City Magistrates should be applied for the maintenance of the Home.

In dealing with the class of heggars under head "B", it must not be forgotten that with the Hindus, the giving of alms to religious mendicants who, under vow, entirely depend upon this form of charity for their livelihood, is considered to be a part of their daily religious duties. And on occasions of special social and religious ceremonies, beggars are sought for and fed or given food, money and clothes at the houses of both Hindus and Mahomedans. Such social customs enoble this class of heggars to get a sufficiency of food and raiments for the ordinary requirements of life and they have, therefore, no excuse to betake to *street-begging*. I would not, therefore, interfere with these people as long as they resort to strictly legitimate quarters for the begging of alms, but any religious mendicant found begging in the streets of Calcutta should be brought under the operation of the law. The *house to house begging* is open to them and they must not be permitted to create nuisance in public streets.

I am, therefore, of opinion that the system of *house to house begging* need not at present be interfered with. It is sanc-

tioned by religious usages and is in accord with the sentiments of the people. It forms an outlet for individual charity to relieve distress among the poor and the helpless of the community. There is no doubt that some professional heggars take advantage of this system but it cannot be helped.

In the case of *able-bodied street-beggars*, it cannot be denied that although as a class, they are the least deserving of sympathy, yet even among them, a certain percentage (no doubt a small one) beg from sheer necessity. New arrivals in Calcutta who find themselves stranded in the streets, men suddenly losing their employments, etc., often find it too difficult to get a living for themselves for the time being and are compelled to take to *street-begging*. For these I would suggest that—

(6) There should be some organisation whence they can obtain temporary help, on application, in the shape of work, or doles, or money, after due enquiry. An institution on the line of a *Work-house* may be established, where they can earn their daily living, until they can get suitable employment elsewhere. Without some such provision, it would not be fair to punish people for begging when they are unable to find work to earn their living.

(7) Arrangements may also be made with many of the charitable institutions in the city to provide temporary help in such cases.

(8) All able-bodied beggars not falling within the above categories, and any person refusing to submit to the above conditions, should be dealt with according to the strict terms of the existing law. Repeated punishment will, I feel convinced, have a deterrent effect on the present evil practice.

The relief of the "respectable poor" must be left to private charity and to the societies for distribution of organised charity existing in the city. Such charities should be made remunerative as far as possible, and with this object, they should be associated with departments of common industries, so that any person receiving help will have an opportunity to give something in return and thus not suffer from the humiliation and loss of self-respect inseparable from begging. It is a complicated sociological question, and it will always tax the energy and resources

of people of all countries to successfully tackle with the problem

The number of juvenile heggars in the streets of Calcutta is on the increase and this constitutes a great nuisance and source of danger to the public. For not only these children give trouble by begging in the streets but they swell up the criminal records of the city as pickpockets and thieves. I would suggest that they should be put in the Reformatory School by orders of Magistrates, unless their natural guardians, if they have any, stand security for them

against repetition of the offence. They should be detained in the School for such period as would be required for a thorough training in some useful art or industry which would enable them to obtain a decent living on their discharge from the School.

Although the present paper deals with the problem as it affects Calcutta, the subject is of general interest, as all large cities in India more or less suffer from the same nuisance, and they may be called upon any day to devise measures for its suppression.

CORRESPONDENCE

Namasudras

To The Editor of *The Modern Review*

Sir—In the March issue of *The Modern Review* a local Home Ruler monthly a letter is published in its correspondence column under the nom de plume of X, in which the Namasudras are abused in the vilest of terms. The character of the abusive language does not admit of more than a mere reference to it here. I would only submit that the Brahmin Brahmo Editor (and well informed persons know that a Brahmin does not forget his caste even when he is a convert to Brahmoism) who encourages this sort of abusive correspondence forgets that if the theory were once accepted, all the offspring of marriages between Kayasthas (Sudras) and Brahmins (the number of which even in a body of 5000 Brahmins in the whole of India is not small) would be regarded as "Chandalas" not even excluding a reference to Lord Sinha's family. Then again another indisputable fact is that the number of Namasudras in Bengal and Assam is 2 millions and odd. And of Brahmins there will be an odd. And as such, does not the shameful statement that these two millions are the offspring of one million Brahmin mothers and Sudra fathers mean the grossest of labels against the character of Brahmin girls as a class. It is strange to find that although the Namasudras abhor any connection between Namasudras and Brahmin girls and emphatically deny the Brahmins and other members of so-called high castes are loath to regale in an attempt at thus drawing down the Namasudras. Such is the bitterness between castes in Bengal. The pity of it is that this has not been a whit realised in the Montford Report. Had it been a little realised Mr. Montagu and Lord Chelmsford would have been the very first to say—Down with caste system must precede Down with Intercaste. [We would say Down with both simultaneously. The Bureau casts are a caste by themselves.—Ed M R.]

Yours etc.

B RAY

Joint Secretary

Calcutta Namasudra Association

Editorial Comment.—We print this letter as it comes from a member of an aggrieved community. We have read 'X's' letter in our last March number. We do not think that there is any abuse in it even of a mild description. 'X' only gives the opinion of a man on the origin of the Namasudras—an opinion on which neither 'X' nor the Editor of this

Review shares. Mann does not in our eyes possess the least authority in matters of anthropology or ethnology. And we know that in 'X's' opinion too a Choudala is as good as as bad as a Brahmin, so far as mere birth is concerned. It is only the character, attainments, conduct, and achievements of a person which really matter. A Sudra father and a Brahmin mother or a Brahmin father and a Sudra mother or a Sudra father and a Sudra mother or a Brahmin father and a Brahmin mother or any other possible combination in describing one's parentage is in our opinion neither abuse nor praise.

We are afraid Mr. B. Ray has not in his wrath understood the drift of 'X's' argument.

We do not care to refer to the personalities in which Mr. Ray has indulged. We can afford to smile and forget.—Editor, M R.

To The Editor of *The Modern Review*.

Sir—About the portrait of some Namasudras against my identification of the Chandalas with Namasudras in the last number of *The Modern Review* (p. 257). I beg to state that Sir Herbert Risley in Chapter II of his *People of India* (pp. 120 and 125) uses the two names as synonymous. No foreigner studied the caste system of Bengal more thoroughly than Sir Herbert and he is regarded as the greatest authority on the subject. But I did not borrow my information from him. I wrote from first hand knowledge. I am an inhabitant of the Dacca district and have some Namasudra tenants and they form the backbone of the Hindu agricultural community in my part of the country. They are universally known as Chandalas and are called as such even by those among themselves who have no pretensions to education or social position. In parts of the Faridpur district where the Namasudras are an influential community, they may not call themselves Chandalas, but in the Dacca District the Namasudras I have met—and I have met a good many, living, as I do, in their midst—certainly do not feel surprised or shocked if they are called so. Indeed when I was a boy that was their usual appellation, and the downy-fangled name of Namasudra had not yet come much into vogue. In this respect however the Namasudras are certainly not singular. The upward movement among the Bengal castes is manifested in the assumption by many other castes of the name and status of a superior caste as can be illustrated by numerous instances which I forbear to mention for fear of further embittering the controversy and wounding

social susceptibilities which are so sensitive in this unhappy country, but such instances will occur to every reader. As a step towards the ultimate obliteration of all caste distinctions, such a movement may have its uses in the scheme of the universe. Many sociologists regard the scriptural explanation of the multiplication of the four primary castes by interbreeding as more or less mythical. Nor do I think any the worse of a man because by birth he is a Chandala or Namasudra. I know some Namasudras in the district of Faridpur whom I sincerely respect, much more than I do many Brahmans, to which caste I myself belong. The simplicity, patience, industry, and piety of the ordinary cultivating Namasudra also evoke my admiration. I feel proud to count him as a brother Hindu, and I am not very sure, as a result of my own ethnic studies, that my own Brahmin blood, Kulla though I am, is much purer than his—Bengal Brahmans like all the other races of India and the rest of the world, appear to me to be a very mixed race indeed though I find nothing to be ashamed of in this. It was therefore never my intention to wound the susceptibilities of my Namasudra brothers. But I cannot help feeling that so long as they pin their faith to any particular theory of their origin in order to make out that they are socially superior to the caste with which they are usually identified, so long will the canker at the root of all such distinctions continue to poison their efforts towards the attainment of that social equality which all genuine well-wishers of the country want to see established. X

Inter-caste Marriage.

To The Editor of *The Modern Review*

Sir,—In continuation of my letter on Inter-caste Marriage in the last number of your magazine the following extract (translated into English) from a Bengali book named *Himalaya Bhayana* (Travels in the Himalayas) by Brahmachari Suddhananda (Calcutta, 1319 B S.) will be found interesting as it shows that in the hill tracts of Northern India inter-marriage, both in the *Anulom* and *Pratilom* forms is prevalent to this day, and the issues of such marriage attain the status of the higher caste parent in the third generation, and we shall presently see that this is in entire accordance with the ancient Shastric injunctions. We are not to suppose that caste is by any means lax in the Himalayan regions. On the contrary, caste observances are very strict but as in ancient India, considerable liberty of choice is allowed by Hindus of these parts in regard to matrimonial alliances (See also on this point an article on the Hill State of Chamba in the Bengali magazine *Prabasi* for Jalsha 1325). Now for the extract referred to above:

"There are three principal castes in the Himalayas—Brahmans, Kshattriyas and Doms (Sudras). Most of the Brahmins are of the Gaur and Saraswat denominations. If after marriage the wife does not suit the husband or vice versa they can divorce each other with the consent of the Courts, and then take another wife or husband as the case may be, and this may go on as often as the parties like. Provided sufficient dowry is available, a Brahman may marry a Kshattriya girl or a Kshattriya may marry a Brahman girl. Only the issues of such marriage are not taken into the Brahmanic fold at once they however observe all the Brahmanic sacraments and gradually, in the third generation, the progeny are accepted as Brahmins and are permitted to dine with the other members of the Brahmanic society.

Brahmans and Kshattriyas are very keen about their respective caste observances, so much so, that after the investiture of the sacred thread, they may not even partake of food cooked by their own mothers" etc (pp. 27-19).

The uncle of His Highness the Holkar, Bhaia Sahab Sirdar Jado Rao, is the son of the late Holkar Tukajirao Rani by a Mahomedan lady, so also Bhaia Sahab Prince Balwant Rao of Gwalior, step-brother of the present Maharaja Sindia. The custom in these royal families is that if the son born of a Mahomedan lady has his ambical cord cut within the palace, he is accepted as a Hindu (See the Bengali magazine *Bharatvarsha*, Bysack, 1324, S V 'Indore and Ugaun'). Indeed, if we take a bird's-eye view of Hinduism as it prevails now over the entire continent of India (including Nepal, whose ruler is the only independent Hindu king in all India), we shall find that there is hardly a form of marriage known to society which is not prevalent in one form or other among the Hindus in various parts of India. The sage Chanakya (Batsayana), writing a few centuries before Christ (*vide Kamasutra*, Section II, ch 4 12 13) called love marriages in the Gandharva form as the best of all forms of marriage, owing to the great attachment prevailing between the parties to such marriage, and the conjugal felicity which flows therefrom. In Gandharva marriages the barriers of caste could hardly be observed with strictness.

The offspring of intermarriage, according to the *Manu Smriti*, (Chap 2, v 9) 'न चर्यात प्रवीर्ये' take rank not much below the offspring of marriage in the same caste, so also according to *Manu* (ch 10, v 8) they are 'सदमाते' (विदुषमान् न च विदुषामाणां इति कुलकथं) similar to the father's caste in status though not quite the same. By repeated cross-breeding, according to *Manu*, (ch 10, v 65) 'मूत्रो वाक्चक्षतेति वाक्चक्षति मूद्राद्' the Sudra is elevated into Brahmanhood and the Brahman is degraded into a Sudra. In Kalluka's commentary of the previous verse we find 'सप्तमे युगे जायते समाधेयस्यो यथा वैशम्पायनात् वाक्चक्ष' प्राप्नोति' in the seventh generation by repeated interbreeding with the paternal caste a Patasara (the son of a Brahman by a Sudra woman) is elevated to the rank of Brahman owing to the superior efficacy of the seed. The great sage Vyasa is an instance in kind. We thus find that the gradual elevation of the offspring of intermarriage into Brahmanhood prevalent in the Himalayan regions to this day has the sanction of our highest Smriti Shastras. Yours &c

Bureaucracy in Baroda.

To The Editor, *The Modern Review*

Sir,—Will you please be kind enough to publish the following letter of public importance and oblige—

Up till now Baroda was considered to be the nursery of democratic institutions. In almost all reforms of far-reaching effects Baroda claimed to be a pioneer State in India. But as the grim facts reveal the inner workings of this State in its true colours the condition is completely the reverse of what it seems to be from a distance.

The recent curtailment of the liberties of the Baroda Legislative Council the bitter complaints against the harsh control system and the reactionary order of this State forbidding its servants to take part in the recent Agricultural Conference at

Baroda, reveal the trend of the official attitude at Baroda. Can Bureaucracy go further!

To crown the grievances rampant at Baroda, an unheard of incident happened yesterday. A great public meeting, under the auspices of the Baroda Chamber of Commerce, was being held on the 9th March, to protest against the Control System at Baroda, by constitutional methods. But the Dis-

trict Magistrate of Baroda, who is also the Revenue head of the Baroda District, issued a prohibition order and stopped the meeting. Is it additions to hold a public meeting to protest against the "Control System"? Surely repression is soon going to be the order of the day in Baroda.

Girgaum, Bombay,
Dated 13th March 1919

Yours faithfully,
APABHAI C AMIN

INDIAN PERIODICALS

Sir Rabindranath Tagore's Views on some Educational Questions

Mr V. Subrahmanya Iyer, B.A., publishes in the February number of *The Mysore Economical Journal* under the above caption some of the notes jotted down by him at an interview with "The Great Indian Poet, Mystic, Scholar and Educationist" during his stay at Bangalore and Mysore in January last. On the eve of the publication of the Report of the Calcutta University Commission Sir Rabindranath's views on matters educational cannot fail to be of great interest to the public and that is our main interest in reproducing them here.

1. UNIVERSITIES

(1) *Professors*—While for the routine work of the University classes men may be appointed, as Assistant Professors in consideration of their academic titles and diplomas, it would be a most serious blunder to select professors for higher work on the same principle. For the latter have to be the leaders and directors of thought. And none but such as have given unquestionable proof of originality and genius should be placed in such positions. It is because of this defect in our Universities that most of them have not been the success that they should otherwise have been.

a The right method of appointing Professors is to invite the leading writers and thinkers available, on any subject, irrespective of caste, colour, creed or caste, to deliver courses of lectures and to select the best from among such lectures.

b Next, such Professors, when appointed should be bound by a condition that within three years they should produce some original work and that in every three years succeeding they should continue to give evidence of thought on original lines.

c The system of "exchanging" Professors of different Universities for short periods as in America should also be adopted.

d High salaries must necessarily be paid. But that will be cheaper than the present system, which is

more costly, in that it does not bring a corresponding return for the large sums spent.

(2) *Selection of Men for Specialization*—Now-a-days men are being deputed for special study not only within the University but also to places outside. But the results such men have thus far achieved, though in some cases really brilliant yet in most cases have not been equal to the expectation. And that is because the selection is not rightly made. Mere academic titles are not a safe guide. Nor is the selection made by authorities competent to judge of the merits of such candidates. It is only when young men have been in close touch with Professors with originality of thought, that their merits and aptitudes for original work can be known. And this can be judged best not by ordinary lecturers, usually known as Professors, but by those who have done original or research work.

a There should be travelling scholarships to enable the students to visit different provinces in India collecting materials for their special studies from observation and submitting them to proper authorities.

b Professors engaged in research work, should select students to collaborate with them. The mechanical portions of their work such as collecting data from different sources, collating different versions of texts, drawing up concordances and other such tasks should be left to these students to carry out with the guidance of the Professors.

(3) *Subjects of Study*—Another chief reason for the paucity of original thought and production in the existing Universities, is the viciousness of dividing the pupils' energies and attention in the Collegiate stage. A grounding in general knowledge ought to be provided for up to the Entrance. But in the University, pupils should be allowed to bring up, for a degree, only one subject, in which the standard might be raised. Such a graduate will have greater depth, consequently greater love of his subject, greater aptitude for research work and better scope for manifesting originality, if he have any.

The Universities will then turn out a superior type of graduates which alone could make for real advancement of knowledge in the land.

(4) *The Medium of Instruction in the University*—As a general rule the mother tongue if it be one of the leading vernaculars of India should be made the medium of instruction. But the adoption of this principle should be gradual. The sciences cannot be

immediately taught in the vernacular. It is, therefore, necessary to bifurcate the courses of study in the University. Pupils desirous of bringing up humanistic subjects like History, Economics, Sociology and Philosophy, should be made to get their education in the vernacular. Pupils seeking to gain degrees in Science subjects should be instructed through the medium of English. The necessary books for the humanistic subjects may be translated at once. In the course of ten or fifteen years, all the courses may be given in the vernacular and the bifurcation abolished. English should be universally taught as a second but compulsory language.

(5) *Fine arts*—Instruction in fine Arts is an urgent necessity. For these arts develop a province of the mind, which remains untouched by modern Indian education. This defective development of the mind of our times has seriously stunted the growth of national life.

The first step must be to organize under the direction of experts, a 'Museum on the most scientific lines. Articles indicative of the life and culture of all the peoples of India, must be secured and then similar articles of other races and cultures of the world, as far as possible. They must be classified according to the purposes they were or are intended to serve, so that the underlying ideas may be studied not only from economic, historical or ethnological standpoints, but also from the ethical and æsthetic.

(6) *Sanskrit Education*—There is a false notion that Buddhist culture is either antagonistic or alien to Hindu culture. But they are, in fact, more closely related than Aryan and Dravidian cultures. The study of the Buddhist and the Pali literature should be combined with a study of Sanskrit literature. The Pehlavi literature should also be associated with it for the same reason. Else a comprehensive idea of Sanskrit education cannot be attained.

II WOMEN'S EDUCATION

Women's Education cannot be the same as men's for the reason that women have a special duty to discharge towards society and humanity. It is not that every woman should be made to learn the culinary art or that she should have no higher ambition than to be a cook or a house manager. Woman has a right to learn the sciences and arts that man learns and to enter, as far as practicable, the walks of life that man usually seeks. But it must not be forgotten that to her alone belongs one of the greatest privileges of life. Of Nature's endowments to man the most valuable is his individuality. Its preservation and development is one of humanity's foremost concerns. This work can be done best only by woman. She must, therefore, be first trained for discharging this great duty of rearing up the real man of the future. And her studies must be subordinated to this end. Else, the very object of creation will have failed. The courses that have such an aim can be best given in the vernacular.

III PRIMARY AND SECONDARY EDUCATION

So far as the Primary stage goes there is some thing to be said in favour of the old Hindu method

of teaching pupils one subject after another. It does not mean that the child should learn nothing of history or geography for months or years when it is engaged in the study of Language or Arithmetic. When Language is taken up, it should be the one subject of special and direct instruction. But the teacher and the parents may give the child talks on various topics or subjects incidentally in the garden, on the road, at dinner or elsewhere. Task work must be confined only to one subject. The talks should prepare the child for receiving instruction in other subjects, later on. In the High School or Lower Secondary stage however, a number of subjects may be taught simultaneously.

The Mother tongue should be the medium of instruction. The fewer the text books the better in the Primary and the Lower Secondary stage. In the High school stage vernacular text books for all subjects should be prepared, without any further delay.

IV EDUCATION IN GENERAL

All educational development must proceed from within outwards. It is really a spiritual process, not merely an intellectual or a mechanical one. The spirit being greater than the body and even the individual mind education is a process covering the widest area. Education is, in a real sense, the breaking of the shackles of individual narrowness. The aim must, therefore, be to develop not only the individual aspect of the mind but also the universal or the spiritual, which is the chief characteristic of the ancient Hindu system. It is therefore necessary to bring together in every educational organization, all the different cultures found in India and, as far as possible, all the cultures of the world. All the phases of religion and art in which the universal mind has expressed itself in different ages and countries, i.e., to co-ordinate these various cultures without attempting the suppression of the natural differences. The highest aim of education should be to help the realization of unity, but not of uniformity. Uniformity is unnatural. And in fact, its attainment is impossible. A sound educational system should provide for the development of variety without losing the hold on the basic or spiritual unity.

Hence the idea underlying the Bolepur school is to bring together pupils of all creeds and cultures and to help them to realize their spiritual brotherhood and to develop, freely and fully at the same time, their individual and racial characteristics.

V A REAL INDIAN UNIVERSITY

There must be a place, if not in every province, at least in one centre in this vast country, to which the best intellects of India and even of the world outside, could be induced to resort where they could meet, stay temporarily or permanently and impart their knowledge to the public. It will help to kill racial, sectarian, caste and other prejudices and be a real fountain of universal light. It is only Hindu States whose rulers have in their veins flowing the ancient Aryan spiritual culture, based on 'unity' and 'universality' can realize its importance and organize a real university of this type, which will be India's educational contribution to the world's progress.

FOREIGN PERIODICALS

The Prime End

From the January number of *The Philippine Review*, we take the following:

The transcendental significance of yesterday's extinguished war, more than the material conquest of the German nation, is the complete dissociation of the Ideal from the galling reality of things, the exaltation of the higher Life of Soul above the bare facts of Prussian materialism. This was the supreme assertion of that sublimity of purpose which has been the invincible consideration in Allied thought, that golden rule without exception which spelled victory since the beginning, and till the last.

Let the coming peace conference dedicate itself energetically to the furtherance of the world's spiritual interests. It must not be vindictive and defeat its own end. After the extradition of Hohenzollern Pharaoh and his punishment together with his myriads, after the reparation of the huge destruction wrought by Teuton heathenism, the gates of mercy shall not be closed on an unfortunate people disillusioned by their war lords. Henceforward they shall form a vital part of the new whole and not be the disconcerting element without. For the peace aspired by Mankind is not a peace endangered by olden trammels of prejudice but a peace which is, in all sense, free and universal. Such is the idea of present day democracy. It is accordant with the spiritual in tendencies of the New world.

The True Basis of Political Progress

Mr M. H. Masillaman, in the course of an article on the above subject in the February number of *The Young Lanka* [Colombo], makes the following observations:

It is interesting to examine as how we in Ceylon are influenced by our contact with Western Civilization. It seems to have affected us in a different way from the Indians. The people of India have managed to preserve their individuality in spite of this intimate contact with the Westerner. They stuck to their religion, their national habits and customs and viewed with suspicion the new civilization. The Indian is a distinct entity, a force to be reckoned with, a factor that cannot be ignored, in the readjustment of affairs after the war. But the pretensions of Western Civilization has made us material in the sense that we work only for the means to keep ourselves and our families in material comfort. The materialism of the West is trenchant, militant, progressive with large ambitions of world domination. But ours is a two-penny materialism that aims at a lengthened life of ease and self respect. But our ambitions do not seem to urge us. Most of us have

a religion borrowed from the West which seemed to have broken our intellectual backbone and prepared us for every sort of bondage.

In short we are non-descript mass of people that do not mind our political backwardness so long as we are well fed and well-clothed and have the means to humour our vices. The only means of saving ourselves from utter extinction is by making a great effort to shake off our sloth and selfishness and aspire after nobler ends.

It is through religion alone that we can succeed. Religion is the common platform on which we can meet.

First of all let us create a conscience, a responsibility to God and to our fellow man. Let us look for the essentials, the things of permanent value and give up the worship of externals. The blind imitation of Western manners is the death of us. I know of a man who would prefer to die rather than be seen in his national costume.

Comments on the above would be superfluous.

Japan and the League of Nations

In the February number of the *Japan Magazine* [Tokyo] just to hand, the Hon. Mr Kiroku Hayashi, M.P., Professor of Diplomacy in the Keio Gakuin University, contributes an article under the above heading in the course of which he writes:

The formation of some kind of international organization for the control of the predatory trend of nations after the war is now being vigorously urged in certain quarters, principally in the United States. The Allies however, on the whole give the proposal substantial support. But Japan has not yet ventured to express any definite opinion as to the proposal, and as she is one of the Allies her convictions should count for something. The present writer does not pretend to speak in any official capacity, so that the opinions here set down may be taken as the writer's individual opinion shared no doubt, by many of his fellow countrymen.

At first the proposal was regarded by many as only a form of extreme idealism in politics, but the acceptance of the idea has now so far gained ground as to command attention as a serious proposition. What then is Japan's view concerning the proposed League of Nations? Speaking generally the proposition seems quite acceptable, as it has the laudable aim of preventing war and promoting good fellowship among nations. Such a project should prove a good omen for the policy of the Twentieth century. It is evident that such makes its balance of power cannot be any longer depended on to avert war. In future all attempts of nations to stand aloof from the international family for purposes of selfish greed or aggression must

be prevented at all costs, even at the risk of turning the rebel. Consequently if the proposal comes to realization, it is quite obvious that Japan must be a party to it or stand apart to her peril. If one is to judge from the utterances of the Minister of Foreign Affairs the Government seems quite ready to support the League of Nations.

The League of Nations will constitute a good means of expressing as well as enforcing Anglo-Saxon ideas of righteousness, on which the English-speaking countries set more value than on German *kultur*. Japan can do nothing more beneficial to her than to make a nearer approach to such principles. Therefore it is not necessary to labour the point as to whether Japan should join with the Anglo-Saxon nations in supporting the formation of a League of Nations. It is to her undoubted interest to do so, as well as to the interests of civilization generally. There can be no doubt that this is the opinion of the vast majority of the people of Japan. It is one thing to agree to the proposal, however, and quite another thing to find a way to carry it into practical realization.

Let us then look at certain features likely to result from the enforcement of the policy of a League of Nations. In the first place those nations that have won their places in the world, gaining great advantage to the disadvantage of others will be guaranteed the *status quo*, and be allowed to enjoy the superior advantages thus gained in the past, while the less fortunate nations will be kept also in the *status quo* and remain unable to improve their opportunities for territorial expansion and national progress. It seems tantamount to saying "Now that we have got all we want, the process of grab must cease and all will remain as they are!" Such a policy will greatly militate against the interests of a country like Japan, with her excessive population, meagre territorial extent and insignificant colonial possessions. She will be unable to expand without violation of the terms of the League of Nations. The situation will be a complete arrestment of the general course of human history. From time immemorial it has been that nations rise and fall according to their character and environment, and on this possibility rests the hopes of humanity. Had a League of Nations existed a couple of hundred years ago or even less, America would still be in possession of England, and Canada would be French and India still a congeries of clashing races. A nation, being a human organism cannot submit to artificial limitation without injury to its life, if not ruin to its destiny. If nations are not to be permitted to increase, are they also not permitted to decline and will those unfit to maintain the competition essential to existence be deprived of the privilege of death? If nations cannot grow are they to be kept artificially alive? This is a principle that cuts both ways.

Continuing the writer observes

The principles of the League of Nations, as I understand them will preclude the privilege of any nation expanding its territories by force. The duty of Germany before the war would have been to maintain her national strength and prosperity by peaceful means, and refrain from any attempt to gratify her ambition by arms. All nations will henceforth be obliged to follow this principle or come into conflict with the League of Nations. For this Japan will of agree provided that nations be assured of

opportunity for natural development, subject to no artificial or fatal restrictions. Will the elimination of arms ensure freedom for national development and free growth? The doubt constantly recurs whether this assurance can be given by a League of Nations. It is a question which Japan in justice to herself is bound seriously to consider.

At present all nations enjoy a degree of freedom that appears to be their right. They can establish protective tariffs for the promotion of domestic industry and the enhancement of national revenue, and they can enact and enforce laws within their own domains for the benefit of their people. Being independent themselves they do not want to limit the independence of others. The League of Nations will have to ensure this freedom unimpaired, even to the extent of precluding unfair economic discrimination as President Wilson has suggested. The League will or should be still more far-reaching than this, for it ought to preclude the enactment of laws or regulations prejudicial to foreigners wishing to enter another country or live therein. Domestic laws must then be drawn up with a view to the convenience rather than the inconvenience of strangers. All must be based on the principles of humanity rather than on self interest. Laws at least must be just and impartial. This justice or impartiality does not now exist between nations. Are the prospective members of the League of Nations ready to adopt such principles and honestly put them into practice?

There does not appear to be much difficulty about maintaining this absence of discrimination among white men. It is when we come to relations between these races and other races that the danger arises. Before the war Germany was treated as an equal by the other white races and her people were received in all western countries on a status of equality with all other western people, while oriental races were placed on a status of inequality. Germany was not satisfied with the freedom she thus enjoyed but resorted to force of arms to take what the law did not allow. Of course she deserves the reproach of mankind. Had she been fighting to avert discrimination against her race or nation she might have had a right to expect more sympathy.

Now there is no doubt that Japan has been discriminated against racially by western nations, and she is still suffering this indignity and injustice. In America and the British colonies the common people of Japan are excluded by law. Those few that are permitted to live in these countries have to submit to various restrictions in regard to land and therefore are deprived of full liberty in regard to natural development and prosperity. This is quite contrary to the idea of the League of Nations as well as against the dictates of justice and humanity. The situation then is that the Japanese are not placed in a position of equality with western races in any part of the western world. With her very limited territory and rapidly increasing population this interference with natural freedom is very difficult to tolerate. Now when a nation is thus placed in a position where she has to make overseas expansion or suffer congestion and decline what is she to do? Will not a suffocating man struggle for air and extended existence? And who can blame him? Are not those who shut off the air and attempt to smother the victim, the real culprits in the case? Thus while Japan is quite ready to agree to any

proposal eliminating the policy of national expansion by force of arms or unjust means, she claims the natural liberty of peaceful development and racial expansion.

The danger rises where there is any attempt to raise obstacles to this peaceful and natural expansion of races and nations. With a great show of righteousness America now strids for the League of Nations, and advocates limitation of armaments and the progress of peoples by peaceful means alone. She must, therefore, be the first to recognize as a national and racial right the natural freedom of races and nations to grow according to the laws of living organisms. This liberty of peaceful and natural development can be stopped only by force of arms, unless races and nations can be found willing to commit suicide to please their selfish neighbours, and force of arms is prohibited, according to the tenets of the League of Nations. The Anglo-Saxons are proud to proclaim that they have been fighting for liberty, and especially for the rights and liberties of the small nations. Japan will hold them to this profession. Japan is a small nation! Will the Anglo-Saxon nations ensure to Japan freedom or natural development? Will their League of Nations see to it that no interference with Japan's natural expansion and growth is allowed? Will they guarantee to Japan and the Japanese the same liberties they guarantee to Belgium? This is all she asks, in order to be a happy member of their League of Nations no more but no less! Are the leaders in the formation of the League of Nations prepared to banish all discrimination against the Japanese race and assure our people the same liberties they themselves now enjoy? This may be a hard question for race prejudice to answer, but it requires an answer!

Mr. Kiroku concludes his interesting article with the following words:

Unless the League of Nations guarantees to every race full freedom for the natural development of its

talents and opportunities, it becomes no more than a trust for the larger nations to guarantee their own superiority and present advantageous position in other words, it becomes a pretext for the retention of unfair monopoly, if there be any monopoly that can be fair. The League of Nations, to ensure itself of permanence, must be more than a name. It must embody humane principles and practise them. No doubt the last thing that President Wilson would think of allowing would be injustice, unfair discrimination or any form of unrighteousness. But whether he allows it or not, the League he proposes might easily be managed to retain the present injustices to oriental races, unless the guarantees to the contrary are explicit. At all events Japan feels seriously bound to call the attention of the Allies to the above point as of vital importance to her. It is a principle for which Japan must stand up at all hazards. She knows that no statesman of Europe or America, worthy of the name, would dare oppose the principles for which she contends but in the past there has been the habit of allowing injustice to persist without openly approving it. If an international society cannot eliminate such injustice what is the good of it?

In his admirable speech before Congress in April, 1917, President Wilson, in announcing a state of war between America and Germany asserted that Right is of greater value than Peace, Peace must be respected, but a peace that violates Right cannot be tolerated. Thus America, though a sincere lover of peace, was compelled to take up arms against Germany, because Right was set at naught. According to American opinion it is right to take up arms when Right is disregarded. The proposed League of Nations, in order to secure peace, must, therefore, see that Right is respected and the rights of the small nations equally with those of the larger nations. If the League should ignore the rights of races it would be worse than no league, for it would be less easy to defeat Japan's right to racial equality is still ignored. Will the League continue this injustice?

INDIAN EDUCATIONAL RECONSTRUCTION

PROFESSOR GEDDES ON THE PROBLEM.

THE problem of education has always been one of the most baffling before the world. No country has yet been able to arrive at a satisfactory solution; least of all modern India. The roots of the world unrest, whether political or social, are deep in the subterranean strata of education. If only the educational foundations could be laid on a ground solid and firm, the superstructure of the State and the society might confidently be regarded as secure, and practically im-

mune from the ever-recurring upheavals that threaten to shake to the very bottom the edifice of civilization.

The task of educational reconstruction seems to be as hopeless and as forlorn as the quest of ultimate Reality; but also equally persistent and irrepressible. The failure of innumerable preceding attempts is powerless to dissuade the ardent spirits of succeeding generations from endeavouring to undertake a fresh reconstruction. Nor do we speak of these abortive efforts

with the slightest disparagement to the educational reformers, any more than with what we could speak of the pioneer workers in any other fields of activity. In this world of imperfections and failings it is not given to man to accomplish any thing that could in any sense be called "perfect". What the greatest among us could ever aspire to achieve is infinitesimally unimportant, but what is infinitely important for us is to do that little. And it is therefore incumbent on humanity to welcome any suggestions that might emanate from a fertile brain towards educational reconstruction.

Professor Patrick Geddes, the eminent Scottish biologist and scholar, has at the present day in the intellectual world few equals, hardly any superior, so far as the recalcitrance of ideas is concerned. He is a man of remarkable personality. Without a touch of racial conceit, he is intensely human, capable of discerning objects, invisible to the eyes blinded by passion or prejudice. He is a great inquirer, a questioner through and through. Luckily for India, he landed on the shores of Bombay in 1915, and has since then, having a brief visit to Paris, been touring throughout the length and breadth of the Continent. Madras and Bombay, Calcutta and Darjeeling, Lahore and Poona, Benares and Cawnpore, Lucknow and Allahabad,—all these cities with their suburbs—he has visited not according to the flying fashion of the professional tourist, but has made things visible to him that are non-existent to the average foreigner, by making a considerable stay of weeks and months at every place, mixing freely with the children of the soil, meeting them on terms of perfect equality, not disdaining to call on them at their antiquated dwellings, frequenting the quarters where the average white man would not set his foot for a moment, cultivating the friendship of "Natives" and winning their confidence by the sheer force of his genuine sympathy.

In this way he has succeeded in getting opportunities which only a few can get, and in surmounting the obstacles that almost invariably blur the vision of an outsider. His official mission to India is in the capacity of a town-planning expert. But the study of Cities, in his philosophy of life, is inseparable from the study of Universities,—in fact only its logical

complement. So alongside Town-planning he has all the time been also doing University planning. The sub-current has always flowed with the main stream.

It is owing to these considerations that everything emanating from the pen of Professor Geddes ought to be received with deep attention. And it is in this spirit that one looks up to his exhaustive *Report on the Proposed University for Central India at Indore*. His exceedingly acute and penetrating observations couched in a charming lucid language are a constant temptation to quotation and we freely confess we shall succumb to the temptation. In the main, however, we shall content ourselves with giving a broad outline of the Professor's scheme for the educational re-construction for India and a summary of his notable suggestions which we shall pass in rapid review offering our comments and criticisms wherever needful.

I.

The book,—it is in fact a book of permanent value, not an ordinary 'report' of the transitory type,—characteristically opens with its dedication to two of the greatest sons, not of Britain, nor of any other European Country, but of the land of the dark "Natives",—Tagore and Bose, as also to "all sages and searchers towards the renewal of education". This homage to the worth of the Indian intellect by a scholar of Professor Geddes's eminence and renown is not a thing to be lightly passed over.

In the Introductory Chapter the author traces the historic origins of the Western Universities in general, and of those of India and London in particular, all of which, despite their many historic and other differences, may be grouped as pre-Germanic implying thereby the essential unity of the present University machinery and its working all over the world. In this connection, his account of the German Universities, both at their height and in their decay, exceedingly succinct though, is not without interest. The fundamental difference between the pre-Germanic and Germanic Universities lies in the emancipation of the latter from examinations and memory-tests, which are apparently the be-all and end-all of education in the former. The results obtained by this free and untrammelled sys-

tem of education must come as a surprise to the autocrats of the examination regime. Looking at the undisputed achievements of German Science and Scholarship our educational bureaucrats may well ask themselves in astonishment 'Freed from administrative authority, freed from memory taxation, freed from economic fears consequent on the failure of examinations, how was it possible for the German to study at all, much less to study so intensively, and so productively as he has admittedly done?' Because, as Professor Geddes' reply, one can only really study, still more investigate, from interest in the subject, whereas under external authority or amid internal fears, one can only cram. *In this distinction, clear as between the nutritive kernel and its shell, lies the historic rise and growth of German Universities and the long arrest of French, British and Indian ones.*

But latterly even Germany did not escape the deteriorative influence of Imperialism in education. Of late the State attempted to over-dominate education and succeeded in doing so only at the expense of its quality. For, in the words of the St. Andrews Professor, 'education like religion, can only be truly vital in the measure of its freedom from external authority, since truth, like goodness, cannot be imposed from without, but can only grow with mind and soul within.'

Who can doubt the transparent truth, the immense wisdom, of the above remark? But is there a single soul among the entire hierarchy of the I. E. S. with sufficient courage or foresight to act accordingly?

Incidentally this also dispels the popular illusion that Universities have been or could be, 'founded' by kings, statesmen or millionaires. In fact "they have all historically arisen from a preliminary growth and culture in their cities." External wealth and power can at best water, not plant, them.

Next, the Professor proceeds to survey the present Indian University situation. His immensely broad outlook leads him to plan a post-Germanic University as a necessary epilogue to the pre-Germanic and Germanic types. With this standard in view, he is naturally dissatisfied with the programme of the Indian University reformer, specially with the Calcutta

University Commission so far as could be judged from its published questions.

That India is a predominantly agricultural country is a truism irritatingly oft repeated. From this fact the Professor deduces the educational corollary that it is the Agricultural education that must be given the most central place in the curricula of Indian Universities and not to clerical, legal or medical education, as heretofore. The reasons he advances to support his views are worthy of serious attention. In the first place, better farming would lead to better business, and this in turn to better living. Material prosperity is then his first point. The second is educational efficiency, since the test which the practitioner professors would require the student assistants to satisfy would obviously no longer be a test of the rote faculty, a test of bookish memory but that of skilful and intelligent practice estimated by actual results in the field. This would automatically put an end to the evils of examinations. Next the training in Agriculture would also be a training in various Sciences inasmuch as the medical, physical and chemical sciences are all advancing towards the biological standpoint—beyond the old static externalism and post-mortem studies toward a clear view of the processes of life—the starting point of Agriculture. Lastly the social sciences e.g. the Humanities instead of suffering would gain by the Agricultural education. Better ploughs would produce better seeds, better leaves better flowers better fruits and better crops. Dead studies would be revitalised. The tyrannous cram trade of colleges would be replaced by recitation of ancient songs, ancient poetry and active representation of ancient drama. The wandering agricultural student would be told of the glorious regions, the great and inspiring cities of the past and be encouraged to visit them. "Even the sacred Grammars will only die to live. At first, of-course, they must disappear, but in and from the wider Grammar of the Sciences all that is vital in them re-appears. We put correct their conventional order of Noun and Verb into the true vital order of activity and fixity of Kriatic and Static, as Verb and Noun, as creative and as product."

So far so good. But with due deference to the learned Professor one may be

permitted to observe that to stop at Agriculture is to stop in the midway. Pressing as is the need for Agricultural education, the need for Industrial education is only little less so. Trade, commerce and industry are the only effective weapons equipped with which can India hope to maintain her existence in the fierce competition raging all the world over. Agriculture is, no doubt, essential. It is in no case to be supplanted. But it is at the same time to be supplanted by a training in that art which is the mainspring of the material civilisation of the West.

II

What are the material adjuncts of an ideal University? To this question the Professor returns after devoting two interesting chapters to general, though rather desultory, remarks on University Renewal as aided by the afterwar Reconstruction. A theatre, a library and a museum are the obvious requisites. With the instinct of a city designer he considers the location of these as of some importance. The locality and buildings should, of course, be suitable both from the architectural and educational points of view. The use of the theatre is to be reserved for physical education. Beside it, may be constructed an open air gymnasium and a couple of wrestling pits. In the theatre with its lawns, public Bands may play, popular entertainments may be held, and even 'Purda' parties may be initiated, say, by the local Girls' school.

Why not also a swimming bath, we may add?

As regards the library and the museum special care should be taken to save them from becoming 'a cemetery of books', a 'mere miscellaneous storehouse' respectively. All sorts of psychological devices should be adopted to make these institutions as useful and as popular as possible. The Library, for instance, should have several separate compartments suited to persons of all classes and all ages. Let the first room be the Leading Library with its large book store. Next should come the Reference Library with its book cases and reading tables between them. The adjoining set of rooms should be kept apart as studies for the research scholar. Opposite this we should find a general reading room or News room

with its papers and magazines and books of everyday reference. Close to this, but with a separate entrance, there should be a Children's reading room and also a Women's (Purda) Reading-room. The school child and his mother may thus visit the library together, the former at the same time visualising the main steps of the ladder of learning. Each room should, of course, have a verandah and around it pleasant and steady garden walks.

Similarly the Museum, too, should be a real "wonder-house" (*Ajaib ghar*, as its Hindustani equivalent denotes), being able both to arouse wonder and "to satisfy it, with wonder yet more." "With innumerable galleries specialised for every aspect of nature, every class of natural objects, every effort, expression and master-piece of man" it should be able to respond to every demand upon it and thus at all levels, from elementary school visits to research consultations. This will lead "even the puzzled and wearied public to readily gather into eager groups and to follow round the Museum an interesting and lucid expositor as Guide." The Museum, like the library, has to be divided into several departments,—regional museum, educational museum, history museum, art museum, agricultural museum, health museum, general museum, and so on, with adjacent model workshop and Bazar exhibiting the work of the potter, the weaver, the painter, the jeweller, the goldsmith and the rest of the craftsman class.

Professor Geddes' extremely graphic description of these institutions of yesterday and tomorrow deserves to be quoted *in extenso*.

'Too commonly hitherto the librarian has been more concerned with the orderly keeping of his books than with getting them worn out through use while still more the Museum curator has been wrapping his treasures within a napkin. But this organisation of material wealth at the expense of intellectual poverty is largely because Museum and Library are as yet scarcely anywhere adequately related with each other or with the surrounding colleges and schools with their city public, or with the town and village beyond. But of late years here and there each and all of these defects have been changing towards their very opposites. The Museum is arranged and displayed with its specimens now in serial and evolutionary order, intelligently and interestingly labelled and while a learned and exhaustive catalogue is made available for the students a popular and well illustrated Introductory Guide to each gallery is offered to the

Public for an anna or two and copies hung beside the cases for those who cannot afford even this. Best of all, the Curator and his assistants divide among them a daily round of teaching in this or that gallery to its visitors. Schoolclassers come in rotation day by day. A higher guidance is given to the college students on their periodical visits often by their Professors. The more living libraries and Museums are now each developing their "Lead ing Branches" the librarian sending out his monthly or fortnightly parcel of books to every village school house and the curator similarly sending round his boxes for the nature teaching of the schools.

And what are the effects of this on students? Let us listen to his words once more.—

"In schools thus kept stirred to active interests by such healthy change and continual freshness children and teacher progress together and this at a rate far exceeding even in rapidly, besides depth permanence and thoroughness, all the whipping and spurting and terrifying which are needed for the present examination method."

Who can doubt, except perhaps the exalted Members of the sublime Indian Educational Service, that reforms such as these are the sure means of reanimating and re-vivifying the dry, dreary bones of the present system of education?

III

The central idea of Educational Renewal is the idea of freedom, of emancipation. Professor Geddes cannot for a moment countenance "the prevalent theory of the blank class and examination room" which implies "that life is to be developed and to be measured by abstracting the normal and improving environment which life requires for that or other functioning." To use a metaphor suggested by him, the true test of the flight of birds does not consist in confining them within the four walls of a chamber, and to have even that chamber emptied of the vital and sustaining air, but in encouraging them to fly in the open air and thereby to estimate their power of flight. But it is precisely this return to the normal conditions of life, this, return to act and fact which the educational autocrats of "Paperdom" abhor from the depths of their souls.

Architecturally, the striking feature of the group of educational buildings in the University City would be the construction of a central Outlook Tower, the topmost turret of which should be accessible only after ascending a fairly long stair. "With circulation stirred beyond everyday slowness of pulse, with heart aroused and

hands alert, Head is also awakened by usual brain circulation." And here with eyes freshened the student should command the view of 'Life and Nature in the City, Nature and Life in the surrounding plain,' and feel his 'vital immersion in the concrete with fresh force and variety'."

Professor Geddes is nothing, if not thorough. Thoroughness is his strongest point. He is never content with mere enunciation of a general proposition. He applied this open air Outlook method to the teaching of Geography, Cosmography, Astronomy, Botany, Physics, History, Sociology, in short to every department of the physical and social sciences with an ingenuity that is all his own. But for the details of this the reader must refer to the pages of the Report itself.

Beside this Outlook the Professor also plans a complementary Inlook,—"a small corner turret without the disturbing windows but with a light opening in its roof,"—for the recluse student of philosophy, for his world of abstractions, for his introspective looks into his own soul, where he may retire and, withdrawing from the outward and phenomenal world, may meditate upon his abstract and universal ideas.

Perhaps the most interesting application of Mr. Geddes' plan of education is to be found in its possibility of proving an antidote to the political unrest and revolutionary tendencies. His etiology of unrest is one of the most sensible utterances that have even fallen from the lips of a member of the ruling class. "It is," says he, 'from the section of youth least contented with the present, most determined to advance upon it, and thus more or less in unrest that revolutionaries are at present drawn, yet these are but so many strayed pioneers. The true Police for them should thus have been their Professors, to open better horizons to each of these ardent young souls before his disappointment and embitterment. Let us educate such restless spirits in the main aspects of life, in appreciating the corresponding great departments of its activity, and sharing in them too—Industrial and Esthetic, Hygienic and Agricultural, Educational, Economic and Social. Yet also Ethical, with faith and effort to the possibility of these, in their community, their city and its betterment around them."

We shudder to think of the consequences that would have befallen an Indian publicist, had he ventured to utter words italicised in the above extract. Strayed pioneers, not downright scoundrels! Incitement to anarchy, was the mildest charge to be levelled against him.

The optimism of the Professor cannot find a greater justification than in the career of the late Bibu Ganga Pershad Varma of the Lucknow 'Advocate,' and readily avails himself of his instance. Let the story and the moral be stated in his own words—

'Knowing as I do the record of men like Ganga Pershad Varma of Lucknow at first so a army and threaten even as it seemed to public order, the James Larkin of Lucknow' but next when practical opportunity was given him so eminently civic and constructive; knowing too his work in detail, through being privileged to plan in connection it in two successive years I cannot but think that half of the restless youth of to day are lost town improvers and planners and I would take over from their present well meaning but insufficiently psychological custodians such students as simple tests of eye and hand would select as the usual and constructive ones. With six months training in any Indian City not their own such men would on the whole be ready for City survey and service. I venture to predict that such at present restless youths would soon be steadied men making, a record deserving their portraits in it (the Memorial Hall) with those of other sons and soldiers of India.

The Indian unrest would be a thing of the past if the present custodians of law and order could be prevailed upon just to give a fair trial to the remedy suggested here. But has not our Bureaucracy shown itself bankrupt of foresight and statesmanship at any rate, in this respect?

IV

How to bring a true University into being? Not by 'founding' it off hand on a sufficiently large site with the help of some generous donor or educationally minded statesmen and to fix on it a "Constitution of administrative and examinational fetters. The right method is to continue and encourage growth, not to force it. The first prerequisite of an University is the intellectual movement and ferment of the times. It is in and from these that Universities have arisen. And they have prospered in the measure not simply of their learning hat of their activity, their own internal movements, their intellectual hunger and thirst. A true University is not a simple union of

several colleges, or a mere agglomeration of scholars. It is all this, but also something more. Its life spirit is the atmosphere of active enquiry and discussion. It must blossom from its culture city. Hence the significance of Athens and Paris, Jena and Leyden, Edinburgh and Boston and let us hope, of Benares and Aligarh.

Not the least important is the question of the University Headship. To organise and maintain an institution dealing with manifold subjects, all related to one another yet also radically dissimilar, calls for exceptional aptitudes and attainment, all of which it is impossible to find combined in a single individual. A University thus needs not an autocrat, but a General Staff, in the full military sense, each member being an expert in his own department. Yet this does not dispense with the need of a Leader. Now what aptitudes shall we require of him, of the Principal of an Indian University? Not that he should be an Honors man of some British University, nor that he should revel in his pet low-level efficiency, nor yet that he should be past master in the art of discipline. None of these at all. What else then? Let the answer come from the lips of the eminent Scotch scientist.

Such a Head must unite Indian traditions at their highest with intellect at its openest. Beyond even this sympathetic attitude and synthetic culture he needs organising energies of that uncommon order which can at once revive the oldest or most weary teachers, encourage and help on the youngest and inspire the students above all and beyond and through all these, the Citizens, until they feel the University as their own as part of themselves and henceforward of civic interest and pride. He must thus be much like a general in the field, as well as in his study tent alert to all changes of the situation yet clear as to his general campaign and vigilant not only of drill and discipline but also of health and spirit even spirit of all ranks. Yet not even this high Military comparison suffices for the powers here needed are more widely intellectual more sympathetic also in a word far more of spiritual energy and influence than of temporal authority and command.

Excellent ideas and excellently expressed! But how many of the present Heads of Colleges and Universities throughout the length and breadth of India, could be found even remotely answering to this description?

But what about the funds? Supposing we have succeeded in getting the right sort of men in the right place, where is the

money to come from? Professor Geddes answers the query by a counter question,—"Why require money at all? The spirit can never be purchased by money, it is unpurchasable. It was not the richest Brahmins, says he, who have been the most learned, not the best supported Gurus who have been the most educative."

All this is true, but this is not the whole truth. True, Prince Siddhartha did not endow Professorships nor did Socrates think of funds when he founded the University of Athens, but then the conditions of the present day are not at all comparable to those obtaining in the days of Buddha or of Socrates. We are not aware that these protagonists of ancient wisdom were ever confronted with the problem of founding a huge library, or a museum, or of having up-to-date biological and physical and chemical laboratories with all their costly equipment. Faced as we are with the material civilization of the West, we have in every educational enterprise to fall back upon what is purchasable by money—though of course the question of funds is not the only question that should concern us.

V

Finally, what with regard to the time honored custom of Examinations,—a custom so dear to, and so beloved of, the Officers of the Order of Red Tape? Our "revolutionary,"—not revolutionary,—Professor of St. Andrew, is strongest in his denunciation of the system. The natural order of 'Research and Estimation' has been inverted and perverted into a course of "Examination and Research." The educational authorities have a superstitious dread of "Research." They consider it a thing beyond the reach of ordinary mortals, and if some one aspires to reach that pedestal he must ascend a long and windy stair of examinations. To expect any original research after passing through long and tedious rituals of lectures and memorisings and cramming, applied with peculiar thoroughness, is (to quote the Professor once more) as reasonable as to ensure the spontaneous flow of a well we first fill up as fully as possible.

It would surely go down to posterity as a curious specimen of the mentality of the present day educationists that for centuries together a three hours' memory ordeal continued to be regarded as the only and sufficient test of a man's abilities, capacities and attainments,—the only passport in the strength of which he could earn his livelihood, the only label according to which his work was to be judged hereafter in the Civic Life.

But, it may be contended, where is the substitute? The examination evil is admitted but it is a necessary evil since no alternative is forthcoming. The malady is there but what is the remedy?

The remedies happily are with Professor Geddes. They are—

First, the definite record of the student's work throughout his course.

Secondly, the periodic and tutorial estimation of his developing qualities and persisting defects.

Thirdly, the final estimation which appreciates his aptitude, and attainments at the close of his studies.

The present writer has elsewhere described the physical, intellectual and moral evils attendant on the examination system and has also set forth the remedies as they appeared to him. Here by way of supplementing the eminently sound observations of Professor Geddes it may be added that the grouping of wholly unrelated subjects for examination purposes and the slavish dependence of students on some particular text book, which allows no initiative in the teachers and which forces a student to cram a particular text book (or rather the handy 'notes' on it) are the two great impediments in the path of educational progress, and unless the present regime of examinations and yet more examinations is radically transformed all hope of sound educational reform is chimerical.

India welcomes with all her heart the splendid scheme of Professor Geddes. Minor differences of opinion as regards the working of details are immaterial. Let us see how Anglo-India receives it. Perhaps we can read it in the studied silence of its champions in the Press.

ABDUL MAJID

HISTORY OF SHIVAJI, 1667-1670

I. STATE OF MUGHAL DECCAN, 1667.

ON his return home from Agra in December 1666, Shivaji found the political situation in the Deccan entirely changed. The Mughal viceroy, Jai Singh, was no longer in a position to repeat his former success over the Marathas. Worn out by age, toil, disappointment and domestic anxieties, discredited in his master's eyes by the failure of his invasion of Bijapur, and expecting every day to be removed from his post, Mirza Rujab was visibly hastening to his grave. In May 1667 Prince Muazzam, the newly appointed governor, reached Aurangabad and relieved Jai Singh of his charge. The Rajput veteran set out on his homeward journey in extreme misery of mind and sense of public humiliation, and died on the way at Burhanpur on 2nd July.

The return of the weak and indolent Muazzam and the friendly Jaswant to power in the Deccan (May 1667) relieved Shivaji of all fear from the Mughal side. It is true that soon afterwards an able and active general, bearing implacable hatred to the Marathas, joined the Mughal camp. Dilir Khan returned from the Gond country to the side of Prince Muazzam in October 1667, but the coming of this famous warrior brought no cessation of strength to the imperialists. The Prince was jealous of Dilir's influence and prestige at his father's Court, resented his insubordinate spirit, and regarded him as a spy on behalf of the Emperor. The proud Rohila general, on his part, publicly slighted Maharajah Jaswant Singh, the right-hand man and trusted confidant of the Prince. Nor was this the only source of discord in the Mughal army in the Deccan. Rao Kurn Rathor, the chief of Bikanir, was an officer in Dilir's contingent. His worthless son Anup Singh, when acting as his father's agent at the imperial court, influenced the Emperor to transfer the principality of Bikanir to himself. "At the news of this event, the Rao became even more negligent of his duties and reckless than before, ... disobeying the

wishes of the Khan. His Rajputs practised gang-robbery in the camp at night, because, his lands having been given to his son, he had ceased to get the necessary money for his expenses from his home. It was proved that his soldiers had looted some villages also. Dilir Khan, to save his credit with the Emperor, reported the matter to Court and the Emperor, [in reply], ordered him to arrest the Rao if he [still] acted in that manner. The court agent of Rao Bhao Singh Hada, learning of the contents of the imperial letter, wrote to his master about it... When Dilir Khan, on the pretext of hunting, approached the camp of Rao Kurn and invited him to join in the chase, ... the Rao came to him with a few Rajputs. Bhao Singh, on getting news of Dilir Khan having ridden out towards the camp of Rao Kurn that morning, arrived there quickly with his own troops and carried off Rao Kurn to safety from the midst of Dilir's guards. The two Raos marched together to Aurangabad, 24 miles behind Dilir's army. Dilir Khan did not pull on well with Muazzam and Jaswant. He was sent towards Bidar to punish the enemy, but the two Raos remained behind at Aurangabad by order [of the Prince]. (Dil. 66-68.) The Prince used to help Rao Kurn with money in his distress and enforced idleness at Aurangabad.

Thus, Dilir's enemies found a ready shelter with Muazzam. After sending Dilir Khan away to Bidar, the Prince freely indulged his natural love of hunting and witnessing animal combats, and no attempt was made to crush Shivaji.

But even if the viceroy of the Deccan had been a man of greater spirit and enterprise, it would have been impossible for him for some years from this time to get adequate men and money for an attempt to crush Shivaji. The resources of the empire had to be concentrated elsewhere, to meet more pressing dangers. Within a fortnight of Shivaji's escape, a large army had to be sent to the Panjab to meet the

threat of a Persian invasion, and the anxiety on this point was not removed till December. But immediately afterwards in March 1667, the Yusufzai rising in Peshawar took place, which taxed the imperial strength for more than a year.

It was, therefore, the Emperor's interest not to molest Shivaji at such a time

II SHIVAJI'S PEACE WITH THE MUGHALS, 1668

The Maratha chief, on his part was not eager for a war with the imperialists. For some years after his return home from Agra, he lived very quietly, and avoided giving any fresh provocation to the Mughals. He wanted peace* for a time to organise his government, repair and provision his forts, and consolidate and extend his power on the western coast at the expense of Bijapur and the Siddis of Janjira. As early as April 1667 he had sent a letter to the Emperor professing terror of the imperial army which was reported to have been despatched against him, and offering to make his submission again and send a contingent of 400 men under his son to fight under the Mughal banners (*Akhbarat*, 10,9)

Aurangzeb had taken no notice of this letter. Some months later Shivaji made another attempt. He entreated Jaswant Singh to be his intermediary in making peace with the empire. He wrote to the Maharajah, "The Emperor has cast me off, otherwise I intended to have begged the task of recovering Qandahar with my unaided resources. I fled [from Agra] in fear of my life. Mirza Rajah, my patron is dead. If through your intercession I am pardoned, I shall send Shambhu to wait on the Prince and serve as a *man sabdar* at the head of my followers where ever ordered" (*Dil* 69, 70)

Jaswant Singh and Prince Muazzam jumped at the offer and recommended Shivaji to the Emperor (9th March 1668), who accepted the proposal, and thus a peace was made which lasted nearly two years. The Emperor recognised Shivaji's title of Rajah, but so far as we can judge did not restore to him any of his forts, except Chakan. For instance, Kalan Bhimra, continued in the hands of the

Mughals. For the next two years Shivaji lived at peace with the Mughal government. The English factory letters at the close of 1668 and in 1669 describe him as "very quiet" and as "Aurangzeb's vassal, [bound] to do whatsoever is commanded by the Prince." His relations with Bijapur also were pacific. The country all about [Karwar] at present is in great tranquility. Shivaji keeps still at Rajgarh, and though as yet there is no peace made between this king [Adil Shah] and him, yet both refrain from committing any acts of hostility against one another. (*P. R. Surat*, vol. 105. Karwar to Surat, 16 Sep. 1668.) Still later, on 17th July 1669, the English traders at Hahli speak of "Shivaji being very quiet, not offering to molest the king's country" (*Ibid*).

In fact, during these three years (1667-69), he was busy framing a set of very wise regulations, which laid the foundations of his government broad and deep, and have remained an object of admiration to after ages (*Sahb* 27, 33, 58, *Chit* 78, 88).

In terms of the agreement with the Mughals, Shambhuji was sent to the Viceroy's court at Aurangabad with a Maratha contingent of 1,000 horse, under Pratap Rao Gajjar. He was created a Commander of Five Thousand again and presented with an elephant and a jewelled sword. Jagirs were assigned to him in Berar. Half his contingent attended him at Aurangabad, while the other half was sent to the new jagir to help in collecting the revenue. After some months Shambhuji was permitted to go back to his father on account of his tender age. For two years the Maratha contingent lived in the jagir, "feeding themselves at the expense of the Mughal dominion," as Sahasrabad frankly puts it (*Dil* 70).

But the peace was essentially a hollow truce on both sides. Shivaji's sole aim in making it was to save himself from the combined attack of three great Powers and to recover his strength during this respite from war. Aurangzeb, ever suspicious of his sons, looked upon Muazzam's friendship with Shivaji as a possible menace to his throne, and he secretly planned to entrap Shivaji a second time, or at least to seize his son and general as hostages. (*Sahb* 62)

The rupture, inevitable in any case, was precipitated by financial causes. Re- trenchment of expenditure had now be-

* Shivaji's two years' peace with the Mughals 1668-1670 and the causes of rupture. *Sahb* 59-62. *Chit* 121, 124. *Dil* 69, 71. The terms of this treaty are nowhere given in detail.

come a pressing necessity to Aurangzib, and he ordered the Mughal army in the Deccan to be greatly reduced. The disbanded soldiery took service with Shiva, who had to find employment for them. Another ill-judged measure of imperial parsimony was to attach a part of Shiva's new jagir in Berar in order to recover the lakh of Rupees advanced to him in 1666 for his journey to the Court. The news of it reached Shivaji when he had completed his military preparations. He sent a secret message to Pratap Rao to slip away from Aurangabad with his men. The other half of the contingent fled from Berar at the same time, plundering the villages on the way! (Dil. 71.)

Sabhasad, however, tells us that Aurangzib wrote to his son to arrest Pratap Rao and Niraji Pant, the Maratha agents at Aurangabad and attach the horses of their troops, and that the Prince, who had learnt of the order beforehand from his court agent, revealed it to Niraji and instigated the Marathas to escape, while the imperial order arrived a week afterwards, when it was too late to carry it out. (Sabb. 61-62.)

III. WAR RENEWED, 1670.

This rupture with the Mughals occurred in January 1670, or a month earlier. On 11th Dec. 1669, the Emperor received a despatch from the Deccan reporting the desertion of four Maratha captains of Shiva's clan (*biradari*) who had entered the imperial service. Aurangzib soon set to strengthening his forces in the Deccan. On 26th January 1670 an order was sent to Dilir to leave Deogarh in the Gond country and hasten to Aurangabad. Daud Khan was ordered to arrange for the defence of his province of Gujrat and then go to Prince Muazzam's assistance. Many other officers were transferred from North India to the Deccan. (Akhbarat, year 12.)

Shivaji opened his offensive with great vigour and immediate success.* His roving hands looted Mughal territory, and he attacked several of the forts which he had ceded to Aurangzib by the Treaty

of Purandar. "The imperial officers in command of most of these forts fell after fighting heroically. Every day the Emperor got news of such losses. But some of these places defied capture by reason of the strength of their fortifications and abundant supply of war material." (Dil. 64.)

His most conspicuous success was the capture of Kondana from Uday Bhan, its Rajput *qildar*, (late in January). Assisted by some Koli guides who knew the place well, one dark night Tanaji Malusare, with his 300 picked Marle infantry scaled the less abrupt hill side near the Kalyan gate by means of rope ladders and advanced into the fort, slaying the sentinels. The alarm was given; the Rajputs, stupefied with opium, took some time to arm and come out; but in the meantime the Marathas had made their footing secure. The garrison fought desperately, but the Marles with their war cry of *Hara! Hara! Mahader!* carried havoc into their ranks. The two chiefs challenged each other and both fell down dead, after a single combat. The Marathas, disheartened by the fall of their leader, were rallied by his brother Suryaji Malusare, opened the Kalyan gate to their supporting columns, and took complete possession of the fort. The rest was butchery. Twelve hundred Rajputs were slain, and many more perished in trying to escape down the bill side. The victors set fire to the huts of the cavalry lines and the blaze informed Shivaji at Rajgarh, nine miles southwards, that the fort had been taken. He mourned the death of Tanaji as too high a price for the fort, and named it Singhgarh after the lion heart that had won it.

Early in March, he recovered Purandar, capturing its *qildar* Razi-ud-din Khan. (M.A. 99.) A few days later he looted the village of Chandor, seizing an elephant, 12 horses and Rs. 40,000 belonging to the imperial treasury, then entered the town and plundered it, while the imperial *qildar* was shut up in the fort. At one place, however, he met with a repulse. The fort of Mahuli (in North Konkan, 50 miles N. E. of Bombay) was held for the Emperor by a gallant and able Rajput named Mannhar Das Gaur, the nephew of Rajah Bithal Das of Shah Jahan's time. Shivaji invested it in February 1670 and attempted a surprise at night. He sent up 500 of

* Sabhasad, 59, says, "In four months he recovered the 27 forts he had ceded to the Mughals." But it is an exaggeration. There is a most spirited but legendary ballad on the capture of Singhgarh (Purandar). The Akhbarat and Diksha have been of invaluable help in the history of the campaign of 1671 as reconstructed here. Maratha *dakhars* are silent.

his men to the ramparts by means of rope ladders. Daud Manohar Das, who "used to be on the alert day and night," fell on the party, slew most of the men and hurled the rest down the precipice. Shivaji then raised the siege, turned to Kahan Bhimra and recovered it after slaying its *thanahdar* Uzbak Khan and driving out the Mughal outpost there. (Dil 65, O C 3415 Surat to Co., 30 March 1670.) Ladi Khan the *faujdar* of Konkan, was wounded in a battle with the Maratha forces defeated in a second encounter and expelled from his district. The Mughal *faujdar* of Nander (?) fled away, deserting his post.

About the end of this year (1670) Mahuli too was lost to the Emperor. Manohar Das, conscious of the inadequacy of the garrison and provisions of the fort to repel another attack of the superior Maratha forces, resigned his post in despair of getting reinforcements. Shivaji seized the opportunity, and about December captured Mahuli, slaying its new commandant Alawardi Khan and his garrison of 200 men (Dil 65.) By the end of April 1670* he had looted 51 villages near Ahmadnagar, Junnar and Paranda.

The only officer who made an attempt to uphold the imperial prestige in the Deccan was Daud Khan Quraishi, who had been second only to Dhir Khan during Jai Singh's Maratha campaign of 1665. Leaving the province of Khandesh in charge of his son, Daud Khan arrived at Ahmadnagar on 28th March, 1670. Six days afterwards he set out with 7,000 cavalry to expel Shiva's men who were roving near Parur, Junnar, and Mahuli. They evacuated Parur and Junnar and retired before him while he occupied these two posts. Meantime Shivaji had invested three Mughal forts in that region, and Daud Khan left Junnar to relieve them. But at the approach of his son (under his gallant son Hamid and Ladi Khan) the Marathas raised the siege and fled away, and the Mughal advanced division fell back on their main body.

Soon afterwards these two officers went with a detachment and destroyed an old fort which the Marathas were repairing on the frontier, 20 miles from Mahuli. Towards the end of April Daud

* The text of *Akhbarat* here is doubtful. The year may be 1671.

Khan himself marched to Mahuli. The Emperor in open court highly praised Daud Khan for his spirit in invading the enemy's country, regardless of the smallness of his own force, and thereby creating a useful diversion of Shivaji's attention. The hot weather evidently put an end to the campaign soon afterwards. (*Akhbarat*, year 13.)

IV QUARREL BETWEEN MUAZZAM AND DILIR

But the Mughal administration of the Deccan was in no condition to make a stand against Shivaji. For half of the year 1670 it was passing through a civil war of its own. In obedience to the Emperor's anxious and repeated orders Dhir Khan* had left the Gond country, where he had been profitably employed in squeezing the local chieftains and set off for the Deccan. Starting from Nagpur on 19th March 1670 he expected to reach Aurangabad and wait on the Prince on 12th April. But at his near approach the old quarrel between the viceroy and his general broke out afresh. We have seen how they had disagreed in 1667. So, now too, when Dhir reached Pathri, 76 miles S.E. of Aurangabad (about 8th April) and received an order from the Prince to wait on him, he feared to go to the interview lest he should be treacherously imprisoned or killed by the Prince. Twice or thrice he took horse for the purpose of visiting the Prince but returned from the way and spent some days on the plea of illness" (Dil 73 74.)

At this act of insubordination Muazzam and Jaswant wrote to the Emperor accusing Dhir Khan of rebellion. The Khan had already denounced the Prince to the Emperor, saying that he was in collusion with Shivaji and had done nothing to defend the imperial dominions, and offering to crush the Maratha chief if the command of the army in the Deccan were left in his (Dilirs) hands for two years with an adequate supply of artillery and siege material.

Aurangzeb was at this time filled with serious anxiety at Muazzam's wilful conduct, neglect of the imperial business,

* Quarrel between Muazzam and Dhir Khan in 1670. Dil 73 75 80 82 (for a source) Ishwardas 39 a-60 a. *Stories* ii. 161 166, while *MA* 101 *Akhbarat* year 13 and English records give dates and a few details. O C 3415 P R Surat Vol 3 Vol 105 (Bombay to Surat 5 Sep.) &c.

and failure to carry out orders. Popular voice in the Deccan could account for the open audacity and easy success of Shivaji's raids and the Prince's inactivity, only by ascribing to Muazzam a treasonable design to attempt his father's throne in alliance with the Marathas.

So, at the end of March 1670 the Emperor had sent his Chamberlain (*Khan-i-saman*) Iftikhar Khao, to Aurangabad to investigate how matters really stood, — whether Muazzam was really bent on treason and what his relations with Shivaji were. This officer was now instructed to inquire into the Prince's charges against Diler Khan, and, if the Pathan general was found to be really guilty, to bring him by any means to the Prince's presence and there "do to him what the exigencies of the State required" (*Dil* 74). Iftikhar's brother, a high officer of the imperial court, learning of this order wrote secretly to Diler to be vigilant when visiting the Prince. This message only deepened the alarm and suspicion of Diler Khao.

Iftikhar after his arrival at Aurangabad, went out to visit Diler, and listen to his explanations of his conduct. When he tried to dispel the alarm of Diler and swore that no disgrace would be done to him at the Prince's Court, Diler put him to shame and silence by showing him the letter of his brother at Court, reporting the Emperor's instructions. Iftikhar, therefore, could only advise Diler to keep away from the Prince longer, by pretending illness and then march away without seeking an interview or permission from the Viceroy.

Iftikhar, no doubt moved by kindly intentions thus became guilty of double dealing. As an English gunner in Muazzam's service wrote, "He played the Jack on both sides and told the Prince that Diler Khan was his enemy, and went to Diler Khan and told him that the Prince would seize on him if he came to Aurangabad" (John Trotter to President of Surat 20 Dec 1670 in *F. R. Surat*, Vol. 105). His unfortunate advice to Diler only prolonged the tension.

Iftikhar then returned to the Prince's court and falsely testified to Diler's illness, adding many imaginary details to it. Diler marched southwards to attack a Maratha force (under Pratap Rao) that was raiding Mungi patan (in May)

Muazzam complained to the Emperor that Diler Khao had openly defied his authority and that the Khao's Afghan troops used to rob the people and sack the villages along their line of march, and the latter charge was borne out by the reports of the news writers. Thea Diler, finding his position in the Deccan intolerable, wanted to go back to the imperial court without waiting for permission, but the Prince ascribed this course to a wicked desire of creating disorder in Northern India. Imperial orders reached him to force Diler Khao back to the path of obedience. The Prince set himself to raise an army for a war with Diler and called in the Maghal detachments from the outlying posts to his banners.

Diler Khan was pursuing a Maratha band across the Godavari river, when he heard of the arrival of a *farman* from the imperial court, and divined its purport. His former suspicion and anxiety now deepened into alarm and perplexity. Though it was the height of the rainy season (August) the rivers swollen and the roads dry, he burnt his tents and stores and fled northwards with his army on horseback. Marching "in great fear of life, without distinguishing between night and day", he reached the ferry of Akharabad on the Tapti and swam his horses across the raging stream, losing many men by drowning. Thence he proceeded to Ujjain, the capital of Malwa, to rest for a few days from the fatigues of this march.

As soon as he started from the south, Prince Muazzam and Jaswant gave him chase with all the available Maghal troops, calling upon Shivaji to come to their aid! The Deccan was filled with wild rumours of a civil war among the imperialists, which were "so confused that we cannot write them for credible" (*O. C.* 3470, Bombay to Surat, 1 S-p 1670).

In the pursuit of Diler Khon, Prince Muazzam reached the pass of Chaogdev, six miles from the Tapti intending to cross the river and enter Burhanpur, the capital of Khandaish, of which Daud Khao was *subahdar*. This governor refused to let him cross his frontier and prepared for armed resistance. The Prince distributed a month's pay to his soldiers to hearten them for the coming struggle. But this

unexpected opposition brought him to a halt for some time, during which a letter came from the Emperor, ordering Muazzam back to Aurangabad (September). The Prince's evil genius, Jaswant Singh, was separated from him and posted at Harbanpur until further orders.

For, in the meantime, Bahadur Khan, the governor of Gujrat, had taken Dhir Khan under his protection and written to the Emperor praising Dhir's loyalty and past services, explaining how the unreasonable antipathy of Jaswant and the misrepresentations of backbiters had turned the Prince's mind against the Khan, and recommending that Dhir might be permitted to serve under him as *faujdar* of Kathiawad. The Emperor's suspicion and alarm had also been excited by Muazzam's approach to Hindustan, it looked so very like his own move in 1657! Indeed his own position now was weaker than Shah Jahan's in that year, for, the war with Shivaji had drawn the greater part of the Mughal forces into the Deccan and Aurangzib had no army in Northern India large enough to confront his son's. It was the talk of the Prince's camp that 'if he had marched forward, he would before this have been king of Hindustan' (Trotter to Surat). Muazzam promptly obeyed his father's order and returned to Aurangabad at the end of September, 1670.*

These internal troubles paralysed the Mughal arms, and Shivaji made the most of this golden opportunity. We have seen how he had recovered several of his forts early in the year. His cavalry hands roamed over the country, plundering far and wide. In March the English factors at Surat wrote, "Shivaji marches now not [as] before as a thief, but in gross with an army of 30,000 men, conquering as he goes, and is not disturbed though the Prince lies near him" (O C 3415).

* We may here conclude this episode in the life of Muazzam. In April his mother Nawab Bai was sent from Delhi to visit him and bring him back to the right path by her influence. She returned from her mission in September. Itikhar Khan the imperial Chamberlain had harshly reprimanded the Prince. But when the Emperor learnt that Muazzam's heart was loyal and that his motives had been misrepresented to him by his enemies, the imperial wrath fell upon Itikhar Khan for having exceeded his instructions and been guilty of double dealing at Aurangabad. His brother, Murtakhar Khan too was punished for communicating official secrets to Dhir Khan. Both brothers remained deprived of office for some months. (U t 101 Akbarnama 138)

V. LOOT OF SURAT

In April Bahadur Khan visited Surat with 3000 horse, to guard the town against an apprehended attack by Shiva. In August there were false rumours that Muazzam, then supposed to be in rebellion against his father, was coming to Surat "to take possession of this town and castle." The Mughals demanded from the Court of Bijapur a contingent of 12,000 horse for service against Shivaji, and some ammunition from the English at Bombay for the fort of Koridru. People were expectant as to what the imperialists would do when the rains would cease and campaigning again become possible (F R Surat, vol 3 Consult 16 and 18 Aug 1670 O C 3457). But Shivaji as usual, struck the first blow. On 3rd October he plundered Surat for the second time.

Throughout September he had been assembling a large body of cavalry at Kahan, evidently to invade Gujrat (F R Surat, Vol 3 Consult 12 Sep 1670). The matter was so notorious that on 12th September the English factors at Surat had rightly concluded that "that town would be the first place he would take," and foreseeing the ensuing danger, [we] had taken a convenient time to empty all our warehouses at Surat of what goods were ready baled and sent them down to Swally," even their entire Council with the President (Gerald Aungier) were at Swally at the beginning of October. And yet the Mughal governor was so criminally negligent as to keep only 300 men for the defence of the city. On 2nd October came successive reports of Shiva's arrival with 15,000 horse and foot within 20 miles of Surat. All the Indian merchants of the city and even the officers of government fled in the course of that day and night. On the 3rd, Shivaji attacked the city which had recently been walled round by order of Aurangzib. After a slight resistance the defenders fled to the fort, and the Marathas possessed themselves of the whole town except only the English, Dutch and French factories, the large New Serai of the Persian and Turkish merchants, and the Tartar Serai midway

* The second loot of Surat. Surat Council to Co 20 Nov 1670 (Hedge's Diary n pp cccxxi-ii) F R Surat Vol 3 (Consult at Swally Marine O to b i), Dut Records Travaux Vol 29 No 703 U t 106 (here mention) Sabh 63 64, Ch t 72 confused and unreliable.

between the English and French houses, which was occupied by Abdullah Khan, ex king of Kashghar, just returned from a pilgrimage to Mecca. The French bought off the raiders by means of "valuable presents." The English factory, though it was an open house, was defended by Streysan Master with 50 sailors, and the Marathas were received with such a hot fire from it that they lost several men, and, leaving the English alone, assaulted the Kashghar king's serai from the advantageous position of some avenues next to the French factory, which they were suffered by the French to occupy. The Tartars made a stout resistance all the day, but finding the post untenable they fled with their king to the fort at night, going up to plunder their house with its valuable property, including a gold *palki* and other costly presents from Aurangzeb.

From the safe shelter of the Tartar Serai, the Marathas prepared to open fire on the English factory the next day but the resolute attitude of the handful of Englishmen cowed them, and after an angry parley they came to an understanding and agreed not to molest the English. The Dutch warehouse was untouched. "A messenger came from the invader to assure us that no harm would befall us if we remained quiet and gave him our assurances that we would not interfere for or against him" (*Dutch Records, Translations Vol 29, Surat to Directors, 14 Nov 1670*). The Turks in the New Serai successfully defended themselves, inflicting some loss on the raiders.

The Marathas plundered the larger houses of the city at leisure, taking immense quantities of treasure, cloth, and other valuable goods and setting fire to several places, so that "nearly half the town" was burnt to the ground. They then approached the fortress of Surat, threatening to storm it, but it was a mere demonstration as they were not prepared to conduct a siege, and did not venture close to the walls. The third day (5th Oct) they again appeared before the English factory, threatening to burn it down. Shivaji and his soldiers were greatly enraged at the loss of their men in the first assault on this house, and they clamoured for vengeance. But the wiser among his captains knew that a second attack would

result in further loss of life, and at their request two English agents waited on Shivaji in his tent outside the town, with some presents of scarlet cloth, sword blades and knives. The Maratha king received them in a very kind manner, telling them that the English and he were good friends and putting his hand into their hands he told them that he would do the English no wrong (*Surat to Co., 20 Nov 1670, in Hedge's Diary*).

On 5th October, about noon Shivaji suddenly retreated from the town, though no Mughal army was near or even reported to be coming. "But he had got plunder enough and thought it prudent to secure himself. When he marched away he sent a letter to the officers and chief merchants saying that if they did not pay him twelve lakhs of Rupees yearly tribute, he would return the next year and burn down the remaining part of the town. No sooner Shivaji was gone than the poor people of Surat fell to plundering what was left, in so much that there was not a house, great or small, excepting those which stood on their guard, which were not ransacked." Even the English sailors, under S. Master took to plundering.

During the three days that Surat was undergoing this fate, the seaport of Swally, 10 miles west of it across the Tapti, was out free from alarm. There the English, Dutch and French had built their warehouses and loading places for ocean-going vessels. Here lay during those days all the members of the English factory, their treasure, and most of the goods bought for Europe. Here the *shah bandar* (harbour and custom master), the *qazi* and the most eminent merchants (Hindu, Muslim and Armenian) of Surat had taken refuge with the English. Many rich people of the town, too, had fled to the villages north of Surat, across the river and close to Swally. On the 3rd it was reported that Shivaji wanted to send 500 horsemen north of the river to plunder the villages and seize these rich men, and it was feared that he might even come to Swally to demand the surrender of the Surat refugees and blackmail from the European merchants. But the coming of the spring tide made it impossible for the Marathas to cross the river, and Swally remained safe. So great was the alarm there, however, that on the 3rd the English factors removed their treasure

from the shore to one of their ships, and next day loaded all their broadcloth, quicksilver, carrall (?) &c., on board ship, 'to secure them against any attempts of Shivaji.' Two other English ships, which were due to sail, were detained at Swally till 10th October, by which time the Marathas were expected to withdraw from the district. The English factors with the help of the ships' carpenters even ran up a wooden platform at one end of the marine yard and mounted eight guns on it, 'to defend the Company's estate the best we could.'

The manly attitude of the English and their success in scaring away the Maratha myriads, greatly impressed the people of the country. They had, as a reward of their brave defence of their factory during the loot of 1664, received commercial privileges from the Emperor. And now the son of Haji Said Beg, the richest merchant of Surat, who had found shelter at Swally, publicly swore that he would migrate with his family to Bombay.

The fact that all the three European factories at Surat were untouched while every other shop and house was ransacked by the raiders, naturally excited suspicion. Both at Surat and the imperial court people 'talked of the three Christian nations having made a league with Shivaji when he was here.' The foreign merchants therefore received no reward from the ruler of the land this time (Master to Swally Marine, 3 Jan 1671, in F.R. Surat, 105).

An official inquiry ascertained that Shivaji had carried off 66 lakhs of Rupees worth of booty from Surat—viz., cash, pearls, and other articles worth 53 lakhs from the city itself and 13 lakhs worth from Naval Sahu and Hari Sahu and a village near Surat (1664-1670, 13-10).

But the real loss of Surat was not to be estimated by the booty which the Marathas carried off. The trade of this, the richest port of India, was practically destroyed. For several years after Shivaji's withdrawal from it, the town used to throb with panic every now and then, whenever any Maratha force came within a few days' march of it, or even at false alarms of their coming. On every such occasion the merchants would quickly remove their goods to ships, the citizens would flee to the villages, and the Europeans would hasten to Swally. Business

was effectually scared away from Surat, and inland producers hesitated to send their goods to this the greatest emporium of Western India.

For one month after the second sack, 'the town was in so great a confusion that there was neither governor nor government,' and almost every day was troubled by rumours of Shivaji's coming there again. 'On the 12th [i.e., only a week after his departure] it was again rumoured that he was returning with 6,000 horse and 10,000 foot, and that he had already reached Pent, a place about 25 miles distant. At once there was a general exodus and the town was changed from a busy port into the deathlike quiet of a desert. The Turkish, English and French merchants abandoned their factories. But the Dutch, 52 men in all, with flags flying and drums beating proceeded from their ship to their factory. This was their belated imitation of the English demonstration of January 1664, when "the English president, at the head of some 200 men, had marched through the town declaring that he meant to withstand Shivaji with this handful of men"' (Dutch Records, Trans. vol. 29, letter No. 763 and Vol. 27, No. 719).

At the end of November, and again about 10th December 1670, the alarm was revived and the European merchants met together to concert means of guarding their respective interests. The landward defences of Swally were strengthened by adding a breastwork on the north side of the *choakery*, and the entrance to the harbour or 'hole' was guarded by stationing a ship there. The English used to remove their money and goods from Surat to this place at every such alarm.

In June 1672 the success of the Maratha forces under Moro Pant in the Koli State of Ramnagar, on the way to Surat, kept the city in constant terror for a long time. The Maratha general openly demanded *chauth* from Surat, threatening a visitation if the governor refused payment. There was the same panic again in February and October 1672, September 1673, October 1674, and December 1679. In short, the destruction of the trade and financial prosperity of Surat was complete (F.R.).

VI BATTLE OF VANI

Having concluded the story of the

Maratha dealings with Surat, we turn to Shivaji's activities in other quarters.

Prince Muazzam had just returned to Aurangabad after chasing Dilir Khan to the bank of the Tapti, when he heard of the plunder of Surat. He immediately summoned Daud Khan from Burhanpur and sent him off to attack the Maratha raiders. Meantime, Shivaji had left Surat, entered Baglana, and plundered the villages nestling at the foot of the fort of Mulbir. Daud Khan, after sending his baggage back to Aurangabad, marched westwards with light kit to Chandor, a town at which the road from Nasik to Baglana crosses the hill range. Spies brought him news that Shivaji had started from Mulbir, and intended to cross the Chandor range by the pass of Kanchana-Manchana, ten miles west of Chandor. Arriving at the hamlet of Chandor (below the fort) at about 9 P.M., Daud Khan waited to verify the news of the enemy's movements. At midnight his spies reported that Shiva had already issued from the pass and was rapidly following the road to Nasik with half his forces, while the other half of his army was holding the pass to pick up stragglers. Daud Khan at once resumed his march. But the moon set about three o'clock in the morning, and in the darkness the Mughal soldiers were somewhat scattered.

Ikhlas Khan Miana (son of Abdul Qadir Bahlol Khan, a former Pathan leader of Bijapur), commanded the Mughal Vanguard. Ascending a hillock in the early morning, he beheld the enemy standing ready for battle in the plain below. While his men were putting on their armour, which was conveyed on camels, he himself with a handful of followers recklessly charged the enemy. The Maratha rearguard, which had faced about, was 10,000 strong and commanded by distinguished generals like Prntap Rao Gujar, the Master of the Horse, Vyankoji Datto, and Makaji Anand Rao (a natural son of Shabji Bhonsla). Ikhlas Khan was very soon wounded and unhorsed. After a time Daud Khan arrived on the scene and sent up Rai Makarand and some other officers to reinforce the Van, while he left his elephants, flags and drums at a ruined village on a height, surrounded by *nalas*, with orders to make his camp and rearguard halt there when they would come up.

For hours together an obstinate and bloody battle raged. Sangram Khan Ghori and his kinsmen were wounded, and many were slain on the Mughal side. The Marathas, "like the *Bargis* of the Deccan, fought hovering round the imperialists." But the Bundela infantry of the Mughal army with their abundant fire-arms kept the enemy back. Daud Khan himself entered the fight, repulsed the enemy with his artillery, and rescued the wounded Ikhlas Khan.

Meantime, in another part of the field, Mir Abdul Mabud, the *darogha* of the Mughal artillery, who had been separated from the main army by a fold in the ground, was attacked. He was wounded with one of his sons and some followers, while another son and many soldiers were slain; and his flags and horses were carried off by the enemy. There was a lull in the fight at noon.

At that time Daud Khan had less than 2,000 men with him, while the Marathas outnumbered him fivefold. In the evening they charged him again, but were driven back, evidently by the artillery. At night the Mughals bivouacked under the autumn sky, their camp was entrenched, and they engaged in burying the dead and tending the wounded. The Marathas retreated to Konkan without further opposition. This battle was fought in the Vani-Dindori sub-division late in the month of October, 1670.*

This battle neutralised the Mughal power for more than a month. The day after the fight, Daud Khan marched with the broken remnant of his army to Nasik, and halted there for one month, evidently to recoup his strength and also to watch the route from Konkan (by the Tal pass?). The wounded were sent to Aurangabad. Late in November, he removed to Ahmadnagar, but at the end of December he was recalled to the scene of his last battle by the revival of Marathan activity in the Chandor range. (*Dil.* 87, 89, 92.)

VII. RAIN INTO BERAR AND BAGLANA.

We shall, for the present, pass over Shivaji's activity at sea and in the western coast-strip during the whole of November and part of December 1670 after his return from Surat. Early in December

* Battle of Vani Dindori; entirely based upon *Dil Kasha*, 84 88. (Bhilsen was an eye-witness); with a few points from Sabh 64 65.

a Maratha force under Pratap Ran made a raid into Khandesh. Advancing by rapid marches, he plundered Bahadurpura, a village two miles from Burhanpur (the capital of Khandesh), but did not come closer to that city, because of the warning of Jaswant Singh, who had been posted there since August last. Passing into Berar, he fell, when least expected, upon the rich and flourishing city of Karanja, and looted it completely. Four thousand oxen and donkeys were loaded with booty—consisting of fine cloth, silver and gold, to the value of a *krore* of Rupees—captured here. All the rich men of the place were carried off for ransom. Only the most eminent one among them escaped in the disguise of a woman. The other towns also yielded vast sums of money. That rich province, with its accumulated wealth of more than half a century of peace and prosperity, afforded a virgin soil to the plunderers in this their first raid. A force, reported to be 20,000 strong, looted the neighbourhood of Aasa and collected *chauth*, but they rode away without attacking the fort. In the neighbourhood of Karanja and Nandurhar the Marathas took from the affrighted people written promises to pay them one-fourth of the revenue (*chauth*) in future.*

No resistance was made by the Mughals. Khan-i-zaman, the governor of Berar, moved too slowly to intercept the raiders, and he stopped on reaching D'garh. Daud Khan, the governor of Khandesh, was absent campaigning near Ahmadnagar, while his son Ahmad Khan, who officiated as his deputy at Burhanpur, was at open war with Mubarak Jah Jaswant Singh, who was trying to raise money for the Prince's expenses and had demanded five lakhs from the treasury of Khandesh. Daud Khan's son replied that if the Maharaja could procure Aurangzeb's order, he would pay him even 20 lakhs, or else not a pice, at which message Jaswant threatened to sack the town (F. R. Surat 105, Bombay to Surat, 5 Feb. 1671).

Daud Khan from his camp near Ankai Tank hastened towards Burhanpur. Arriving near the pass of Fardapur he heard that the Marathas returning from

Berar had turned aside from Burhanpur and taken the road to Baglana. The situation at the capital of Khandesh was also saved by the arrival there on 1st January 1671 of a new supreme commander, Mahabat Khan, who took Jaswant away with himself when leaving the town.

From Fardapur, Daud Khan swerved to the west and entered Baglana on the heels of the Marathas. While Pratap Rao had been sacking Karanja in Berar, another Maratha band under Moro Trimhakar Pingle had been looting West Khandesh and Baglana, and now these two divisions had united in the neighbourhood of Salhur. They had plundered the village under the hill fort of Mulhur and laid siege to Salhur. Daud Khan arrived near Mulhur at about 8 P.M., but could advance no further as most of his camp and army were lagging behind.

The Khan urged his troops to start next morning in order to raise the siege of Salhur. He himself set out before sunrise. But most of his men had not yet arrived, and the few that had come with him were scattered. They busied themselves in cooking food or taking rest in the camp, instead of resuming the march with their chief. Daud Khan heard on the way that Salhur had already been captured by the Marathas, and so he returned in disappointment to Mulhur, and after a short halt there fell back on his new base near Kanchana Manchana in the Chaudor range.

Shivaji had invested Salhur with a force of 20,000 horse and foot, and one day finding the garrison off their guard he had scaled the wall by means of rope ladders. The *qiladar* Fathullah Khan fell fighting, and his wife's brother then gave up the fort to the enemy. This happened about 5th January 1671. The success of the Marathas continued. They threatened other forts in the province, such as Mulhur, Chauragarh and Talalgarh. Their roving bands cut off the grain supply of Nekam Khan, the *faujdar* of Baglana (whose headquarters were at Mulhur). They also laid siege to Dhodap, the loftiest hill fort in the Chaudor range.*

NOTES

Mere Political Unity Neither Stable nor Sufficient.

The making of all the inhabitants of our country into one people, is our greatest problem. If we could once really be thoroughly one people, as partially we already are, nothing of self-government would be child's play. We do not forget that self-government is one of the means by which the unification of the people may be brought about, for in reality none of our problems admits of isolated solution, all being inter-related and inter-dependent.

What is the meaning of unification of a people? Would the people be one, if they merely lived under one government? Though this factor brings about unification to a slight extent, this alone cannot make us one people. For, having already lived under one government for generations, we should then have by now become fused into one organic whole. It may be objected that as our government is alien in character, it has not served to make us one, and it may, in consequence, be argued that a *swadeshi* government would make us one. There is no doubt that under present circumstances a *swadeshi* government within the British Empire would be a more powerful means of unification than the present alien rule. But even then we should not be a thoroughly unified people. In fact, political unity or union of any kind is never stable or sufficient without social unity, though when built upon the foundation of social unity, political unity is stable and capable of withstanding internal and external shocks.

It is to be hoped that the number of Indian nationalists is diminishing who think that thorough political unification is possible without social oneness or that political unity however brought about, can be stable and can stand proof against all internal and external disruptive forces, in the absence of social unity. The fates of Austria-Hungary, Russia and the German Empire should have their lessons for us. Austria-Hungary was a conglomerate

of many countries inhabited by different races, speaking various tongues. But they were under one central government which granted to all certain rights of self-rule and, moreover, intermarriage between the different linguistic and ethnic groups was not as impossible as it is between Hindus and Moslems, or between the different Hindu castes. Still Austria-Hungary has not been able to resist the shock of the war. Independent nations and governments are springing up from her ashes. Russia, too, which was even a greater conglomeration of countries, races, languages and creeds than Austria-Hungary, has fallen into pieces and has ceased to be one nation. Even Germany proper, which could claim to be inhabited by one people—we do not take into account Poland, Schleswig, and French-speaking Alsace-Lorraine—is threatened with disruption, because the Prussians, particularly the Junkers among them, were a sort of proud caste whose arrogance and domineering spirit prevented perfect social solidarity with other Germans.

By perfect social unity and solidarity we mean that among a people all kinds of social relations should be possible and that no class or section of the people should smart under a sense of some inmediate disability or injustice. It may be conceded that in this sense perfect social solidarity does not exist even in Great Britain or in the United States of America. In Great Britain, not only is there class war between Labour and Capital, but there is also great social inequality between the Lords and the humblest ranks of the people, standing in the way of easy intermarriage and other kinds of social intercourse. This state of things undoubtedly points to a weak spot in Britain's armour. But it has to be remembered that class distinctions in that country, whether based on birth or on wealth, do not constitute a permanent line of cleavage between class and class. A labourer may become a capitalist, and this not in theory merely; there are occu-

ally many persons who began life in great poverty and afterwards became very wealthy. Similarly, it is true not merely in theory that a commoer may become a lord, but there are numerous instances of ordinary men becoming peers. Every year many men are raised to the peerage. As regards social intercourse a lord may not as a rule dine with commoners, but if he does, a coarser food does not defile him. He is not cast outside the pale of his fraternity, and though it is not the rule for lords and commoners to intermarry, if there be such intermarriage, the lord does not cease either to be an Englishman or a lord, or a Christian. Therefore, in Great Britain the people are one people to a far greater extent than the people of India or of any province of India can be spoken of as one people. In the United States of America, all white immigrants, of whatever nationality, tend to become one people though a minority, consisting of a section of the German Americans, were not thoroughly loyal to the States. But they were the only exception among the white immigrants. The Negroes, however, constitute a far graver problem. For in the South lynch law still prevails and there is perfect social cleavage between the white and coloured peoples. In many States there are laws actually forbidding marriage between the coloured and white races, and even where there are no such laws, such marriages are looked at askance and are not usual. Still the Negro in America enjoys greater educational advantages than the lower orders of the people of India, which have enabled them to make greater economic and educational progress than the people of India. And, however low the position of the Negro in America may be it is to be remembered that neither his touch nor his vicinity defiles or pollutes the white man as the touch and vicinity of some castes pollutes Brahmins, wells, tanks and public thoroughfares in parts of India. No orthodox Brahmin household keeps pariahs, or chamars or members of any of the other so-called untouchable castes as cooks—not to speak of Christian or Moslem cooks. But Negro-cooks in white families in America are innumerable. So, though so long as the Negroes are not thoroughly assimilated with the other communities of America, that would continue to constitute a weak spot in Ameri-

can armour, the Americans are undoubtedly possessed of greater social solidarity than the people of India.

Our defects do not indeed give any people on the face of the earth the right to exploit and dominate over us and keep us deprived of the opportunity and power to manage our own affairs even in a blundering way but they do give foreign people the right to treat us as imbeciles and slaves. Nationalists are agreed that we must have political unity in order that we may not continue to be treated as eternal babies and slaves. But political unity cannot be attained without a certain amount of social solidarity and we have not yet become socially one to that extent though we are slowly on the way to it. And even if political unity could be attained without the necessary degree of social solidarity it would neither be stable nor would it make our nationality proof against internal and external forces of disruption, as history and common logic prove. Hence political unity must be built on the foundation of social solidarity.

There may be an appearance or even for a time the reality of political unity among classes and communities brought about by policy and a patched up truce. But as we have said, political unity to be stable and sufficiently strong must be based on social solidarity. And social solidarity cannot be brought about by policy. It can be brought about only by spiritual sympathy and unity. The belief in all men's spiritual affinity is the only element which can help to build up and hold together the social fabric. Education along right lines given by free-souled and unprejudiced school teachers and ministers of religion can produce this belief in human spiritual affinity. This belief is latent and dormant in all of us. It has only to be roused and made an active factor in all our lives.

A Hindu in U S A Army

Duggu Ram is a native of the Simla Hills, whom an American sojourner in India took with him as servant when he went to America. As he elected to stay there for a time when the American returned to India, he was left there. When America entered the war, he enlisted in the army, and is now in France. He is a great favourite with his fellow soldiers.

Deccu Ram.

The only Hindu in the U. S. A. Army in France.

and amuses them in the evenings by doing *Pahari* (hill) dances for them. He is probably the only Hindu in the United States Army.

Holi a Century Ago.

"Holi" was celebrated throughout Hindustan a few days ago. No decent man can approve of or wink at the coarseness, the drunkenness and the obscenities which have come to be associated with it. Earnest efforts ought to be, and have in various places been made, to eliminate these. Stripped of these undesirable features, it would serve a useful purpose as introducing life and colour into the gloomy and colourless lives of the people.

It is interesting to learn that owing to political necessity or on account of their

greater sociability Anglo-Indians (old style) of a century or more ago, mixed more freely with the people than their present-day successors and joined in popular festivities, as will appear, for example; from the following extract from a letter of Sir John Malcolm to General Wellesley written in 1803 :

"I am to deliver the treaty to-day and after that ceremony is over to play 'hooley', for which I have prepared an old coat and an old hat. Scindiah is furnished with an engine of great power by which he can play upon a fellow fifty yards distant. He has besides a magazine of syringes; so I expect to be well squirted."

Sir John wrote afterwards that the "cursed hooley play" had given him a sharp attack of fever. At that time he was negotiating a treaty with Scindiah. Evidently in those days the West did meet the East sometimes. But now Lord Chelmsford does not play *holi* with the Maharaja of Kashmir or the Maharaja of Mysore, or any other Maharaja; his lordship does not play *holi* even with Sir Sankaran Nair. Lord Ronaldshay, too, does not play *holi* with the Maharaja-dhira of Burdwan.

Famine in Bankura.

Famine is raging in so many provinces of India over such extensive tracts that it is with reluctance that we refer to its prevalence in only one district of one province, namely, Bankura, in Bengal. As the editor of this Review is a native of that district, he hopes that he will be excused for this apparent or real partiality.

Swami Saradananda of the Ramkrishna Mission gives a heart-rending description of the condition of the district in the *Amrita Bazar Patrika*. Says he :—

"The famine has cast its darkest gloom in the thana of Indpur, which was also stated in the Government communique that was published a fortnight ago. The people, including working hands, both men and women, are deserting their homes in bands to find their livelihood elsewhere, leaving behind such of their relations in their homes as are too old or too young to go and whose last resource has become the small stores of forest plums and husks; while we are almost unable to deal with this critical situation even in our small area for inadequate funds. We can neither supply them with labour nor with sufficient gratuitous doles. Such also is the case of the well-to-do classes. The circumstances have turned them into so many beggars. Even the ladies are always eager to accept a handful of rice like an ordinary person in the street, and sometimes prevented even in that because of their audacity. Also the scarcity of water has commenced.

simultaneously with the famine. People used up the "bund and the tank water very lavishly to save the crop that is confined only to a scanty area which has now been spared by the last year's drought. The shortage of drinking water has increased the intensity of distress and pestilence to its last extreme."

Among the advertisements in this issue of the Review, the reader will find an appeal of the Bankura Sammilani on behalf of the famine-stricken people, in which it is requested that all contributions should be sent to *Rai Bahadur Hemanta Kumar Raha, Assistant Director General of Post Offices, Calcutta*.

Srimati Krishnabhabini Das

The greatest, most active, and most unostentatious of social workers among Bengali women has passed away from the scene of her earthly labours. Srimati Krishnabhabini Das was the widow of the late Prof. Devendranath Das B.A. (Calcutta) and the daughter-in-law of the late Babu Srinath Das, a leading millionaire. Aikil of the Calcutta High Court. She was in England with her husband for eight or nine years in the eighties of the last century, and many Indians who were in London in those days saw her passing hours day after day absorbed in her studies in the library of the British Museum. When she returned to India with her husband she was a true helpmeet to him, working devotedly with him to establish and conduct the now extinct Century School, which later grew into the Century College. After the death of her husband and of her only daughter, she threw herself heart and soul into the movement for the education and uplift of her sisters. With the help of teachers maintained by the *Stree mahamandal* of which she was secretary and chief worker, she carried on the work of zenana tuition for years in a thoroughly unsectarian manner. She did not neglect state help for this or any other of her activities as she did not like any interference with her liberty in the choice of means and methods. She got even poor women of meagre education to do some useful teaching work. She also maintained a school for girls with a hostel attached where she brought up among other things some girls from very poor families who could not pay their way. Many orphans were maintained by her. She also conducted a rescue home.

Though she had been in England for

about a decade and was an educated lady, she was not in the least Anglicised or Europeanised. Neither from her dress nor from her speech or manners could it be guessed that she was other than an ordinary *pardahnashin* Hindu lady. With the selfless pure and unostentatious devotion of the typical Hindu widow, she combined the method, the energy and the spirit of active social service of the West. She was a Bengali writer of repute in prose and verse. Her prose style bore the stamp of individuality.

Though she was a *pardahnashin* Hindu lady and a millionaire's daughter in law, she led the austere life of a *sannyasini*, not spending more than fifteen rupees a month on herself as we learn from an intimate friend of hers and often walking the crowded streets and lanes of Calcutta to obtain help for her institutions.

We could not obtain any photograph of her as she was very unwilling to be photographed. But fortunately when she was once engaged in conversation in the residence of Sir J. C. Bose, Miss Lareher made a pencil sketch of her without her knowledge. This we have much pleasure to reproduce and are very thankful for permission to do so.

"The League of Dreams"

In an article in the *Nineteenth Century* and *After* Sir Herbert Stephen calls the League of Nations The League of Dreams. Says he—

Human nature being what it is and the departure of human thought known as jurisprudence being what it is I think that there ought to be no League of Nations. I think that if there ever is one it will bitterly disappoint the hopes of its votaries. I think it will be totally inadequate to its intended purpose and therefore not only will not promote but will positively retard the achievement of that purpose. If you buy a new kind of coat to keep out the rain and it is not really fit to keep out the rain you will be better than if you had eschewed the new coat and relied on your previous precaution whatever they were. If we construct a League of Nations we shall rely on it not on our own good behaviour, foresight and courage to keep us out of war. When it is to do so we shall in any case feel extremely ill-used and angry and may not improbably be caught at a horrible disadvantage.

The Review of Reviews says in reply—

This is the argument of one who has no faith or belief in the upward progress gradual but none the less sure of human nature. What man has been made will be says the writer no effect. Having started as a quarrelsome fighting animal he will continue so to the end. The spread of civilization

the betterment of social conditions, the softening of manners, the rise of law and moral conceptions, to which all history bears witness, are so many delusions. If the facts bore out Sir Herbert Stephen's theory, his pessimism would be justified, but they do not. Human nature does change, is changing every day, and on the whole for the better.

All this is true. At the same time it cannot be gainsaid that the League of Nations, as it is going to be constituted, would be not a League of *all* Nations, as it ought to be, but a League of the preponderant Nations, which are, with one exception, all of European race and professedly Christian. Such a League is neither just, nor can it prevent war. Sir Robert Stephen is right when he observes :—

The more sober advocates of the League of Nations, and in particular Lord Robert Cecil, its British official advocate, recognise fully the distinction between a group of nations, preponderant in strength, and earnestly desirous of a prolonged period of peace, and a League of all Nations desirous of establishing constitutional arrangements which will prevent our descendants from ever going to war again. We have the group now. A good many years must elapse before we can have the League.

What follows is based on a low view of human nature and is an appeal to national selfishness.

In order to have the League we must share with foreign nations the control of the British Navy, which, under our own control, has saved the civilised world from the domination of a single State four several times in five different centuries. There is every reason to think that, unless mankind and their most profound emotions change into something quite different from what they have hitherto been, the League of Nations, if it ever exists, will fail to prevent the occurrence of wars. We are asked to sacrifice the best things we have in order to obtain a remote and exceedingly improbable advantage. Our only wise course is to recognise the truth at once, and destroy an insane project by plainly and openly refusing to have anything to do with it.

British Maritime Supremacy.

Great Britain's empire rests on the foundation of her supremacy at sea. During the war her net loss in merchant tonnage amounted to at least 3,500,000 tons. What has crippled her, has been of advantage to her rivals, who have occupied part of the sea-ways of the world. Hence in the pages of the *Edinburgh Review*, Mr. David Hannay calls upon all Britons to face and grapple with the unpleasant fact that the maritime supremacy upon which the safety and well-being of the Empire depend is in danger. Says he :—

The British Empire is spread in widely separated masses of territory over the surface of the globe.

The "Sea-ways" are the connecting nerves and veins which hold it together and make it one. It is a credible proposition that "In the deeps of the years and the changes of things" there may arise some people which, because of the advantages of its position, its resources, and its qualities, will be able to create a merchant shipping equal to or greater than the British, and will then produce a navy proportionate to its stake on the sea. That the only people which is likely to achieve this development is the Americas, that we are excellent friends and happen to remain, are considerations irrelevant to our argument. Whenever the United States, or another nation, is our equal, and still more when it is our superior, on the sea, the British Empire will have lost its place in the world. Our rival may be moved by no animosity, may be just and friendly. None the less he will have the power to cut the connections which hold the British Empire together. It may continue to be prosperous. Spain is richer now than when she owned the Indies. So may we be more wealthy when our supremacy is gone, but we shall no longer be the British Empire which owed its place in the world to its own strength. We shall be compelled to trust our safety to the moderation, the justice, the generosity of a rival. Supremacy we must have or we fall from our high estate.

Transport Reconstruction

While the Government of India is going to sink a staggering amount of capital in railways, to the neglect of waterways and roads, people in other countries are by no means satisfied that the railroad is the last word in locomotion. Not to speak of air traffic, which is coming or has already come, there are better means even of land transport than the railroad. Mr. W. M. Acworth writes in the *Edinburgh Review* :

The capital cost of a motor service beyond the actual purchase of the vehicles themselves is almost negligible, and the number of vehicles can be proportioned to the public demands for their use; whereas the railway goes on costing £475 a mile per annum, without allowing for the purchase of rolling stock, however little, use the public make of it. A very rough estimate would probably put the average cost of running the road vehicles—assuming normal prices—at something like 18d. per mile. In favourable districts this might be covered by the receipts, for both fares and charges would reasonably be at a higher rate than on a railway. It is better worth anybody's while to be carried from the market place to his own door four miles off for 6d. than the same distance between two stations for 4d., if the 4d. implies two miles' walk in addition. As for goods, the charge by lorry would in most cases replace not only the railway charge for carriage but the cost of hauling to or from the station in addition. Further, the lorry can perform services that the light railway can never do. The railway is limited to few trains, and the hours that suit the passengers are not the hours that best suit the milk, etc. In districts where the traffic was not likely to suffice to cover the cost of a motor service, still less would it cover that of a light railway, and if for good cause shows the State decided to subsidise locomotion in such districts, the cost would be

KRISHNABHAGINI DAS

immensely less than that in 'colonising' but it is a

Hence he believes that the real solution of the problem of motor transport lies in the development of motor transport in India that would depend on the proper upkeep of the existing highways and the construction of a network of new roads all over the country. Besides this we must have the improvement and linking up of canals and waterways.

Among the newspapers in India the *Indian Daily News* alone has been laying stress on the development of motor traffic and its pre-requisite, the conservation and extension of roads. In addition to what our contemporary has itself written it has alluded the examples of France and America to support its views.

The Senate Post Office Committee of the U. S. A. has just recommended the expenditure of \$100,000,000 (ten hundred crores) spent over three years for the construction and maintenance of roads. The first thing that struck the Americans as arriving in France was the French road system and the immense possibilities for traffic. The result is that the road programme has become a part of the French policy in the value of roads but he seems to have nothing as yet only after a small amount about the hoarding of rubber which is the fundamental people who distrust Governments and is just now prevalent over the whole of the world.

Capital and Labour

A great, and perhaps the most pressing problem in Great Britain and in Europe generally is the class war between capital and labourers. Writers belonging to different classes and professions have been discussing the means and methods of its solution. The *Reviews of Reviews* has published the opinions of many such writers. The Right Rev James B. C. Widdow, Dean of Durham, says

The frequent strike and lockout in the industrial world have long been recognised as grave evils. They have degraded bitter suffering. They have created widespread misery. They have driven trade away from Great Britain to Germany. Whether right in them has been said on the side of Capital or on the side of Labour, or now on one side and now on the other as partly on both sides they have been and must always be a catastrophe.

It is a fearful fact that Labour is apt to be wronged rather than the slighted. It sees its own immediate advantage. It does not always see the ultimate grounds upon which its advantage must rest. There is no greater mistake than the assumption (to which the currency of the language has supported) that the only work of men is the man who works with his hands. Brains are as necessary to the welfare of trade as sinews and muscles. Therefore a true health of society as operative

Commercial Labourer has done or could have done as much for social progress as Watt or Stephenson or Arkwright or Hargreaves. But can any great business be successfully carried on without Capital? And as business grows and increases through the agency of industrial companies and other such combinations, Capital becomes a more important factor in commercial development.

But, he admits that whatever is true to-day, it has on doubtfully been true in the past that Labour has not enjoyed its legitimate share of the profits to which it has so largely contributed by its services. He continues—

It is so it has been impossible to contrast the lives of small men and of the men whom they employ without a feeling that something was wrong in the relation between them. Until the era of the legions which has not always will be associated with the name of the great Lord of Shalisbury, the hours of Labour were too long. Its conditions were so harsh its wages were small, but its opportunities of education and recreation were too few. For most of these evils a partial, if not complete remedy has now been found. But there are leaders of industry like Lord Leverhulme in England and Mr. Henry Ford in the United States of America who do it better. It is the possibility of reducing the hours of labour without lowering its product or its productivity. It is the growing association of employers from the daily life of the workmen is so far as it has destroyed or improved the sympathy which a sense of personal knowledge and personal friendship which has been the prelude of a new era of economic and settlement in industrial life.

Whatever the case in England, it can not be said that Labour in India has yet come to enjoy its legitimate share of the profits to which it so largely contributes by its services. Here the problem has been further complicated by the existence, in most factories and plantations, the feeling that the labourers belong to an inferior race and the capitalists and exploiters to a superior ruling race, the consequences being that there is less sympathy between Labour and Capital, for the most part in India than there ever was in the West and Labour troubles here are often unjustly ascribed to the 'seditions' efforts of political agitators. Here we ought to say that Indian employers of Labour, too, are not universally or for the most part as just and sympathetic as they ought to be.

However, the solution of the problem is essentially the same here as in the West. The Dean of Durham looks for it wholly or mainly to two principles which, in his opinion, should govern all operations in the world of Labour.

One is partnership. For under a system of co-

partnership the interests of Capital and Labour will be no longer even in appearance divergent, they will be identical. Both will be concerned and equally concerned in the prosperity of a business. Both will share its profits. Both will if need be bear its losses. It will be the common interest of masters and men that industry in all its forms should be so scientifically ordered as to give everybody a chance, and I might almost say an equally fair chance of profiting by his own skill and toil or of suffering from his own negligence or indolence.

The other is arbitration. War among classes is as barbarous as it is among nations. Economic battles are not less fatal than battles on the stricken fields of warfare. Individuals in a civilised society do not settle their disputes nowadays by the revolver or the bowie-knife; they appeal to Courts of Law. The notions of the world are now aspiring to similar pacific means of avoiding what has been called by a misuse of language the arbitrament of the sword. Is it not high time that the world of industry should say decisively: There must be no more industrial war. There must be no more of the distress which arises from industrial war? It is when men bring their differences into a judicial court when they argue their cases before a competent tribunal when they accept the decisions of an impartial judge that they will act as Christians in the 20th century of the Christian era ought to act.

Such are I think the essential principles of a new and a better and a higher life in the world of industry.

What the Deon says is true and just, as far as it goes, but it does not go far enough. He does not explicitly tackle the problem of international industrial war. He does not say how much can be put to one nation's efforts to industriously throttle another nation or nations. Dr John Clifford M.A., the eminent Nonconformist, takes higher ground and grapples with the international aspects too of industrial conflicts. He says that employers and employees should get together as men and women brothers and sisters in fraternal fellowship conference and co-operation, with a view to the arrangement of the terms and conditions of their common work. They need to agree.

(1) That the ideal of Labour is the best service of the whole Commonwealth and not a ceaseless battle for filling the private purse; that is to say, that all trade is a social service, and not a struggle for the exclusive collection of coin.

(2) That the whole physical, intellectual, moral and social welfare of the toiler must have a primary place in the fixing of the distribution of the rewards of labour and not his only but that of the family or of the community to support and train for the Commonwealth and the world.

(3) That the worker must have a voice with regard to the conditions under which he works and must be taken into counsel through his chosen representatives as to the management of the business. He must not be a part of the machinery of a mere dead dog in a wheel in a large machine of the firm.

(4) That labour must not be narrowly paid off

but broadly humanitarian and international. For the world is one and humanity is a solidarity.

We call particular attention to item (4) of the extract given above.

Dr Clifford mentions a factory where the principles he advocates have been reduced to practice.

I know a slipper factory employing what used to be called a thousand 'hands'. They are no longer hands; they are souls personified men and women, and they are in the business as well as at it. They have a share not only in its profits but in the management through their representatives. They are in regular conference with the directors with the result that hours have been reduced to 46½ per week and the output increased. Sufferers by the war have been relieved and then afterwards cared for. Hence the relations of all concerned in the business are happy; they are not mechanical, frigid and rigid but entirely human and friendly and the atmosphere of the factory is laden with goodwill.

A "Professional Man" expresses the view that 'the ultimate causes of the war may be summed up in one word "materialism," which lies not only at the root of Prussianism, but also behind the far too prevalent view of what the new, post-war world shall be. Various expressions of the materialistic spirit, in the pre-war period, brought about mutual distrust, not only between nations but also between classes in each nation.'

Spiritual Education and World Citizenship

This writer's observations of the essential need of the ideal of world citizenship are so clear and convincing that we make no apology for making rather long extracts from his article.

The prime necessity of all is education on international rather than patriotic lines for in that case a surer guarantee of the future peace of the world than in all the money ever spent on armaments. If reconstruction means retention of the armament of each nation, and retention of military schemes—no matter whether they are frankly militarist or disguised as merely defensive—then peace becomes an armed truce and under the weight of armament and the cost thereof materialism gets a new lease of life. If one-tenth of the pre-war annual appropriation of funds to naval and military purposes had, in each of the great countries of the world been devoted to education on right lines, the need for means of offence and defence would have disappeared within a couple of generations of the innovation, for the misconceptions that lead to war born of ignorance which can only be combated by better educational measures.

He gives us an idea of what kind of education is required by telling us what it ought not to be, what Germany gave her people.

Paradoxical though it may seem Germany—

super-educated Germany—is the best available proof of this thesis. In the material sense no country educated its people so thoroughly as did Germany. Every class received attention in this direction and all with a view to the ultimate conquest of the world, all to the end that the German should be lord in every country. The utter failure of the system, the inefficiency of the education provided to this end, is proved by the multitudes of Germans who, emigrating, disowned the country of their birth and became citizens of the countries of their adoption. There were the paid spies, of course the Germans who retained their nationality—usually behind a form of naturalisation—and worked for the fatherland in the fatherland in a crooked way, the result of complete assimilation of the German system of education. But the majority threw off their Germanism, and became good Americans, good Argentines, especially in the Western Continent was the trait marked, for to the western countries flowed the main stream of genuine emigration. The older countries of Europe received mainly the cloaked agents and emissaries of Germanism, which is materialism at its worst—which again is lack of education in the true sense of the word.

German education was a training so materialism, a narrow, perverted instruction, in the rights of the German and the inferiority of all other races, it was a cultivation of insular barbarism, a shutting-off rather than an opening out and in the real sense of the word was not education at all. The first requirement of every country is that each one of its citizens shall be educated to a sense of his or her responsibility, not only to his or her own country, but to the citizens of the whole world. If the bases of the future are to be soundly laid there must be established an ideal of world-citizenship.

The writer proceeds, —

It is this ideal of world-citizenship which through education on right lines, must be made to permeate the world. If civilisation is to endure. Without it plans for the expansion of trade for the capture of this or that market, for the development of this or that industry, are useless. The peoples of the world be lifted to an understanding of the responsibilities, and to conception of the tempers and needs of other peoples. For, just as distrust between classes interferes with the development of national life, so international distrust interferes with world-development, breeds preparation for war, which in turn breeds war and the temporary total cessation of peaceful advance in civilisation.

He is right in saying that "it is of no use to suggest material remedies for the materialism that has, through a century, led steadily up to the world's greatest disaster."

Homeopathy will not act in this case. The only remedy lies in a clearer conception of the duties of every world-citizen and that in turn can only be attained by a clearer moral conception of life, which, by means of education on right lines must lift up the whole world. From the practical point of view, the war has impoverished the whole world, but it has left such material wealth as will permit of the education of every citizen of every country more especially since in such use of wealth lies the creation of the greatest asset that any nation can possess. Education on patriotic lines is of no avail

for in patriotism is no virtue, but merely the expression of an instinct; in Internationalism rather than Patriotism lies the great promise of the future.

The writer observes that this ideal may seem vague, but in reality it is definite and possible of attainment.

Apart from disconnected charities, no attempt has yet been made to better the lot of any people. The experiment of moral uplifting has never been tried and now in these days of change and rebuilding is the time to try it. It is self-evident that, if any one nation had the courage to educate its citizens on right lines with a view to the realisation of international responsibility and to house them decently giving to each one the time and the room to live, in place of existing in twenty years the results of the experiment would be such as to bring the whole world into line. From the material point of view, the experiment would pay. Increase of comfort increases of knowledge and the spread of a right conception of life would inevitably be followed by greater producing power, for it is a mere platitude that moral well-being brings physical well-being. Certain industries and enterprises might suffer at the outset for many of these are built on sheer materialism but the total of gain would far outweigh the loss and if the experiment of incalculable lag the younger generation a right conception of life and its responsibilities were once set going, public opinion would ensure its continuance.

The cry of economic war after the war was raised during the war and that is still one of the main cries of the dominant nations. The writer is opposed to this commercial war.

The morrow is envisaged as a sterner struggle than ever—this time for supremacy in trade, one which is to be as uncompromising and relentless as the struggle of war, in which the eventual victor is to control the markets of the world and depend on its own material prosperity as Germany depended on its colossal armaments and armies. Among leaders of industry this view is far too prevalent there is to be an attempt, by means of production, to capture this or that industry, and eventually, though this is not expressed in so many words, to monopolise it not for the benefit of the industry producing group. Such an attitude is a logical outcome of the war but it is a sign of reconstruction rather than new construction, a putting together of old pieces rather than creation of the new world for which the opportunity is open. It is a view incompatible with international development, a parochial expression of what the war has incited, and an expression which, to the end may lead to the development of monopolies which are as evil to their effect as is Franchism in the form that we know. This view of means as end—for that is what it amounts to—leads back to war, and not to peace at all. It is aggressive, and the main practical need of the future is security against aggression, which must be interpreted as security against commercial aggression as well as the more obvious forms.

"Action, of course, is a necessity" But, the guiding impulse, the immaterial thought

from which the act springs is that which most needs shaping. Let each citizen be awakened to the spiritual significance of material action and let him or her be given a life in which is time and room to realise that the spirit rules and matter is its servant, and in any country the result will be a power which could dominate the whole world to the world's good—not, as Germany sought to its oppression and to the final extinction of the experiment.

Litigation in India.

That litigation in India has been one of the causes of the poverty and ruin of a large section of our people goes without saying. According to the "Statistics of British India" which deals with Administrative, Judicial and Local Self Government tables published recently by Mr Findlay Shirras, the love of litigation in India is so great that in 1916 2 329 000 civil cases were taken up against 2,226,468 in 1915, 2 055,272 in 1914 and an average of 2,153,000 in the last five years. Suits for money or movable property made up more than two-thirds of the total and suits under the Rent Law one half of the remainder. Relatively to the population Bengal appears to be the most litigious of all the provinces of India, Madras and the Punjab next. The suits instituted in 1916 involved a money value of Rs 48,75,42,538. Fifty three per cent were for amounts not exceeding Rs 50, and 95 per cent for sums not exceeding Rs 500. In the Small Causes Court 352 097 cases were tried, of which the United Provinces had the greatest number. As regards criminal justice the number of offences reported in 1916 was 1 669,670 in a population of 243,607,034. The number of persons concerned was 2,053 656, and 1,011 210 convictions took place. There was a marked increase in criminality in the year—the convictions increasing from 28 per 10 000 of the population in 1889 to 42 per 10,000 in 1916. These figures furnish us with matters for serious consideration.

Sir Rahindranath Tagore's Tour in Southern India

Those who have been able to follow the Madras daily papers will have taken note of the long tour of Sir Rahindranath Tagore, the Poet, extending over two months and undertaken during a period of great physical exhaustion and at a serious cost to health. Twice over the Poet went steadily on with his work, fill-

ing his crowded engagements, until influenza and fever made it impossible for him to proceed any longer, and the doctors peremptorily ordered him to take complete rest. The Poet has now returned to his ashram at Shantimuketun, after lecturing in Calcutta, but he intends to start out once again for Benares, where he hopes to deliver the same message which he gave with such power in the South.

The reason for the Poet's breaking through the bounds of his accustomed retirement has been the imperative call from within to declare what he has, at last, felt to be the truth on certain subjects of vital importance. His three lectures present an ideal for India by which all her modern standards of value, taken from the West, must be judged and appraised. When at last these lectures are read and studied and absorbed, their effect will be seen in fundamental changes in education, in society, in politics and in religion. For they have the creative genius of the Poet and the living words of the seer behind them.

In South India it would not be too much to say that the visit of Sir Rahindranath Tagore has been revolutionary. Nothing will quite remain where it was. One symptom of the revolution was that, for the first time in history, a member of the Legislative Council got up and addressed the assembly in his own mother tongue, instead of in English. This councillor afterwards told the Poet that he had been so impressed by the truth of his words that his mind had not been able to rest, until he had taken some definite action, and that this speech in his mother tongue was the action which came to him to take.

The social structure of the South, with its rigid walls of exclusion, felt the impact of the Poet's utterance. Those who listened to him went away with a new determination to set themselves free from the thralldom of the past.

The most touching thing of all to witness was the way in which everywhere, on every side, the students flocked around the Poet and received him as their own with an immediate instinct of reverence and humility, mingled with love, which went at once to his heart. Night and day he sat with them,—as they came individually and in little groups,—listening to

their difficulties, answering their questions, inspiring them with courage, enlarging their minds with hope. Nothing was more significant than the claim thus made upon his time and energy by the students,—a claim which no weariness of mind or body could ever make him refuse.

In Madras, all the venom of party politics was hushed during the Poet's visit. Every section of the community met together to do him honour. The great audiences, which were gathered to hear him, night after night, were drawn into a spiritual unity under the spell of the Poet's presence. The dead weight of their minor differences dropped from them, unawares, as they were lifted into the higher air which the Poet himself breathed.

It is difficult to estimate, in practical terms, the meaning of all that has happened. Perhaps such an estimate is impossible, but what is certain is this, that a new atmosphere has been created of hope and aspiration and courage. In this new atmosphere, the younger generation, as it rises to full manhood, may accomplish much that before was beyond achievement.

A German View of "the Suicide of Europe"

We learn from the *Review of Reviews* that an unsigned article bearing the title "The Suicide of Europe" has appeared in the *Sueddeutsche Monatshefte*, which it has summarised.

The most obvious result of the war, says the writer, is the disappearance of the European Continent as a deciding political factor. Another result is that at first, but probably not for long, there remain three Great Powers—all outside Europe—America, Japan and England—the United States and Japan being the masters of the New World, Japan and England the masters of Asia, and England the master of Europe and Africa. Of the eight former Great Powers three have been destroyed—Russia, Austria-Hungary, and Germany, their destruction being in the interests of England. Germany has done England the favour of rendering her Asiatic competitor harmless. This fact and the destruction of Austria give England a free hand in the Balkans for Egypt and India can no longer be menaced. By the overthrow of Germany every obstacle in the way of England with regard to Russia, Scandinavia, Holland, Belgium and France is removed. If England comes to an understanding with America, the two countries can divide between them all the spheres of interest in the world. Denmark during the war parted with her American possessions. Holland will retain her colonies only so long as England pleases. By her fleet England rules the northern kingdoms

politically and commercially, so completely that there is no need to annex them officially. She can stop transport to every single Continental state so long as Central and Eastern Europe is composed of decentralised small states.

But, continues the writer, England will have to pay a pretty high price for her enormous increase of power.

Before the war England was master of the world. The world has now apparently three masters but in reality only two—England and America, the latter of whom has utilised the war to militarise herself to such an extent that she can meet every possibility either from the offensive or the defensive point of view. The great X is Japan. England and America are in a position to send her a dismament ultimatum. This would rob one of these two Powers of the only ally possible in case of a conflict with the other for the only second possible ally, Germany or the German fleet, has ceased to exist. All the demands of Japan are directed against America and all the armaments America are directed against Japan.

The writer then dwells on the fate of the lesser great powers.

France, once a Great Power of the first rank, will, according to the writer, fall to a position of the second rank, her territorial gain notwithstanding, and this because the three Great Powers have become so strong that France no longer counts. While France has conquered Germany she has been conquered by England. Italy, a Great Power of the third rank, has from the Anglo-American standpoint lost more power than France. By the extension of her frontiers her population will be less homogeneous and the interests between north and south more diverse. The rest of Europe, with the exception of France, has added three new Balkan middle powers: the old Balkan middle—Russia, Austria and Germany. Belgium has become an annex of France, but France will take care not to annex it. Antwerp apparently Belgian is so English pistol threatening France, Belgium has ceased to be an independent state.

In the opinion of the writer, the ruin of Germany means the destruction of the European arch.

All the European States have by the ruin of the Central Powers weakened themselves to the advantage of England. Germany was so to speak, the keystone of the European arch. Since this stone has been broken out the arch is showing cracks everywhere. Especially instructive is the case of Switzerland. Of the four walls of the Swiss house the one least menaced has fallen at a single blow. The eastern wall has fallen because no Austria is there, and Italy is pushing northward her south-east corner. The west wall was a wall against France only so long as there was a Germany; now there is only a French wall against Switzerland. In the future there will be no Swiss neutrality for its due course Switzerland will be Italianised and Frenchified. The new Polish house will have no walls at all. Equally precarious is the position of Holland. France has destroyed a neighbour whom she hated but a disarrangeable neighbour is often better than none at all, and Germany was a protection against invasion from the East.

Nemesis in Europe.

The spread of Bolshevism, in its lower and brutal phase, in Europe, threatens to be her nemesis. It is the logical outcome of her predatory and cannibalistic nationalism and "civilisation." If it be right for one people to ent up the substance of and destroy, if necessary, another people, body and soul, why would it not be right for a class (the Have—Nots) of one people to war and prey on another class (the Haves) of the same people and its women? That is the conscious or unconscious logic of the Bolsheviks.

English and Indian Manners.

In his reply to a correspondent on the subject of Indian manners, Sir John Woodroffe says:—

"I do not myself, nor does any other Englishman, Irishman or Scotchman feel inclined to imitate any one. We therefore do not generally borrow Indian customs or manners for we consider ours are good and the best for us. Nor do we as a rule esteem the imitator, for the latter is generally a snob or a person who, to the extent and in respect of the subject of imitation, writes himself down as inferior to ourselves. Many Indians however desire to imitate us, a fact which gives many of us a good conceit of ourselves. Personally if I were a native of this country I would not adopt any foreign custom unless I was satisfied that I ought to do so. Certainly I would not give up the Indian salutation for an English shake hand, great and inspired by freedom and comradeship though the shaking of hands be. I should see no object in doing so except to imitate and thereby acknowledge the superiority (in this particular respect at least) of a foreign civilisation. As regards however your outlook upon women, it is not ours. We do not feel in the way you describe either when shaking the hands of another man's wife or seeing another man shake the hands of your own wife. As a foreigner however I would respect the feelings of the people of this country in all matters and would not shake hands with any one (man or woman) who or whose people I thought might not like me to do so."

Imitation, they say, is the best form of flattery. It, therefore, sometimes puzzles us, how people calling themselves Swarajists and patriots, ape European manners. Adopt, but adapt.

Another Letter From Australia.

The letter printed below has been received from a large and influential body of women workers in Australia. It will touch the hearts of all who read it and give confidence in India that there are many siding with us in our struggle for freedom of whom we have never heard. We are thankful of these signs of the dawn of a brighter day amid much that is

enveloped in gloom. The letter runs as follows:—

"We the women of New South Wales branch of the Women's Peace Army send greetings to our sisters in India.

"The object of our organisation is to create the sisterhood of mankind regardless of race, creed or color and the recognition of the oneness of humanity.

"We would like a regular letter from your organisation giving us accounts of your economic and political position.

"Here in Australia, the life of an Australian working woman is not such as should be found in an enlightened country in the twentieth century, but I believe we are advancing and I hope one day our goal may be obtained.

"There may be much we can learn from you, there may be something you can learn from us.

"We particularly wish to express our deep sympathy with our Indian sisters suffering in Fiji, wholly through the wrongs of Australian and British people. We assure you that had the working women in Australia been acquainted with the situation earlier, it would have been non-existent to-day. But we did not know you and what we are asking is to know you.

"We are particularly interested in Indian Home Rule and would like your expression of thought on that subject. We are also interested in political rights for women, believing that women who are by nature creative, will if given power, abolish the destruction of humanity such as has been seen on the European continent during the past four years. When the bond of womanhood stands stronger than the bond of nationality, then and then alone can women's creative power be freed from the degradation it suffers to-day.

"Therefore we appeal to you to put a small link in this chain which will bind the world in one. Let us unite, let us sympathise with one another's sorrows, let us know each other's weakness, let us know each other's strength and by knowing one another copy what is strong, what is good in one another, bringing about that unity which alone can emancipate women and thereby emancipate humanity.

"Yours truly,—
ISABEL F. FANNY."

It is encouraging to know that these words of greeting which have been reaching us from Australia have not ended in theory. The united women's organisations in Australia have sent out Miss Garnham as their representative to Fiji and she has conducted an entirely independent enquiry. Her conclusions have been identical with those of Mr C F Andrews whose statements have been impugned by the Fiji Legislative Council. It remains to be seen whether the said Legislative Council will now revise its own conclusions. It welcomed Miss Garnham's enquiry hoping that she might witness in their favour but her evidence has gone altogether against them. Will they now impugn Miss Garnham's statements as exaggerated and untrue as they did those of Mr C F Andrews?

The Shame to Indian Womanhood

While the Fiji Legislative Council spends its time in heaping abuse on those who bring to light the wrong that is being done, that wrong itself is becoming more and more accentuated. The Indian women who remain in the cooler lines under indenture are suffering a worse fate than ever. When these lines were occupied only by indentured labourers the proportion of men to women in them was three to one. But as the indentures are gradually running out, a large number of non-indentured men (with practically no women) are being hired by the employers to come into the lines, side by side with those men and women who are still under indenture. This makes the proportion of wifeless men in the lines far greater than ever. The indentured women are forced to remain in these lines whether they like it or no and with their spirit already crushed they cannot hold out against the solicitations of this crowd of men. They spoke to Miss Garnham personally as women to a woman of the wretchedness of their fate which is that of enforced prostitution. Has India's manhood any heart to feel what that means?

The Government of India promised in open Council in September 1918 that it would negotiate for the early release of those still under indenture in Fiji. The Government of India professed itself anxious to do everything in its power to help. How have these pledges and promises been kept?

"An Act to Cope with Anarchical and Revolutionary Crime"

One of the Rowlatt Bills which has become law has been given the above title by Government. With the exception of Sir Sankaran Nair who is an official and has therefore, for the time being virtually ceased to be one of the people, not a single Indian has voted in favour of the Act nor has a single European voted against it. But the triumph and solidarity of the Europeans and the officials were greater than the unanimity and solidarity of the non-official Indians. For whilst the Europeans and officials were all present to vote and voted in favour of the law and there was one Indian though an official on their side all the non-official Indian members were not present to vote only 21 were present and out of these one did not vote on either side. It may be presumed that the Indian members who were absent had sufficient reasons for their absence but their countrymen would have rejoiced if they had all been present to vote against the bill. Khan Bahadur Nawab Sayid Nawab Ali Chaudhary who abstained from voting must be praised for his great courage in not voting in favour of the bill.

We do not know whether there is any covenant which obliges an official member of the council to vote for every bill introduced by Government but there is nothing which can prevent an official member from resigning his seat. One would therefore be curious to know why Sir Sankaran Nair voted for the bill. If he voted from conviction he may be presumed to have more facts in his possession than his non-official countrymen in council and these may have led him to vote in the way he did. But we need not make even this assumption. For we find that no one among the non-official Indian members called in question the facts given in the Rowlatt Committee's Report on which the law is said to be based, and yet every one of them abstained from voting in favour of it. It is not of course, impossible for an Indian member to sincerely and conscientiously vote for a law not supported by any other Indian member. Therefore as regards Sir Sankaran Nair's vote we have to choose between two alternative suppositions either he voted from sincere conviction or he voted

against his conviction and conscience because of his official position. If the former supposition be true one must respect him for his sincerity though at the same time one may cease to think that Sir Sankaran Nair is at one with his patriotic countrymen in all matters of moment. If the latter supposition be accepted as true one must regretfully hold a low opinion of his sincerity and manhood and cease to consider him a patriot. It is the duty of every right minded man to follow the dictates of his conscience at all costs and under all circumstances. If an official feels that he cannot conscientiously vote for a bill it is his duty to resign. As we do not know why Sir Sankaran Nair voted as he did, we shall not be justified in taking it for granted that he voted against his conviction. But neither shall we be justified in continuing to think that he is the same Sankaran Nair unchanged who once presided over the Congress. We must hold our judgment in suspense awarding neither praise nor blame so far as the *moral aspect of his conduct is concerned*. As for the political aspect we are decided of the opinion that his vote was wrong and unpatriotic. It may be observed incidentally that as Indian official members generally act as the European official members what is wanted is not an Indian bureaucracy in lieu of the present foreign bureaucracy but an executive responsible to the people's representatives and amenable to control by them.

The Character of the Act

The Act as passed into law is not quite as bad as the bill originally introduced in council. But it still remains a 'lawless law' calculated to be subversive of personal and national liberty in the hands of an irresponsible executive. Therefore it must be opposed in all legitimate ways. We must not take it as a settled fact that would brand us all as slaves.

The promise that the Act will be in force only for three years practically means nothing. For there is nothing to prevent Government passing a similar law or even a more drastic law under a different name after the lapse of three years. So our attitude towards the Act shall be as if it were a permanent law. And therefore we should try by every legi-

timate means to get it repealed or to prevent its enforcement and nullify its effect.

Officials and Non officials and the Rowlatt Act

As from before the passing of the Defence of India Act there have been many weapons in the hands of Government to cope with all sorts of crime and even with non criminal movements and the Defence of India Act will remain in force for six months after the conclusion of peace which is not yet in sight there ought not to have been any hurry in passing the Rowlatt Act. But it has been forced through the Council at a breakneck pace the members one day sitting even after one A.M. which is a record for legislative councils in India. The bill was not published in the provincial gazettes nor were the provincial governments the high courts the public bodies &c. asked and given an opportunity to express their opinions on it. Most of the non official Indian members tried their best to get the bill dropped and when that attempt failed they tried to prevent its passing or to see that its consideration was delayed or that its most obnoxious clauses were dropped or modified. But in spite of all their efforts the bill has become law, with some modifications most of which are not very important.

There was no lack of earnestness, courage, statesmanship, logic and facts on the non official side. But these were of no avail and these could not divest the debate of its air of unreality. For the deciding factor was not the value of the things said but were numbers. Things might seem real and rational if some times the officials sided with the non officials but that was not to be. The officials thought that it is they who were always right. It is impossible to believe that non officials can be wise and in the right only when they are either Europeans or when they say ditto to European officials. And it is also funny to find that even an Indian becomes wise as soon as he becomes an official. With all our humility we cannot perceive and admit the collective wisdom and the collective incapacity of non official Indians to understand what is good for the country. In fact we are so foolishly as to assert that it is sheer absurdity and impudence on the part of the foreign

tional agitation of the usual kind has been advocated by some public men and journals, whilst others are in favour of passive resistance. Seeing that constitutional agitation as usually understood was successful to some extent in modifying the Bengal Partition, it is possible that it may succeed on the present occasion, too. But to be successful, the agitation should be as persistent, widespread and strenuous as the anti-partition agitation was. It is to be borne in mind that since partition days, Government has armed itself with many weapons to crush strong agitation, which were non-existent when the Partition took place, and that, therefore, it is not so easy now to carry on constitutional agitation vigorously as it was more than a decade ago. Still vigorous agitation is not at all impossible, as the comparatively recent example of the agitation carried on after Mrs. Besant's internment shows. And whatever the difficulties and risks public duty must be done.

As for passive resistance, there cannot be any objection to it on principle and in theory. And the present is certainly an occasion on which it may be resorted to. Still there are grave questions connected with it which require serious consideration.

It has first to be ascertained what law or laws one can disobey without striking at the foundations of society. Some laws there are which are the reflex of moral and spiritual laws, on the observance and maintenance of which the permanence and welfare of society depend. Such laws are not to be broken. There are other, man-made, laws which are not of such a fundamental character. One or all of these may be disobeyed. Clearly then the passive resister should be a man who is able to decide for himself what laws are essential for the stability and well-being of society and what not. We are against the taking of a vow by any would-be passive resister that he would disobey any law or laws to be chosen by a committee whose personnel, again, is still unknown. Such blind following militates against our ideas of free and intelligent manhood. Moreover, men who to-day would agree to follow the yet unknown directions of a yet unknown committee because of their faith in Mr. M. K. Gandhi, are fit material to be influenced by some other

strong personality whose views and intentions may be different from those of Mr. Gandhi and may be of a mischievous character. It is of blind followers who unquestioningly bow to authority that good political, social or religious slaves are made. And since our object is to free men from thralldom of all kinds, we are opposed to blind following, no matter who it is that is followed or for what ends. We know blind soldier-like obedience has its result-producing efficiency value. But in a passive resistance campaign in the present circumstances of India, with its large area, teeming population and extensive ignorance and traditions of blind obedience to authority, the object ought to be not so much to force the hands of Government, in a trial of strength (which does not seem to us practicable), as the development of fearless, discriminating, intelligent, and self-respecting manhood, and fortitude. The reason why we say that it does not seem to us practicable to force the hands of Government in a trial of strength, is that passive resistance is most successful in forcing the hands of a government when it is resorted to by a comparatively small community living in a limited area, on a definite and clear issue, and when there is neither a majority nor an influential minority of the community opposed to it. These conditions are not satisfied in the present case. And Government has various means of putting forward an ostensible justification for declaring even a passive resistance movement or organisation unlawful and making such a declaration; passive resisters acting individually on their own responsibility cannot be dealt with exactly in that way. There are sections of the people who would, of their own accord or otherwise, be only too willing to help in bringing about such a result, viz., the declaration that the passive resistance movement is unlawful. We say all these things not to dissuade people from adopting passive resistance. Our object is far different, and we hope it will be clear before we reach the end of this note.

Passive resistance may or may not oblige Government to repeal the Rowlatt Act or to hold it in abeyance. We are willing to believe that it may, but there is no certainty. But the other object that we have spoken of, namely, the development of fortitude and fearless, intelligent,

discriminating and self respecting manhood, is certainly attainable, provided the passive resisters are of the right stamp. Let us make our meaning clear. A passive resister of the kind that we have in view will say to Government "You may or may not repeal the law, but I, a peace loving man who is prepared to obey all laws which are necessary for the preservation and good of society, will not obey any law which militates against my idea of personal liberty and the dignity of human nature, whatever hardships and penalties my disobedience may bring upon me." If Government cannot break the righteous will of such a man, as we believe no Government can, that would mean a defeat for Government and a triumph for the upholder of personal liberty and of the dignity of human nature. One such victory would bring many recruits to uphold the banner of personal liberty. Now, the question is, who can be passive resisters of this description? We think blind followers cannot be passive resisters of this kind. For our idea of passive resistance of the right kind is that a man should not only be staunch and fearless and capable of sacrifice and the endurance of hardships, but that he should also be able to decide for himself what laws are fundamental and what are not, and what may be disobeyed and what should not. He should also be a man who has recourse to any method not because of excitement or resentment but from a sense of duty and the pursuit of a calm sense of duty and the pursuance of right principles, for what distinguishes passive resistance, or Satyagraha or the use of soul force, as Mr M. K. Gandhi prefers to call it from physical force methods or active resistance, is not merely that in passive resistance there is an absence of those external acts of physical force which men moved by passion and resentment and sense of injury have recourse to, but also that there is the internal absence of the mainsprings of violence viz, passion and excitement. This distinction is important and essential, for where there is resentment and violence within, there is also the probability of an outbreak of violence without.

We say, therefore, let there be, and there should be, passive resistance. But let it be adopted not by blind, undisciplined and impulsive men moving in masses but by self-controlled and intelli-

gent men who have freed their minds from *himself* against Government and the bureaucrats and who are able to distinguish between essential and unessential laws and between laws which tend to kill freedom and the dignity of manhood and laws which promote the cause of personal and national liberty and foster freedom of conscience. If there be even only one such passive resister, the cause of personal freedom and of the dignity of human nature will be victorious by his conduct, for arbitrariness and despotism embodied in 'lawless laws' will not be able to enforce his obedience, and Government will thus suffer defeat at his hands.

We wish it to be distinctly understood that no expectation of results of any kind can reconcile us to anything which directly or indirectly strengthens and encourages crowd psychology. Crowd psychology the sheep instinct, mob impulse blind obedience, are evils, not merely when the thing done, adopted, followed, or obeyed is evil or injurious, but these are in themselves to be guarded against for what they are because they detract from the worth of human personality.

Obedience and Disobedience

To encourage the impulse and habit of disobedience is risky. Civil disobedience is allowable only when it is equivalent to and proceeds from obedience to the highest laws, not made by man. It should be resorted to only from a compelling sense of duty. We support the attitude of disobedience towards the Rowlatt Act, because to obey it would be to disobey what is higher, viz, the claims of personal freedom and the dignity of human nature. Our emphasis is on obedience not on disobedience. We say, Obey the law of your being, if that involves the violation of some man-made laws, conventions and customs you should not flinch.

What Laws to Disobey

It would have been well if before asking men to sign the Satyagraha vow Mr M. K. Gandhi had told them definitely what laws he would expect them to disobey.

The Gazette of India of March 22, 1919, containing the full text of the Rowlatt Act, reached us on the 25th March and we have not yet (26-3-1919) been able to go through it carefully. From what we

have been able to see, section 22 alone of this Act, or of any rate parts of that section may be passively resisted or civilly disobeyed by persons who are not or have not been really concerned in anarchical or revolutionary movements. Sections 21 and 22 require to be quoted in order that the reader may understand what we mean.

21. If the Governor General in Council is satisfied that anarchical or revolutionary movements which are, in his opinion, likely to lead to the commission of scheduled offences are being extensively promoted in the whole or any part of British India, he may by notification in the *Gazette of India* make a declaration to that effect, and thereupon the provisions of this Part shall come into force in the area specified in the notification.

22 (1) Where, in the opinion of the Local Government, there are reasonable grounds for believing that any person is or has been actively concerned in such area in any movement of the nature referred to in section 21, the Local Government may place all the materials in its possession relating to his case before a judicial officer who is qualified for appointment to a High Court and take his opinion thereon. If, after considering such opinion, the Local Government is satisfied that action under the provisions of this section is necessary, it may by order in writing containing a declaration to the effect that such person is or has been actively concerned in such area in any movement of the nature referred to in section 21, give all or any of the following directions, namely—

(a) shall, within such period as may be specified in the order, execute a bond with or without sureties undertaking, for such period not exceeding one year as may be so specified, that he will not commit, or attempt or conspire to commit, or abet the commitment of, any offence against any provision of the law which is referred to in the schedule;

(b) shall notify his residence and any change of residence to such authority as may be so specified;

(c) shall remain or reside in any area in British India so specified.

Provided that, if the area so specified is outside the province, the concurrence of the Local Government of that area in the making of the order shall first have been obtained.

(d) Shall abstain from any act so specified which, in the opinion of the Local Government, is calculated to disturb the public peace or is prejudicial to the public safety, and

(e) shall report himself to the officer in charge of the police station nearest to his residence at such periods as may be so specified.

(2) Any order under clauses (b) to (e) of subsection (1) may also be made to take effect upon default by the person concerned in complying with an order under clause (a) of that subsection.

The penalty for disobeying any order (other than an order to furnish security) made under section 22 is imprisonment for a maximum term of six months or fine up to 500 rupees, or both. Moreover, the refusal to execute a bond, as required by clause (a) of section (1) of section 22, may lead

to the presumption that the passive resister is a person who intends to commit, or attempt or conspire to commit, or abet the commitment of, any offence against any provision of the law which is referred to in the Schedule. But the passive resister must be prepared for all such risks.

Section 22 of the Rowlatt Act can, however, be disobeyed only by those upon whom an order has been passed under it. It is not very probable that any such order will be passed upon the majority, if at all upon any, of those who are signing the Satyagraha Pledge. If so, in what other way can they make their passive resistance a reality?

Here the question arises, whether it is right to break any other law because of the enactment of a bad or "lawless" law. Of course, no law which is inadmissible, that is to say, which is necessary for the preservation and welfare of society, ought to be broken under any circumstances. But there are other laws which are not of that description. They may be broken under some circumstances. But is it right to break on otherwise unobjectionable, though non-essential, law, because of the enactment by Government of an objectionable law? In other words, does Government forfeit the right to the obedience of even its unobjectionable laws because it has enacted a very harmful law against public opinion? Here we do not feel quite competent to give a definite answer dogmatically. Much will depend upon the character of the harmful law and the degree and extent of its militancy against personal and national freedom and dignity. We are inclined to think that individuals may be left to judge for themselves. And should any persons answer the question in the affirmative, they may decide for themselves whether they will refuse to pay the income-tax or the road-tax or any other tax, or keep in their possession and circulate a really good and unobjectionable but proscribed book, or take some other step to civilly disobey some other law.

The mischief of a wrong use of passive resistance may be illustrated by a suggestion which we vaguely remember to have seen in a newspaper, namely, that should the Patel Inter-marriage Bill be passed, orthodox Hindus should have recourse to passive resistance. This is certainly a

rash, if not an idiotic, suggestion. For the Patel Bill does not in the least propose to interfere with anybody's freedom. If passed, it will not compel anybody to marry outside his caste or to have social intercourse with those who are parties to such intermarriages. It only proposes to validate intercaste marriages, thereby recognising freedom of conscience and the right of the individual to perform all non-criminal actions so long as he does not thereby interfere with the similar right of others. Passive resistance is justified only against those laws which are calculated to curtail or destroy personal or national liberty or which requires or compels men to do, what is derogatory to human nature, or which takes away any fundamental civil or political right of the citizen, &c.

Small Holdings and Co-operation.

"Towards Industrial Freedom" by Edward Carpenter is a book which critics would call a thought provoking production. It is full of suggestions for us. In the present note we wish to present our readers with some paragraphs from the author's chapter on small holdings and agricultural co-operation.

It is well-known that our agriculturists (call them farmers, peasants and ryots, as you will) are generally men of small means and their holdings are small. Moreover, they generally pass their lives in a state of chronic indebtedness. Such being the case, what hope is there of improvement in their economic condition? And, it is also well understood that educational, intellectual and moral improvement depends to a great extent on economic improvement.

Let us see what the people and government did under similar circumstances in some other countries. Says Mr. Edward Carpenter:—

One common objection brought against the small holding idea is that little industries work at a disadvantage in point of capital, division of labour, sheer productiveness, etc., as compared with large scale industries. Of course there is a certain amount of truth in this—though it would not do to say that all small scale industries suffer in the comparison—and if it were the case that the absolute and only object of industry was the money value of its product there would be still more truth in it, but we have seen through that delusion already, and need not again be led astray by it.

The limitation, however, of his capital, in the case of a small man, his disadvantage in the mar-

kets, both in buying and selling, his being compelled sometimes to invest in a horse and cart or in some kind of machinery, which the exigency of his estate will not permit him fully to use, the difficulty that he has in borrowing money in a time of need, and the danger of falling into the hands of the money-lender—*all these things undoubtedly do militate against the small holder and the cure for them equally undoubtedly is to be found in Co-operation.*

The classical instance of the value of Co-operation in connexion with small holdings is to be found in Denmark. After 1864, when Germany had wrested Schleswig Holstein from the Danes, there was nothing left for the latter but to make the best of what remained to them. Jutland was little better than a sandy heath, but with extraordinary energy, the people threw themselves into its development, the soil was worked and enriched in every possible way, the land was broken up into holdings of seven to ten acres each, sheds and cottages were erected, co-operative societies were formed among the settlers; the government helped with agricultural organisation, the creation of High schools for the peasants, and the loan of funds (the italics are ours,—Ed, M, R), and before long there were beside large farms some 150,000 little holdings of seven to ten acres successfully running there, whose activities were largely carried on by combined labour. The first co-operative dairy was started in 1882 by the year 1904 there were over 1,000 such dairies. Bacon curing, the collecting and sale of eggs, poultry, honey, the manufacture of butter and cheese, the purchase of seeds, food stuffs, manures, machinery, were all negotiated by the same method; insurance and banking the same, and in this short period of time sandy Jutland became a large exporter of food, and poured even into England (with its really richer soil) great quantities of farm produce which England might have been growing for herself. In the form of butter, eggs and bacon alone Denmark before the War was supplying the United Kingdom to the value of 15 or 20 million sterling.

As the British Government in India exacts from us the same allegiance and loyalty as national governments do in independent countries from their peoples, it is its bounden duty to do for the Indian people all that the Danish Government has done for the Danes. But the object of the present Note is not to encourage the attitude of helpless dependence on government. Such an attitude is both unmanly, beggarly and suicidal. From the big landholders downwards, we must all try to do for our peasants, who are our mainstay, what foreign governments in Denmark, France, Belgium and other countries have done for their people. And it is not Governments alone in foreign countries which have helped the people. In Ireland, for example, the noble efforts of Horace Plunkett and George Russell have changed the face of Ireland.

It is not Denmark alone which has adopted agricultural co-operation with suc-

cess. Other European countries have done the same.

France, Belgium, Holland, Norway, Sweden, Finland, Italy, Roumania, Bulgaria, have followed on the same lines of agricultural co-operation. Nor must we forget Ireland. The noble efforts of Horace Plunkett and afterwards of George Russell (A.E.) were coffered at at first. But gradually they won their way. In 1882, I believe, the first Irish Creamery was started; in 1895 there were already 67, and in 1892, over 320, effecting sales to the value of £1,000,000 per annum; to-day there are agricultural societies without end, for the production and sale of poultry, eggs, flax, fruit, honey, and a variety of other things.

The author then proceeds to quote a paragraph from Mr. George Russell's excellent book *The National Being* (Maunsell & Co., Dublin and London, 1916, price 4s. 6d.) in which Mr. Russell shows from his own experience what the co-operative association can do. He says (p. 46):

The Society is a better buyer than the individual. It can buy things the individual cannot buy. It is a better producer also. The plant for a creamery is beyond the individual farmer. But our organised farmers in Ireland, small though they are, find it no trouble to erect and equip a creamery with plant costing £2,000, the organised rural community of the future will generate its own electricity at its central buildings, and run not only its factories and other enterprises by this power, but will supply light to the houses of its members and also mechanical power to run machinery on the farm. One of our Irish Societies already supplies electric light for the town it works in. In the organised rural community the eggs, milk, poultry, pigs, cattle, grain and wheat produced on the farm and not consumed or required for further, agricultural production, will automatically be delivered to the co-operative business centre of the district where the manager of the dairy will turn the milk into butter or cheese, and the skim milk will be returned to feed the community's pigs. The poultry and egg department will pick and dispatch the fowls and eggs to market. The mill will grind the corn, and return it ground to the member, or there may be a co-operative bakery to which some of it may go."

This is followed in Mr. George Russell's book by a picture of how the rural laborers under this regime will gradually become skilled co-workers with one another, and the co-operative community have its own carpenters, smiths and mechanics; how there will be common laundries and kitchens, and village halls, with libraries and gymnasiums and rooms for recreation and dancing. All this is quite feasible, and one may say already realised in part in various different localities. In India, of course, the things to be produced, consumed and sold by agri-

cultural co-operative societies will be partly different from those in foreign countries and will vary from province to province; but the methods are the same everywhere.

Revenue and War Expenditure in Japan and India.

For the year 1919-20 the revenue of India is expected to amount to £ 86,375,000, of which £ 41,200,000, will be allotted for military expenditure. So that India will be required to spend 47.7 per cent. of her revenue for readiness to fight. For the year 1918-19 the revised figures for her total revenue are £ 85,298,000. Of this amount £ 43,950,000 was spent by the war departments. That is to say, more than 51.5 per cent. of our total revenue was spent in 1918-19 for war.

Let us see what the total revenues of Japan and her total military and naval allotments were for the same year 1918-19. The figures are taken from the Japan Year Book for 1918, pp. 607-8. The total ordinary revenue was 642,641,000 yens and the total extraordinary revenue was 76,935,000 yens, grand total 719,576,000 yens. The naval and military expenditures in yens were as follows:—

	Ordinary	Extraordinary
War Department	84,894,000	30,219,000
Navy Department	54,620,000	95,343,000
	139,014,000	125,562,000

The total of ordinary and extraordinary expenditure on the War and Navy departments for 1918-19 was 264,676,000. As the total ordinary and extraordinary revenues stood at 719,576,000 yens, Japan spent for fighting and the readiness to fight 36.7 per cent. of her total revenues in 1918-19. In the same year India spent 51.5 per cent. of her revenue for fighting and the readiness to fight. And now though the War is over, she will still be required to spend 47.7 per cent. of her total revenue for the readiness to fight.

As regards the actual amount spent, as one yen is approximately equivalent to Re. 1.8, Japan spent in 1918-19 about Rs. 398,864,000, or say 40 crores of rupees in round figures for fighting. In the same year India spent for the same purpose Rs. 659,250,000, or say 66 crores of rupees in round figures.

Besides this India made a "free gift" of 150 crores of rupees, and she has been made to promise another free gift of 45 millions sterling, or 67½ crores of rupees.

Here it should be noted that Japan has both an Army and a Navy and she spent 40 crores of rupees, or 36.7 per cent of her total revenues, for both the Army and the Navy, which are both an excellent fighting trim and among the best in the world. They have raised her power and prestige in the world. India has only an Army but no Navy, and for the Army alone she spent 66 crores of rupees or 51.5 per cent of her revenues, and thus expenditure has made her people neither strong, nor respected, or free. For the army alone Japan's expenditure was 114,613,000 yens or Rs 17,19,19,500 as against India's expenditure of 66 crores of rupees for the army alone. Or, in other words, India's expenditure on her army was about four times that of Japan for hers. Japan's expenditure on the army alone was 15.9 per cent of her total revenues in 1918-19, whereas in the same year India's expenditure on her army was 51.5 per cent of her total revenues!

And yet there are ungrateful wretches who say that India has not spent enough for the war! We have not taken into consideration the contributions made by the princes and people of India to various war funds, hospital ship funds, relief funds, &c., and the sums spent by the Indian States for the maintenance of their contingents.

The Indian Budget for 1919-20

On the 21st of March last, Sir James Weston presenting the budget for 1919-20 in the Imperial Legislative Council said that "for the coming year the revenue is now expected to amount to £86,375,000," of which £41,185,000 has been allotted for military expenditure. This is like a householder earning Rs 86 per annum spending Rs 41 per annum for keeping armed retainers in order to fight his enemies,—though the members of the household wear rags, dwell in unhealthy hovels, cannot for want of funds and proper education carry on manufacturing and agricultural industries properly, do not owing to poverty receive proper medical aid during illness and in consequence die in large numbers or lead wretched lives, and, owing to poverty and

ignorance combined, many of them become criminals, and though the children of the household, for the most part, grow up in ignorance!

The people of India are this household. But they cannot control their income and expenditure. It was a heinous sin on their part to have allowed this control to pass out of their hands. They must regain this control. In the meantime all their sufferings and indignities must be considered as penance for their sin.

The table given below shows how rapidly our military expenditure has grown—

Year	Military charges in Rs
1915-16	22,261,353
1916-17	24,990,811
1917-18	29,043,141
1918-19 (budget)	29,000,000
1918-19 (revised)	43,926,000
1919-20 (budget)	41,185,000

The amount budgeted for 1919-20 will most probably be exceeded as that for 1918-19 was very greatly exceeded. The expenses for the financial year just closed were very heavy and the coming year's estimates are also very heavy. It will not do to say that the War is responsible for this heavy expenditure, for during the greater part of the war, i.e., up to 31st March, 1918, the expenditure, though excessive, was not abnormally heavy. It is only during and since 1918-19 that India has been unjustly burdened with a disproportionately heavy military expenditure. Previous to the war, India's military expenditure, though great, was less than what it was during the least expensive war year, which was 1915-16, when it was Rs 33,39,20,000. Let us see what the military expenditure was in some pre-war years.

Years	Military expenditure in crores of rupees
1884-85	16.96
1887-88	20.41
1890-91	20.69
1894-95	24.09
1902-03	25.91
1903-04 (revised)	26.78
1904-05 (budget)	28.66

For the year 1919-20 the sum of Rs 61,79,25,000 has been allotted for military expenditure; but probably it will not ultimately fall short of 64 or 65 crores of rupees. In 1884-85 it was 16.96 crores,

so that in 35 years, military expenditure has quadrupled. But neither the income of the people of India nor the revenue of the Government of India has increased even approximately to the same extent in degree.

A greater falsehood was never uttered than when it was said in Council that the budget for 1919-20 was a poor man's budget. It is in fact the soldier's and railwayman's budget.

We have shown in a previous note that the actual amount of India's military expenditure for the army alone is greater than that of Japan for both the army and the navy, and also that India is required to spend a very much larger percentage of her total revenue for military purposes. This heavy expenditure cannot be justified on any account.

India keeps a much larger army than she requires for her own purposes. During the War there were in India sometimes only 15,000 soldiers; yet there was neither any internal rising nor aggression from outside. It may be said that the probable foreign aggressors were all busily engaged in the world-war, and hence could not turn their thoughts towards India. Though this is not entirely true, let us take it, for granted. Still one thing has to be admitted, and that is that there was no internal rising, which shows that India's large army is not necessary to cope with any probable internal trouble. Let us now consider the argument that the large army is required for coping with aggression from outside. During the Boer war, the Boxer troubles in China, and in many other military expeditions or undertakings outside the boundaries of India, large numbers of soldiers were taken away to foreign parts and remained there for long periods; and yet there was not only no rebellion in India, but also no invasion by any foreign enemy. This is significant; because during the wars referred to in the previous sentence, the probable invaders of India, like Russia, were not involved in any great undertaking like the recent war and consequently their hands were not full, and they could have made an attempt to attack India, if so minded. But they did not. All which shows that the Indian army, at least its greater portion, is not required for India's purposes. It is in reality an army of occupation, which is occasionally used to put down frontier risings, but has

more often been used in foreign wars for British Imperial purposes. India is thus practically a training ground for an Imperial army from which soldiers are drawn for foreign wars from which India does not derive any benefit and in which India is not interested. The late Sir Henry Campbell-Bannerman said: "*Justice demands that England should pay a portion of the cost of the great Indian army maintained in India for Imperial rather than Indian purposes. This has not yet been done, and famine-stricken India is being bled for the maintenance of England's world-wide Empire.*"

As we have already said, though during the War there were sometimes only 15,000 soldiers, there was not, as there could not be, any rebellion. Hence, we do not really require to keep more than 15 or 20 thousand soldiers. Russia has gone to pieces and requires all her men, money and energies to put her own house in order. She cannot invade India. Germany cannot invade India, she is distracted with her own troubles, and has been rendered powerless by the War. China is not yet sufficiently "modernised" to think of attacking India, is distracted with civil troubles, and has enough work in her hands to protect herself against the designs of powerful foreign exploiters. Japan is an ally of Great Britain. Moreover, even if she had any designs upon India, she could not and would not do any thing. Because at present, the only three powers in the world that count are Great Britain, the United States and Japan; and as there is rivalry and jealousy (and consequent mutual suspicion) between Japan and the U. S. A. with regard to predominance in China and the Pacific ocean, each of these two countries would do their best to have Great Britain on its side. Hence Japan will do nothing to make Great Britain an enemy.

We have thus proved that there is not the least chance of a foreign invasion of India, nor is there any likelihood of a rebellion. So the army is mainly for Britain's imperial purposes, and hence Britain ought to pay the greater portion of its upkeep and equipment.

When a country keeps an army, it is generally with three objects in view: (1) to prevent or cope with internal trouble, (2) to prevent or cope with foreign invasion and aggression, and (3) to invade or

fight with foreign countries for purposes of obtaining foreign territory or some such material gain. Sometimes though rarely, a country may use its army for the preservation or restoration of the independence of another country. We have shown that India's large army is not necessary for objects (1) & (2). As for (3), India does not wish to and cannot conquer and annex foreign territory and subjugate foreign peoples. Territory conquered with aid of India's army has enriched England, not India. So for object (3) too India does not require to keep a large army. As for preserving or restoring another country's independence the idea of a dependent country thinking of doing such a thing is ludicrous. So for no reason whatever does India require a large army. Independent countries keep an adequate large army to preserve their independence. India is made to keep a large army in order to preserve her dependence on England. And as we have seen India has to pay more for preserving her dependence on England than Japan pays for preserving her independence. We can well understand the argument that India's dependence on England is worth something to India, that is to say, that India derives benefits from being dependent on and being ruled by England. Granted. But the question is, is India's dependence on England the cause of us much moral and material prosperity, as the independence of other countries is? Let us take a concrete case, the case of another Asiatic country. The educational, intellectual, industrial and commercial progress made by Japan during the last half a century of constitutional government is well known. India, in spite of, or, it may be, because of, her much longer period of dependence on England, lags far far behind Japan in all these respects. And whereas today Japan is one of the three greatest powers in the world and as such enjoys great prestige everywhere India and Indians are despised and insulted everywhere. Such being the contrast between the beneficial results of Japan's independence and of India's dependence on England, no one ought to expect India to pay more for an army which ensures this dependence than Japan pays for her army and navy to preserve her independence. But, as we have seen, India does pay more. Which let those who can defend

It is not contended that India's connection with England has not been at all beneficial to us in any way. It has been. It is also probable that India would have fared worse if she had been dependent on some other foreign powers. It is idle, too, to speculate whether she would have fared better at the hands of any other master than Great Britain. It is also unnecessary to dwell on the harm that has resulted from India's dependence on England. Speaking only of the good results of the connection, we say that England too has derived and continues to derive great advantages from her connection with India. No one but an ignoramus or a lying hypocrite can deny this. And England has not yet sacrificed half a crown for the untold advantages which the possession of India has given her. Justice therefore, demands that she should pay the greater part of the amount needed for maintaining a large army in India.

It has been and will be said that as India does not pay any portion of the expenses of the British Navy, which in part protects India and her commerce, there is no injustice involved in her bearing her entire military burden. We will meet this argument. The British Navy, it goes without saying does not prevent and is not meant to prevent rebellion in India. As for foreign invasion by way of the sea Japan is the only power which need be feared. But as we have shown above, Japan will in her own interests do her best to remain friends with England. Besides, even supposing that the British Navy protects India against some unknown foe, this protection is simply the preservation, not of India's independence but of her dependence on England,—which is of advantage to both countries. As for the maritime commerce and passenger traffic, which the Navy protects, they are entirely in the hands of foreigners, mostly Britishers. All these facts prove that there is no injustice in Great Britain bearing the entire expenses of her Navy, and that she cannot in justice call upon our country to meet any part of it.

But supposing justice requires us to pay a part, we, too may claim that impartial and strict justice should be done to us. This means that we should be admitted to all the advantages of the Army,

the Navy and the Air Force. And what does that mean?

Let us at the outset make it clear that we do not want the material advantages in the form of the annexation and exploitation of foreign territory which the possession of an army and a navy gives to Great Britain. We refer to other advantages than these.

In Great Britain's army, navy, and air force, all the privates and officers are Britishers, and hence all the salary and emoluments paid and the experience and prestige gained remain Great Britain's. Great Britain manufactures her munitions, war stores, equipments, army, &c., in her own factories, with the aid of her own capital and the skilled and unskilled labour of her own men. Here, too, the gain, experience, and every other advantage remain hers. She makes her own war-vessels of all sorts in her own dockyards with the skilled and unskilled assistance of her own men and with her own capital. Here, too, all the advantages, material and immaterial, remain hers. The same remarks apply to the making of aeroplanes, &c. If India be called upon to pay her share of the cost of Empire Defence on land, in the ocean and in the air, she should in justice be entitled to officer and man her army, her navy and her air force with her own sons, make her arms, ammunition and stores, her war-vessels and aeroplanes in her own factories and dockyards with the assistance of the skilled and unskilled labour of her own sons and daughters, have facilities of training them for these purposes, and have all the material and immaterial advantages and prestige which the possession of an army, a navy and an air force gives. Long ago Dadabhai Naoroji wanted justice of this kind, which has not yet come but will come some day. He wrote in a letter on "The Causes of Discontent in India" addressed to Lord Welby, dated 31st January, 1897:—

"Indians are repeatedly told and in this commission several times that Indians are partners in the British Empire and must share the burdens of the Empire. Then, I propose a simple test. For instance supposing that the expenditure of the total navy of the Empire is, say £20,000,000, and as partners in the Empire you ask British India to pay £10,000,000, more or less, British India as partner, would be ready to pay, and therefore, as partner, must have her share in the employment of British Indians and in every other benefit of the service to the extent of her contribution. Take the Army. Suppose the expenditure of the total Army of the British Empire

is, say £40,000,000. Now you may ask £20,000,000 for more or less, to be contributed by British India. Then as partners, India must claim and must have every employment and every benefit of that service to the extent of her contribution.... In short, if British India is to be treated as a partner in the Empire, it must follow that to whatever extent (be it a farthing or a hundred millions) British India contributes to the expenses of any department, to that extent British India must have a share in the services and benefits of that department—whether civil, military, naval or other: then only will British India be the 'integral part' or partner in the Empire. 'If there be honour and righteousness on the side of the British, then this is the right solution' of the rights and duties of British India."

Japan's & India's Fighting Expenses.

It cannot fail to have been noticed that though Japan provided a smaller amount than India for fighting expenses in her budget for the year 1918-19, she was able to maintain both an efficient army and an efficient navy, whereas India had only an army. Japan's army and navy are second to none in the world in efficiency. *The Daily Mail Year Book for 1919* says that "The Japanese Navy in efficiency is second to none, and in strength comes third among the Allied Powers. It acts as a very formidable and useful reserve." One of the reasons why Japan can maintain both a navy and an army for a smaller amount than India's military expenditure is that all her fighters, both men in the ranks and officers, are children of the soil; whereas India's European army consists of European privates and European officers, and the commissioned officers of the sepoy army are, with about a dozen exceptions, all Europeans. And Europeans have to be paid at a much higher rate than Indians.

Railway Expenditure.

Next to the military charges, the biggest item in the Budget for 1919-20, is the sum allotted to the railways. Railways are necessary, but not more necessary than food production, sanitation, education, and manufacturing industries. Railways are required for strategic purposes, for passenger traffic and for goods traffic. It may be said that within the borders of India no more strategic railways are required. Men require food, good health, education and the power to manufacture things more than they require to travel. And Indians have to travel in railways like cattle! Railways, no doubt, provide facilities for the distribution of food and

of manufactured goods, but the first thing to do is to produce the food and manufacture the goods. But our railways help but little in the production of food or in the manufacture of goods in India by Indians. No doubt in times of famine railways are of use in carrying food to the affected parts. But this presupposes the existence of sufficient food. So the plea that railways prevent famine is not true either in logic or in fact. In spite of the existence of railways, famines continue to ravage some parts of India or other every year. At the same time they help foreign dealers in grain and other raw materials in exporting these things in large quantities even in famine years. When railways had not penetrated to the remotest parts of India, some parts of the country at least could have sufficient and cheap food in good years. But now prices are high and food scarce and dear almost in every district of India. This would not have been the evil that it is in India, if the people of India had enough money in their hands by the sale of manufactory to be able to pay as high prices for food grains as the people of Europe and thus keep their food in the country. But the pity is, our producers of food have to part with it for money to pay taxes and interest and the purchase of foreign-made cloth, utensils, trinkets &c. and are unable, because of insufficient production to lay by a sufficient store of grain for lean years. When such years come they have either no money or little to buy food at high prices.

As for manufactures the railway tariff is so arranged that it favours the foreign importer of foreign manufactures into India and the foreign exporter of Indian food grain and raw materials out of the country. It is now well understood in Europe, America, New Zealand, &c., that one of the important functions of railways is to foster the growth of national industries by a favourable tariff and other means. Our railways do no such thing. On the contrary, they favour the foreign manufacturer. There is another way in which railways have injured the people. They have carried foreign manufactures to every nook and corner of India and brought them into competition with the products of indigenous industries and killed the latter. The artisans and crafts-men have been thus ruined and thrown

on the soil for subsistence. This has intensified the poverty of the country.

Railways are also responsible for the shortage of the acreage under crops in many districts and are thus directly responsible for scarcity and famine.

As regards sanitation, railways obstruct natural water courses increase soil humidity by water logging provide breeding grounds for mosquitoes in the borrow pits left unfilled, and thus produce malaria. They are also great disseminators of infectious and contagious diseases in India in pre-railway days there were epidemics of plague &c. But they never spread over such large areas as now.

For all these reasons and because of their natural priority in importance we must have sufficient sums provided for the encouragement, promotion and teaching of agriculture, the construction of canals and wells for irrigation, the undertaking of all kinds of sanitary works, the provision of good drinking water, the provision of adequate medical aid, the improvement of waterways, the opening of a sufficient number of new schools for all children of school age, &c., before further extension of railways is thought of. But whereas a very large amount has been provided for railway extension—agriculture, irrigation, sanitation, education, the scientific departments, and industries have all been starved. The reason is that the British industrial and commercial classes are directly interested in railway extension. The British suppliers of railway material gain by railway extension. When Lord George Hamilton was Secretary of State for India, British capitalists owning iron and steel factories one year waited upon him in deputation and represented to him that in the Indian budget sufficient provision had not been made for railway extension, meaning of course, that their concerns would be affected thereby. Lord George had to satisfy them. Those who export manufactured goods from England to India and import raw materials from India to England are also interested in railway extension. Britishers in India carrying on import and export business are also interested. All these classes of men are more influential than the 315 millions of Indians who want more food, more money, more clothing and better houses, more

and better sanitation, doctors, hospitals and dispensaries, more and better education, &c.

In discussing the question of railway extension, one has also to consider whether railways are at present and will continue to be in the near future the best means of transport.

As air traffic has already been proved to be practicable, and as air routes do not require any expenditure for construction or maintenance, it is time for all governments to pay increasing attention to this means of locomotion and transport. In all advanced countries, internal waterways receive due attention. Old existing waterways, both natural and artificial, are maintained in good condition, and new artificial waterways are created. Waterways are not only not so costly as railways, but have the additional advantage of being helpful in irrigation and in the production of fish and similar food. They are also not a monopoly of either the state or of private companies as railways are. Hence waterways should receive due attention in our country. Another means of locomotion has in recent years come to be increasingly adopted, namely, that by motor traction. For this purpose, as has been showed in a previous note, by means of an extract from the *Indian Daily News*, in some advanced countries, good roads have been and are being constructed. Roads for motor traffic, unlike railroads, are also not a monopoly, and serve as well for bullock cart, horse carriage, pack bullock, pedestrian and other kinds of ordinary traffic. There is no reason why the State in India should not cover the whole country with a network of good roads fit for motor traffic. There is a probability that in the near future all railways will be run by electricity. Hence the system of electric traction should be adopted from now.

It is argued that as railways are a good source of income, they should be extended. But from how long have they begun to pay, and after what loss for how many years? Up to the end of 1917-18 capital expenditure on railways amounted to more than 372 million pounds sterling, or 560 crores of rupees in round figures. What have been the profit and loss? *The Indian Daily News* writes:—

In 1890, the evidence before the Welby Commission:

on showed that the deficit on the railways of India amounted to 52 crores or about a crore a year. In 1909 Sir Dinshaw Wacha demonstrated that the net earnings of the railways were under one per cent. (91 per cent.) or allowing for the annuities as repayment of capital to at most 1·20 per cent. after 60 years. In the appendix to his remarkable essay on Indian Railway Finance he gives a table showing a net loss of 52 crores from 1848 to 1895, a gain of eleven crores from 1895 to 1910 or a total net loss of 41 crores to 1910. A good deal of money has been made since then, as we say, most of it, for the last four years, has been by raising freights and passenger rates and inflicting considerable loss on the country by inability to carry. This loss has been chronic for the last fifteen years and up to the war was the result of ineptitude. As we have said, the best course is to improve the roads and to cease to pretend that the railways are an immensely valuable asset making huge profits in relief of the taxpayer. Six crores of ostensible profit may be obtained by twelve crores of damage to the trader.

Moreover, the profits made in passenger traffic are due mostly to travelling done by third class passengers, who are accommodated and treated like beasts. The State has no right to make moneys in this way. And during the war, profits in goods traffic have meant simply the debiting of certain sums in the account books of the war departments for carriage of coal, manitons, &c., and crediting the same in the account books of railways.

If the huge sums sunk in railways had been spent on educating the people, in improving their health by proper sanitation and thus increasing their working and earning capacity, in teaching them better means and methods of agriculture and financing agriculture, in technological and industrial education and the financing of industrial enterprises, in the extension of irrigation works, &c., it is absolutely certain that the state revenues would have gained much more than they have by capital expenditure on railways. We intend to show in future to what extent irrigation works have been profitable. Mr. (now Sir D. B.) Wacha said in his evidence before the Welby Commission:

"But I may be permitted to observe that in the present deteriorated condition of Indian Agriculture when there is not enough food grain produced to fully suffice for the entire population per annum, it is of greater importance to construct irrigation works than Railways. It should be remembered that even protective Railways against famine, however largely constructed, would give no help to the people in famine stricken districts; whenever a serious famine of the intensity now prevailing may occur, if there be not adequate surplus of grain to carry from one province to another. What is more essential is to stimulate the food supply."

As regards the reasons why railways

in India are being built at a breathless pace the same authority says in his paper on Indian Railway Finance —

"In short as in many other matters so in connection with Railways, it is the foreign exploiter who calls the tune, but it is the indigenous taxpayer who is called upon to pay the piper. A policy so flagrantly unjust demands complete condemnation. It is another of those inroad acts of financial injustice which create dissatisfaction and aggravate the sullenness prevailing in the land."

It is much to be wished that our far sighted and sober Indian politicians will now turn attention to the problem of economic salvation of the country. At present India is the slave of British capitalists. Is the a cry to last for ever

In the construction and upkeep of Irrigation and Sanitary works so much British-manufactured material is not required as in railways nor do Irrigation and Sanitary works bring so much profit to British exploiters of India as railways do. This is one of the reasons why the British mercantile classes at home and in India exert great pressure on Government to construct railways to the neglect of irrigation sanitation etc.

In the United States of America railways promote agriculture by means of demonstration trains etc., and thus also increase their own incomes by having more food to carry. In New Zealand railways help forward education. In Australia they help in many ways in the development of the country's resources as the following paragraphs quoted from the *Mahratta* will show

"In addition to the purely commercial aspect of the figures relating to the revenue and expenditure of the Commonwealth Railways, it is of great importance that the object with which many of the lines were constructed should be kept clearly in view, then anticipated advantage in building these lines has been the ultimate settlement of the country rather than the direct returns from the railways themselves and the policy of the State Government has been to use the railway systems of the Commonwealth for the development of the country's resources to the maximum extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. Further the money has been spent in developing immense agricultural potential and mineral resources, which add to the wealth of the community while the benefits conferred in providing a cheap and convenient mode of transport, and in generally furthering trade and the best interests of the Commonwealth are incalculable."

The story of State management of railways in New Zealand reads like a romance. The railways are used to and the cause of education. Children in the primary grades are carried free to school. Older children are given season tickets at merely nominal

rates. Sold concessions are given to children and teachers for excursions. The Minister of Railways figures that the department loses on these trips but he justifies the low rates on the ground that from an educational point of view very marked and beneficial results must follow. Thus suburbanizing the lower forms of wealth to the higher. Books are carried to and from libraries at one-fourth the parcel rates. Passenger fares and freight rates are reduced involuntarily and the service is greatly improved. Railways are used at cost or less to redistribute the unemployed and to settle the people on the land. The Railway Department works in harmony with the Labour department in securing work for the workers. A definite effort is made to relieve congestion in cities and to attract the slum dwellers to healthy homes in the suburbs. Factory and holiday excursions are encouraged in every possible way as a matter of public policy. Railways construct on as arranged so as to be most vigorous in dull seasons. In the farmers' busy season work on the railways is slackened. The New Zealand record is of great interest for the admirable illustration of the railway usefulness under enlightened management which is possible only when the railway system of a country is owned and managed by the State."

The first extract is taken from the official Year Book of the Australian Commonwealth.

Had railways in India been as useful to the indigenous population of the country as they are in other countries to their population there would have been less objection to the sinking of capital in them in the present state of the country.

As we have observed before railway expenditure is the second biggest item in the budget for 1919-20 consisting of £17½ millions of capital expenditure for construction and £6½ millions for renewals from revenue—total £24½ millions or more than 36 crores of rupees. It is true that during the last three years the capital outlay on railways was not very heavy but that is no reason why the expenditure should be so lavish in the coming year. It will be seen from extracts from Mr G. K. Gokhale's speeches given below that there was a time when very much smaller expenditure on railways was objected to.

The capital sunk in railway should not be supplied out of the current revenues of the country. Generations yet unborn are to reap the advantages of railways. Hence if necessary, they as well as ourselves should pay for them. This may be equitably arranged by building railways out of capital obtained by loans the interest on these loans so long as they are not repaid being paid by us and our children and their children &c.

But if railways are built from current revenues, only the living generation pays for them, which is not just. If the railways prove very paying, they can, after paying interest, also provide for a sinking fund by means of which in course of time the loans are entirely repaid. Our views are supported by what Mr. G. K. Gokhale said in some of his Budget speeches. In 1909 he said

'The present year is a year of deficit, but the Hon'ble Member includes the small surplus, for which he budgets for next year, among the ways and means of meeting capital expenditure. This means that even if the expected surplus is not realised, the estimated amount will be devoted to railways construction out of cash balances. Again as I have already pointed out this year's deficit includes a sum of $\frac{1}{2}$ million under railway charges which represents the portion of an unity payments devoted to the redemption of capital. Thus our surpluses whenever they are realised are to go to railway construction and in addition to that a sum of $\frac{1}{2}$ million a year out of current revenues is to be devoted to the redemption of railway capital. My Lord I protest respectfully but with all the emphasis at my command against this policy. It is in the circumstances of India unjust and unjustifiable, and even from the standpoint of sound financial administration, it is wholly unnecessary.'

Mr. Gokhale's budget speech in 1907 contains the following passage

'I know there is the standing pressure of the European mercantile community to expend every available rupee on railways, and these men are powerful both in this country and in England. But my lord the Government must resist this pressure in larger interests so far as any rate as the surpluses are concerned. Time was not long ago when the Government never thought of spending more than four or five crores a year on railways. And ten years ago Sir James Westland protested sharply against the manner in which programme after programme of railway construction was being pressed on him in breathless succession. It is true that in those days the railways were worked at a net loss to the state and that in that respect the position has now undergone a change. Still 13½ crores is a very large amount to spend in any one year on railways and yet the Hon'ble Member has thought it necessary to be 'apologetic' in making the announcement. My lord I have no objection to the Government using its borrowing powers as freely as possible to push on railway which now rest on a sound commercial basis. But it seems to me most unfair that the loans thus raised should be supplemented by the proceeds of taxation.'

In 1919-20 a loan of £10 millions will be raised. But it is not expressly for railway construction, and even if it were, it would not meet even half the railway expenditure, the balance having to be met from the proceeds of taxation.

The same speech from which an extract has been made above, contains the following passage

'Coming now to larger questions, I find that I must renew my earnest and emphatic protest against the manner in which our surpluses still continue to be expended as capital outlay on Railway construction. My lord, I have spoken repeatedly on this subject in previous years, but I feel the injustice of the present arrangement so strongly that I must ask the council to bear with me while I urge once again, as briefly as I can, my reasons why a change of policy is immediately called for in this matter. This is the ninth successive year when a substantial surplus of revenue over expenditure has been realised, and it is clear that the era of surpluses has not yet come to an end. The total of these surpluses during these nine years stands at the high figure of 37 crores of rupees, or about 25 millions sterling, and nearly the whole of this amount has been spent as capital on railways. [Nearly the same amount is going to be spent in the one year 1919-20, not in nine years, against which Mr. Gokhale raised his voice.—Ed., M. R.] Now a surplus is so much more money taken from the people, either through miscalculation or in other ways than was needed for the requirements of Government. And as it is not possible to return this money to the taxpayers in a direct form, what the Government is bound to do with it is to apply it to purposes which are most calculated to benefit the mass of the people. And the question that we must consider is this—what is the most urgent need of the mass of our people at the present day? Judging from the manner in which the surpluses are applied year after year to Railway construction, one would conclude that, in the opinion of the Government, what the people needed most was a vigorous extension of railway facilities. Now my lord I respectfully submit that such a view of the situation is not justified by the circumstances of the country. The claims, for instance, of Sanitation on the attention of the Government are at the present day infinitely stronger and more urgent than those of railway construction. Already an enormous sum has been spent on railways in India, while next to nothing has so far been expended on the construction of sanitary works. With so many towns in the country decimated by plague year after year, with cholera and malaria committing their havoc in other parts, with the death rate of the country as high as 35 per thousand as against 16 per thousand in England, I do not see how the Government can continue to leave sanitation practically to take care of itself. Let the council consider what difference it would have made to the country, if the surpluses of the last nine years—37 crores of rupees—had been devoted to sanitary works instead of to Railway construction. My lord, it will not do for the Government to say that sanitation is the concern of Local Bodies and it is for them to find the money required to improve it. Most of our towns are extremely poor and the present distribution of the resources between the Government and the Local Bodies is of a most unsatisfactory character. How unsatisfactory it is may be judged from the fact that, while there has been a plethora of money in the Government exchequer for the last nine years, most of our local bodies have all the time been struggling with serious financial difficulties and some of them have been in a state not far removed from bankruptcy. Without substantial assistance, therefore, from the Government in meeting the large capital outlay which modern sanitary works require.

Local Bodies will never be able to grapple with the problem of improved sanitation, and to my mind there can be no more desirable object on which the Government might expend its surpluses. The Supreme Government should call upon the Provincial Governments to assist sanitary projects liberally out of their own ordinary revenues and whenever a surplus is realised, it should as a rule, be placed at the disposal of Provincial Governments for pushing on the construction of sanitary works.

In the course of his budget speech for 1902, Mr. Gokhale observed

"The English mercantile classes have been incited by undertaking the construction of railways on an unprecedentedly large scale—programme following programme in breathless succession—some in spite of the protests of the Finance Member—a policy which whatever its advantages has helped to destroy more and more the few struggling non-agricultural industries that the country possessed and throw a steadily increasing number on the single precarious resources of agriculture. And this railway expansion has gone on while irrigation in which the country is deeply interested has been more or less neglected."

The Relative Importance of Functions of the State

The budget of the Government of India 1919-20 gives one a clear idea of its conception of the relative importance of the different kinds of work which it has to do. Let us show this by means of a tabular statement of the Imperial allotments for different kinds of work.

Kinds of Work	Allotment in Rs
Fighting	61,78,25,000
Railways	36,30,00,000
Irrigation	60,00,000
Agriculture	14,53,500
Education	55,15,600
Industries	nil [could not find out]
Science, etc.,	46,69,500

As we have shown by clear analysis of the objects for which States keep themselves in readiness to fight, the Indian army is intended mainly for Imperial purposes, including the preservation of India's dependence on England. This is the most important object for which the British Government exists in India. Next to it, come railway construction and maintenance. And we have shown that the railways in India are mainly either strategic or commercial. The strategic object is mainly an imperial object. And as commerce, including export, import and distribution, is mainly European commerce, the main benefit accruing from it goes to foreigners. What harm railways have

done to indigenous industries has been shown above.

The allotment shown against science is for the scientific and miscellaneous departments.

The Table shows that in the opinion of the Government of India preparedness for fighting and the construction and maintenance of railways are far more important than all the other functions of the State, including education, sanitation, advancement of agriculture and manufacturing industries, irrigation, &c.

The Tilak-Chitrol Case

The Leader of Allahabad is one of the ablest dailies in India. It is an organ of the Moderate section of Indian politicians, and cannot as such be accused of partiality for Mr. B. G. Tilak. It is for this reason that we give below the observations of the Leader. Mr. Tilak has not had justice in its proper sense, of the British or any other variety, and we do not think any the worse of him because he has lost his case.

It can be easily imagined what effect would have been produced on the mind of a British jury by Sir Edward Carson's passionate political and racial appeal to their prejudices when he emphasized the result of a verdict in Mr. Tilak's favour on the Government of India and white officials in India. Mr. Tilak's countrymen cannot endorse Sir Edward's opinion that he had had the most profound British justice. It is notorious that he has not had it. He was awarded eighteen months in 1897 on a flagrant misinterpretation by the late Sir Arthur Strachey of 'disaffection' as meaning absence of affection. The later sentence of six years transportation commuted to one of simple imprisonment was monstrously severe. On both occasions the Indians who were in the jury returned a verdict of not guilty and they alone knew the language in which the impugned articles were written. In the present case itself it came out that the defendant received valuable assistance from the Government of Bombay which gave him access to private documents in the archives of the state and even officials of that Government were virtually placed on special duty to unearth material for him. If it is Sir Edward Carson's opinion that all this is the most profound British justice, he is welcome to think so, but then its value will have to be assessed differently. It is an irony that of all people it should have fallen to Sir Edward Carson, the Ulster King, who committed atrocious seditious acts to prevent the wishes of the British Government and Parliament taking effect in Ireland to conduct the case against Mr. Tilak. If Mr. A. Q. Khan's Government had acted with courage and justness and prosecuted Sir Edward Carson, he would perhaps have spoken differently. In fact, that Privy Council (1) was rewarded with a seat in the Cabinet—a most curious sequel to the propaganda in which he indulged and an act that was rightly

resented by the whole of Nationalist Ireland. Sir John Simon was perfectly right when he pointed out that in the 1897 trial of Mr. Tilak not a word was said about the murder of Mr. Rand! Not only that, but Mr. W. H. (afterwards Mr. Justice) Crowe, the sessions judge who tried Chapekar for the murder of Mr. Rand, almost went out of his way to say from the bench that he had taken particular care to see if there would be any evidence of conspiracy but there was none whatever. He held Chapekar alone responsible for the dastardly deed. Sir John Simon vainly pleaded that 'even the devil should have his due.' That unnameable being might conceivably have it, but Mr. Tilak has not had it and he is far from being a 'devil'. We have many and serious differences with him, but nothing will deter any of his countrymen from acknowledging his great qualities of ability, courage, patriotism, determination, purposefulness. We sympathize with Mr. Tilak in the loss of the suit with costs.

Hunger-strike in Hazaribagh.

We have received information that thirty-one Bengali state prisoners in Hazaribagh Jail had determined to hunger-strike, it is said, on account of the harshness of the Superintendent, on account of their being punished with solitary or separate confinement for slight cause or no cause, on account of their being in rags, on account of the privileges given them after the last hunger strike being taken away from them, and on account of their petitions to the Supreme and Local Governments having proved of no avail. It is said that they received better treatment in Bengal Jails. These men have never had any trial public or in camera, and have been kept in confinement on mere suspicion. Their cases ought to be thoroughly enquired into. There must be some reason why of all jails, hunger-striking should be thought of in Hazaribagh jail and that more than once. There is no fun in trying to starve one's self to death. The ends of justice can be met either by releasing them or bringing them in public trial. And the least that should be done for them is to see that they receive humane treatment.

Release of All Interned Sinn Feiners

In Great Britain, Government, we learn, had decided to release all Sinn Feiners who had been for so long interned there, and no doubt they are now all free men. These internees are not mere suspects, they actually took part in rebellion against Great Britain and in the agitation in Ireland against the British connec-

tion. As a party they are far stronger and better organised than the Indian state prisoners or internees. And yet they have been released! The difference in treatment is easily accounted for. The Sinn Feiners are white men and there is parliamentary representation and almost fully developed local self-government in Ireland. The conditions are different here

Not one Political Prisoner in the Philippines.

Sir William Meyer, our late Finance Member, recently visited the Philippine Islands in order to study political, economic and other conditions there. He had somehow got the idea in his brain that the jails in the Philippines were full of political prisoners. But on visiting the Prison Bureau, he was, to his keen disappointment, informed that there was no political prisoner in any Philippine jail! *The Philippine Review* writes:—

Sir William called on some of our Government officials and visited some of our public institutions, and, we hope, carried away with him ideas that might be of service in the adoption of the new policies and new methods in the newer relationship between Europe and the also newer Orient. To quote an instance. His belief that the Bureau of Prisons was full of political prisoners, because of what has been made to prevail abroad as to our way of living, i.e., as professional insurrectors, etc., was undone by his official visit to the said Bureau and the negative reply of the Director of said institution to his inquiry, *that there was absolutely no political prisoner in that ward*. Such is the difference between the Philippines, allowed to run her own government, and soon to embark into a new, independent, national life, and the life of the so-called European colonies in the Far East held through the force of arms for economic and political reasons. Their jails will continue to be full of political prisoners, while ours, empty of them. The Islands will continue to be, and still grow, content, and happy at the policy of unselfishness here so nobly pursued by America, while the so-called European colonies in the East will continue to be the place of political discontent, of revolutions, of insurrections. The old argument of backwardness, which furnished the chief reason for the colonization of Oriental countries should fall down under the weight of the example given by the Philippines, which was in no better condition than India, and which is making wonderful advance in politics, in education, in commerce, in business, and in many other lines.

The Imperial Budget.

The principal points of the Finance Member's Budget Statement laid before the Imperial Legislative Council on March 1, are:—

	1918-19	1919 20
	£	£
Estimated Imperial Revenue	74 256 000	88 250 000
Actual Imperial Revenue	85 250 000	
Estimated Imperial Expenditure	71 750 000	85 382 000
Actual Imperial Expenditure	89 700 000	
Realised Deficit	4 500 000	
Estimated Surplus		868 000

The causes of the Deficit in 1918 19 as detailed below are accounted for as under in millions of pounds

Adverse Factors	
Increased Expenditure under War Gift	12½
Ordinary Army Increase	2½
Loss under Land Revenue	1½
Propitious Factors	
Net Profit on Exchange	4½
Net Railway Improvement	2½
Customs Increase	1½
Wheat Increase	1½

The Surplus in the Budget for 1919 20 is accounted for in millions of pounds as under

Increased Receipts	
Customs and Malt	1½
Reduced Receipts	
Net Railway Returns (allowing for renewals)	4½
Income Tax	½
Increased Expenditure	
Railways (Capital Expenditure)	13½
Reduced Expenditure	
Army	2½
Political Department	2
Miscellaneous and Refunds	1

The following figures represent the proposed Railway Programme

Proposed Capital Expenditure	£17 700 000
Renewals from Profits	£6 500 000

The following are the proposed changes in taxation.

Addition	
Excess Profits Tax Gross Yield	7½
Remissions	
Income Tax abated for incomes below Rs 2 000 ½	
Income Tax and Super tax concessions to Excess Profits tax payers	1½

In presenting the Budget in its final form on the 21st March the Finance Member said the estimated surplus had been reduced from £868,000 to £668,000, provision having been made for larger outlay

in Bombay and the Central Provinces for famine reliefs. The preliminary estimates laid before the Council on the 1st March have thus been revised in the light of the latest information. The Financial Secretary's explanatory memorandum has also been checked and brought up to date. The final figures of the revised estimates for 1918 19 and the budget estimates for 1919 20 are given in separate formal statements. The broad results as regards the revised estimates for 1918 19 on the Imperial side are that now the total revenue is expected to stand at £85 298 000 or a deficit of £4 568 000, as compared with £4 320 000 previously estimated. The deterioration of rather over £2,000 000 is due to a number of variations of which a falling off in the Customs revenue amounting to £200 000 and in the Land revenue of £140 000 are set off by some small improvements under other heads. It is also expected to spend more on famine relief but this will be met from the Famine insurance grant and it does not affect either surplus or deficit.

For the year 1919 20 the revenue is now expected to amount to £86,375,000 and the expenditure to £85 706,000 taken in the financial statement or a reduction in the surplus of £200,000. This is mainly due to scarcity in Bombay and the Central Provinces where the relief grant for the year 1919 20 is already exceeded. They have also included in the budget, since the publication of the financial statement, a sum of £33 000 to form the nucleus of a new public health fund. The Finance Member fully appreciates, he said the importance attached by non-official members of the Viceregal Council to the necessity of strengthening the equipment of the Government for dealing with epidemic diseases such as the recent disastrous outbreak of influenza and he considers it desirable to emphasise by a small initial grant the Government acceptance of the principle that rental machinery for dealing with these matters should be developed. The net result of the modification in the Provincial budgets is that there will be a slight reduction in the collective surplus of the provinces anticipated during the past year from £1,073 000 to £979 000 during the current year. Their estimated drafts on their balances will be increased from £1,641,000 to £1,918,000 mainly due to

To this list we may add the name of our Bengali magazine the *Prabasi*, which also has had to furnish a security deposit of Rs. 500. The list would have been still more edifying than it is, if the reasons for demanding security, in every case, could be known and published. So far as the *Modern Review* and the *Prabasi* are concerned, the reason was that formerly they were printed at the Kuntaline Press and now they are printed at the Brhmo Mission Press, which involved new declarations being made; and that occasion was seized by the Magistrate to demand security! Our information is that the Moderate Bengali weekly the *Sanjibani* had to deposit Rs. 1000 as security when its old printer died and a new man had to declare himself as printer. Mr. Bhupendranath Basu used all his influence to avert such a fate, but did not succeed; and the *Sanjibani* was not exempted.

New India has corrected the list published by the *Independent* as follows:—

In the list of the Press Penalties, (p 2), imposed on National Papers, the statement as to New India is very incomplete. It should run—

New India (1st Security) Rs. 1000 (forfeited).

" 2nd " Rs. 10,000 (returned by Mr. Pelly on change of proprietorship).

" 3rd " Rs. 2000 (forfeited).

" 4th " Rs. 10,000 (retained by Mr. J. C. Adam, when proprietorship changed after Mrs. Besant's release, and her resumption of Editorship, Oct. 1917. Mr. Adam still holds Rs. 12,000).

Besant Press, printing *Commonweal* and *New India*, Rs. 2000.

Perhaps the *Independent* and Mr. P. T. Chandra will kindly correct. He might also add—

Vasanta Press (Theosophical), Rs. 5000.

No interest is paid on the Rs. 17,000 held by the Local Government or their agents, and a continuing fine is thus inflicted, outside the law, of Rs. 508 annually, reckoning interest at 3½ per cent.

The figures published by the Allahabad paper were taken from Mr. P. T. Chandra's forthcoming book entitled the "National Cyclopaedia." Mr. Tajuddin, superintendent of the central bureau for the help of Muslim internees, Delhi, has sent the Allahabad journal a supplement-

ary list, consisting of the Muslim papers that have been dealt with under the Press Act since 1910. The list is long, but we reproduce it as a matter of public duty.

1. "The Comrade", English weekly, Rs. 2,000 forfeited.

2. "Hamdard", Urdu daily Rs. 2,000, forfeited.

3. "Taufeeq", Urdu weekly, Rs. 2,000 demanded.

4. "Hamdard", Urdu daily. Fresh Security of Rs. 2,000 deposited.

5. "The Comrade", English weekly. Fresh Security of Rs. 10,000 demanded.

6. "Rafiq", Urdu daily, Rs. 500 forfeited. Rs. 2000 demanded.

7. "Muslim Gazette", Urdu weekly, Rs. 2,000 demanded.

8. "Zamindar", Urdu daily, Rs. 2,000 forfeited Rs. 10,000 forfeited with all the Press machines and material.

9. "Al-Hilal", Urdu Illustrated weekly, Rs. 2,000 forfeited Rs. 10,000 demanded.

10. "Al-Balagh", Urdu Illustrated weekly, Rs. 2,000 demanded.

11. "Tarjuman", Urdu daily, Rs. 500 deposited.

12. "Sadaqat", Urdu daily, Rs. 500 deposited.

13. "Jamhoor", Urdu daily, Rs. 500 deposited censor appointed, editor externed and interned.

14. "Nagash", Urdu daily, Rs. 500 deposited, censor appointed, editor externed and interned.

15. "Rahbar", Urdu daily, Rs. 500 deposited, censor appointed, editor externed and interned.

16. "Millet", Urdu daily, Rs. 500 deposited, censor appointed, editor externed and interned.

17. "Risalat", Urdu daily, Rs. 500 deposited, censor appointed, editor externed and interned.

18. "Nai-Roshni", Urdu daily, Rs. 2,000 demanded, deposited, Rs. 500 forfeited.

19. "Masawat", Urdu daily, Rs. 2,000 deposited.

20. "Iqdam", Urdu daily, Rs. 500 (2).

21. "Oudh Panch", Urdu weekly, Rs. 500 forfeited. Rs. 2,000 demanded.

22. "New Era", English weekly, Rs. 2,000 forfeited. Rs. 10,000 demanded.

23. "The Observer", English Bi-weekly, Rs. 2,000 forfeited.

24. "Vakeel", Urdu Bi-weekly, Rs. 500, Deposited.

25. "Ud-d-Moalla", Urdu monthly, Rs. 2,000 demanded.

26. "Punjab", Urdu daily, Rs. 500, demanded.

27. The Ishraqi Press publishers of "Inqilab", Urdu weekly, Rs. 500, deposited.

28. N.P. W. publishers of "Congress", Urdu daily, Rs. 500 deposited.

29. Darvesh Press of "Khatib", Urdu weekly, Rs. 500, deposited.

The newspapers mentioned suffered in one of three ways: either they were called upon to deposit security, or had the security already deposited, forfeited and were made to pay fresh and larger security or, failing to pay the impost demanded had to close down.

increased provision for civil works expenditure in Burnah and Bombay.

Of the 85·3 millions of pounds the estimated expenditure during the year 1919-20 a sum of 41·20 million of pounds has been set apart for Military Expenditure, 17·75 millions for original capital expenditure on Railways and a sum of 6·50 millions for repairs and replacements of rolling-stock &c.—altogether the provision for Railways thus amounting to 24·25 millions sterling. For Education the allotment is £367,700; for Medicine £135,900; for Sanitation £144,000; for Agriculture £96,900; for Scientific and Miscellaneous Expenditure the sum laid apart amounts to £911,300; while the proposed expenditure on Irrigation and kindred works amounts to £400,000 only.

In a country, where according to Mr. Bonar Law, one of the British statesmen of the first-rank and erstwhile Prime Minister of England, owing to the loyalty of the Indians the British garrison could be "enormously reduced" even during the world-war, such abnormally heavy Military expenditure as 48·28 per cent. of the entire outlay budgeted for can by no means be justified by any argument when many other expenditure heads of the Budget have been almost totally neglected.

We could perhaps find some justification for the proposed heavy outlay on Railways which bring in such a large return to the State in the way of profits arising therefrom. But these profits to the State could be enormously increased, but for the railways in most cases being under the management of the companies the share-holders of which are, moreover, people other than Indians. The Government, however, is quite indifferent in respect of the working of the Railways under the direct control of the State, repeated demands of the public notwithstanding. In reply to a question asked by Mr. Sarma, in the Imperial Legislative Council on the 7th March Sir A. R. Anderson said: "Regarding the future management of the East Indian Railway, the present arrangements will continue till the 31st December, 1924, after which the direction will be transferred to India. In the meantime, an inquiry will be set on foot to modify, as may be deemed best, the future of State Railways in India."

We find that the huge labours of the appointed by the Government

of India about a couple of years ago—consider the question of the by the State of the railways owned by have resulted in bringing forth the verbal mouse.

Thus while lavish expenditure marked the Budget in regard to the Railways, the expenditure provided necessary projects of social and material advancement of the people has been miserably below the mark. The prospect of continued starvation of the schemes for improving the condition of the people cannot but be a source of great distress to them.

While thus the serious and most urgent needs of the people have been neglected in the preparations of Sir James Meston's Budget the Finance Member has been careful enough to make ample provision for the prosecution of the New Delhi scheme—a scheme necessitated by the quite unnecessary and uncalled for transfer of the Imperial capital from Calcutta which from its very inception in 1911 has always been condemned from all sides. According to the estimates a sum of £53,333½ will be spent during the current year in sanitation alone in New Delhi while the sanitary needs of the entire India have such a meagre recognition, as indicated above. It will be remembered that with the object of saving money at the crisis of the war the Government had decided to stop work at new Delhi. But this is how it has been saving money. The figures represent initial outlay on the new capital: In 1917-18 they spent £250,543; in 1918-19, £286,700; and in 1919-20 it is estimated to spend £300,000. Lord Hardinge's estimate for building the new Capital was, it will be remembered, £4000,000. Already nearly £3,000,000 has been spent, and the work is scarcely more than begun, and the country will be fortunate if it escapes with less than £25,000,000 if not more on this fad of a new Capital at a time when money is most urgently needed for the amelioration of the unfortunate millions of the people inhabiting this vast Peninsula.

The one and only redeeming feature of Sir James Meston's present Budget is his decision to free incomes below two Rs. 2,000 per annum from income tax. The Finance Member said: "There can be no question that the Rs. 1,000 minimum is now a serious hardship, and we have decided to raise the taxable limit of income

THE MESSAGE OF THE FORTIST

By SIR RABINDRANATH TAGORE

THE past not only contains, in its depths the unrealised future, but in part the realised future itself. Everybody admits the truth that, in the grandfather lies dormant the potential grandson who is to carry the growth of his ancestry to a further stage, or in a new direction. But it is also true that the grandson is practically born in the grandfather. New additions are made and modifications effected, but some keynote, that is to dominate the racial life, has already been achieved in the life of the grandfather.

This is the reason, why every race of people has its tradition of the Golden Age in the past, because we never can trust our future, if it does not carry some great promise bequeathed to it. It is not enough for us to know, that our future is growing out clearer from the nebulous adumbration of a primitive age. We must also be assured that it has already shown itself distinct in its achievements in the past. Every great people holds its history so valuable because of this: because it contains not mere memories but hope, and therefore the image of the future. Man has his instinctive faith in heredity. He feels that, in heredity, that which is to come has been proved in that which has been,—in great heredity, the great conclusion is perpetually present in the process. And all history is man's credential of his future, signed and sealed by his past.

The physical organisation of the race has certain vital memories which are persistent: which fashion its nose and eyes in a particular shape, regulate its stature and deal with the pigment of its skin. In the ideal of a race, there also run memories that remain constant or, in case of alien mixture come back repeatedly, even after the lapse of long intervals.

These are the compelling forces, that secretly and inevitably fashion the future of a people and give characteristic shape to its civilization. In our Shastras it is held that our desires are the creative factors which originate and guide our future births. Likewise every race has its innate desires of its former days, lending it through the repeated new births of its history. Any people which lacks in its racial mind these inherited aspirations, merely drifts till it sinks in the current of time: it never creates its own history. In a word it does not renew its birth but is merged in the amorphous vagueness of a ghostly existence.

Therefore it is of great importance for us to know whether as a people, we carry in our subconscious mind some primal aspiration which alone can guarantee us a definite future of our own. If we still have that, strong and living, it will save us from extinction, or from the perpetual shame—worse than death—of the life of imitation, or parasitism. When we are threatened with loss of self respect, when our mind is overwhelmed with the idea that there can be only one type of civilization worth the name, and that a foreign one, when our one conscious desire is to strive with all our might, by begging, borrowing or stealing, towards some ideal of perfection which can only be related to us, as a mask to a face or a wig to a head—then our only hope lies in discovering some profound creative desire pent in the heart of our race, in the subconscious mind of our people. For, in the long run it is our subconscious nature which wins, and it is the deeper unseen current of the mind which secretly cuts its own path and reaches its own goal—not the conscious waves on the

surface, which clamorously make themselves obvious and vigorously storm at the present time

I have said elsewhere, that the environment in which we see the past of India, is the forest, the memory of which permeates our classical literature and still haunts our minds. The legends related in our great epics cluster under the sublime shade of those ancient forests, and, in the forest, the most intense pathos of human life found its background in the greatest of our romantic dramas. The memory of these sacred forests is the one great inheritance which India ever cherishes through all her political vicissitudes and economic disturbances.

But we must know, that these forests were not merely topographical in their significance. We have seen that the history of the Northmen of Europe is resonant with the association of the sea. That sea, also, is not a mere physical fact, but represents certain ideals of life which still guide their history and inspire all their creations. In the sea, Nature presented herself to these men in her aspect of a danger, of a barrier, which seemed to be at constant war with the land and its children. The sea was the challenge of untamed Nature to the indomitable human soul. And man did not flinch, he fought and won, and the spirit of fight continued in him. He looked upon his place in the world as extorted from a hostile scheme of things, retained in the teeth of opposition. His cry is the cry of triumph of defiant Man against the rest of the universe.

This is about the people who lived by the sea and rode on it as on a wild champing horse, clutching it by its mane and making it render service from shore to shore. But in the level tracts of *Aryavarta* men found no barrier between their lives and the Grand Life that permeates the Universe. The forest gave them shelter and shade, fruit and flower, fodder and fuel. It entered into a close living relation with their work and leisure and necessity, and in this way made it easy for them to know their own lives as associated with the larger life. They could not think of their surroundings as lifeless separate, or inimical. So the view of the Truth, which these men found, was distinctly different from that of those of whom we have spoken above and their relation

ship with this world also took a different turn, as they came to realise that the gifts of light and air, of food and drink, did not come from either sky or tree or soil, but had their fount in the all pervading consciousness and joy of universal life. They uttered quite simply and naturally *सर्विदम् किञ्च यच्चान् प्राप यजति निवृत्तम्*—“All that is, vibrates with life, having emerged from the Supreme Life.”

When we know this world as alien to us then we know it as a thing mechanical built by a divine mechanic or by a chance combination of blind forces. Then our relation to it becomes the relation of utility, and we set up our own machines or mechanical methods to deal with it and make as much profit as our knowledge of its mechanism allows us to do. Then we are apt to say that Knowledge is power. This view of things does not altogether play us false, for the machine has its place in this world. And therefore, not only this material universe, but also human beings can be used as machines and made to yield results. But the view of the world which India has taken is summed up in one compound word—

सर्विदानम्. Its meaning is that Reality, which is essentially one, has three aspects. The first is *sat*, the principle of Being whose first information comes to us through our senses, it relates us to all things through the relationship of common existence. The second is *chit*, the principle of knowing, it relates us to all things through the relationship of mind. The third is *ananda*—the principle of Enjoying—which unites us with all things through the relationship of love. Our consciousness of the world as that of the sum total of things that exist or that are governed by universal laws is imperfect according to the true Indian view,—but it is perfect when our consciousness realises all things as spiritually one with it and therefore capable of giving us joy. Our text of daily meditation contains the truth of the one and the same creative force appearing in an undivided stream of manifestation in our consciousness and in the world of which we are conscious. They are one, as the East and the West are one which only our self divides into contradictions. For us the highest purpose of this world is not merely living in it, knowing it and making use of it, but realising our own

selves in it through expansion of sympathy and emancipation of consciousness, not alienating and dominating it but comprehending and uniting it with us in blissful union. The Man whom you only use is a machine; the Man whom you only study is a material for your knowledge. But your friend is neither a machine to you nor a psychological curiosity, (though consciously or unconsciously he does take his part as a machine of work and as an object of study for you), his ultimate value lies in his giving you opportunity to lose your self in his love. This is his aspect of *ananda*—his truest aspect for you, which comprehends his other two aspects in harmony. And to know the highest truth of all existence as that of a friend is truly Indian. This view of the world as the world of life and love, as the manifestation of the Supreme Soul whose nature is to realise his unity in the endlessness of the varied, has come to us from the great peace of our ancient forest.

When Vikramāditya became king, Ujjain a great capital, and Kālidāsa its poet, the age of India's forest retreats had passed. Then we had taken our stand in the midst of the great concourse of humanity, and the Chinese and the Hun, the Sertorian and the Persian the Greek and the Roman, had crowded round us. But even in this age of pride and prosperity, the longing love and awe of reverence with which its poet sang about the hermitage, shows what was the dominant ideal that occupied the mind of India, what was the one current of memory that continually flowed back through her life.

In Kālidāsa's drama *Shakuntala*, also, the hermitage, which dominates the play, overshadowing even the king's palace, has the same idea running through,—the recognition of the kinship of man with conscious and unconscious creation alike.

A poet of a later age, while describing a hermitage in his *Kadambari*, tells of the posture of devoutness in the flowering leaves as they bow to the wind, of the sacrifice offered by the trees scattering their blossoms, of the grove sounding with the lessons chanted by the neophytes, and the *mantras* which the parrots, constantly hearing, had learned to pronounce, of the wild fowl enjoying *Varaha dera bali pinda*—the food offered to the divinity which is in all creatures,—

and of the ducks coming up from the lake, near by, for their portion of the grass seed, spread in the cottage yards to dry; of the deer caressing with their tongues the young hermit boys. It is again the same story. The hermitage shines out, in all our ancient literature, as the place where the chasm between man and the rest of creation has been bridged.

In the drama of other countries, where the human characters violently drown our attention in the vortex of their passions, Nature occasionally peeps in, but she is almost always a trespasser, who has to submit urgent excuses, or bow apologetically and depart. But in all our dramas, which still retain their fame, such as *Mrīchchhakatika*, *Shakuntala*, *Uttara Rama Charita* Nature stands on her own right, proving that she has her great function, to impart the peace of the eternal to the human passions and to mitigate their violent agitations which often come from the instability of spiritual lameness.

The frenzied fury of passion, described in two of Shakespeare's youthful poems stands isolated upon its own pedestal of unashamed conspicuity. It is wrenched away naked from the cover of the All, it has not the green earth or the blue sky around it, the many coloured veil of nature has been impatiently swept away from its face, bringing to our view the fever which is in man's desires, and not the healing balm which encircles it in the universe.

Ritusamhara is clearly a work of Kālidāsa's immaturity. The song of youthful love sung in it sounds from the fundamental bass notes of human passion,—it does not reach the sublime height of reticence that there is in *Shakuntala* or *Kumara Sambhava*. But the tone of these voluptuous outbursts, being set to the varied harmony of Nature's symphony, loses its delicious shrillness in the expanse of the open sky. The moon beams of the summer evening, resonant with the murmuring flow of fountains, add to it their own melody, in its rhythm sways the *Kadambari* grove, glistening in the first cool rain of the season; and the south breezes wait into its heart the wistfulness of the scent of the mango flowers.

In the third canto of *Kumara Sambhava*, while describing the boisterous emergence of youth at the sudden coming of *Vadatu*

(Eros), Kalidasa has been careful to avoid giving this outburst of passion an abnormal supremacy within the narrow field of view of exclusive humanity. His genius basked in the sunshine of the human spirit, where it pervades the spring flower and the harvest of the autumn, and that genius never played at focussing it into a point of fixation upon the naked fluttering heart. Kalidasa has shown a true reverence to the divine love-making of Sati by making his narration of it as a central white lotus floating on the world-wide immensity of youth, in which the animals and trees have their rhythm of life throbs. It is a sacred flame of longing whose lamp is the universe.

Not only its third canto, but, the whole of the *Kumara Sambhava* poem is printed upon a limitless canvas. Its inner idea is deep and of all time. It answers the one question that humanity asks through all its endeavours—How is the birth of the hero to be brought about,—the brave one who can defy and vanquish the evil demon, when he sweeps upon the scene, laying waste heaven's own kingdom? This is the greatest of all problems for each individual, and it forces itself in ever new, ever recurring forms upon each race and nation, and this is the one problem which persists in most of our poet's works—in his *Shakuntala*, *Raghuvamsha* and *Kumara Sambhava*.

It becomes evident that such a problem had become new to Kalidasa's time when the old simplicity of Hindu life had broken up. The Hindu kings forgetful of their kingly duties, had become self-seeking epicureans and India was being repeatedly devastated by the Shakas.

But what answer does the poem give to the question it raises?—Not that more armaments were needed, or that a league of powers should be formed, or that some mechanical adjustment of political balance had to be effected. Its message is that the cause of weakness lies in the inner life of the soul. It is in some break of harmony with the Good some dissociation from the True. When gain is completed by giving up when love is fulfilled by self-sacrifice when passion is purified by the penance of the soul, then only is heroism born—the heroism which can save mankind from all defeat and disaster. When the ascetic Shiva—the Good—was lost in the passive immensity of his soli-

tude, heaven was in peril. And when beautiful Sati—the Real—was all by herself, in her unwedded self-seclusion, the demons were triumphant. Only from the union of the exuberant freedom of the Real with the tranquil restraint of the Good comes the fullest strength.

Viewed from the outside, India, in the time of Kalidasa, appeared to have reached the zenith of civilization, excelling as she did in luxury, literature and the arts. Kalidasa himself was not free from the prevailing tone, and the outer embellishment of his poetry is as daintily luxurious as must have been the decorative art of the period. This, however, is only one aspect in which his age influenced the poet.

But what sudden passion for sacrifice, for the austere discipline of the life of aspiration, troubled our Goddess of Poesy amidst the luxury of her golden bower? It was the eternal message of the forest, that can never be silenced, and like a refrain, simple in its purity, comes up again and again, through all noisy distractions of discord,—the message to free our consciousness from the accumulations of desire to win our immortality, by breaking through the sheath of self, the self which belongs to death. From his seat beside all the glories of Vikramaditya's throne the poet's heart yearned for the purity of India's past age of spiritual striving. And it was this yearning which took shape and impelled him to go back to the annals of the ancient kings of Raghu's line.

"I fain would sing," says Kalidasa, in his prologue, "of those whose purity went back to the day of their birth, whose striving went forward till attainment, whose empire knew no bounds but the seas, whose adventurous journeys reached up to the high heaven, who offered oblations to the sacred fire in accordance with injunctions made gifts to the needy in accordance with their wants, awarded punishments in accordance with the crime, and regulated every wakeful activity in accordance with the hour,—who accumulated treasure for the sake of redistribution, tempered their utterance for the sake of truth, desired victories for the sake of glory entered into wedlock for the sake of progeny,—who practised learning in their childhood attended to wealth in their youth took to the hermitage in their old age cast away their bodies

when they had attained the supreme union. Of these would I sing, though I lack all wealth of language, for their great merits, entering my ears, have disturbed my heart."

But it was not in a strain of praise that his poem ended. What had troubled his heart becomes clear, when we come to the end of his *Raghuvamsha*. What was the life story of the founder of this line of Kings? Where did it begin?

The heroic life of Raghu had its prologue in a hermitage, showing that its origin was in a life of purity and self-restraint, led there by Raghu's royal parents. The poem is not ushered in with the pomp and circumstance befitting the history of a great king. King Dilip, with his consort, Queen Sudakshina, has entered upon the life of the forest. The great monarch is busy tending the cattle of the hermitage. Thus opens the *Raghuvamsha* amidst scenes of simplicity and self-denial. But it ends in the palace of magnificence, in the wealth and luxury which divert the current of energy from the truth of life to the heaps of things. There is brilliance in this ending, as there is in the conflagration which destroys and devastates. Peaceful as the dawn, radiant as the tawny haired hermit boy, is the calm strength of the restrained language in which the poet tells us of the king's glory crowned with the halo of purity,—beginning his poem, as the day begins, in the serene solemnity of its sunrise. And lavish are the colours in which he describes the end, as of the evening, eloquent for a time with its sumptuous splendour of sunset, but overtaken at last by the devouring darkness which sweeps away all its brilliance into the fathomless abyss of night.

In this beginning and this ending of his poem, lies hidden the message of the forest which found its voice in the poet's words. With a suppressed sigh he is saying, "Look on that which was and that which is! In the days when the future glowed gloriously ahead, self-discipline was esteemed as the highest path, self-renunciation the greatest treasure, but when down fall had become imminent, the hungry fires of desire aflame at a hundred different points dazzled the eyes of all beholders."

When the lust of self-aggrandisement is unbridled, the harmony between enjoyment and renunciation is destroyed. By concentrating our pride or desire upon a

limited field, the field of the animal life, we seek to exaggerate a portion at the expense of the whole, the wholeness which is in man's life of the spirit. From this results evil. That is why renunciation becomes necessary,—not to lead to destitution, but to restoration, to win back the All.

Kalidasa in almost all his works, has depicted this break of harmony between enjoyment and renunciation, between the life that loses itself in the sands of the self and the life that seeks its sea of eternity. And this is characteristically represented by the unbounded impetuosity of kingly splendour on one side and the serene strength of regulated desires on the other. I have already given above an illustration of this from the *Raghuvamsha*. Even in the minor drama of *Malavikāgnimitra* we find the same thing in a different manner. It must never be thought that, in this play the poet's deliberate object was to pander to his royal patron by inviting him to a literary orgy of lasciviousness. The very *Nandi* contradicts this and shows the object towards which this play is directed. The poet begins the drama with the prayer, "अमृतमिच्छामि च यमममृतम्" "Let God, to illumine for us the path of truth, sweep away our passions' herd of darkness." The God, to whom this prayer is uttered, says the poet, is one in whose nature Eternal Woman is ever commingled, in an ascetic purity of love,—who stands in the sacred simplicity of barrenness in the midst of his infinite wealth. The unified being of Hara and Parvati is the perfect symbolism of the eternal in the wedded love of man and woman. The poet opens his drama with the invocation of this spirit of the Divine Union. It is quite evident that this invocation carries the message in it with which he greeted his kingly audience. The whole drama is to show in vivid colour the utter ugliness of the treacherous falsehoods and cruelties inherent in all passions that are unchecked. In this play the conflict of ideals is between the king and the queen—between Agnimitra and Dharmā, between the insolent offence against all that is good and true, and the unlimited peace of forgiveness, that dwells deep in the self-sacrifice of love. The great significance of this contrast lies hidden in the very names of the hero and

the heroine of the drama. Though the name *Ummat* is historical yet it symbolises in the poet's mind the desolating destructiveness of uncontrolled desire—just as did the name of *Ummat* in *Kaghuvamsa*. *Ummat*—the friend of the fire—the reckless person who in his love-making is playing with fire not knowing that all the time it is scorching him black till the seed of immortality perishes at the core of his being. And what a great name is *Dharma* signifying the fortitude and forbearance that comes of the majesty of soul. What association it carries of the infinite dignity of love purified by the sacrificial fire of self-abnegation rising far above all insult of base betrayal! Can anybody doubt what effect the performance of this drama produced upon the royal looter on what searching of heart what humility what reverence for the love that claims our best worship by the offer of its patient worship of service!

In *Shaluntala* this conflict of ideals has been shown all through the drama by the contrast of the pompous heartlessness of the king's court and the natural purity of the hermitage the contrast of the arrogance displaying itself upon the hollow eminence of convention and the simplicity standing upon the altitude of truth. The message of the poet is uttered by the two hermit boys when they enter the king's palace just before the impending catastrophe of *Shaluntala*'s life the naked cruelty of which is skilfully hidden by the episode of the curse though it was unbarred a moment before through the shameless self-confession of fickleness by the king when he listened to the lamentation of *Hamsapadika* one of his numerous victims. The message is—

अमृतनिधिं स्नातुं यथियैर्विभिन्नं प्रवक्ष्ये हवः कथम् ।

वक्ष्येहि स्नेहेतिजानमिहं सुखकलिनम् अवेदि ।

We look upon these devotees of pleasure as he who has bathed looks upon the unclean as the pure in heart upon the polluted as the wide awake soul looks upon the slothful slumberer and as the one who is free to move looks upon the shackled.

And what is the inner meaning of the curse that follows the hermit girl in this drama till she is purified by her penance? I am sure according to the poet it is the

same curse from which his country at that time suffered. There were two guests who knocked at the gate of *Shaluntala* of whom one was accepted and the other refused. The king as an embodiment of passion and worldliness came to her and she readily yielded to his allurements. But when after that the duty of the higher life the spirit of the forest ideal stood before her in the guise of an ascetic, she in her absent-mindedness did not notice him. And what was the result? She lost her world of desire for which she had forsaken her truth. And in order to regain that world as her own by right she had to follow through suffering the path of self-conquest. The poet was aware of the two guests who sought entrance into the heart of his country—the devotee of pleasure and power who comes secretly without giving his real name and insinuates himself into trustful acceptance, and the seeker of spiritual perfection who announces himself in a master's voice in clear notes *वदमहं यो*—'I am here! And to his dismay he found his country baring her heart to the former to be betrayed by him. It is evident that kings of that period were deeply drawn into the eddy of self-indulgence and were fighting each other for power the love of which lends men into the insanity of suicide. The fatal curse of falsehood is always generated when power and success are pursued for their own sake when our baser passions shamelessly refuse all claims of justice and self-control. The poet had one lingering ray of hope in his heart. He could not but believe that his country had not lost her reverence for her *tapasvi* the guest who brings to her door the message of everlasting life. Only her mind was distracted by some temporary outbreak of temptation. He was certain that she would wake up in sanctifying sorrow and give birth to her *Bharata* the hero who would bring to her life unity and strength of truth. There was a note of assurance in the poet's voice when through his great poems *Kumara Samhava* and *Shakuntala* he called her to come back once again to her purity of life and realisation of soul the call which is true for other times and other countries also. For the curse still remains to be worked off by humanity for the inobservable insult offered to the Eternal in Man.

The drama of *Shakuntala* opens with a hunting scene, where the king is in pursuit of an antelope. This indulgence in sport appears like a menace symbolising the spirit of the king's life clashing against the spirit of the forest retreat, where all creatures find their protection of love. And the pleading of the forest dwellers to the king to spare the life of the deer helplessly innocent and beautiful, is the pleading that rises from the heart of the whole drama.

न खनु, न खनु, नाच दक्षिणतोऽप्यनक्ति ।

इति वनपरोरे इव रामाविशति ॥

"Never oh never is the arrow meet for piercing the tender body of a deer, as the fire is not for burning flowers."

The living beauty, whose representative in this drama is *Shakuntala* is not aggressively strong like the callous destructive ness of lust, but, through its frailty it is sublimely great. And it is the poet's pleading which still rings in our ears against the ugly greed of commercialism in the modern age, against its mailed fist of earth hunger, against the lust of the strong, which is grossly intent upon killing the Beautiful and piercing the heart of the Good to the quick. Once again sounds the warning of the forest, at the conclusion of the first act, when the king is engaged in fateful dalliance with the hermit girl — O *Tapasvini*, hasten to rescue the living spirit of the sacred forest for *Dushynata*, the lord of earth, whose pleasure is in hunting is come." It is the warning of India's past, and that warning still continues against the reckless carnival of the present time, celebrated by the lords of Earth whose pleasure is in hunting to death with their ruthless machines all that is beautiful with the delicacy of life.

In *Kumara Sambhava* the friend and ally of Indra, the king of the Gods is *Madana* the god of desire. And he in his blindness imagines that he can unite *Shiva* and *Parvati* by the delusion created by the madness of the senses. It is the same as when we try to reach our perfection through wealth and power through the intensity of boisterous self-seeking. That is not to be. At last *Parvati*'s love was crowned with fulfilment through her penance of self sacrifice. The moral of the *Kumara Sambhava* is the same as the teaching of the *Upanishat* —

"enjoy through renunciation" वा नृप
इति वनपरोरे इव रामाविशति ॥
greed.

One thing which we must remember is, that the life in ancient India was not all forest life,—nor is the heart the only organ we possess in our vital organism. But the heart lies in the centre of our body, it purifies our blood and sends our life current through the ramifications of all the channels in our body to the extremities of our limbs. Our *tapovana* was just such a vital centre of our social body. In it throbbed the rhythm of our life's ebb and flow. It gave truth to our thoughts, right impulse to our feelings and guiding force to our work. We distinctly see, from the works of our poet that the teaching of the forest was not towards the inertia of passivity but towards true heroism and victory. It was not towards suppression of action but its purification, towards giving it freedom of life by removing obstructions.

We know of other great systems in which there is a special insistence upon sacrifice and resignation. Just as heat is an important factor in the process of creation so is pain an essential reagent in the formation of man's life. It melts the intractable hardness of his spirit, and wears away the unyielding crust which confines his heart. But the *Upanishat* enjoins renunciation not by way of acceptance of pain but for the purpose of enjoyment of truth. Such renunciation means an expansion into the Universal a union with the Supreme. It is the renunciation of the cocoon for the freedom of the living wings. So that the ideal hermitage of ancient India was not a theatre where the spirit should wrestle with the flesh or where the monastic order should try conclusions with the social order—it was to establish a harmony between all our energies and the eternal reality. That is why the relations of Indian humanity with beast and bird and tree had attained an intimacy which may seem strange to people of other lands. Our poets have told us that the *tapovana* is *shantarasaspadam*,—that the emotional quality peculiar to the forest retreat is Peace the peace which is the emotional counterpart of perfection. Just as the mingling of the colours of the spectrum gives us white light, so when the faculties

She asks Rama about the flowering trees and shrubs and creepers which she has not seen before. At her request Lakshmana gathers and brings her plants of all kinds exuberant with flowers and it delights her heart to see the forest rivers, variegated with their streams and sandy bank resounding with the calls of heron and duck

सुखमावाय त्वं विवक्षुः

नदीषु तां पाशरातीं सुवीचीम्

नमन् वृष्टौ समरचिमुद्राम्

जरो न दुःखं उदयिमावाह ॥

When Rama first took his abode in the Chitrakuta peak that delightful *Chitrakuta*, by the *Mulparati* river, with its easy slopes for landing, he forgot all the pain of leaving his home in the capital at the sight of these woodlands alive with beast and bird

सोऽसौ चित्रकूटं गिरौ निरिष्यन्निव—having lived on that hill for long, Rama who was निरिष्यन्निव, lover of the mountain and the forest, said one day to Sita

न राजस्य मम भद्रं न दुःखद्विविधमपि

मनो मे मयि दृष्टं । रम्योऽयं गिरिः ।

"When I look upon the beauties of this hill, the loss of my kingdom troubles me no longer, nor does the separation from my friends cause me any pang"

When they went over to the Dindaka forest, they saw there a hermitage with a halo round it caused by the sacrificial fires blazing like the sun itself. This ash ram was ब्रह्मचर्य-चर्मन्ताशन the refuge of all creatures, it was enfolded by *Brahma Lakshmi*, the Spirit of the Infinite

Thus passed Ramachandra's exile, now in woodland, now in hermitage scenes. The love which Rama and Sita bore each other united them, not only to each other, but to the Universe of life. That is why, when Sita was taken away, the loss seemed to be very great to the forest itself. The extinction of a star is doubtless a mighty event in the world of stars, and we would know, if we had pure vision, that any indication of injury in the heart of a true lover gives rise to suffering which belongs to all the world. Sita's abduction robbed the forest of the most beautiful of

its blossoms, the ineffable tenderness of human love,—that which imparted the mystery of a spiritual depth to all its sounds and forms

Strangely enough in Shakespeare's dramas like those of *Kalidasa* we find a secret vein of complaint against the artificial life of the king's court the life of ungrateful treachery and falsehood. And almost everywhere in his dramas, forest scenes have been introduced in connection with some working of the life of unscrupulous ambition. It is perfectly obvious in *Timon of Athens*—but there Nature offers no message or balm to the injured soul of man. In *Cymbeline* the mountainous forest and the cave appear in their aspect of obstruction to life's opportunities—which only seem tolerable in comparison with the vicissitudes of fortune in the artificial court life as expressed by *Belarius*

'Did you but know the city's usuries
And felt them knowingly 'the art of'
the court,
As hard to leave as keep whose top to climb

Is certain falling or so slippery that
The fear's as bad as falling."

In 'As You Like It' the Forest of Arden is didactic in its lessons,—it does not bring peace but it preaches when it says

Hath not old custom made this life
more sweet
Than that of painted pomp? Are not
these woods
More free from penil than the envious
court?"

In the 'Tempest' in Prospero's treatment of Ariel and Caliban we realise man's struggle with nature and his longing to sever connection with her. In 'Macbeth' as a prelude to a bloody crime of treachery and treason, we are introduced to a scene of barren heath where the three witches appear as the personification of Nature's malignant forces, and in 'King Lear,' it is the fury of a father's love turned into curses by the ingratitude born of the unnatural life of the court that finds its symbol in the storm in the heath. The extreme tragic intensity of 'Hamlet' and 'Othello' is unrelieved by any touch of Nature's eternity. Excepting in a passing glimpse of a moonlight night in the love scene in the 'Merchant of Venice' Nature has not been allowed in other dramas of this series, including 'Romeo and Juliet'

and "Antony and Cleopatra," to contrabute her own music to the music of man's love. In "The Winter's Tale" the suspicious cruelty of a king's love stands bare in its relentlessness and Nature cowers before it offering no consolation. I hope it is needless for me to say that these observations of mine are not for criticising Shakespeare's great power as a dramatic poet, but to show in his works the gulf between nature and human nature owing to the tradition of his race and time. It cannot be said that beauty of nature is ignored in his writings, only he fails to recognise in them the truth of the interpenetration of human life and the cosmic life of the world. When literature takes for its object the exhibition of the explosiveness of a human passion then necessarily that passion is made detached from its great context of the universe and is shown in its extreme violence generated by the instability of equilibrium. And this is what we find in Elizabethan dramas,—the clash of passions to their fury of self assertion. We observe a sudden and a completely different attitude of mind in the later English poets, like Wordsworth and Shelley, which can only be attributed to the great mental change in Europe at that particular period, through the influence of the newly discovered philosophy of India which stirred the soul of Germany and strongly roused the attention of other Western countries.

In Milton's "Paradise Lost," the very subject—Man dwelling in the garden of Paradise,—seems to afford a special opportunity for bringing out the true greatness of man's relationship with Nature. But though the poet has described to us the beauties of the garden though he has shown us the animals living there in amity and peace among themselves, there is no reality of kinship between them and man. They were created for man's enjoyment, man was their lord and master. We find no trace of the love of the first man and woman surpassing themselves and overflowing the rest of creation, such as we find in the love scenes in *Kumara Sambhava* and *Shakuntala* and in our Vaisnava lyrics, where love finds its symbols in the beauty of all natural objects. But in the seclusion of the bower, where the first man and woman rested in the garden of paradise,

"Bird, beast, insect or worm
Dorst enter nooe, such was their awe of man"

At the bottom of this gulf between man and Nature there is the lack of the message,—*ईशावासिमिदम् वक्तुम्* 'koow all that is, as enveloped by God.' According to this epic of the West, God remains aloof to receive glorification from his creatures. The same idea persists in the case of man's relation to the rest of creation.

Not that India denied the superiority of man, but the test of that superiority lies, according to her, in the comprehensive-ness of sympathy,—not in the aloofness of absolute distinction.

The love of Rama and Sita, in the *Uttara Rama Charita* has permeated the surrounding earth, water and sky with its exuberance. When Rama, for the second time, finds himself on the banks of the Godavari, he exclaims *यत्र द्रुमा वसिष्ठो वसिष्ठो वास्यो ये* "this is the place even whose deer and whose trees are my friends". When after Sita's exile he comes across some former haunt of theirs, he laments that his heart, even though turned to stone, melts when he sees the trees and the deer and the birds which Sita's own hands used to nourish with water, seed and grass.

In the *Meghaduta*, the exiled Yatisa is not shut up within himself in his grief. The very agony of his separation from his loved one serves to scatter his heart over the woods and streams, enriched by the prodigality of the rains. And so the casual linging of a lovesick individual has become part of the symphony of the universe. And this is the outcome of the spirit of teaching which springs from the ancient forest.

India holds sacred, and counts as places of pilgrimage, all spots which display a special beauty or splendour of nature. These had no original attraction, on account of any special fitness to be cultivated, or lived upon. Here man is free, not to look upon nature as a source of supply of his necessities but to realise his soul beyond himself. The Himalayas of India are sacred and the Vindhya Hills. Her majestic rivers are sacred. Lake Manasa and the confluence of the Ganges and the Jumna are sacred. India has saturated with her love and worship the great nature with which her children are sur-

rounded, whose light fills their eyes with gladness, whose water cleanses them, whose food gives them life, and from whose majestic mystery come forth constant messages of the infinite in music, scent, and colour, bringing awakening to their souls. India has gained the world through worship—through communion of soul. And this is her heritage from her forest sanctuary.

Learning does not depend on the school alone. Much more does it depend upon the receptive mind of the pupil. There are scholars who win diplomas, but fail to learn. So do many of us frequent places of pilgrimage, but come away from the door of the invisible shrine, where dwells the Eternal spirit of the place. They imagine that the mere journey to a place held sacred is sanctifying, that some peculiar virtues reside in particular soils and waters. Their minds do not shrink at the unspeakable pollution of the water and the air of those places, the pollution to which they themselves contribute, and the moral filth which they allow to accumulate there. The salutation of worship to the all pervading divinity in the fire, water and plants, in all creation has been bequeathed to us by our ancestors in the following immortal verse

श्री देवीश्री गायत्री श्री विष्णु भूतब्रह्मादिभ्यः

ॐ नमोस्तुभ्यै नमस्तुभ्यै नमस्तुभ्यै नमो नमः ।

But we seem to have forgotten that all worship has also its duty of service, and in order truly to realise and approach the divine presence in the water and the air we have reverently to keep them clean and pure and healthful. The more our country has lost its powers of soul, the more elaborate have become its outward practices. The inner illumination of consciousness which is not only the object, but also the means of all true worship has, in our case, given place to the grossness of the senses and deadness of mere repetition of habits. But, even in these days of our spiritual sluggishness, I am unwilling to accept these mechanical practices as a permanent feature of India. It is absurd to believe as well founded the idea, that a bath in a particular stream procures for the bather and millions of his ancestors a more favourable circumstance and desirable accommodation in the after life. Nor am I able to respect such a belief as something admirable.

But my reverence goes out to the man, who when taking an immersion, can receive the water upon his body, and into his mind as well, in a devout spirit,—for him the grimy touch of habit has not been able to tarnish the everlasting mystery which is in fire and earth water and food, he has overcome, by the sensitiveness of his soul the gross materialism,—the spirit of contempt, of the average man which impels the latter to look upon water as mere liquid matter.

So long as man was unable to realise an all pervading law in the material world, his knowledge remained petty and unfruitful. But the modern man feels himself united to the universe by physical laws governing all. This is Science's great achievement.

The quest which India set to herself was to realise the same unity in the realm of the spirit, that is to say, in its completeness. Such union enables us to see Him in all who is above all else. And the wisdom which grew up in the quiet of the forest shade came out of the realisation of this Greater than all in the heart of the all.

Let no one think that I desire to extol this achievement, as the one and the only consummation. I would rather insist on the inexhaustible variety of the human race, which does not grow straight up, like a palmyra tree on a single stem, but like a banyan tree spreads itself in ever new trunks and branches. Man's history is organic and deep seated life forces work towards its growth. It is hopeless to cater to some clamorous demand of the moment, by endeavouring to fashion the history of one people on the model of another,—however flourishing the latter may be. A small foot may be the sign of aristocratic descent, but the Chinese woman's artificial attempt has only resulted in cramped feet. For India to force herself along European lines of growth would not make her Europe, but only a distorted India.

That is why we must be careful to-day to try to find out the principles, by means of which India will be able for certain to realise herself. That principle is neither commercialism, nor nationalism. It is universalism. It is not merely self-determination, but self conquest and self-dedication. This was recognised and followed in India's forests of old, its truth was

declared in the Upanishat and expounded in the Gita, the Lord Buddha renounced the world that he might make this truth a household word for all mankind, Kabir, Nanak and other great spirits of India continued to proclaim its message. India's grand achievement, which is still stored deep within her heart is waiting, to unite within itself Hindu Moslem Buddhist, and Christian not by force, not by the apathy of resignation, but in the harmony of active co operation.

An almost impossible task has been set to India by her Providence, a task given to no other great countries in the world. Among her children and her guests differences in race and language, religious and social ideals are as numerous as great, and she has to achieve the difficult unity which has to be true in spite of the separateness that is real. The best and the greatest of her sons have called us in immortal words to realise the unity of souls in all human beings and thus fulfil

the highest mission of our history, but we have merely played with their words and we have rigidly kept apart man from man, and class from class, setting up permanent barriers of indignity between them. We remained unconscious of the suicidal consequence of such divisions so long as we lay stationary in the torpor of centuries, but when the alien world suddenly broke upon our sleep and dragged us on in its impetus of movement and disjointed heterogeneity set up in its lumbering unwieldiness an internal clash and crush and unrhythmic stagger which is both ludicrous and tragic at the same moment. So long as we disregard or misread the message of our ancient forest, the message of all pervading truth in humanity, the message of all comprehensive union of souls which rises above all differences and goes deeper than mere expediency, we shall have to go on suffering sorrow after sorrow and endless humiliation, and in all things futility.

LIFE HISTORY OF FROGS AND TOADS

FROGS and Toads are in many respects intermediate between Reptiles and Fishes. From their mode of life they are very appropriately called Amphibians.

Frogs and Toads are distributed all over the world except the polar regions. They are most abundant in the tropical and sub tropical regions, and as they are not marine in their habits, even a narrow arm of the sea is generally sufficient to limit their habitat. When they occur on islands it is probable either that their eggs have been carried by birds or that there has been a comparatively recent separation from the mainland. In absolutely desert districts also they are unknown, while in countries where there is a long dry season, followed by a period of rains, they are in the habit of being torpid, during the former, the length of the sleep in one Javan species being upwards of five months. In cold climates they become torpid during winter. They are abundant in India and

South America, and it is not a little remarkable that some of the largest forms are inhabitants of islands. They are represented by about a thousand species.

When the autumn sets in Frogs seek out suitable places in which to pass the winter. Moss lined crannies and hollows in the stumps of trees are the places most favored, and there they remain till the spring recalls them to activity.

During this period of hibernation these creatures are in a state of torpor, the mouth and nostrils are closed and respiration is all but absent, being carried on then entirely by means of the skin. Only healthy Frogs can successfully withstand the rigours of the winter, the weaklings die during their hibernation.

With the advent of the spring these Frogs issue from their hiding places and congregate in considerable numbers in the ponds and there they commence to spawn. Curiously enough the same water is chosen year after year, and too, the same part of the pond.

Eggs of Frogs—First stage

The female frog deposits her eggs in the water in the form of a small black mass not more than an inch and a half in its longest dimension. The mass is tacky like rubber solution, and consists of a quantity of tiny jet black spheres all tightly pressed together. The tackiness is due to a minute coating of a sort of gelatine on each sphere. When laid in water this gelatine rapidly absorbs water and becomes a slippery jelly, becoming thereby a very efficient protective covering of the black tiny eggs. This gelatine covering is very porous and allows the water free access, thereby helping the eggs with a constant supply of oxygen dissolved in water, oxygen being an important factor in the healthy hatching of the eggs. The slippery jelly toils the attacks of birds and fishes which would gladly prey on the black eggs were they not thus prevented. The spawn is always laid in some shallow where it cannot sink more than half an inch or so below the surface, for the eggs require light and heat from the sun to hatch them, and their black color largely aids in this absorption.

In some ten days or more after the eggs are deposited, black bodies appear to unroll and the eggs change their spherical shapes. As the embryo tadpoles develop, the jelly gradually loses its toughness, and becomes slimy and mucilaginous, so that when the young tadpole is ready to leave the spawn it is able to slowly wriggle its way through the jelly out into the water.

The young tadpole is a curious little creature now, jet black and just a head body and stumpy tail, but without a suggestion of limbs. Under its head is a gland which secretes an adhesive sub-

stance that causes the tadpole to stick to anything the gland touches. It has no mouth yet, and is incapable of any movement beyond an occasional wriggle. It breathes by means of tiny gills, which at this stage somewhat resemble ears at the side of the head. In a few days the tail lengthens and the gills grow to be feathery and then the creatures begin to swim freely. Gradually these new gills disappear for a skin grows over them until they are no longer visible, and a horny beak like mouth is formed.

Respiration is carried on now by taking in water at the mouth, passing it over the concealed gills and expelling it at the single gill hole at the left side of the head. Lungs too are now beginning to form and the tadpole frequently visits the surface to exercise its new power. As development proceeds the gills tend to fall into disuse, and the lungs begin to predominate, so that when the creature leaves the water as a Frog the gills will have disappeared altogether. Frogs and Toads have no ribs, and consequently they are unable to breathe in the ordinary way by alternate expansion and contraction of the cavity of the chest and they, so to speak, swallow air, taking in a large gulp, and then closing the mouth. If the mouth of one of these creatures be kept forcibly open death must inevitably ensue, owing to the impossibility of breathing while in this state.

Eggs of Frogs—Second stage. In this stage the black dots have become developed and somewhat elongated.

By this time the part of the pond in which the spawn was laid is a seething mass of wriggling black. They are the scavengers of the pond, feeding on any thing vegetable or animal and on the re-

The Paradox Frog—Only 2 inches when full grown when it remains young it is bigger in size than when it reaches its adult stage. On this account it is known as the Paradox Frog.

The Frogs display remarkable attention and care to their youngs.

The spurtoed frogs lay large eggs singly. The tadpoles which at birth have already lost their external gills, on the third day after leaving the eggs develop

A Whiskered Tadpole and a full grown Frog

a pair of barhels hanging down from the corners of the mouth.

The Toad is a small family of the Frog tribe characterized by the disc like firm of the tongue, which may be either free or adherent to the floor of the mouth. Short hind limbs are the distinguishing characteristic of the Toad. It is also distinguishable by the absence of teeth in both jaws, and by the horizontal pupil of the eye. The Toads have an almost cosmopolitan distribution, with the exception of Madagascar, Australia, New Guinea and

the islands of the Pacific. And while the more typical forms are characterised by their terrestrial habits, rough skin, and creeping gait, so unlike that of the frogs others are burrowing and others again are thoroughly aquatic. Those who are in the habit of burrowing develop a tubercle on the head with a sharp edge and is used in a shovel like manner to excavate the burrow. The disc footed toads are arboreal. They are practically harmless, though it is true that the secretion from its skin is acrid and irritating. When alarmed or threatened with danger a toad immediately stops and puffs out its body to its utmost capacity, at the same time causing the acrid secretion to exude from the pores of its skin, and likewise discharging a pure limpid fluid from a special reservoir, and this is not urine as is commonly believed to be.

The eggs of the Toad differ from those of the Frog in that instead of forming an irregular mass with their enclosing jelly, they are arranged in a regular, double and alternating series in the form of a string which may be a yard or more in length. These strings are generally deposited in the water about a fortnight later than the spawn of the frog, and it is not till autumn that the young toads complete their metamorphosis and forsake the water. From that of the frog, the tadpole of the toad is distinguished by its smaller size and blacker color.

The vocal sac beneath the throat of the male is wanting in the common toad.

There are some toads which have gained some distinguishing names from some of their peculiarities, such as the Green Toad, Natterjack Toad, Sharp nosed Toad, the first named being the handsomest of all.

There is a kind of Toad, the ground color of the under surface of whose body is either yellow or orange, and is therefore known as the Fire bellied Toad. The color of the belly depends on the station, the yellow bellied living in streams at a considerable elevation in the mountains, while the orange bellied inhabits ponds and rivers in the plains. Another peculiar characteristic of this Toad is its death feigning instinct. When it is afraid of any real or imaginary danger it lies sprawling on its back with its limbs as rigid as though in the grip of death. Another peculiarity of the Fire bellied Toad is the great size attained by its tadpole which

Sharp-nosed Triangular headed Frog

is further characterized by the unusual development of its tail fin. This frog is unknown in the British Isles but is common in many parts of the European Continent whence it extends eastwards into Asia. The skin of its back is warty and is of olive-brown color which may or may not be marbled with black; the skin of the under parts is smooth and either yellow or orange with black markings. It is further characterised by the triangular form of the pupil of the eye.

Many kinds of frogs spend their lives in trees where there is no opportunity for the tadpoles to live in water, but Nature is not to be beaten by trifles of this kind and we accordingly find that the eggs are much larger than usual thus permitting the whole of the tadpole time being passed within the egg, and allowing the young to make their appearance in the world as full blown frogs. Again a frog inhabiting dry districts in the Solomon Islands lays eggs of the size of marbles in rocky situations from which also emerge in due course perfectly formed frogs. Other tree frogs take advantage of the moisture contained in the cavities of the boughs or leaves of the trees in which they dwell, so that the tadpoles may undergo their development either in little pools or in masses of froth.

The Piping frogs dig a hole in the ground near water line it with a layer of scum, upon which the eggs are deposited and left to hatch. The nests seem, how

ever always to be so placed that at a certain season they will be flooded by the rise of the neighbouring water.

One kind of Brazilian tree frog makes regular pools of a circular form in the shallow borders of ponds and swamps such pools being surrounded by a narrow mud wall about 4 inches in height and these ponds serve as nests for the tadpoles but what is most astonishing is the manner in which the frog smooths the mud wall with its hands as would a mason with his trowel. The female undertakes the entire task of building.

Another tree frog of Brazil has acquired the remarkable habit of depositing its eggs in the sheaths of old decaying leaves of bananas where even during the hot hours of the day sufficient coolness and moisture are preserved. These lumps are enclosed in a frothy white substance. The tailed larvae are seen struggling in this frothy mass if put into fresh water all will die in a few hours.

Stranger still is the development of the so called marsupial frogs of South America the females of which have a long pouch in the hind part of the back wherein the fifteen or sixteen eggs are placed by the male there to hatch and produce tadpoles which undergo the usual course of development.

Spotted Frogs

These have horns on the heads and poisonous glands in the bodies their temper is very hot and irritable.

Even this is surpassed in the case of Darwin's Frog of Chili the males of which take the eggs into a special chamber in their throats there to remain till they develop into full formed frogs which appear to

fuse which would decay and poison the water were it not removed by them. These tadpoles also constitute the staple food of the carnivorous creatures which share their haunts, such as fishes, newts and the numerous water insects.

Eggs of Frogs—Third stage In this stage the larvæ have become more developed.

With the loss of the external gills the black color of the tadpole begins to change: its body becomes closely dotted with minute golden spots, which as time goes on gradually expand, and give the creature the familiar brown color. This admirably protects it from unwelcome observations while lying at the bottom of a muddy pond.

The tadpole grows very rapidly, and after a few weeks the hind toes become visible at the root of the tail, and the front legs begin to develop within the gill chamber although as yet invisible from outside. Steadily these legs lengthen and grow stouter and by the middle of June the hind pair become folded in the position so characteristic of a Frog. Then the left fore-leg suddenly pushes its way out through the gill hole, but the right one has to forcibly make an exit in the skin, and consequently appears some hours later. The little creature is now a veritable Frog, but with a tadpole's tail. But as soon as it is the proud possessor of four legs the tail begins to wither. A sort of inflammation sets in at the tip and gradually the tail shortens to a stump, and in three or four days is absorbed and so vanishes altogether.

The number of toes in the frogs and toads is always five. In a few frogs the toes are furnished with claw-like nails; the toes are often connected by webs,

sometimes carrying adhesive discs on the lower surface.

The little frog now wanders into the grass at the waterside feeding on the tiny insects it meets with. A summer shower will cause the simultaneous exit of thousands of these young frogs from the ponds. Henceforth it is a terrestrial creature, not an aquatic one.

The frog restricts itself to an animal diet and its food must always be taken alive. He sits with great stolidity until the moving small creature comes within range. Then the tip of the long sticky tongue is shot out with lightning rapidity and returned instantly as if by magic with its quarry adhering. The tongue is well-developed and thick, filling the whole space between the jaws and being capable of a large amount of very quick motion; it is fixed to the inner side of the front of the lower jaw, with its tip pointing down the throat. The tongue is more an organ for holding its prey than an organ of taste. It is wanting in one group of frogs. In some the tip of the tongue is notched.

In Frogs and Toads the lower jaw is very generally toothless; but the upper jaw and even the palate may be armed with teeth. The teeth are small, simple and pointed, being adapted for holding and not for masticating.

Eggs of Frogs—Fourth stage Now the larvæ are about to come out by biting through the tough egg shells.

The brain of Frogs and Toads is of a very low type. Their eyes are large and very highly developed, generally possessing two lids, of which the lower one is larger and thinner than the upper, and more or less transparent. In some the

pupil of the eye is horizontal and in some vertical the pupil of the eye of the Fire bellied Frog is triangular and that of the Spur toed tongueless Frog circular

The Evolution of the Frog—(1) Newly laid eggs (2) Developed eggs (3) The developed larva with the egg (4) Newborn tadpoles (5 and 6) Tadpoles with branching gills (7 to 12) Several stages in the evolution of the frog from its tadpole stage to a four footed frog stage

The skin of frogs and toads are porous and they do not drink water through their mouth but imbibe moisture through the pores of their integument. Moisture is essential to their existence and if they be confined in a dry atmosphere they soon

ing of the frog is principally uttered. The males have a globular sac on each side of the head opening by a slit behind the angle of the mouth which produces the croaking. The croaking of a number of frogs can be heard from long distances. The croaking of the Bull frog is considerable in volume as other frogs are mere dwarfs compared to their big forms. Their croaking can be heard for a distance of several miles. The Bull frog is upwards of 9 inches in length exclusive of the legs. It takes two years to attain its full growth.

A well developed tadpole

There is a class of frogs called Piping frogs from their loud pipe-like croaking. The Grasshopper Frog derives its name from its piercing strident cry which resembles the noise of its insect name sake. It is fond of resting on the leaves of aquatic plants.

A young frog

A tadpole of the Paradox Frog—10 inches long the tail being 7 inches

perish. Such members of the class as inhabit dry localities are mostly nocturnal avoiding sunshine and wandering abroad when they can obtain moisture from dew.

In about three seasons if it escapes the jaws of its many enemies our Frog will be full grown and able to breed and then if the Fates are still kind it may live on till it reaches the age of seven or eight years or even more. Toads live up to forty years.

During the breeding season the croak

The male frogs croak in order to make known their presence to the female.

A kind of Frog of South America in the tadpole stage attains the enormous length of ten inches and of this no less than seven inches is taken up by the tail. As the animal nears maturity this tail slowly shrinks so that by the time the adult tailless stage is attained the total length of the animal does not exceed two and a half inches! Thus this creature grows it were backwards that is to

ship the usual tadpole stage and even tully hop out of their father's mouth to try their own luck in the world. The special breeding pouch in the gullet of the Frog communicates with the mouth by means of a pair of slits in the floor of the mouth, one on each side of the tongue.

The nursery arrangement which obtain in the Surinam Toad a Tropical South American species is very peculiar. These toads inhabit the hottest and dampest districts of the Guianas and Brazil and over voluntarily leave the water during the dry season when many of the ponds and pools give out they are compelled to bury themselves in the mud. They awake however with the coming of the rainy season, and then commence the business of spawning in the flooded forests.

In the spawning season the skin of the back of the female becomes very much thickened and softened. After spawning the female by a special arrangement deposits the spawn on the lower part of her own back. The eggs are then pushed forward, one by one by the male and

gradually pressed down so as to cause them to sink into the soft and yielding skin until they become completely buried. When development has taken place the young toad becomes enclosed in a pocket like cavity furnished with a thin lid of a shining horny substance, in these cells the young toads undergo their full development not emerging until they are miniature replicas of their parents. As a rule from sixty to seventy offspring are developed in the back of each female, but in some instances the number may be increased to so many as one hundred and twenty, the whole process of development occupying eighty two days. When ready to emerge, the young toads do not appear to require any assistance, each pushing off the lid of its cell by thrusting forth its head or a leg, and then proceeding to climb out.

After the young have come forth the outer layer of the skin of the back of the female dries up and is shed, while the honeycomb like cells gradually close up, the position of each being indicated by a small pimple like elevation.

This is an ugly looking creature, being one of the larger members of the group. It has a depressed and triangular head, with small heady eyes and some protruding flaps or filaments of skin on the upper lip, at the gape of the mouth, and in front of the eyes. It has very distinctive star like expansions on the tips of the front toes which are quite separate from each other, and likewise the fully webbed hind toes, each armed with a claw. The skin covers the back of the broad depressed body, like that of the head, is dark blackish brown in color and dotted over with small tubercles, but on the under surface is whitish sometimes with a brown line along the middle. Each of the tubercles or papillae on the skin of both surfaces of the head, body and limbs is armed with a minute horny spine, some of them being also provided with a poison gland at the base. There are likewise four rows of larger poison glands on both aspects of the body.

If the mouth of one of these toads be opened, it will be seen to be completely devoid of both tongue and teeth, although the place of the latter is taken in the adult by horny plates. The lack of a tongue—although not of teeth—is shared by an allied African family of frogs.

The Surinam Toad—On its back are many cells which are the nursery of its young.

Paddy Frogs

There exists in the island of Ceylon a species of frog belonging to the same group as the Flying Frog of Java in which the eggs to the number of about a score become attached to the skin of the under surface of the body of the female on which after hatching they leave small shallow pits.

It is a remarkable circumstance that while in some representatives of the great tribe of frogs and toads the care of the eggs is confided to the female who may develop special structural modification for their accommodation in other species this office is undertaken by the male alone who may likewise possess special appliances to aid him in the task. The best examples of this species are Darwin's Frogs of Chili described before and the so called Midwife Toad of France and Southern Europe.

Unlike the great majority of frogs and toads which deposit their spawn in water the female Midwife Toad lays a long string of from about twenty to fifty eggs on land in early spring. As she lays them she is closely attended by her partner who when the whole string is completed proceeds to attach the mass to his hind legs by thrusting his feet into the midst. When the packing is completed the eggs form a grape like mass covering the upper part of the hind legs and loins. In proportion to the size of the parent toads the eggs which are bright yellow in color are remarkably large. When fully laden with his burden with which however he gets about actively enough the male Midwife returns to his usual abode which may be a

hole in the ground or a chink between the stones in a heap or a wall where he has to get through a period of about three weeks before the tadpoles make their appearance.

In order to prevent the precious eggs from drying up the careful parent makes most of his peregrinations abroad in search of food by night and if he finds that even this care does not keep them sufficiently moist he refreshes them by an occasional bath in the nearest stream or pool.

When the three weeks of probation are over some instinct impels the burdened father to take to the water and when once there the tadpoles bite their way through the tough envelope in which the eggs are wrapped and make their appearance in the outer world. Whereas ordinary tadpoles are at first provided with branching external gills in the tadpoles of the Midwife Toad these gills of which there is only one on each side are shed before hatching and replaced by internal ones which again give place in due course to lungs. After the cares of the nursing period are over the male loses his voice.

The Fly ing Frog of Java

They descend from the tree in a slanting direction as if flying and in this act on the webbed feet are of much help to them which serves the purpose of so many wings.

which is not resumed till the following February when it is continued till August.

The arboreal frogs have large discs at the ends of the toes usually although smaller discs are met with in certain purely aquatic species. One of the most curious and interesting tree frogs is the Flying Frog of Java and Borneo which comes down in a slanting direction from a high

tree as if it flew. Its toes are very long, and fully webbed to their extremity, so that when expanded they offer a surface much larger than that of the body; the fore-legs are also hordered by a memhrane, and the body is capable of considerable inflation. The hody is about 4 inches long, while the wehs of each hind-foot when fully expanded covers a surface of 4 square inches and the wehs of all the feet together about 12 sqnre inches.

Tree Frogs.

They can change their colors according to their environments.

One of the Cingalese members of the genus possesses in a high degree the faculty of changing its hues. Where there is the greatest variety and brilliancy of color among the forest trees, the tree-frogs attain their most brilliant and varied tints.

There is a species called Leaf-frogs from their habitation, and the shape and color of their body.

All the Frogs change their colour according to the nature of their habitat; the tree-frogs harmonise with the foliage among which they dwell. In Costa Rica a certain toad simulates to an extraordinary degree the coloration of the

snakes—both poisonous and harmless—of the same country.

In all the frogs and toads the skin is furnished with glands secreting a more or less milk-like fluid; the viscid milky fluid secreted by these glands is exuded during excitement, and is endued with more or less poisonous properties, being intended to serve as a means of defence. When introduced into the circulation this venom acts as a powerful poison, and the secretion of a South American species is employed by the Red Indians to poison spears and arrows used in killing monkeys.

There are various kinds of frogs of very peculiar forms and names after their characteristics, such as the Narrow-mouthed frogs, Short-headed frogs, the Sharp-nosed frogs, the Horned frogs. In the Narrow-mouthed frogs the mouth is extremely narrow. The Short-headed frogs have very plump hodies, indeed, when the hody is puffed out to its fullest extent, they more resemble india-rubber balls than frogs. The Sharp-nosed frog has a very large triangular head, ornamented with prominent ridges, and terminating in front in a pointed flap of skin; similar flaps occupying the eyelids and the mouth have an enormous capacity; in color it is very variable. The Horned frogs or toads are remarkable alike for their large size and brilliant coloration, as well as for the enormous dimensions of their mouths and their fierce and carnivorous habits; the Brazilian horned frog is the largest representative of the genus, which attains as much as 8 inches in length, and is one of the most handsomely ornamented of the genus; in some the upper eyelid is produced into a horn-like appendage, and in some it is triangular and only slightly pointed; the skin is covered with tubercles above and granules below, surmounted by a horny shield on the back; they are exceedingly bold and ferocious, flying fiercely at any one who attacks them and maintaining their hold with the tenacity of a bulldog, at the same time uttering a kind of barking cry; on other occasions they give vent to a peculiarly deep bell-like note; when in repose they are in the habit of burying themselves in the soil with only the top of the back exposed, in which state they are almost invisible; in this position they lie in wait for their prey, which includes other frogs, birds

and small mammals, and at times they capture and attempt to swallow objects too large for their capacity.

One family may be collectively termed Toad-Frogs, since they come neither under the designation of toads nor of frogs. The family is distributed over Europe, the Oriental region, North America, and New Guinea. When an adult toad-frog is suddenly seized or pinched, it utters a cry like the mewling of a kitten, at the same time emitting a pungent vapour with a strong odor of garlic, which makes the eyes water, both these being apparently intended as a means of defence.

Some frogs are edible.

All these characteristics and peculiar-

ities lead us to acknowledge that frogs and toads are really some of the most marvellous of all animals; for what can be more wonderful than the development of the purely aquatic vegetable-feeding gill breathing limbless long-tailed tadpole into the amphibious carnivorous lung-breathing four-legged tailless frog or toad? Not less remarkable is the shortening of the intestinal canal as the creature changes its herbivorous for carnivorous habits.

CHARU BANDYOPADHYAY,

* Compiled mainly from *The Royal Natural History The Marvels of the Universe*, and *The Encyclopedia Britannica*, 10th edition.

PACHMARHI

TO the ordinary untravelled Indian Pachmarhi is a mere name. Every one knows and reads about Darjeeling and Simla, Musourie, Ootacamund and Mahabaleswar as being the summer capitals of the imperial or one or other of the various provincial governments in India. Pachmarhi is no doubt the summer residence of the chief commissioner of the Central Provinces but that has not made it famous to the lovers of hill-stations in India. Yet this picturesque little town situated on a plateau (altitude 3500 feet) in the Mahadeo hills of the Satpura range possesses some very remarkable scenery and deserves well at the hands of lovers of beauty. Pachmarhi is not a hill station in the sense in which Darjeeling and Simla are hill-stations, neither can it, I think, compare with the minor Himalayan heights of Solon, Dharampur or Kasauli from the point of view of climate. It only affords a sort of shelter to Europeans during the not too long summer months of the Central Provinces. Its average temperature is only 10° less than that of the Hoshangabad district in which it is situated and in this respect I think the climatic conditions cannot be much different from Tindheria on the Darjeeling-Himalayan Railway. A cool breeze is about the only thing which differentiates

Pachmarhi in summer from the surrounding plains, but September and October are said to be particularly cool and bracing. The place is easily accessible by motor from Piparia on the G I P Railway but the

A Beggar, Pachmarhi.

motor charges are rather high (being 8 rupees per head) and this partially accounts for the comparative oblivion into which this station has been thrown.

Pachmarhi contains some remarkable scenery. The general outlook of the place however is not very prepossessing. Once the town is reached you feel as if you were still in the plains though hills surround you on all sides. The town is situated practically on a flat hill top many square miles in dimensions of which 23 are occupied by this sanitarium. The whole place has the appearance of a big park, extending over many miles, beautifully kept. The roads are nicely laid over a large country covered with green verdure and clumps of Harra (Terminalia chebula) and Jamun (Eugenia Jambolina) trees. The Saj and Sal also abound in the place.

Little Hill During the Rain, Pachmarhi.

If one has been to Darjeeling and seen the Birch hill park, he has only to stretch the scenery over a flat country in order to get an idea of the general appearance of the parks of Pachmarhi—though it

must be admitted that there is nothing of the grandeur of the Birch hill park in Pachmarhi.

In describing Pachmarhi one cannot miss the caves of Pachmarhi (the Panch Mathi or five huts) from which the place derives its name. These are a group of fine ancient caves hewn in a small hill rising openly from one open part of the plateau. Hindu tradition claims these caves as one of the places where the Pandava brothers sojourned during the period of their secret wanderings, but some claim for them a Buddhist origin. The caves have been cut out of solid rock and one wonders whether the Pandavas would have taken so much pains over a temporary hiding place.

The outstanding features of Pachmarhi scenery are however its water falls and Khuds. The water falls are numerous and imposing and I have not seen the like of them in Darjeeling nor heard of any in the other hill stations which could compare with these. These falls are perennial, but in the rainy season they are really superb. In summer it is delightful to sit under one of these jets of water and have a refreshing shower bath.

The Khuds of Pachmarhi are however more remarkable than its water falls or its parks. They are a great deal more than what we understand by the expression in Darjeeling or other hill stations. They are not merely abrupt and precipitous descents on a hill side. They are vast and unexpected ravines or rather clefts in the solid rock which seam the edges of the scarp, some of them reaching in sheer descent down to the level of the plains. They look more like ancient stone built fortresses—so well hewn and symmetrical the rocks look—than a mere freak of nature. You come across one of these on the way from Piparia to Pachmarhi about 10 miles from the latter place. It is remarkable for its symmetrical appearance and great perpendicular height.

But the most remarkable is the Andeh Koh (Handi Koho popularly called) which begins about a mile to the east of the village and runs right down into the Deawa valley. Looking over its edge the eye loses itself in the vast profundity. A few dark and go-coloured specks at the bottom represent wild mango trees of sixty or eighty feet in height. A faint sound of running water rises on the sigh of the wind from the abyss. The only sign of life is an occasional flight of blue pigeons winging out from the face of either cliff and circling round on suspended

pass again to disappear under the creags. If a gun is fired the echoes roll round the hollow in continually increasing confusion until the accumulated volume seems to bellow forth at the mouth of the ravine into the plain below.

The grandeur of this ravine has been thus described by Captain Forsyth the discoverer of Pachmarhi in The High Land of Central India.

The Jambu Dwip is another remarkable ravine on the opposite side of the plateau from Andeh koh and is considered a sacred place by pilgrims. It is remarkable how these spots of imposing natural grandeur have been marked out by our Hindu forefathers as sacred places to attract people to them in the name of religion. There is no sacrilege certainly if we of the modern age look upon these heights with only a secular eye. But this too is not possible for as Pope says

All are but parts of one stupendous whole
Whose body Nature is and God the soul

I have said that Pachmarhi looks like one big park. It is I think a series of parks systematically laid out and the natural effect would be incomplete if there was no lake to supply the aquatic scenery. But nature has provided for this and the lake with its bridge affords a fine panorama. Pachmarhi affords fine facilities to lovers of what Prof Blackie calls The breezy Scottish game of golf. From the golf links you command a good view of one of the lofty crags of Pachmarhi.

I have said that Pachmarhi is more like a city in the plains and this is true in more senses than one. Not only is its general appearance dissimilar to the other well known hill stations such as Darjeeling or Simla but judged by its flora and fauna it is more like the terai districts at the foot of the Eastern Himalayas than a hill station. You find all the tropical trees flourishing there the Sal the Jamun the Harra the mango the Kathar (jack fruit) and the total absence of the coniferous trees the pines and the Jhows of various description complete the contrast. No doubt a few of these latter variety of trees have been planted near about the Tehsil Court building but the hand of man can be easily seen in them. It is in Olympia alone that these trees would flourish but Pachmarhi is no Olympia though some would feign make it one.

There is also a total absence of those

wild flowers which give Darjeeling for instance such a gay look. There is none of the Dahlia with their resplendent colour nor the wild rose the Foxglove the Daisy the Hydrangea or the Bignonia which abound in every nook and corner of Darjeeling. You find some Dahlias and Orchids in the public garden at Pachmarhi.

Mahadeo Fair at Pachmarhi

but they are mostly foreign only two varieties (of Deurubium and Vanda so far as I could guess) of Orchids were pointed out to me as being native to the Pachmarhi hills. I do not know whether anybody has made investigations in this line and whether a Hooker has been found for the Satpura hills.

I shall now close with a few words about the town of Pachmarhi. The town has no native population one of the chief attractions of the Himalayan hill stations and you do not find the picturesque hill atmosphere of market days. Nor do you hear the

solemn music 'of the hill-men echoing in the hills in the evening as they return home after the day's work.' In Pachmarhi you find the slovenly and ill-clad labourers from the plains doing all the manual work and there is no respectable Indian population except a few Bohra shop-keepers and contractors. In season time you may come across the secretariat "Baboo" or an occasional Indian sojourner from the plains. No well-to-do Indian (with the exception of one or two gentlemen) has built his own house in Pachmarhi and cantonment authorities would not, I am told, encourage private buildings owned by Indians. The Begum of Bhopal has built a residence here but I do not know of any other Indian potentate having done this. You do not find any trace of the aristocracy of C. P. in Pachmarhi. The Bungalows are mostly owned by Europeans and they are neither cheap nor easily available to Indians. The native part of the town (the portion outside the cantonment limits) is insignificant and it would not be worth while for anybody to go and live there. Nor do I think, are

decent houses available in this part of the town. The few respectable lodging houses are owned by Bohras who live and have their shops there.

The annual Mahadeo fair draws a large number of people to Pachmarhi hills from the neighbouring plains and the picture reproduced shows a characteristic group of pilgrims.

The kind of bullock carts which ply between Piparia and Pachmarhi have low tops and are drawn by trotting bullocks which go very fast and one very different from the bullock carts one comes across in Bengal. Undoubtedly the Bengal vehicles are better built, more commodious, but they are rather slow-moving vehicles compared with the C. P. carts. There is a type of beggars here found in C. P. alone. These people in their begging uniform go about the streets ringing a bell and get doles of flour and grain unasked from householders. The monk has his cow! and the haggard must have his uniform. Respectability is a veritable fetish!

B. C.

THE ENTANGLED ONE

Lo! we are treading the broad and soft
summer road, strong sunlight surging
around us as we go.

Afar we see the glittering ocean, whose
glory hath no end, but melteth into the
blue of heaven.

Afar we see the splendour of high moun-
tains that shine as eternal signals
through the mist of the plains.

And our hearts are so full that our rejoic-
ing ceaselessly overfloweth in song.

Yet thou, dear comrade, art struggling
deep in the thorns, whence is no way
out of darkness and misery. Fighting

the sharp and clutching hands, thou dost
but wound and fetter thyself the more.

Stand where thou art in great hope, and
we will cut a way for thee with swords
of sunlight.

Wait in good heart and we will bear thee
forth and lay thee by a stream on the
green wayside, that thou mayst wash
away thy pain, and rest, comforted by
them that pass by with shining faces.

For if thou canst not look upon that glory
of the sea, what availeth our going
thither?

E. E. SPEIGHT.

no remedy is of any good after his death. But it may be, and I fear it is, a fact that you and your friends wish for the speedy death of this allegorical man, and you and they have taken every means in your power to see that he is really dead and finished while, at the same time, you think that all sorts of things are to be done for the benefit of the dead body to what end, if there is no life to benefit?

The question of Nurses for plantation Hospitals has been fully discussed between us and you are aware that it is a project that I should like to see put into practice. It is not, as I believe, a project that can in these times be easily inaugurated for several reasons. These are the difficulties in war time of obtaining Nurses at all the grave difficulty of obtaining the services of the right kind of Nurses the difficulty of getting Nurses who will remain and work in plantation Hospitals. These difficulties are not imaginary, they are very real.

On the other side is the point that the indentured people, now remaining to be provided for, are far fewer than they were, and become less in numbers each year, and the employer is thinking that he is not justified in spending money on improvements when he does not see any chance of new arrivals on whom those improvements are to confer a benefit. Desirable though the provision would be, one cannot lose sight of the practical difficulty of its being properly carried out at the present time.

In your letter you express the hope that you have made no minor inaccuracies. You will forgive me for saying that your reports bear, in my opinion, the stamp of the propaganda of the blind partisanship, so eager to show up the evils said to have been wrought in this Colony that you remain purposely oblivious to any benefits or advantages that have accrued to immigrants in Fiji, or if not oblivious to them, then they are displayed in so grudging a manner as to make it appear that these benefits have resulted in spite of the treatment meted out and not because of any desire or effort on the part of those in authority to compass them. Your readers in India are for the most part those who wish to believe the worst, some, because they are of the party which wishes to put an end to evils which they believe to exist from a

genuine wish to improve matters, others from interested motives.

I must not omit to comment on your remarks on the subject of a Medical Officer's report on Venereal Disease in Council paper No. 54. It appears to be fairly obvious that when the writer says what he does he says so having in mind the proportion of women to men amongst those who immigrate, and not that it is his opinion that every Indian woman in Fiji has to serve three 'indentured men' as you wish your readers to think that he means, and by so doing gravely aspersing the characters of many hundreds of decent and respectable Indian women in the Colony.

You say that you have seen the Secretary of State while on his visit. I think that it is a misfortune for the Colony that it is not possible for him or for a representative to come and see for himself how matters stand for I do not see how he can form judgment from hearing but one side of the question.

I am Yours faithfully,

G W A LYNCH

P.S. Please make what use you like of this."

Those who have read my published articles will be able to judge whether they implied about health conditions what Dr. Lynch supposes. With regard to Council paper No. 54, I will simply quote again the words of the Medical Officer which Dr. Lynch himself countersigned. They are as follows:—When one indentured Indian woman has to serve those indentured Indian men as well as various outsiders. While the words may not mean that Every Indian woman has to do so, they do mean that this is customary and normal.

An anonymous writer in the 'Fiji Times and Herald' calls attention to the fact, that I had not mentioned the remarkably low death rate among Indians in the Colony. I gladly reproduce the figures he quotes which are altogether encouraging—

Death rate	Per thousand
1910	25.91
1911	18.24
1912	16.53
1913	14.10
1914	13.43
1915	10.62
1916	8.69
1917	9.61

It must be remembered that up to the year 1917 large numbers of Indians under indenture were being brought out, in the prime of life, after careful medical examination and that these would naturally keep the death rate low year by year. But, while taking due account of this factor, it is a striking testimony to the work of the Medical Department to find the death rate showing a steady decline. In both Reports published, it had been my own intention to make clear that, with certain exceptions due to moral causes, Fiji was a healthy place for Indians to live in,—much healthier than India itself. I wrote as follows:—

"More and more it has been borne in upon me by what I have seen, that Fiji, as far as the conditions provided by nature are concerned, is a good place for Indians to live in. It is surprising to see the change which has come over the physical growth of the people in a place like Nadi—the breadth of shoulder in the growing lads and the increased stature. Both girls and boys seem to be taller than children of their own age in India. Any one coming from India would be struck by the health and prosperity on every side. It was a pleasure to see the chubby little Indian children in the free Indian settlements so different from those we know in malaria-stricken Bengal and in the upcountry districts of India."

Many other passages of a similar character may be found in the Reports.

The Fiji Legislative Council have recently passed the following resolution:—

"That this Council regrets and disagrees with the reports concerning the condition of Indians in Fiji being circulated in Australia by Mr. C. F. Andrews,—which reports the Council considers highly coloured, misleading and, in parts, untrue."

In addition to this official condemnation of the Council, the following statement was published and laid before the Legislative Council of Fiji by the new Governor in November 1918:—

"I consider that the Reports which Mr. C. F. Andrews has furnished to his leaders in India have cast an unjust and unmerited slur, not only upon the employers of labour and the Government, but upon the European Community of this Colony. I include the European Community, because it is among them that public opinion is formed and I should be very reluctant to think that public opinion would have tolerated a state of affairs such as Mr. Andrews has depicted. At the same time, amid much that is exaggerated and misleading (I abstain from using the word 'disingenuous', for I do

not desire to question the writer's honesty of purpose), Mr. Andrews has made certain criticisms which cannot unfortunately be refuted. In his condemnation, for example, of the Indian labour 'lines' as unfit for occupation by married couples and their families, I find it impossible to disagree with him. It would be unwise, and indeed impracticable, to insist upon the immediate provision of separate married quarters. Reasonable time must be allowed. But the change ought to be effected as soon as possible. It must also be admitted that the hospital arrangements for Indians, and their medical treatment generally, require improvement; and that the care and education of Indian children demand more attention than they have received in the past. The disproportion of the sexes is also an urgent problem."

The Governor, after discussing the question of 'free contract emigration', ends as follows:—

"There are many difficulties. Reforms are necessary, especially in the directions which I have above indicated. Employers may have to make sacrifices. The Government of Fiji may have to face increased expenditure. But what is chiefly required, at the moment, is a sane and temperate appreciation of the facts, a frank recognition of existing abuses, and a definite policy for the future such as will satisfy both Indians here and their friends at home that it is the desire and the intention of the administration to introduce the measures necessary for their social and moral, as well as for their material welfare."

The real issue is contained in the words,—“Reasonable time must be allowed.”

Nearly six years have now elapsed since that terrible record of murder and suicide in the Fiji coolie 'lines' was published in the Government of India's own official Report. More than three years have gone by since the issue of the Government of India Despatch of October 25, 1915,—one of the most scathing condemnations of indenture ever written. In addition two independent enquiries have been instituted and the conclusions reached in them concerning the moral evils in the coolie 'lines', have been identical with those of the Government of India Despatch. Last of all, the Government of India has

promised to negotiate for the early release of those who are still under indenture, and has recommended to the Fiji Government drastic changes. Yet, up to the present, very little indeed has been done to rectify the moral evil. While privately admitting that the evil exists, any publicity is at once met with the cry of 'exaggeration', and when it comes to a question of a definite payment of sums of money (in re-education) out of the enormous war profits, which have been amassed, the plea for delay is put forward even by the Governor himself. It is for this very reason that I have been fully convinced that the Fiji Islands should be placed as soon as possible under Australia or New Zealand. The Australian Government has been able to keep a check on the C S K Company with regard to the management of their estates in Queensland, and no delay has been ever allowed where reform is needed but the weak Colonial Government of Fiji has had very little power of resistance in the face of the Company Directors. The virtual ruler in Fiji for many years has been the C S K Company, with its millions of invested capital and its enormous profits. Planters, officials and Governments alike have had to bow before its sway.

With regard to the repeated charges of 'exaggeration' brought forward by the Governor and his Council, I would simply state the fact that I did my utmost to get my opinions corrected by the authorities while I was in the Islands. I explained personally what my opinions were to the leading men in Fiji, official and non official alike, and circulated them in type, asking that any errors might be pointed out. But only two definite corrections came to me and these I immediately accepted. I was constantly told by planters and missionaries that what I had written about the morals of the coolie 'lines' could not be denied and that they themselves knew what was going on. One of the oldest residents, who had been engaged in planting interests for thirty six years, told me that every one knew how the things I had mentioned were happening daily and that there was no exaggeration in what I had said. At two large gatherings of Planters (where I put quite bluntly and plainly the evils of the coolie 'lines') not a single voice was raised to dispute the facts. These were acknowledged in the most open manner, and speaker after speaker got up and

asked me the one pertinent question,—
"How can we get out more Indian women?"

I was urged, at the same time, to make known in India the more encouraging side of Indian life in Fiji and if I have failed in doing this I express regret. I would most gladly bear witness (as I have done both in public and in private a thousand times) that the material prospects and the climatic conditions of Fiji are extremely good and the race prejudice is very small.

But on the moral side, I cannot, with any truthfulness, make the picture less dark than I have drawn it. And when the Governor of Fiji has had a longer experience, I feel certain that he will come to know what I myself have found to be the truth.

Miss Garnham, the representative whom the women of Australia sent out to make a new independent enquiry, has fully borne out the main facts. Her Report, which has been published, is in some ways stronger than my own in its statements concerning the hopelessly corrupt conditions of the Fiji coolie 'lines' and her recommendations for the improvement of the present situation are almost identical.

Though this corroborative testimony of Miss Garnham is of the greatest value, as confirming the facts, I can only repeat that planters, missionaries and government officials alike have themselves acknowledged to me personally the very same things.

It is a fact, that under the conditions of living in the coolie 'lines' it has been, for more than 30 years practically impossible for an Indian woman, coming out without a husband, to lead a decent life. It is a fact, that women who have either come out with husbands, or who have mated themselves with some man on the boats, find it very difficult indeed to remain faithful to one man, and that they are constantly solicited and cohabited with by other men,—their husbands finding themselves unable to prevent this. It is a fact, that very young Indian girls in Fiji are in constant danger of contamination, owing to the shortage of women, and that they are constantly being bought and sold in an abominable traffic. It is perfectly useless to deny these facts, or to talk about 'exaggeration' when they are mentioned. The one thing needed is to rectify them.

I have a definite appeal to make, and I venture to make it to the planters themselves and to the companies, as well as to the general public. It is this: There are now, held down by indenture in the coolie 'lines', a number of women who will not be released, in the ordinary course of things, for another two years. They are bound by law to remain in the coolie 'lines', whether they like it or not. These coolie 'lines' are now being used by unindentured as well as by indentured Indian men. These unindentured labourers come, in a great number of cases, without their wives,—with the full intention of using the women who are bound down by indenture in the 'lines'. These indentured women have complained to me of this very thing happening to them in the past. They have complained to Miss Gurnham also. The missionaries know well their fate. This fate is becoming more hateful, year by year. Last September, the lot of these women (who still remain under indenture) was brought before the Government of India and the promise was made by Sir George Barnes in the Imperial Council that negotiations should be entered into for their early release. But nothing as yet has transpired.

I had intended to deal fully (in the conclusion of this Report) with the questions of education and franchise, but it seems best to leave the details of these subjects, which are somewhat technical, out of public discussion. I wish, if possible, to concentrate attention on the one main issue, namely, the condition of the life lived in the coolie 'lines' in Fiji and what is still going on to day.

With regard to education, it may be stated briefly, that after a long delay (which has put Fiji far behind all other Crown Colonies where Indians have settled) education is now being taken up in earnest. The Government has also accepted the principle of grants being given to vernacular schools, which was at first refused.

With regard to the franchise, an important step was taken when one nominated Indian member was allowed by statute upon the Fiji Legislative Council. It should not be difficult for the Indians in the islands still further to improve their position by obtaining elected instead of nominated Indian members. Such fuller

franchise would probably come more rapidly, if Fiji were placed under the jurisdiction either of Australia or New Zealand.

In this connexion, it is a very great satisfaction to be able to place on record, as I have done so many times before, that the social and racial treatment of Indians by Europeans in Fiji is far in advance of that which I have witnessed in Natal and better than the common experience in India itself. Quite recently I met an Indian who had been many years away from India, resident in Fiji, and he told me, that it had been a very great shock to him to see the treatment of Indians by Europeans in his own country of India. He was astonished to find, in India, the growing aloofness between European and Indian which existed on all sides, he contrasted this with the comparative friendliness of the two races in Fiji and in Australia. The scene which I have related as taking place in Nadi, Fiji, on the Indian Red Cross Day, may be remembered, and it was by no means exceptional.

I return in my last paragraphs, to the one outstanding fact, which must be insisted on, in spite of all attempts to conceal it or to deny it. It is this: The immediate gravity of the situation in Fiji does not lie on the material side, but on the moral side. Until the moral evil due to the shortage of women is seriously and effectively met, until some clear and definite acts of reparation (at whatever monetary cost) have been made, it is wholly and entirely futile and vain for the Fiji Government to plead for an immediate reopening of the emigration question.

On the other hand, if the steps, which each enquiry in its turn has emphasised more and more strongly, be taken,—if the indenture is immediately closed down, if the separate married quarters are erected, if the hospitals are provided with matrons, if Indian education is pressed forward, if passages are provided for Indian men to bring back wives from India,—if these things are undertaken in real earnest, then the question of emigration might be reopened with some chance of a hearing in India, and I should personally welcome it under wholesome conditions for, as I have so often said, there are few places more healthy and prosperous for intending Indian emigrants than Fiji.

C. F. ANDREW

CAUSES OF FREQUENT FAMINES IN BANKURA

THE geology of the district of Bankura makes the region naturally liable to famines. Hardly had the famine relief measures of 1915-16 been suspended, their accounts adjusted and reports published, when the world-wide scourge of Influenza took its toll of human life, resulting in privations and utter devaluation of the survivors. The last famine was terrible enough, but with these records of the immediate past what the coming one forebodes imagination shudders to depict. That immediate relief work is imperative will be realised from the following appeal of the District Magistrate of Bankura to the general public:—

You will doubtless have noticed the Government Communique which was recently issued drawing attention to the failure of the winter crop in the Bankura District last year. At present the part most affected is the South and West of the Sadat Sub-division, particularly those positions where there is high land. In these places a great part of the winter crop withered and what sowed was only fit for use as fodder. The estimated outturn of this crop was only 4½ as, and consequently distress prevails in some of the thanas.

You will not have forgotten the great famine of 1915-1916. The majority of the distressed people were then saved by the relief given by the Government and by the charity of the Public. But though good harvest have obtained in the last two years yet the people have not been able to recover altogether from the effects of the famine as much of the surplus has been absorbed by the repayment of loans and arrears of rent, and the price of most necessities of life as you are aware has been abnormally high.

In order to relieve the present distress the District Board have already opened some centres for gratuitous relief and are providing work for the labouring classes with the intention of gradually extending such work to the cultivators and people of the middle class. Government are issuing Takavi loans but there are many who have no land or whose land owing to the previous famine is already mortgaged. Such people cannot obtain any loan and they are therefore in a helpless condition.

A Public Meeting was held at Bankura on the 18th instant (February 1919) under the Chairmanship of the District Magistrate in which it was resolved to collect additional funds. Subscriptions have been promised by the local public, but we feel that the state of things calls for an appeal to a wider public. The Committee have decided to spend their funds in the following ways:—

1. In giving help to the indigent "Bhadrolak" who otherwise starve in secret as they have too much respect to beg.

2. In the free distribution of cloth and medicine.
3. In making advances to artisans etc. etc.
For these objects the District Board have as yet been unable to make any provision. We therefore appeal to the public.

In surveying the history of Bankura, its prosperous past, and its gradual decline, culminating in the present acute state of distress, one at once realises the thesis of Professor Geddes of how Place determines the Work, and this in turn the People, who in their turn react on these, which he has explained in his numerous Regional Surveys and in his recent lectures at the Bose Institute.

According to the *Bankura Gazetteer*, the present district formed a part of the old Bishnupur Raj, whose territory included portions of the Santal Pargana in the north, of Midnapur in the south, of Burdwan in the east, and of Chota Nagpur in the west.

Thus the history of the present district of Bankura is identical with the history of the Bishnupur Raj. "The ancient Rajas of Bishnupur trace back their history to a time when the Hindus were still reigning in Delhi." * * * Indeed they could already count five centuries of rule over the Western frontier tracts of Bengal before Bakhtiyar Khilji wrested that province from the Hindus" (R. C. Dutt). Leaving the narration of the decline of the Bishnupur Raj to the historians, let us see what determined the growth and development of the regional industries and agriculture with attendant prosperity and their civic and artistic achievements.

Bishnupur must have been selected for the stronghold and seat of the Raj for its admirable defences, natural and possible. The turbulent Damodar guarded the northern side, the main direction from which invasions were likely to come, while other rivers and extensive jungles protected different sides. The immunity of the region from floods and its hard laterite soil were suited for the construction of a very strong fort. The jungle flood was utilised to the utmost advantage in making a series of artificial lakes, alike for

defence and for irrigation. The seven lakes apart from removing the scarcity of water, have long been the pride and beauty of the place. Adequate alluvial deposits being absent, this region could not develop to agricultural importance. Yet through the encouragement of the Raj, with needed irrigation works the flower and fruit gardens were fostered. Even so late as 1872 over half the adult men were non agriculturists. But the stretch of extensive jungles produced silk, tussur, cocoon, lac, varied kinds of vegetable dyes, medicinal herbs, wax and other forest products, which determined and developed the industries for which the place was famous.

The seat of the Raj established order and security, which must have made the different caravan routes to Ghatol (a big centre of commerce) and Tamruk (the great sea port of Bengal) converge there. Given law and order, exchange of commodities and ideas intercourse friendly and competitive. Bishampur soon grew to a great centre of industry and culture. Thus for the military needs they had a very remarkable gun foundry to which the cannon *Dalmadal* of non rusting wrought iron (12 ft 5½ in long diameter of the bore 11½ in) of which a picture has been given in the March issue of this Review, bears eloquent testimony. To meet the varied demands of agricultural, domestic, religious and artistic needs other metal industries flourished. Weaving must have been the chief industry, as could be seen from its survival even up to the present time. Industries were hereditary family occupations in which the different members of the family took their respective parts according to age and sex. Thus reeling is done by the old women winding of the reeled silk in different degrees of fineness is done by the boys, women help in dressing and bleaching while the men do the actual weaving. Similarly with other industries.

Unlike the existing state with freedom of occupation all the ability of the literate people is being directed in swelling the already over-crowded ranks of clerks and lawyers and of the illiterate in increasing the number of peasants. The caste system despite its limitations compelled the people to get distributed in different activities.

The up and down traffic secured an

extensive market for raw materials and industrial products. New demands stimulated fresh efforts, and each of these secured further income and enterprise. Their prosperity and immunity against hostile attacks afforded opportunity to develop their social and industrial organisation. Art rose to a high degree of perfection. The place is still famous for its artistic silk weaving and clay modelling. In music it still lends Bengal. The numerous temples, which writes Dr Bloch, * 'represent the most complete set of peculiarly Bengali style of architecture', whose photographs have been published in a previous number of this Review, record the religious zeal of the people and their architectural achievements.

Thus we see that it was to the seat of the Rajas, who encouraged the industries and arts and maintained a balanced co-operation between the industrial and agricultural activities of their territory that the region owed its prosperity. The industries supplied the needs of the agricultural district while its fertile eastern portion provided against the scarcity of food to which the western region is naturally liable, especially as in those days there was neither the necessity for the export of grains nor the present alluring facilities. The harmonious relation between the landlords and the tenants secured an active interest in increasing the productivity of the land, which fostered irrigation and other agricultural activities. Cows as the indispensable animals of every Hindu household and bullocks for carts and *chhala* (pack bullocks), the chief means of transit, inadequately supplemented the output of manure. The use and hoarding of coin were limited as experience and even the standard of respectable ability and commonsense demanded every respectable agriculturist to have a granary which entailed provision against failure of crops even for two successive years.

The tenets of religion, then strictly observed, were potent in maintaining a high standard of personal hygiene. The religious merit and social respectability attached to the excavation and repairing of tanks, improvements and conveniences of public thoroughfares by planting shady

* Report Arch Surv Ind for 1903-4

trees and digging of wells ennnraged and ohtaoied adequate civic activities Religious festivities, *yatras* and *kathakatas* popularised the great epics *Ramayana* and *Mahabharata*, which had a great cultural influence, alike intellectual, romantic and spiritual

Thos we see with their growing industries the people were prosperous, and their civic activities increasingly improved the region alike in productivity, health and beauty

The excessive religious tendency of the saintly Raja Gopal Singh who reigned between 1730 and 1745, made him neglect his administrative duties and military requirements He was unable to cope with the ravages of Mahratta invasions, and the lawlessness and disorder that followed

Already impoverished by the Mahratta raids the resources of the (Rajas') family were still further reduced by the famine of 1770 during which more than half of its estate relapsed into jungles The earlier years of the British administration in the region were rather than relieved its difficulties Its ruin was completed by family dispute, costly litigation and crushing revenue

The fate of the region followed that of its Rajas, since it was to the seat of the Raj that Bishnupur owed its prosperity To begin with, the passing of the fertile eastern portion of the territory into the hands of the Bardwan Raj destroyed the balance which the Raja maintained between the agricultural and industrial activities, and made the region more liable to famines The subsequent conditions which developed may be summarised as follows The bulk of the region passed into the hands of the Bardwan Raj and other non resident proprietors, of whose effect Mr O' Malley writes —

He (Maharaja of Bardwan) parcelled out his vast estate into tenures known as *patwar-taluk* the grantees of which not only gave him a high premium but covenanted to pay an annual rental in perpetuity This system left him a mere annuity on the land The *patwaris* again sublet on similar terms, and the result has been to create a class of persons living on small fixed incomes and without interest in the tenure This has caused the disappearance of the old feudal spirit and disintegration of the relation between landlords and tenants who no longer have that common solidarity of interest which used to exist. The surplus grain in former days was spent in works of public utility and a large village would have good tanks and

baibung ghats, while its temples were carefully kept up and religious festivals lavishly observed

Hitherto all the landlords were resident, and the code of administration, and the old social and religious culture made them responsible for the health and well being of tenants for the right of rental Now the remarkable order and peace established by the British Government has made the realisation of rent very exact, while the corresponding activities of the landlords, which their rental entails, have not been forthcoming The landlords increasingly becoming non resident spend their incomes elsewhere in luxuries which do not help any section of the community The resident ones such as are still surviving spend their incomes in fighting law suits Thus not only has no fresh irrigation enterprises been undertaken but the existing tanks and bunds are allowed to get silted up and worse — being definitely filled up where possible for cultivation with diminishing water area every year Further, for the establishment of two railroads through the district, a considerable portion of good arable land had to be acquired For each acquisition there has been a definite shortage from which it could not revive to the former acreage, even with favourable distribution of rainfall Thus from the Government statistics available we find that the agricultural area has diminished considerably The average normal net area cropped has diminished by about 16 per cent since 1890 to 1915

1890 to 1895, the normal average of net area cropped was	640 680 acres
1910 to 1915	536,200

Diminution 104 480 acres

Industries — The causes of the decline and ruin of Indian industries are too well known for repetition The belated survivals of such industries as the people's religious beliefs and artistic demands still maintain and whose limited demand alone does not encourage their production by machinery, are suffering from lack of proper marketing and from the effects of war The local industries used to supply almost all the demands of the people Thus in 1813 Warren Hastings when asked about the probability of demand for European commodities by the Indian population, replied :

* L. S. O. Malley—Bengal District Gaz.—Ban
kura p. 35, O—
† Ibid, p. 62

"The supplies of trade are for the wants and luxuries of a people. The poor in India may be said to have no wants. Their wants are confined to their dwellings, to their food and to a scanty portion of clothing, all of which they can have from the soil they tread upon."

In succeeding years the luxuries and wants of the people have increased on the one hand, and their industries been ruined on the other. Of the existing condition of cotton weaving and spinning I have already spoken in a previous article in this Review,† and its general condition is well known. In the district, of all the varied industries which once flourished, only silk-weaving, conch-shell, and bell-metal still struggle on. Conch-shell industry is being affected by the introduction of glass bangles. Tin trunks have replaced bambaa and cane pantras. Artistic bamboo and cane thatch-workers, who were the better class of pantra-makers, have lost their living. The high price of raw materials due to excessive speculations of the capitalists, and the exorbitant profits of the middlemen, the general rise of prices all around on account of the War, the frequent famines, malaria and, lastly, the present epidemic of Influenza have brought an alarming condition of the industrial people.

The earnings of the silk-weavers of Bishnupur, one of the best class of industrial people of Bengal, has been reduced on an average to 12 ns. a day, half of what it used to be in pre-war days. Their present daily expenditure for a family of an average of 3 adults and two children is about annas 12-6 pies, without taking into consideration the doctor's bill, *sraddh*, marriages and other items. The daily earnings of the Bankura weavers are barely enough for their food, being on an average as. 9 only. The condition of the tussar workers is worse still, their earnings being reduced from 11 ns. to 5 as. per day. The earnings of the brass and bell-metal workers have been reduced by 50 per cent being now as. 4, 5, and 7 only according to the class of workers and this has made about 25 per cent. of these workers to give up their profession.

Thus the number of persons dependent on agriculture is increasing. In the year 1872 less than 50 per cent. of the popula-

tion were dependent on agriculture, in 1901, 60 per cent. and while in 1911 it has gone up to 73.9 per cent.

While on the other hand, the average net area of cultivation has diminished by 16 per cent. Thus the number of persons depending on agriculture increasing on diminishing area of cultivation has brought on the inevitable consequences.

Railroads:—Acknowledging all the necessities and obvious advantages of the Railways and can not help ascertaining how they have affected the people. With the first establishment of a railroad from Ranigunj to Hawrah, though outside the district boundary, the seasonal navigation ceased, and the boat-builders and boatmen, though in a minority, have lost their living. Importation of cheap machine-made goods was facilitated and exportation of grains increased. For the establishment of the Bengal-Nagpur and the Bankura-Damodar Railways through the district, the acquisition of land affected agriculture seriously. Cattle traffic is increasingly diminishing, with loss of occupation of the cartmen and bullock-owners and deterioration of cattle. The railroads have disturbed the natural water-courses of the district and caused the lodgment of necessary water in pools, which is very insanitary. They have not helped the local industries in any way, on the contrary the import of cheap luxuries and export of grains have enormously increased. They have given rise to a new class of speculators who are artificially keeping up the prices of food stuff. Thus the price of fish in town has gone up from 4 as. to 8 ns. per seer. Good cow's milk is hardly obtainable. While the speculators buy 6 seers of buffalo milk per rupee, the local retail price is 2 seers per rupee. Undoubtedly the railways could relieve distress by the import of grains provided the people had the means.

Administration. The existing system of settlement of disputes in law-courts situated as they are several miles away from the villages, is not suited to the life and requirements of the people. Besides having to maintain a growing crop of lawyers for the settlement of disputes, the loss of time and money is very great, to say nothing of the vices of litigation and perjury learned in law courts.

To provide against future famine the

* Minutes of Evidence, etc., on the Affairs of the East India Company (1813) p. 3.

† Bengal Weavers and Their Industry—Modern Review, —July, 1918.

first thing necessary is proper irrigation. The undulated surface of the district and the numerous streams make the reservation of water easy enough by damming the natural water drainage. The reexcavation of the existing tanks, bunds and *khaals* should be undertaken at once as a relief work on a larger scale than hitherto. This alike for sanitation and agriculture. Well irrigation is necessary in certain parts of the district which will mainly help the aboriginal population of the district and this should be introduced by the Government. About canal irrigation in general Mr R. C. Dutt writes

"The discussion about the comparative merits of canals and railways was carried on, and as might be expected preference was given to railways which facilitated British trade with India and not canals which would have benefited Indian agriculture. £2,000,000 were spent on railways resulting not in a profit but in a loss of £40,000,000 to the Indian taxpayer up to 1900. And so little were the interests of Indian agriculture appreciated that only £5,000,000 were spent on irrigation up to 1900."

Since this district is liable to such frequent famines and the population dependent on agriculture is increasing and the average of net area cropped decreasing the question of canal irrigation ought to engage the immediate attention of the Government despite the cost. The reexcavation of tanks and ponds should be made compulsory by issuing loans where necessary. The present activities of the District Agricultural Officer are inadequate and require further extension. The export of foodstuffs must be controlled and definitely prohibited till the final forecast of crops becomes available.

The agricultural improvements alone cannot effectively meet the situation. Industries must be revived along with it. For this we require Co-operative Societies with the following definite objects

- (1) To reduce the cost of articles by supply of raw materials at the cheapest possible rates to the workers directly.
- (2) To improve the method of production by introduction of such improved machinery and implements as are possible under the existing conditions.
- (3) To secure a better market by introducing improved patterns and designs of varying sizes and qualities to meet modern

demands like Indian and foreign for useful and artistic purposes.

(4) When necessary to establish workshops on contract labour system with improved machinery and methods of production which would be the best means of their introduction.

They will also have a separate branch for the following purposes. To undertake the reexcavation of such tanks as the proprietors could not or would not undertake. The yield of fish and the produce of the vegetable garden on the excavated silt will give a reasonable return for their investment subsequently these to be made over to the proprietors as soon as the expenses are realised. They should also start poultry farming on a small scale at the beginning. With the help of the Government cattle breeding should be undertaken by this Society since the breed of cattle of the district is the most deteriorated in India so much so that they do not earn their keep. They should start a Co-operative granary in each village and deal with the surplus grains. They should export raw materials such as forest products and hides which are profitable business. Thus in this organisation there will be scope for the activities of the different sections of the community.

The habit of co-operation which the life of the people determined and their old society maintained has been destroyed by the advent of the modern mechanical age. As such Co-operative organisations have to be started by the Government with the help of philanthropist bodies as the Ramkrishna Mission and the Social Service League and local public spirited persons. Once started with forethought and care it will increasingly be able to recruit members from the workers themselves. An experienced and impartial local business man should be in charge to make the undertaking a business success.

The Society has to be registered for a fairly large number of shares of not exceeding Rs 5 the bulk of which should be reserved for the agricultural and industrial people. To start with the Government and the landlords should be asked to advance loan to this Society at the minimum possible rate.

The researches of scientific bodies being inaccessible to the people their conclusions should be popularised in the vernacular and introduced as text books in the

local *pathshalas* and schools. These should coötin the fundamentals of agriculture, local method of production, its defects and merits, if any, compared with those of other countries, and the line of possible improvements and also giving a small summary of the work that is being done in India along the line. For these and other real educational purposes every *pathshala* and school should have garden-excursions to the neighbouring fields and gardens would be most helpful. For the existing industries similar textbooks should be introduced, with demonstration of the improved methods of production and by taking the boys round the workshops of the best worker of the locality. In this way it will be possible to bring the modern education to some definite relation with the life activity of the people. With the help of the experienced local agriculturist and industrial worker, these could be easily introduced and with very little additional expenditure.

Establishment of industrial and technical schools in large numbers may not yet be possible, but the most practical method of improvement of the industries would be to send experienced local industrial workers to different industrial schools, and to places where improved methods of manufacture have been introduced. These experienced workers will be able to pick up within a very short time the necessary improvements which could be effectively carried out in their local conditions. Moreover the suggestions of one of their own members stand a much better chance of acceptance than those of foreign

specialists. The expenses and allowances of these people are to be met by the District Board. The Co-operative Society should advance loans for the introduction of improved machinery.

An annual scholarship for the best District report in the vernacular on the industrial and agricultural conditions and their possible lines of development will be the best means of spread of industrial and agricultural information to the workers, and would also create an intelligent interest among the educated people in the activities of the region, which is at present amazingly rare.

Scholarships should be established by the Government for sending students abroad on the merit of their knowledge of the existing local industries and their possible developments by introduction of modern scientific appliances and organisation.

With these enterprises, started on the lines indicated above, the people will begin to realise what the modern age has brought and benefit therefrom. Proper irrigation enterprises will improve agriculture; Co-operative societies will increasingly revive the possible industries with corresponding prosperity, health and happiness. The Regional interest, initiated in schools, developed through youth by the demands of the Co-operative organisation, and maintained by the experience and wisdom of age, may evolve a new order of life surpassing the little village republics of old to wider interest and intelligent co-operation.

MATISWAR SEN.

HISTORY OF SHIVAJI, 1671-74

I

THE second sack of Surat and the Maratha ravages in Baglana roused Anrangzib to a sense of the gravity of the situation in the Deccan. As early as 28th November, 1670, he had issued orders transferring Mahabat Khan from Afghanistan to the supreme command in the Deccan. The events of December

only deepened the Emperor's anxiety. On 9th January 1671, he sent orders to Bahadur Khan to leave his province of Gujrat and command one of the imperial army corps in the Deccan, Dilir Khan being ordered to accompany him. The Emperor also repeatedly talked of going to the Deccan and conducting the war against Shivaji in person, but the idea was ultimately dropped. Daud Khao was

instructed to attack Shivn wherever he was reported. Amar Singh Chandawat and many other Rajput officers with their clansmen were posted to the Deccan. Reinforcements, money and provisions were poured into Baglana in Jan 1671 (*Akhbar*, 13 1 2, 8 14 16, *M A* 107).

Mahabat Khan left Burhanpur on 3rd January 1671 with Jaswant Singh reached Aurangabad on the 10th, paid his respects to the viceroy, Prince Muazzam and set out to join the army near Chandor. Daud Khan had been appointed his chief lieutenant and commander of his vanguard, but he despised this office as below his rank, and begged the Emperor to recall him (*Akh* 13 12 *Dil* 102).

We shall now trace the history of the war in the Chandor range. Late in December 1670 Shivaji's men had laid siege to Dhodap, and Daud Khan had started on the 28th of that month to relieve the fort. But the qiladar Muhammad Zamana, successfully repelled the attack without his aid. Daud Khan had next advanced to the relief of Salhur but had been too late to save it as we have already seen. In January 1671 he held a fortified base near the Kanchana pass from which he sallied forth in every direction in which the Marathas were heard of. From the Emperor's letters it appears that Daud Khan was under a general order to fight everything that might go wrong in Baglana. Once after a night march he fell on a body of the enemy near Hatgarh and slew 700 of them (*Dil* 101, *Akhbarat*, 13 15).

Late in January 1671 Mahabat Khan joined Daud Khan near Chandor and the two laid siege to Ahivant which Shivaji had recently taken. After a month had been wasted in a fruitless exchange of fire the fort was entered from the trenches of Daud Khan and the garrison capitulated to him. Mahabat Khan became furiously angry at losing the credit of this success. He had been previously treating Daud Khan as a *5-hazari* with discourtesy, and now the relations between them became strained to the point of leaving a garrison to hold Ahivant. Mahabat passed three months at Nasik and then went to Parnur (20 miles west of Ahmadnagar) to pass the rainy season (June to September) there while Daud Khan was recalled to Court (about June).

There was excessive rainfall that year and many men and cattle perished of pestilence in the camp at Parnur. But while his troops were dying Mahabat Khan attended daily entertainments in the houses of the nobles by turu. There were 400 dancing girls of Afghanistan and the Punjab in his camp, and they were patronised by the officers (*Dil* 106).

II

The Emperor was dissatisfied with Mahabat Khan for the poor result of his campaign in the first quarter of 1671 and his long spell of inactivity afterwards and suspected him of having formed a secret understanding with Shivaji. So, he sent Bahadur Khan and Dilir Khan to the Deccan next winter. They marched from Gujrat into Baglana, laid siege to Salhur (now in Maratha hands), and leaving Ikhlas Khan Miana, Rao Amar Singh Chandawat and some other officers to continue the siege proceeded towards Ahmadnagar (*Dil* 107, *O C* 3567).

From the environs of Ahmadnagar, Bahadur Khan advanced to Supa (in the Puna district) while Dilir Khan with a flying column recovered Puna, massacring all the inhabitants above the age of 9 years (end of December 1671). Early in January 1672 Shivaji was at Mahad draining his forts of men to raise a vast army for expelling the invaders from the home of his childhood. But the pressure on Puna was immediately afterwards removed and Bahadur Khan was recalled from this region by a severe

become as far as Nasik, Trimbak and both taken 4 castles. Haturat (=Ahavant) and Salhur are the names of two of them. (F. R. Surat 105. Bomb. to Surat 8 Apr 1671. But the Mughals did not recover Salhur though Sabb (3) says so).

1. K. Surat 106. Bombay to Surat 13 Jan. and 14 Jan. 1672. The town taken by Dilir Khan is spelt in the English Factory Records as Puna Chakine and Puna Chakins and described as a place of great concern in a very large plan in the heart of all Shivaji's upper country. The description suggests Puna and not Chakan, but we have no direct evidence that Shivaji got back Puna and Chakan from the Mughals by the treaty of 1665 or that of 1668. The English record rumours this place Dilir Khan killed Kartaji Gujar the Maratha Lieutenant General (the Pratap Rao). Supa a few lines above may easily be a copyist's error for Puna in the Persian Ms. of *Diksha* 107 which Chakins 119 says that the Marathas recovered Chakan by force in 1666 or later.

* *Dil* 102 104 106. *Akh* 13 15. Mahabat Khan

disaster to Mughal arms in Baglana. There, the division left to besiege Salbir was attacked by Shiva himself with a large force. After an obstinate battle, Ikhlās Khan and Mubakam Singh (the son of Rao Amar Singh Chandawat) were wounded and captured, with 30 of their principal officers,* while Rao Amar Singh and many other commanders as well as several thousand common soldiers were slain, and the entire siege camp was taken by the enemy. Shortly afterwards Shivaji captured Mulhir, and then putting fresh men, munitions and provisions in the two forts, he hurried back to Konkan unmolested. This took place in the second half of January 1672. Shivaji's prestige and confidence in his own power were immensely increased by these successes. Surat was now in constant terror of him, as he entirely dominated Baglana. (*Dil.* 107; Ishwardas, 60 b; *F. R.* Surat 87, *M. Gray* to Bombay, 15 Feb. Vol. 106, Bombay to Surat, 16 Feb. 1672; *Sabb.* 74; *K. K.* ii. 249.)

From the English records we learn that Shiva now "forced the two generals (*viz.*, Bahadur and Dilir), who with their armies had entered into his country, to retreat with shame and loss."† But the Persian accounts are silent about it. We can, however, be sure that the Satnami rising at March and the rebellion of the Khaibar Afghans in April next, made it impossible for the Emperor to attempt the recovery of his prestige in the Deccan, and Shiva was therefore left the master of the situation throughout the year 1672. (*M.A.* 115-116).

Bahadur Khan returned with failure from Baglana, encamped for some time on the bank of the Bhima, and then went back to Ahmadnagar to canton for the rains. About May 1672 Mahabat left the Deccan for Hindustan, and a month later Prince Muazzam did the same. Bahadur Khan was appointed commander-in-chief and acting viceroy of the Deccan, in the place of these two, becoming substantial *Subahdar* in January 1673 and

holding that office till August 1677. (*Dil.* 108-109; *M. A.* 121).

III

So greatly was the spirit of the Mnrathas roused by their victory over Ikhlās Khan, capture of Mulhir, and the expulsion of Bahadur and Dilir from Puna that their activity continued unabated even during the hot weather and the rainy season of this year. About 5th June, a large Maratha army under Moro Trimbak Pingle captured Jawhar from its Koli Rajah, and seized there treasure amounting to 17 lakhs of Rupees. The place was only 110 miles from Surat, and adjoined the Nnsik district, from which it was separated by the Western Ghats. Advancing further north, he threatened the other Kali State of Ramnagar which is only sixty miles south of Surat. The Rajah fled with his family (about 19th June 1672) to Chikli, six miles S. E. of Gandavi. Even Gandavi was deserted by the people in fear of the coming of the Marathas. But the invaders speedily retreated from Ramnagar on hearing that Dilir Khan was assembling his forces for a campaign. Heavy rain stopped the activity of the Mnrathas for a few days. But soon afterwards Moro Pant, with his army raised to 15,000 men, returned to the attack, and took Ramnagar in the first week of July.

The annexation of Jawhar and Ramnagar gave the Marathas a short, safe and easy route from Kalian up Northern Kankann to Surat, and laid that port helplessly open to invasion from the south. The city became subject to chronic alarm, whenever any Marathas were heard of even 60 miles off, at Ramnagar.

From the neighbourhood of Ramnagar, Moro Trimbak Pingle sent three successive letters to the governor and leading traders of Surat demanding four lakhs of Rupees as blackmail, and threatening a visit to the city in the case of their refusal. The third of these epistles was very peremptory in tone; Shivaji wrote, "I demand for the third time, which I declare shall be the last, the *chauth* or quarter part of the king's revenue under your government. As your Emperor has forced me to keep an army for the defence of my people and country, that army must be paid by his subjects. If you do not send me the money speedily, then make ready a large house for me, for I shall go and sit down

* They were released after a time and returned to Ahmadnagar (*Dil.* 116). On the Maratha side also many soldiers were slain and only one chief of note, Sarya Rao Kakre, a comrade of Shivaji's youth.

† *O. C.* 36 33, Surat to Co., 8 Apr. 1672. Ramaji Panze's heroic battle with Dilir near fort Kancra (*Sabb.* 73) must be placed here.

there and receive the revenue and custom duties, as there is none now to stop my passage."

At the first news of the arrival of the Maratha army in Ramnagar, the governor of Surat summoned all the leading Hindu and Muhammadan merchants and proposed that they should subscribe Rs 25 000 for engaging 500 horse and 3 000 foot to defend the town for two months. Officers were immediately sent to make a list of all the Hindu houses in the town for assessing this contribution. But no soldiers were enlisted, and the governor pocketed whatever money was actually raised for the defence.

On the receipt of the third letter from Shiva, the helpless citizens were seized with a panic. The rich went to the governor that very night and wanted permission to remove their families to Broach and other towns for safety. He kept them waiting till after midnight gave them the permission but retracted it next morning, when he held a second conference with the townsmen asking them to raise the black mail demanded—the merchants paying one lakh and the *desais* raising two lakhs from the cultivators of the villages around. After a discussion lasting a day and a night, in which he reduced his demand to Rs 60 000, the people finally refused to pay anything as they knew too well that he would appropriate the money instead of buying the enemy off with it. Thereafter, every time that there was an alarm of the approach of Shivaji's troops the citizens of Surat hastened to flee from the town, but the governor shut the gates to keep them in!^{*}

IV.

From their base in the Kol country of Jawhar and Ramnagar, a Maratha force under Moro Trimbak easily crossed the Ghats into the Nasik district, so the middle of July 1672 plundered and occupied it. Jadun Rao Deccan, a great grandson of Lukhji Jadar (the maternal grandfather of Shivaji) with 4000 men was the Moghal thanahdar of Nasik Trimbak. He was defeated and captured after losing

many of his troops in battle. Siddi Halal, the thanahdar of Vam Dindori (or North Nasik), was also defeated and his charge looted by the Marathas. For this failure, both officers were sharply reprimanded by Bahadur Khan, and in anger they deserted to the Marathas, with two other officers and all the men of their "four great regiments of horse" (October). Other desertions were apprehended, and Dilir Khan was left in great danger with a weakened army to defend the province of Gujarat against the exultant enemy (*Dil* 116. *F R* Surat 87. Surat to Bombay 20 July 1672. *Vol* 3. Surat 26 October, Bombay to Surat 18 October, in *F R* Surat 106. *T S* 33 b for the 2 deserters.)

On 25th October a large Maratha army appeared at Ramnagar again, and Surat trembled in alarm, especially as a party of Shivaji's horse advanced past Gaodari to Chikli, 12 miles further towards Surat. But that city was not Shivaji's objective now. He made a lightning raid into a different corner of the Moghal Empire.

He sent his light cavalry to plunder Berar and Telugana.^{*} The viceroy Bahadur Khan on hearing of it, set out from Ahmadnagar due eastwards, left his heavy baggage at Bir (70 miles to the east, and Qandahar and arrived as fast as he could near the fort of Ramgur (18 35 N. 79 35 E) in pursuit of the raiders. But they had been two days beforehand with him, looted the village at the foot of the fort, and carried off the families of most of the inhabitants for ransom. So the baffled Moghal general returned by way of Indur (23 miles due west). Entering the Qutb Shahi territory, he ravaged the land of the instigation of Dilir Khan. The Marathas in their retreat divided into two bodies, one escaping south into the Golkonda State and the other turning northwards to Chanda, and thence westwards into Berar proper. Dilir Khan was sent off to pursue the first division while Bahadur Khan tried to cut off the retreat of the second.

Sending his heavy baggage back to Aurangabad from the neighbourhood of the village of Khair, (?) the viceroy hastened by way of Partur, Shillode and Peddola, and arrived near the pass of Antur (38 miles north of Aurangabad). Here the

^{*} Conquest of Kol country. *F R* Surat *Vol* 3, consult Surat 21 June 1672. *Vol* 8. Surat to Bombay 21 and 22 June; *Vol* 106, Bombay to Surat, 5 July. *O C* 3043, *F R* Surat, *Vol* 8, Surat to Persa, 1 November 1673. *Sabb* 72.

^{*} *D.* 116 120 122 (full).

Marathas turned at hvy, and attacked the Mughal Van under Sujan Singh Bundela. But they were repulsed and pursued till evening many of the horses of traders and other kinds of booty were recovered from the enemy and restored to their owners. Next day the Mughals crossed the pass and encamped at Durgapur four miles from the fort of Antur.

The following day, when they were marching to Aurangabad in rather straggling groups before the time fixed for the starting of the general, one division of 10 000 imperialists was charged by 750 picked Maratha cavalry on the left of the pass of Bakapur, six miles (from Durgapur?). After an obstinate battle, in which the Mughals were reinforced by their general, the Marathas retreated, leaving 400 of their number dead in the field. The credit of this victory belongs to the Bundelas under Suhkarn, whose son Dalpat Rao was wounded in the fight.

The division under Dilir Khan headed the other Maratha band off into Byapur territory, capturing much booty and rejoining Bahadur Khan. That general encamped his troops at Pathri, 76 miles S. E. of Aurangabad. This Marathan raid into Khandesh and Berar, unlike their first incursion in December 1670, was completely foiled, and the Mughal troops showed commendable mobility and enterprise (Nov-Dec 1672).

To guard against a repetition of these two Maratha penetrations into Khandesh from Balaghat Bahadur Khan set up gates across the tops of the chief passes and posted troops with artillery at each of them. Byaji Nayak, Nimbalkar, a great Deccan zamindar and father of Shiva's son-in-law Mahadji, with his family, was now won over by the Mughals (Dil 122 '3, 125).

V

Maratha activity, thus shut out of Khandesh and Berar, burst forth in

another quarter (Jan 1673). They next raided the Puna district. Bahadur Khan left his baggage at Chamargunda, hastened to meet the invaders, and defeated them after a severe battle. Then he encamped at Pedgaon on the north bank of the Bhima, eight miles due south of Chamargunda. This place became the residence of his army for many years afterwards, and here a fort and town grew up from their cantonment, which the Emperor permitted him to name *Bahadurgarh* (Dil 126).

Pedgaon occupies a position of great strategic importance. It stands on the plain just clear of the long mountain spur running eastwards from Puna. From this place the Mughal general could at will move westwards along the north of the range to protect the valleys of the Mula and the Bhima (the North Puna district), or along the south of it to guard the valleys of the Nira and the Baramati (the southern portion of the district). Northwards he could communicate with his great depot of arms and provisions at Ahmadnagar, without having to cross any river (except at the foot of that fort), and southwards he could easily invade Byapur through the Sholapur district. In short the cantonment at Pedgaon served as the Mughal advanced base for some years after this time, exactly as Aurangzeb's camp at Brahmapur, 90 miles S. E. of it, did twenty-two years later, when the Mughal empire had extended further south.

It was most probably in this year (1673) that Shivaji met with a sore disappointment. The fort of Shivnir, a mile west of Junnar, was no doubt of strategic importance, as it guarded the Mughal frontier in the north of the Puna district and blocked the shortest route by which he could sally out of North Konkan to overrun Mughal Deccan. But what gave it the greatest value in Shivaji's eyes was that it was his birthplace. The Mughal governor of Shivnir was Abdul Aziz Khan, a Brahman convert to Islam and one of the most faithful and valued servants of Aurangzeb. Shivaji promised him 'mountains of gold' for surrendering the fort into Marathan hands, and he, pretending consent, received the money, appointed a day for the delivery, and asked Shivaji to send 7000 cavalry to take the fort over. But Abdul Aziz at the

* It is probably this campaign that is referred to in M.A. 175 among court news of 1673 in the following terms: "Bahadur Khan had defeated Shiva after a bloodied match of 120 miles, made large captures of spoils and sent them with Dalpat to the Emperor who viewed them on 22 Oct."

† They are named in D'Neale as Fardepur, Tenagar, Malkapur, Barapuri, Rajdhar, Lakanwarah, Deogaon, Kharwad, Dharwad &c.

same time secretly informed Bahadar Khan of the plot, the Maratha army fell into an ambushade planned by the Mughals, and retired in disappointment with heavy loss (Fryer, I 339-340)

VI

In another direction, however, a wide door of conquest was now opened to the Marathas. Ali Adil Shah II died on 24th Nov 1672, and in a few months the government of Bijapur fell into disorder and weakness. This was Shivaji's opportunity. On 5th March 1673, he got possession of Panhala a second time by bribery, and early in September he secured the hill fort Satara by the same means. In May his men under Pratap Rao Gujar hurried into the inland parts of Bijapur Kanara looting Hubli and many other rich cities. But they received a great check from the Bijapur general Bahlol Khan, who repeatedly defeated the Maratha rovers and expelled them from Kanara, and then (in June 1673) took post at Kolhapur, to watch the road and prevent their return. Soon afterwards the rains put an end to military operations and Maratha activity in this region was checked but for a time only (B S 397-399 O C 3779 F R Surat 106 Bomhay to Surat 16 Sep 1673, Datch Records vol 31 No 805, O C 3800)

As Mr Gerald Aungier, the English President of Bomhay, wrote on 16th Sep 1673 'Shivaji hears himself up manfully against all his enemies and though it is probable that the Mughal's army may fall into his country this year and Bahlol Khan on the other side yet neither of them can stay long for want of provisions and his flying army will constantly keep them in alarm, nor is it either their design to destroy Shivaji totally, for the Umara's maintain a politic war to their own profit at the king's charge and never intend to prosecute it violently so as to end it' (F R Surat, 106)

Shivaji took full advantage of his enemies' moral and political weakness. Early in October 1673 he was reported to have made 20,000 sacks 'ready to convey what plunder he can get, having

also a considerable flying army ready for that action. Soon afterwards this army, 25,000 strong, led by Shiva in person, hurried into west Bijapur territory, plundering many rich towns and then passed into Kanara for more plunder. This work occupied him till the end of December. In the first week of that month he was at Kadra with 6000 men, and stayed there only four days. But his detachments were twice defeated at this time by Bahlol Khan at Bankapur and by Sharza Khan at Chandragara and forced to quit Kanara.

VII

It was probably in November or December of this year, while Shivaji was campaigning in Kanara that Bahlol Khan* marched from Bijapur with a large army (12,000 men according to the Maratha chronicle) to protect the Miraj Kolhapur district, and cut Shivaji's northern line of communication with his dominions by the Satara Panhala route. If this strategic move had succeeded the road for Shiva's return from Kanara through the Southern Deccan country would have been closed, while the Portuguese State of Goa would have barred the land route west of the Ghats and he would have been compelled to make the journey in ships or make a wide detour eastwards and try to force his way between Miraj and Bijapur and run the risk of attack on both flanks by the large Adil Shahi forces at these two places.

Pratap Rao Gujar the Maratha commander-in-chief was detached with a slightly larger force and artillery, to meet the danger. He tried to envelop Bahlol's army near Umbran, between

* Battle of Umran and Jesari. Sabb. 78 79 B S 399-400 (full but a little about Jesari) Chit 126 (has Sabse Navari for Jesari) Dg 274 (meagre) Narayan Shenvi writes from Raigad 4 April 1674.

Pratap Rai fell in the encounter of Shivaji's army with Bahlol Khan in a narrow passage between two hills who with six horsemen more were slain being not recovered by the rest of the army so that Bahlol Khan remained victorious (F R Surat Vol 83).

The place of the first battle is named Umbran in Sabb and Umran in Chit. The Indian Atlas gives neither but there is a Amrat 4 m east of Jath and 34 m N.W. of Bhapur which may have been the place. I have failed to trace Jesari. According to Duff's authorities Pratap Rao's appearance near Bijapur induced the Regent to recall Bahlol from Kolhapur and the latter general was intercepted by the Marathas on the way to

* F R Surat 106 Bomh to Surat 10 Oct 1673 G C 3910 F R Surat 83 Karwar to Surat 17 Dec

Miraj and Bijapur, cutting him off from his water supply. The battle raged all day with intense ferocity. Many were slain on both sides, the Marathas suffering less than the Bijapuris. After sunset, Bahlol induced Pratap to grant a truce, while he promised not to commit any further hostility against Shivaji. So, the Maratha army withdrew, instead of following up their success and capturing the whale of the stricken enemy force.

The Bijapuris with their numerous wounded, fell back on Tikata (13 m. west of Bijapur); but being reinforced appeared in the Panhala district again a few months later (Feb. 1674). Shivaji sharply censured Pratap Rao for having let Bahlol Khan escape, when he could have easily crushed him and ended for ever his frequent menace to the Maratha possessions in the Southern Desh tract and the roads leading across the Ghats to South Kanara. Pratap Rao, immediately after the battle of Umbrani, had dashed off to plunder parts of Golkanda, Telangana and Berar. On returning from this raid, which was utterly useless from the military point of view, he found Bahlol back near Panhala and received an angry message from his master saying, "Bahlol has come again. Go with your army, destroy him and win a complete victory. Otherwise, never show your face to me again!"

Stung to the quick by this letter, Pratap Rao sought Bahlol out at Jesari (near Panhala), "in a narrow passage between two hills." Smarting under his master's censure, he threw generalship to the winds, and rushed upon Bahlol followed by only six horsemen, the rest of his army hanging back from the mad charge. The gallant seven were cut down by the swarm of foes, and much havoc was done among the Marathas who were disheartened by the fall of their leader; "a river of blood flowed." Shivaji greatly mourned the death of Pratap Rao and repented of his angry letter. The dead general's relatives and dependents were well provided for, and his daughter was married to Raja-Ram the favourite son of the king.

Anand Rao, a lieutenant of Pratap Rao, rallied the disheartened army of his chief. Shiva appointed him* commander-

* I here follow the account of Narayan Shenvi, written at Raigarh, only a month later, on m-

in-chief in succession to Pratap Rao, gave him the title of Hambir Rao, and ordered him not to return alive without defeating the enemy. At this Hambir Rao went off with the whole body of his cavalry far into Bijapur territory in search of Bahlol. Dilir Khana with the Mughal army advanced promptly to the succour of his brother Afghana, Bahlol Khan. But Hambir Rao, not daring to fight two such large forces, retreated towards Kanara, making forced marches of 45 miles a day. The two Khana, unable to overtake the mobile Marathas, gave up the pursuit and turned,—Bahlol to Kolhapur and Dilir to Panhala, whence, after a 5 days' halt with the intention of besieging it, he fell back on his base [Purnir?].

Hambir Rao, penetrating further into Kanara, robbed the city of Peach,* 24 miles from Bankapur, in Bahlol's jagir, looting at least 150,000 *hau* worth of booty. Thence he returned with 3000 ox-loads of plunder. Bahlol and Khizr Khana, with 2000 cavalry and many foot soldiers, tried to intercept him near Bankapur, but were defeated after a desperate battle and put to flight with the loss of a brother of Khizr Khan. Hambir Rao robbed the entire Bijapuri army, captured 500 horses, 2 elephants, and much other prize. (March, 1674) †

But the Bijapuris had their revenge immediately afterwards. Bahlol Khan, "regarding the loss [of the elephants] as

formation supplied by Shiva's ministers. The new commander-in-chief's name is given Hasaji (Hansaji) Mohite by both Sabhasad and Chitnis. The latter adds (p. 126) that Hasaji attacked Bahlol's army when dispersed in pursuit, converted the defeat into a victory, and chased Bahlol back to Bijapur. *H. S.* 429 names Shiva's general Anand Rao, but in 1679.

* The whole of this paragraph and the next is based upon Narayan Shenvi's letter of 4th April 1674 (*P. R. Surat*, vol. 88) and the Dutchman Van Riebeeck's letter of 15th Dec 1674 (*Dutch Records*, vol. 32, No. 824), which latter calls the pillaged bazar "*Honspant*, situated on the borders of Bijapur near Bankapur." (*Honspant* near the ruins of Vijaynagar cannot be the place meant).

† Sabhasad refers to this campaign on p. 90, but gives other names to the place of battle and the Bijapuri general: "Hambir Rao went with his army to Sampragan (19 m. s.e. of Belgaum) Husain Khan Miana, a great Bijapuri general, with 5000 Pathans marched against Hambir Rao. A severe battle took place between them from noon till next morning. Many men, horses, and elephants were slain in Husain's army. He was captured with 4000 horses, 12 elephants, many camels and property beyond calculation. His whole army was destroyed." See also Chitnis, 146 *Shiva-dig*, 339.

a great disgrace to him became desperate attacked the robbers again and being reinforced secured such a victory that the robbers had to abandon 1000 horses and were pursued for a long distance. It was not the Maratha policy during a raid to fight pitched battles. So Haimur Rao rapidly retreated with his booty to Shirdi dominions left it there in safety and then (Apr 1) burst into Balaghat.

VIII

Late in January 1674 a Mughal army tried to descend into Konkan and cause a diversion in that quarter simultaneously with the Bijapur invasion of the Panhala region. But Shiva stopped the paths by breaking the roads and mounting a passade and keeping a constant guard at various points where the route was most difficult. And the Mughals had to return baffled. It was probably this expedition to which the English merchants refer in a letter written at the end of January 1674 in the following words: Dhir Khan hath lately received a rout by Shivaji and lost 1000 of his Pathans and Shivaji about five or

six hundred men. If so Dhir Khan had either made a rash frontal attack on one of the entrenched passes or fallen into an ambuscade of the Marathas. Throughout these months (December 1673 to March 1674) Shivaji's wars with Adil Shah and the Siddis were carried on languidly with only occasional outbreaks of vigour. The soldiers on both sides were weary of war and their commanders not in earnest to end this paying business. The winter rains of this year were very heavy and bred pestilence. Shirdi in December and January was compelled to distribute his horses throughout his dominions in order to stable them in comfort.*

Soon afterwards the Mughal power in the Deccan was crippled. The rising of the Khairab Afghans became so serious that Aurangzib had to leave Delhi (7th April) for Hassan Abdal in order to direct the war from the rear and next month Dhir Khan was called to the North western frontier. Bahadur Khan was left alone in the Deccan with a greatly weakened force. This lull in the war was utilised by Shivaji to crown himself with the greatest pomp and ceremony. *M A 132 F R Surat 88 Oxinden's Letter 21 May 1674*)

JADUNATH SARKAR

* Cabbasad 81 says that Haimur Rao's raid extended over Khandesh Baglana Gohat Ahmadabad Burhanpur Bera and Mahur to the bank of the Narmada and that the 1000 Mughal persons always lagged 30 or 40 miles behind so that the Marathas returned home unmolested and with all the booty.

THE INTERNATIONAL PHONETIC SCRIPT

"THERE are many phonetic alphabets all else being equal the one most widely used is clearly the most valuable. We have therefore chosen for this book the alphabet of the International Phonetic Association which is already well known in England. It will commend itself by its great simplicity. So writes Mr Walter Rappmann M.A. in his *Sounds of Spoken English* (New Version 1914 p 23). Why should there be many phonetic alphabets all based though on the Roman? Would it not be a gain to the world if the leading schools of phonetic writing in Europe and America arrived at

a consensus about the representation of simple sounds of human speech by means of small Roman characters and supplementary modified small Roman characters so that a phonetic system of writing might be devised which could win its way to universal acceptance? On obvious grounds of utility capital letters must be discarded.

The three prominent schools of phonetic writing at present are the following—(1) Orientalists who follow the system of transliteration which has come down from the time of Sir William Jones receiving slight modifications from time to time

and which has been employed in transliterating Oriental writing and in writing hitherto unwritten languages (2) Esperantists who follow the alphabet very simply devised by the late Dr Zamenhof, the founder of Esperanto (3) The adherents of the alphabet of the International Phonetic Association of Paris

Lepsius's Standard Alphabet, which in point of time came next after Sir William Jones's system of transliteration, though elaborately devised with a vast wealth of logographic lore and acumen, has proved a practical failure on account of its complexity

The Phonetic Association of Paris which calls itself International, should take the lead in the devising of a phonetic script which may ultimately be accepted as a common script by all the world Its present script is open to some very serious objections I mention here certain prominent defects of the script, and give later on a detailed criticism of some of the characters given by Mr Rippmann on pp 24-25 of his book

1 The script has so many as five vowel characters and five consonantal characters for the English language as given by Mr Rippmann, that are widely different from Roman characters Why then not give up the Roman characters altogether and have in their place their closest broad Roman equivalents, which however serviceable they may be for a scientific handling of phonetics cannot answer well for the practical needs of life?

2 It calls itself phonetic, and yet anti-phonetically draws from Anglo-Saxon the complex symbol, æ, for expressing the simple sound of a in the English word *bat*, and thus in face of the fact that the same complex symbol very properly expresses the diphthongal sound æ in Latin, as in the word *Cæsar* (sounded *kæsar*)

3 It follows the wrong principle of representing kindred sounds by quite unlike characters in the case of the English *s* and *sh* sounds The Orientalists' *ś* and the Esperantists' *ŝ* with an angular mark over it are far preferable to the International Phonetic symbol for the English *sh* sound

4 It makes the sign indicate full length of a vowel sound and half length Could not the three grades of quantity—short, medium or half long, and long—of

the letter *n*, for instance, be indicated thus —ā ā ā? A departure from old venerable usage is justifiable only under absolute necessity No innovation is admissible which is not clearly an improvement Another objection to the signs and · is that a vowel without either of the signs would stand for the short sound of the vowel and be the name of the vowel The name of a vowel with its short sound is practically very inconvenient.

Simple sounds wanting in the Latin language and so unrepresented by any existing Roman letter must have to be represented by modified Roman small letters It is difficult to settle how modifications may best be made It is desirable indeed that the modifications should be of a simple and uniform character Dotted *o* is historically the oldest method of modification It is simple enough, but it has been objected to as being inconspicuous* A far more serious objection is that the use of more than two dots is noway convenient, and two dots cannot satisfy international requirements An international alphabet must have a stock of letters sufficient for all human languages It must have symbols besides for indicating Mongolian intonations and Hottentot clicks

Extension of a method of modification which has been adopted by both the International Phonetic Association and a section of Orientalists may perhaps have a favourable consideration from both the schools The same symbol is used by the International Phonetic Association and by Orientalists of the Asiatic Society of Bengal for signifying the English *ng* sound in *king*, which is wanting in Latin Now this symbol is but *n* with a little curve ending in a dot attached at the end Nay, the Roman letter *n* itself has a similar appendage at the top An extension of the method of attaching a dot eoded curve, as shown below may not be unacceptable to the International Phoneticians and the Orientalists The letter *d* with its dental Italian sound, which is the same as that of the Devanagari *ḍ*, being taken into consideration, there are, within my knowledge four other sounds that have to be represented by modifications of it, viz, the sound of the English *th* in *then*, which is the same as that of the Arabic letter called *ṭā* in India and Persia, the sound of the

* The unnecessary dots in *i* and *j* are not discarded though

English *d* (not dental but alveolar) the sound of the Devanagari *v* (cerebral or front palatal and so somewhat different from that of the English *d*), the sound of the Devanagari *v* (which approaches the sound of the English *r* in *bird* and is transcribed as *r* or *r* by Orientalists though its sound is nearer to that of their *d* [= *v*] than of their *r* [= *x*]). By an extension of the dot-ended curve method *d* with a figure like a comma attached to it *d* with a figure like a reversed comma attached to it *d* with a figure like the Bengali letter *ḍ* attached to it and *d* with a figure like the Bengali letter *ḍ* reversed attached to it may respectively represent the four sounds mentioned above. Four appendages can not fully meet all requirements it may be urged. Requirements beyond the number four can be but few and they can be met by inserting under the letter concerned the initial letter of the name of the language to which any peculiar sound may belong.

There are eleven Latin vowels *a i e æ o u y* and *y* a sound unknown in common Latin and imported into the learned language from Greece it answers to French *u* or to German *u* in Moller with however a tendency to pass into *i*. Letting alone the imported *y* with its dubious sound the five Latin vowels each with its long and its short sound have not the same powers in all the languages that are written with Roman letters. In the English language, for instance the letter *a* has in addition to the proper long and short Latin sounds as in the words *father* and *maia* respectively so many as five other distinct sounds as in *any* *hate* *hat* *what* and *all*. In French the simple Latin *u* sound is represented by *ou* while *u* is used for expressing a peculiar French vowel sound. In English German and French *s* has sometimes the *s* and some times the *z* sound and in German *w* has always the *v* sound and *v* the *f* sound. Such divergences can have no place in a system of phonetic writing. Such writing justly demands that the Latin sound of every Roman letter should be recognized as its normal sound and that every variation from this normal sound should be represented by the Roman letter marked somehow.

* Brachet's *Etymological Dictionary of the French Language* Clarendon Press Series 2nd Edition Introduction p. xlv.

No country in the world is yet prepared to give up its established system of writing and adopt a purely phonetic system in its place. The International Phonetic Association of Paris very properly therefore does not aim at dethroning conventional French or English spelling and seating in its place its own phonetic system. It means its system to be a common instrument for phonetically representing the sounds of all languages for a special end viz the proper comprehension of the sounds by learners native or foreign. But it does not like Orientalists deal only with non-European languages written in Oriental character or hitherto not written at all. It deals with the world's foremost languages—English French and German—which are written in Roman character (the German Black Letter Alphabet being substantially the same as the Latin and now on the way to yield place to it). It is quite legitimate therefore to desire that its system should be as faultless as possible and as well fitted for the daily purposes of life in writing and printing as to induce English speakers French speakers German speakers Spanish speakers Portuguese speakers and speakers of minor languages written in the Roman character to give up their particular conventional systems and adopt the phonetic system instead. The International Phonetic Script has however numerous faults and I state below in detail what appear to me to be faults in the phonetic signs for the sounds occurring normally in standard English given by Mr Rippmann on pp. 24-25 of his *Sounds of Spoken English* New Version 1914.

1 The first fault is that consonants are given together first and vowels afterwards. Vowels as capable of being sounded by themselves, should certainly come before consonants which cannot be sounded without the help of vowel sounds. Indian grammarians of a very remote past classed together vowels first in scientific order and consonants afterwards in like scientific order. In Mr Rippmann's lists of consonants and vowels there is not the good comprehensive scientific order found in the Devanagari alphabet which drew forth high eulogium from the great philologist Lepsius.

2 The English *d* and *t* have not the same sounds as the Continental *d* and *t* of which the Italian sounds corre-

to those of the Devanagari ॠ and ॡ , respectively, may be taken as the typical representatives. The English d and t are not dental, as the Italian d and t are, nor are they cerebral or front palatal like the Devanagari ॠ and ॡ . They are alveolar, and so intermediate in sound between the dental and the cerebral. European scholars generally make no distinction between the English d and the Continental d , and between the English t and the Continental t . But an alphabet which claims to be phonetic and international is bound to make a discrimination in this matter. Even in English as spoken by Scotsmen, d and t are given their Italian sounds. The Scotsman's English does not indeed come under the head of "Standard English", but one who wants to study English phonetics scientifically is bound to recognise the Scottish sounds of d and t .

The order in which the letters b and p , d and t , g and k , v and f , etc., are given by Mr Rippmann, the letters for the voiced sounds preceding the letters for the unvoiced sounds calls for remark. The order is the reverse of that followed in the Devanagari alphabet. Which is the better order? The Devanagari order seems to be the better of the two.

3 The symbol for the ng sound in *sing* is far from being objectionable. Indeed it is commendable, it is a deft modification of the practice of dotting. The symbol has been adopted also by the Asiatic Society of Bengal.

4 The w in *when* is represented by Δ (w turned upside down) with the remark that "it is doubtful whether this can be called a sound of standard English". What this supposed sound may be I am unable to guess. As I have heard the word pronounced by Englishmen, it has always sounded to my ears as *hwen*, and I am glad that wh is symbolised by hw in the system of respelling in the Oxford English Dictionary."

5 If v be recognised as the Latin equivalent of the Devanagari ॠ and the English w , the English r , which is equivalent to ॠ plus ॠ or w plus h , should be represented by vr .

6 Instead of the awkward Anglo-Saxon character, which is quite inimical to facile writing, d simply marked some

how, would be a better representative of the th sound in *clothe*.

7 Instead of the Greek letter *theta* for the sound of *th* in *cloth*, t somehow marked plus h would serve better, and this not only for convenience of writing, but also for the reason that this English *th* sound is not a simple sound but a compound of a modified t or ॠ sound and an h sound. It may also well be emphasised that the Greek letter *theta* cannot well fit into English writing.

8 The symbol given for the sound of s in *leisure* is not a newly invented symbol, but it is a big symbol Z marked somehow would be a handier and so a better symbol.

9 The symbol given for the English *sh* sound is, as has already been remarked very objectionable, as being quite unlike in shape to the letter s , which usually expresses a kindred sound but expresses also the same sound in *sugar*.

10 The analysis of the English *ch* sound into *tsh* and of the English *j* sound into *dzh* is accepted by Mr Rippmann. "The analysis has the support of such high authorities as Sir James Murray and Prof Whitney, and has evidently its origin in the French *tch* and *dj*." "Even though we accept the analysis (which some persons are not inclined to do)," says Mr J C Nesfield, M.A., "it would be very convenient to write *tsh* for *ch* and *dzh* for *j*. Moreover, the sounds in question are of such frequent occurrence in our language, that *j* and *ch*, even if they are diphthongal, deserve a place in our list of consonantal symbols."

"The compound consonants *ch* and *j*, in *church* and *judge*, have also strictly a right," says Prof Whitney, "to separate representation, since, though their final element respectively is [s and z with an angular mark over each in the original, for *sh* and *zh*], their initial element is not precisely our usual t and d , but one of another quality, more palatal."

If men of such high eminence as Prof. Whitney and Sir James Murray have held *ch* and *j* to be compound consonants, "some persons", we are told by Mr Nesfield, who is not one of them, "are not inclined" to accept this view. Among Mr Nesfield's "some persons" must be in

cluded, I think, great English philologists from Sir William Jones down to Sir George Grierson, who have identified *ch* with *ʃ* with its modern sound and the corresponding Bengali and Persian letters, and *j* with *ɟ* with its modern sound and the corresponding Bengali and Persian letters. May all Englishmen in India who have been concerned with the spelling of such proper names as Chryt Singh Chunar, Chittagong, Jai Singh, Jodhpur and Punjab must come under the same category as the great philologists. I know also that a very clear-headed Englishman of high distinction, now spending the evening of his life in his native land after conspicuously meritorious service in India, who holds the view that the *ch* and *j* sounds in English are simple sounds corresponding respectively to particular Bengali and Hindustani simple sounds. I do not mention his name here because I have not sought and obtained his permission to do so. It seems clear that all cultured men who speak English as their vernacular do not pronounce the English *ch* and *j* sounds in the same way. Some pronounce them as simple sounds, and others as compound sounds the elements of which cannot clearly be given, for the English *t* plus *ʃ* cannot in any way give the English *ch* sound, and the English *d* plus *ʒ* (= *z* in *azure*) cannot in any way give the English *j* sound. Nor is it at all clear to me that the Italian *t* sound or the English *t* sound in *this* compounded with the English *ʃ* sound, could give the English *ch* sound or that the Italian *d* sound or the English *th* sound in *then* compounded with the sound of *z* in *azure* could give the English *j* sound. It is for the English-speaking world to settle how the English *ch* and *j* sounds are to be properly graphically represented. Perhaps *c* for *ch* and *j* marked somehow (to distinguish it from the German *j*) for *j* might answer. *ʃ* is already used by Orientalists for *ʃ*.

A foot note on p. 5 of Mr. Rippmann's book contains a pregnant remark. 'It might be thought that reference to a dictionary would be sufficient to settle disputed points. However it may be said that no dictionary—not even the familiar Webster or the great Oxford English Dictionary, now in course of publication—can be implicitly trusted in matters of pronunciation. On the whole our dictio-

naries strive to record educated southern English speech with some concessions to Northern English.' A standardisation of the pronunciation of English for all English speaking lands appears to be desirable.

11. Is given its German sound, the sound being said to be the same as that of *y* in *yes*. But can *y* be rightly recognised as a consonant in English, and does it not deserve to be rejected as a vowel, on the ground of its being superfluous?

12. Representation of the English *r* sound by the same symbol as the Continental *r* sound and the Devanagari *र* sound is bad. There should be a differentiating mark for the English *r* sound.

13. A word here about the *f* sound. Is it not a compound of a modified *p* sound and an *h* sound? This modified *p* sound does not indeed exist independently in English, and other languages that have the *f* sound. But this cannot make *f* a simple sound.

Though not connected particularly with Mr. Rippmann a remark I have to make here about the practice in Europe of making *ts* stand for a simple sound. It is held to be equivalent to the German *z* and so the East Bengal *s* and to *ʃ* with its ancient sound. The sound of *ts* in *Tsar* is a simple and not a compound sound. So it should be represented by a single letter and not a combination of two letters. There is a close relation between this *ts* sound and the sound which *c* has partially in Italian as in the name *Medici*. *C* with this sound has been appropriated by Orientalists for the representation of *ʃ* with its modern sound. If *c* stands for this sound *g* would be a very appropriate substitute for *ts*.

Coming now to Mr. Rippmann's list of vowels the first remark I have to make is that in giving pairs of vowels as consisting of a long and a short one each. Mr. Rippmann follows a method which is the reverse of that followed by Indian grammarians. The question is a physiological one. Did the long vowels originate first, or the short ones? The short ones appear to have originated before the long ones as is evidenced by the fact of the earliest alphabets being without vowel symbols. The Indian Grammarians appear, therefore, to have followed the right track.

I come now to details —

1 It is not at all clear to me that the first vowel sound in *fury* is organically different from that of *e* in *bet* and not a lengthening of it, so as to make it necessary to represent it by a new letter.

2 The impropriety of the symbol α for the vowel sound in *bat* has already been shown.

3 It is not at all clear to me that the first vowel sound in *bite* is not simply the short of *a* in *father*, as is the first vowel sound in *house*, sounded *haus* (German *haus*), but an organically different sound that requires to be represented by a letter different in shape from *a* in *father*. I see no reason, again, why the historical hooded α should not be used in *father*, but be used for the first vowel sound in *bite* while the *a* in *father* should be represented by a new unhooded α . The unhooded α may well be used for the vowel sound in *pot* and *law*.

4 The vowel long in *law* and short in *pot*, is represented by a new character quite different in shape from *o*, which in English and also in German has in some cases the sound of *o* in *pot*. Besides the objectionable shape of the letter, there is the further objection against it that it is very ill adapted for writing.

5 The inverted *e* adopted for representing the second vowel sound in *better* and the supposed long of this vowel sound in *burn* calls for a good deal of comment. Mr Nesfield, in his *Idiom, Grammar and Synthesis* 1914 p 431 calls the inverted *e* an "awkward looking symbol," and this awkward looking symbol and its doubling for indicating its long sound (the doubling not adopted by the International Phonetic Association) have the support of great names—Skeat, Sweet and Murray. But great men do sometimes fail to grasp all aspects of a question. The invention of the inverted *e* symbol has its origin in the English convention of expressing the sound of the symbol by *e*. The sound of *e* in the words *gather* and *confer* (Mr Nesfield's examples) has no affinity to the Latin sound of *e* but has affinity to the short sound of the Latin *a* and the

English sound of *a* in *hut* or *but*. Instead of an *e* inverted, a marked somehow would be a better means of representing the second vowel sound in *better*.

6 As for the new symbol for "the vowel sound" (evidently meant for the first vowel sound) in *butter*, I am unable to understand in what the sound of *u* in *butter* differs from that of *u* in *burn* and *burn*. Here one is reminded of what Max Müller says about Sir John Herschel's bearing "but the same sound in *spurt*, *assert*, *bird*, *dove*, *oven*, *double*, *blood*," and Sheridan and Smart's distinguishing "between the vowels in *bird* and *work*, in *whirl* and *world*."* It is not for a foreigner to venture to say anything about a question like this in which native Englishmen differ among themselves. But the recognition of *e* in *clerk* as having an \bar{a} sound, the transformation of *university* into *varsity* and the vulgar or provincial pronunciation of *sir* being written *sah* and of *sisters* being written *sistahs*† indicate even to the foreigner that the *e* in *her* and the *i* in *sir* have the short sound of the Latin *a* modified a bit. Mr Nesfield gives *e* in *confer* as the long of *e* in *gather*. Now the *er* in *confer* is certainly not the same in sound as *far*. The *e* in *gather* and *confer* can thus be held to have a modified sound of the Latin \bar{a} and \bar{a} respectively.

The International Phonetic Association's method of nasalising vowels is the same as that of the Asiatic Society of Bengal. The method is exceedingly good.

Who can say that one system of weights and measures, one system of coinage, and one common alphabet would not benefit the world? The world would take time indeed to attain these benefits. The dreams of to-day become the realities of to-morrow. Hope lies in this.

SWAMI VIVEKANANDA*

I.

SWAMI Vivekananda who died in his fortieth year in 1902 is the greatest moral force in modern Hinduism and though his active life of preaching was confined to the last ten years of his crowded existence, thanks to his speeches pamphlets, letters and the books about him by his disciples of whom Sister Nivedita is the best known his ideas have now been widely disseminated in India and this work has been helped by the several organisations established at Belur (Calcutta), Mayavati (Almora) Benares Madras and other places to carry on his propaganda. The recently completed Life of the Swami in four volumes by his eastern and western disciples is a monumental work in which the story of a noble life has been ably told and in spite of its obvious deficiencies chief among which is too great an idealisation of the picture which is common to most biographies the spiritual side of the Swami's development and activities has been narrated in these volumes with a comprehensiveness and philosophic grasp which make them a standard work of reference for all students of Hindu religion and spiritual culture Indian and foreign.

The fifty seventh anniversary of the Swami's birth has recently been celebrated in all the centres associated with his name and it is a fitting occasion for taking stock of the character of the man and the ideas he stands for in modern Indian thought. As is well known he imbibed his religious ideas at the feet of his Master Paramhansa Ramkrishna for whom he

entertained the highest reverence. From his master he learnt the great lesson of his spiritual life—renunciation of lust and gold. By austere psychic practices deep and prolonged meditation continued for years' severe thought control and ascetic self discipline he totally crucified his flesh and attained a passionate purity of thought which wonderfully developed his will power and was the secret of his magnetic personality and of his great influence over men and women all the world over. Years of meditation and spiritual austerities were behind him and hence his very words were living potencies. One of his western lady disciples who knew him intimately for years said 'I never thought it possible for man to be so white so Christ as he was. It set him apart from other men. Another said that his presence was a perpetual benediction.' He literally radiated spirituality. Throughout his life as he says in one of his letters he strictly observed the ideal monk that he was the two great vows of the Sannyasin's life—poverty and chastity. He was a scholar mystic and philosopher. The great American mystic philosopher William James was his devoted admirer, Professor Wright of Harvard wrote to him 'To ask you Swami for your credentials is like asking the sun to state its right to shine.' The Chairman of the Committee for selecting delegates to the Chicago Parliament of Religions said of him 'Here is a man who is more learned than all our learned professors put together. While his learning attracted men of his type his character gained the admiration of scientists like Sir Hiram Maxim the inventor of Maxim guns and world renowned actresses and artistes like Sarah Bernhardt and Madame Calve. He had penetrated more deeply into the ancient scriptures of the Hindus than any other Hindu of the modern times and could hold learned discourses in Sanskrit with orthodox pundits. As a wandering monk who did not know where to lay his head, unburdened with any worldly possessions and enduring the severest privations, he

* The materials for this article have been collected and all the extracts made from the following books: (1) Life of Swami Vivekananda by his eastern and western disciples 4 vols. (2) Epistles 5 vols. (3) Baridaman Bharata (Modern India) (4) Prachya O Paschatya (East and West) (5) Bhavad-bor Kalha (Things which should make one think) (6) Pastra Jaka (Wanderer) (7) Speeches and Writings of Swami Vivekananda Nateson & Co. (8) Inspired Talks (9) The Master as I Saw Him by Sister Nivedita. Many of the extracts are from the published translations of the Swami's Bengali works but a few of the translations have been made by the compiler himself.

traversed the whole of India from the Himalayas to Cape Comorio, studying the manners, customs and religion of the people at first hand, and gaining thereby a wonderful knowledge of Indian sociology and of the cultural unity of Hinduism. A brilliant conversationalist and debater, a sweet singer of devotional songs, he was yet the ideal Karma Yogi, a born leader and organiser. As a youth he had developed his muscles by gymnastic and athletic exercises. In him strength of character and devotional ardour and soft sympathy were blended in a rare union. He was the patriot saint of Modern India. Certainly none loved India more passionately than he. "My life's allegiance is to my Mother land, and if I had a thousand lives, every moment of the whole series would be consecrated to your service, my countrymen, my friends." He was the interpreter of the soul of India to her own children and to the world, the spirit incarnate of the culture of the Hindu race, the embodiment of its religious ideal before the modern world. By long and intense self-discipline and intimate acquaintance with all the varied aspects of religious India, he had earned his credentials to stand forth as the accredited champion and representative of Hinduism before the powerful and aggressive West.

The Swami was a philosopher, but so him philosophy was not confined to mere book learning, as is usually the case in the West. Philosophy and religion are one in Hinduism. "Religion is not in books, nor in theories, nor in dogmas nor in talking, nor even in reasoning. It is Being and Becoming." Philosophy is not so much a process of ideas as of experience. It is the doorway to vision, to spiritual illumination. Mystical experience is the only guarantee of spiritual certitude. Religion is realisation. The end of philosophical concentration is insight. The superconscious state of ecstasy, trance, beatitude, is the true goal of religious experience. The training of the spiritual self by intense meditation and philosophic study, the transfiguration of personality, —these are the objects of religious exercises. The wandering monk—the sannyasin—is the apex of the social and spiritual aspirations of the Hindu race.

The mission of Vivekananda was summed up in two words—Sera and Siva—the life of meditation upon God

and service unto man. Of the latter, we will speak fully later on. Renunciation was his watchword in regard to the former. But as Sister Nivedita says: "Towards the end of his life I told him that renunciation (a life of poverty and silence, free, undimensioned, sovereign in its mastery) was the only word I had heard from his lips. And yet, in truth, I think that 'conquer' was much more characteristic of him." Like all great men, he had immense faith in himself. "Really, there is so much power in me, I feel as though I could revolutionise the world." "I shall burst upon society like a bombshell and it shall follow me like a dog." "If I get only five hundred men in all India who understand I shall shake India to its foundations!" "India will hear me!" he used to exclaim. The Ramkrishna Mission embodies his ideal of Sera, and the Math at Belur was intended to work out his ideal of Siva. When the foundation of the Math was laid, Vivekananda said that it "will be the central institution for the practice of religion and the culture of knowledge. The spiritual force emanating from here will permeate the whole world." Let us hope that he has left worthy successors to carry on this high ideal.

In his posthumous 'India's Message to the world' he said that India's destiny was the regeneration of man the brute into man the God through renunciation. The conquest of the world by Indian spirituality was his favourite aspiration. Expansion is life, contraction is death. As a nation we must either expand or die.

Up India and conquer the world with your spirituality! Materialism and all its miseries can never be conquered by materialism. Armies when they attempt to conquer armies only multiply and make brutes of humanity. Spiritual by must conquer the West. We must go out we must conquer the world through our spirituality and philosophy. There is no other alternative, we must do it or die. The only condition of national life, of awakened and vigorous national life is the conquest of the world by Indian thought.

The expression 'Indian spirituality' has often been misunderstood, but the Swami used it in an all-comprehensive sense. As his biographers put it:

He knew already that the spiritual impetus once given would diversify itself into many channels of national usefulness and activity and would unify the Indians into a nation. This he knew would cement the fibres of the millions into one common purpose—the regeneration of the mother

universal toleration, the spiritual oneness of the whole universe. It is wonderfully rationalistic. It exactly harmonises with the aspirations of the age and with the conclusions of modern science.

But the distinguishing feature of Vivekananda's religious message is his insistence on making the Vedanta practically fruitful in life, or his doctrine of Practical Vedantism. India is full of Vedantists who have abjured the world for their own salvation, or who revel in the philosophic vision of the oneness of the Self with the Absolute, without allowing it to affect their notions of ordinary social life, divided into a thousand water-tight compartments by castes, customs and prejudices by a jot or tittle. It is Vivekananda who taught that, corresponding to the Vedantic ideal of oneness in the abstract, there should be a Vedantic social body, imbued with the doctrines of equality, fraternity and equal privilege, in the concrete. The historian Seely, who was a profound student of the political relations between India and England, pointed his unerring finger to the peculiarity of Hindu civilisation which "unrested and half-crushed" this "gifted race," viz., its preclusion for "reverie and the luxury of unbounded speculation." Vivekananda saw this vital weakness, and tried to apply the necessary corrective.

"Aye you may be astonished to hear but as practical vedantists the Europeans are better than we are. I used to stand on the sea-side of New York and look at the emigrants coming from different countries crushed down trodden hopeless. And mark you in six months those very men were walking erect well-clothed looking everybody in the face, and what makes this wonderful difference? Say this man comes from Armenia or anywhere else where he was crushed down beyond all recognition where everybody told him he was a born slave and born to remain in his low state all his life and at the least move he made they would crush him out. There everything told him, Slave! you are a slave, remain there. Hopeless you were born hopeless remain. Even the very air murmured round him. There is no hope for you hopeless and a slave remain. And when he landed in the streets of New York he found a gentleman well-dressed shaking him by the hand. Perhaps he went to Washington, shook hands with the President of the United States and perhaps there he saw men coming from the distant villages peasants and ill-clad all shaking hands with the President. Then the veil of Maya slipped away from him. He is Brahman who has more awake and he rises up and finds himself a man in the world of men. Aye in this country of ours the very birthplace of the Vedanta our masses have been hypnotised for ages into that very state. To

touch them is pollution! Hopeless you were born, remain hopeless and the result is that they have been sinking, sinking, sinking, and have come to the last stage to which a human being can come. For what country is there in the world where man has to sleep with the cattle? And for this blame nobody else do not commit the mistake of the ignorant. The effect is here and the cause is here too. We are to blame stand up be bold and take the blame on your own shoulders. Do not go about throwing mud at others, for all the faults you suffer you are the sole and only cause. Young men of Lahore understand this, therefore—this great sin hereditary and national is on your shoulders. There is no hope for us

until there is that sympathy that love, that heart that thinks for all until Buddha's heart comes once more into India until the words of Lord Krishna are brought to their practical use, there is no hope for us. Therefore young men of Lahore, raise once more that wonderful banner of Advaita for on another ground can you have that wonderful love until you see that the same Lord is present in the same manner everywhere. Unfold the banner of Love. Arise awake, and stop not till the goal is reached.

At the present time there are men who give up the world to help their own salvation. Throw away everything even your own salvation, and go and help others. Here is practical Vedanta before you. This nation is sinking, the curse of ooooobered millions is on our heads to whom we have been giving ditch water to drink when they have been dying of thirst and when the perennial river of water was flowing past, the unnumbered millions whom we have allowed to starve at sight of plenty, the unnumbered millions to whom we have talked of Advaita and whom we have hated with all our strength the unnumbered millions against whom we have invented the doctrines of *lokashara* [local customs] to whom we have talked theoretically that all are same that all are the same Lord without even an ounce of practice. Our insincerity in India is awful what we want is character, that steadiness and character that make a man cling on to a thing like grim death. What we want is not so much spirituality as a little of bringing down of the Advaita into the material world. First bread and then religion. We stuff them too much with religion when the poor fellows have been starving. No dogmas will satisfy the craving of hunger. There are two curses here first our weakness secondly our hatred. Our dried up hearts. You may talk doctrines by the millions you may have seeds by the hundreds of millions aye but it is nothing until you have the heart to feel for them as your Veda teaches you, till you find they are parts of your own bodies till you and they, the poor and the rich the saint and the sinner all are felt to be parts of one infinite whole which you call Brahman.

Vedantism teaches self reliance, it gives man faith in himself.

Faith faith faith in ourselves faith in God this is the secret of greatness. If you have faith in all the 300 millions of your mythological gods and in all the gods which foreigners have now and again sent into your midst and still have no faith in yourselves there is no salvation for you. Have faith in yourselves and stand up on that faith and be strong; that is what we need. Why is it that we 300 millions of people have been ruled for the last 1000 years by any and every handful of foreigners who

chose to walk over our prostrate bodies? Because they had faith in themselves and we had not. What did I learn in the West and what did I see behind those talks of frothy nonsense of the Christian religious sects saying that man was a fallen and hopelessly fallen sinner? There inside the national hearts of both Europe and America resides the tremendous power of the men's faith in themselves. An English boy will tell you, 'I am an Englishman, and I will do anything.' The American boy will tell you the same, and so will every European boy. Can our boys say the same thing here? No, not even the boys' fathers. We have lost faith in ourselves. Therefore to preach the Advaita aspect of the Vedanta is necessary to rouse up the hearts of men, to show them the glory of their souls. Arise, awake, awake from this hypnotism of weakness. None is really weak, the soul is infinite, omnipotent, omniscient. Stand up, assert yourself, proclaim the God within you, do not deny. Too much of inactivity, too much of weakness, too much of hypnotism, had been sown in our race. O ye modern Hindus dehypnotise yourselves. The way to do that is to be found in your sacred books. Teach yourselves, teach every one his real nature, call upon the sleeping soul to see how it rises. Power will come, glory will come, goodness will come, purity will come, and everything that is excellent will come when this sleeping soul is roused to self-conscious activity.

Again,

'Would you believe me, you have less faith than the Englishmen and women, thousand times less faith! These are plain words, but I say them, can not help it. You are more wise than is good for you that is your difficulty. It is all because your blood is a part of tar, your brain is sloughing, your body is weak!'

Vedantism teaches strength, and the first thing it should teach us is to acquire physical strength.

'I must tell you in plain words that we are weak, very weak. First of all is our physical weakness. That physical weakness is the cause of at least one third of our miseries. We are lazy, we cannot work, we cannot combine; we do not love each other, we are immensely selfish. That is the state in which we are, hopelessly disorganised, mobs, immensely selfish, fighting each other for centuries, whether a certain mark is to be put this way or that way, writing volumes and volumes upon such momentous questions as to whether the look of a man spoils his food or not! There we have been doing for the last few centuries. We cannot expect anything more except what we are just now of a race whose whole brain energy has been occupied in such woefully beautiful problems and researches! And we are not ashamed. What is the cause of that? Physical weakness. This weak brain is not able to do any thing; you must change that. Our young men must be strong first of all. Religion will come afterwards. Be strong, my young friends, that is my advice to you. You will be nearer to heaven through football than through the study of the Gita. Bold words are these. I have to say them. I love you. I know where the shoe pinches. I have got a little experience. You will understand the Gita better with your biceps muscles a little stronger. You will understand the mighty genius and the mighty strength of Krishna better with a little of strong blood in

you. You will understand the Upanishads better and the story of the Atman when your body stands firm upon your feet and you feel yourselves as men. You talk of reforms of ideals and all these for the last hundred years and when it comes to practice, you are not to be found anywhere. What is the cause? Is it that you do not know? You know too much. The only cause is that you are weak, weak, weak, your body is weak, your mind is weak. You have no faith in yourselves! Centuries and centuries, thousands of years of crushing tyranny of castes and kings and foreigners and your own people have taken out all strength from you, my brethren! Like the trodden down, and broken and backboneless worms you are, who will give us strength? Let me tell you strength, strength, strength, is what we want. And the first step in getting strength is to uphold the Upanishads and believe that I am the soul. I wish that faith would come onto each of you, and every one of you would stand up a gigantic intellect, a world mover, a giant, an infinite god in every respect, that is what I want you to become.'

To Sister Nivedita the Swami said,

'I preach only the Upanishads. If you look you will find that I have quoted nothing but the Upanishads. And of the Upanishads it is only that one idea, strength. The quintessence of the Vedas and the Vedanta and all lies in that one word. The longer I live the more I think that the whole thing is summed up in manliness.'

In justification of his strong denunciations of Hindu society, he wrote

'I have not been imported from foreign parts to do good to you so that I must perforce invent scientific explanations even for your follies. But what are such considerations to the foreign friend? All that he wants is cheap notoriety, what of the fact that whatever blackens your face also covers me with shame?'

It is not our purpose in this article to enter into the spiritual side of the Swami's teaching. We shall now proceed to discuss his social views, which, in our opinion, are the most fruitful part of his teachings, as well as the ones which lay nearest to his heart. Since the Swami expressly repudiated politics as having anything to do with his activities, it is by his social exertions chiefly that his title to rank among the foremost of Indian patriots must be justified. His views on social questions are all the more deserving of consideration as they proceed from a fullness of love and knowledge rarely, if ever, equalled by his countrymen. In a fine passage, Sister Nivedita says

'The thought of India was to him like the air he breathed. True he was a worker at foundations. He never used the word "nationality" nor proclaimed an era of "nation making". Nation making, he said, was his own task. But he was born a lover, and the queen of his adoration was his Motherland. Like some delicately poised bell

thrilled and vibrated by every sound that falls upon it, was his heart to all that concerned her. Not a sob was heard within her shores that did not find in him a responsive echo. There was no cry of fear, no tremor of weakness, no shrinking from mortification, that he had not known and understood. He was hard on her sins, unsparing of her want of worldly wisdom but only because he felt these faults to be his own. And none, on the contrary, was ever so possessed by the vision of her greatness. His country's religion, history, geography, ethnology, poured from his lips in an inexhaustible stream. Like some great spiral of emotion, its lowest circles held fast in love of soul and love of nature; its next embracing every possible association of race, experience, history and thought, and the whole converging and centering upon a single definite point, was the Swami's worship of his own land. And the point in which it was focussed was the conviction that India was not old and cliche, as her critics had supposed, but young, ripe with potentiality, and standing, at the beginning of the twentieth century, on the threshold of even greater development than she had known in the past."

Unfortunately for this land, where centuries of slavery to caste and custom have annihilated free thought and freedom of action, the social reform movement inaugurated by Swami Vivekananda, which constitutes, as we have said, his best title to be counted among our greatest patriots, seems to us to be already on the wane; his biographers do not lay that emphasis on it which it deserves, and love rather to idealise the Hindu cult and customs, sometimes beyond recognition; his followers, at anniversary memorial meetings, prefer not to court unpopularity by dwelling too pointedly on the Swami's outspoken observations on social matters; and the general Hindu public, deceived by the fact that "in the customs of his own people, the Swami brought the eye of a poet and the imagination of a prophet," are being left more and more under the impression that the patriotism of the Swami consisted in his exaltation of Hinduism above other religions, his occasional defence of Indian society, and his denunciations of hind foreign imitation. The Swami realised that "when a man loses faith in his own historic past, he cannot have any self-respect and faith in himself. He realised that conquest is not of the body, or by the sword, but in the infusion of a foreign culture. When the mind of a people is conquered, then is there conquest in fact. And so he used to say that 'India can never become Europe until she dies.' And his faith in India's mission and her

place in world-civilisation will appear from the following extract from one of his speeches :

"Shall India die? Then from the world all spirituality will be extinct; all moral perfection will be extinct; All sweet souled sympathy for religion will be extinct; and in its place will rule the dullity of lust and luxury as the male and female deities, with money as its priest, fraud, force and competition its ceremonies, and the human soul its sacrifice. Such a thing can never be."

The Swami was of opinion that conservative methods should be employed to bring about radical reforms. Assimilation was good, but mere methiologisation was to be avoided. "And when," says Sister Nivedita, "he would lose himself, in splendid scorn of apology for anything Indian, in fiery repudiation of false charge or contemptuous criticism, or in laying down for others the elements of a faith and love that could never be more than a pale reflection of his own, how often did the habit of the monk seem to slip away from him, and the armour of the warrior stand revealed!" The average man in the street cannot be blamed if in this 'aggressive Hinduism' of the heroic monk he fails to recognise the ardent social reformer that Vivekananda really was, specially as some of his own utterances tend to obscure our vision in this respect to no small degree. In order to proceed along the line of least resistance, in the hope of obtaining the greatest result thereby, the Swami sometimes exhorted his disciples * not to preach directly against caste and social customs, and sometimes he even said things to suit the temper of his audience which, we know, did not represent his own real attitude. This mental reservation he probably justified by the logical process which he was often fond of quoting—the Arundhati Nyaya, which means adapting the truth to the intelligence of the audience. For instance, in his lecture on 'The Mission of the Vedanta,' he says :

"I must frankly let this audience know that I am neither a caste breaker nor a mere social reformer. I have nothing to do directly with your castes or with your social reformation."

That the Swami was both a caste-breaker and a social reformer, will be proved to demonstration from his own utterances quoted in the following pages.

* *Epistles*, pp 36, 51, vol. I

Describing the influence of the Swami's wanderings all over India on the formation of his character, his biographers observe

"He had developed wonderfully. The caste-consciousness had been completely obliterated and the provincial consciousness in him had been superseded by that of the ethnological and racial oneness of the land. The Swami had grown from a Bengali into an Indian."

In the same lecture, again the Swami says:

"I have not one word of condemnation even for the most superstitious or the most irrational of its institutions, for they also must have served to do us good in the past."

It is only necessary to observe with regard to this injunction, that the Swami's own public life was one long contradiction of this precept. Elsewhere the Swami says

"To the reformers I will point out, I am a greater reformer than any one of them. They want to reform only little bits. I want root and branch reform. Where we differ is exactly in the method. There is the method of destruction, mine is that of construction. I do not believe in reform, I believe in growth. There is, then, another great consideration. Here in India, we have always been governed by kings, kings have made all our laws, now the kings are gone and there is none left to take their place. The Government dares not. It has to fashion its ways according to the growth of public opinion. It takes time quite a long time, to make a healthy strong public opinion which will solve its own problems and in the interim we shall have to wait. The whole problem of social reform therefore resolves itself into this: Where are those who want reform? Make them first. Therefore even for social reform the first duty is to educate the people and you have to wait till that time comes."

It is undoubtedly necessary to educate the masses in order to foster the growth of a healthy public opinion in favour of social reform, but it is also necessary, at the same time, to prepare the classes which are equally averse to such reform, by preaching its necessity, and pointing out, as the Swami himself has done, the gross abuses at present prevailing in society. It is moreover true that successful reform can only proceed from true sympathy, from one who passionately loves the people, knows all their failings and the causes to which they are due. But the extreme caution sometimes displayed by the Swami in order not to offend an ignorant mass among whom public opinion is yet to be developed has been mistaken for apathy to social reform on his part, and as the result of this we find orthodoxy exalting over his aggressive advocacy of Hinduism, which the

reforms which he preached with such burning eloquence, and without which he considered Hinduism as doomed, are as far off as ever. Following in his wake, we are now having a class of pseudo philosophic exponents of Hinduism whose stock in trade seems to be a mongrel sentimentalism which seeks to clothe in a poetic garb of justification even the most flagrant abuses prevailing in Hindu society under the guise of sympathetic interpretation and who preach the necessity of national evolution in accordance with the genius of the race unhampered by the superimposition of foreign ideals. The result of all this mystery mongering is that, what between the Scylla of the deadweight of popular apathy and native inertia, and the Charybdis of the *laissez faire* policy of sentimental nationalists who thought themselves seceders from orthodoxy in their social life are fond of obfuscating the Hindu public by their esoteric interpretations, the cause of social reform has progressed very little since Vivekananda burst upon society like a bombshell and shook India to its foundations, confident that India should hear him. This mongre achievement has convinced us that the Swami's occasional attempts at compromise with the orthodox and unreasoning section of his community by offering them bitter pills of reform in a sugared coating of flattering pictures of ancient glory, largely overdrawn, with a view to evoke their national self-confidence and win their allegiance to the cause of reform, was a mistake, and that had he confined himself in all cases to the truth as he had found it, and allowed it to tell its own sad tale, without being influenced by any questions of policy or expediency in the presentation of the case, his efforts at social amelioration would have stood greater chances of success. For the class whom he wanted to conciliate is represented in Hindu society by the Pundits, the custodians of the ancient culture, of whom, according to his biographers, Vivekananda thought that they "had become mere chatters of Sanskrit, grammar and philosophy and were only as so many photographic records of its past, without being possessed of its spirit and of the sense of responsibility as to their adding to that culture the fruits of original intellectual and spiritual researches." Nor is it the

fact that Vivekananda had a blind admiration for Hindu philosophy and the Hindu sages

In one of his letters he says.

'The Hindu mind was ever deductive and never synthetic or inductive. In all our philosophies, we always find our splitting arguments, taking for granted some general proposition, but the proposition itself may be as childish as possible. Nobody ever asked or searched the truth of these general propositions. Therefore independent thought we have almost none to speak of.

The personality of Krishna has become so covered with haze that it is impossible to day to draw any life giving inspiration from that life. Moreover, the present age requires new modes of thought and new life."

Sankara "was a tremendous upholder of exclusiveness as regards caste." He and Ramanuja were dry intellects, without the heart that feels for all. In the Vaishnav reformers "we find a wonderful liberalism as to the teaching of caste questions but exclusiveness as regards religious questions." "Dualists naturally tend to become intolerant. The Vaishnavs in India, who are dualists, are a most intolerant sect." Even Buddhism itself, of the founder of which Vivekananda always spoke with the greatest reverence, had one great defect. It introduced many wild and uncivilised races into the Aryan fold, who brought their superstitious and hideous worship with them, "and thus the whole of India became one degraded mass of superstition." The simple worship of the Vedic times vanished along with the Vedic sacrifices against which Buddha preached, to be replaced by 'the gorgeous temples, gorgeous ceremonies, and gorgeous priests' of the Buddhists. Thus Buddhism created Brahminism and idolatry in India." In a letter to a learned Hindu for whom the Swami had a high regard, he says

'One absolute Brahman without attributes I fairly understand and I see in some particular individuals the special manifestations of that Brahman. If those individuals are called by the name of God, I can well follow, otherwise the mind does not feel inclined towards intellectual theorising such as the postulated Creator and the like."

Such being some of the views of the Swami, it will be easily understood that in his attempt to walk in company with the orthodox he was soon bound to come at the parting of the ways, and reveal his real self by outspoken denunciations of orthodox customs and hoary abuses.

Let us now examine the views of the Swami, the apostle of modern Hinduism,

on the keystone of the faith—the caste system. We shall find that however carefully the Swami tried at times to speak guardedly in order not to give a rude shock to the orthodox section of his co-religionists, both in his speeches and letters and other writings, from which the following extracts have been made, the Swami has made it abundantly clear to every discerning reader capable of penetrating beneath the surface that he considered the caste system to be the greatest stumbling-block to Indian advancement and heartily wished for its death.

'With the question whether caste shall come or go I have nothing to do. My idea is to bring to the door of the meaneast, the poorest, the noble ideas that the human race has developed both in and out of India, and let them think for themselves. Whether there should be caste or not, whether women should be perfectly free or not, does not concern me. Liberty of thought and action is the only condition of life, of growth and well being." Where it does not exist the man, the race, the nation must go down. Caste or no caste, creed or no creed, any man or class, or caste, or nation, or institution which has the power of free thought and action of an individual—even so long as that power does not injure others—is devilish and must go down." "We preach neither social equality nor inequality, but that every being has the same rights, and insist upon freedom of thought and action in every way."

[To his disciples] "Preach against nobody, against no custom. Preach neither for nor against caste or any other social evil, preach to let "Hands off," and everything will come right." "In spite of all the ravings of the priests, caste is simply a crystallised social institution, which after doing its service is now filling the atmosphere of India with its stench, and it can only be removed by giving back to the people their lost social individuality. Every man born here [in America] knows that he is a man. Every man born in India knows that he is a slave of society. Now freedom is the only condition of growth. Take that off, the result is degeneration."

'I believe that the Satya Yuga will come when there will be one caste. This idea of Satya Yuga is what would revivify India. Believe it."

'I fully agree with the educated classes in India, that a thorough overhauling of society is necessary. But how to do it? The destructive plans of reformers have failed. My plan is this. We have not done badly in the past, certainly not. Our society is not bad but good, only I want it to be better still."

Now take the case of caste. The original idea of jati was the freedom of the individual to express his nature. His Prakriti, his jati, his caste, and so it remained for thousands of years. Not even in the latest books is intermarriage prohibited, nor in any of the older books is intermarriage forbidden. Then what was the cause of India's downfall?—the giving up of this idea of caste. The present caste is not the real

* Observe the Swami's pathetic attempt to conciliate society by smooth phrases and pleasing flatteries while enunciating new doctrine of caste, which is really the negation of all hereditary caste distinctions.

fast, but a baffle to its progress. It really has prevented the free action of fast, i. e., caste, or variation. Any crystallised custom or privilege or hereditary class in any shape really prevents caste (fast) from having its full sway, and whenever any nation ceases to propagate this immense variety, it must die. Therefore what I have to tell you, my countrymen, is this: That India fell because you prevented and abolished caste. Every foreign aristocracy or privileged class is a blow to caste and is not caste. Let [the individual variation] have its sway, break down every barrier in the way of caste and we shall rise. Now look to Europe. When it succeeded in giving free scope to caste and took away most of the barriers that stood in the way of individuals—each developing his caste—Europe rose. In America there is the best scope for caste (real fast) to develop, and so the people are great. Every one knows that astrologers try to fix the caste of every boy or girl as soon as he or she is born. That is the real caste—the individuality—and astrology recognised it. And we can only rise by giving it full sway again. This recipe does not mean insignificance nor any special privilege.

After thus explaining away caste to his own satisfaction, the Swami says:

"This is my method—to show the Hindus that they have to give up nothing but only to move on in the line laid down by the sages and shake off their inertia, the result of centuries of servitude.

Had the Swami been alive today, he should have felt the futility of this method, for it has not gained a single adherent to the cause of reform which he had so much at heart, while it may possibly have strengthened in some minds the authority of the Shastras against the dictates of reason and humanity. Writing later in the same year, the Swami expresses himself much more vigorously and plainly in the following lines:

"Do you mean to say I am born to live and die one of those caste children, superstitious, merciless hypocrites! at the side towards that you find among the educated Hindus? I hate cowardice.

Now and then the Swami emphasised the evils of caste by referring to the activities of the Christian missionaries, especially in Deccan.

"They are converting the lower classes by lakhs and in Travancore the most priest-ridden country in India—where every bit of land is owned by the Brahmins and where the females even of the royal family hold it as a high honour to live in concubinage with the Brahmins—nearly one fourth has become Christian! And I cannot blame them. When, O Lord, shall man be brother to man?"

In practical life, the Swami advocated the social equality of Islam.

"... Adulthood is the last word of religion and thought. We believe it is the religion of the future enlightened humanity. Yet practical Adulthood, which looks upon and behaves to all mankind as one's own soul, is yet to be developed among the

Hindus universally. On the other hand, our experience is that of ever the followers of any religion approached to this equality in an appreciable degree in the plane of practical work a day if it is those of Islam and Islam alone. Therefore we are firmly persuaded that without the drip of practical Islam, theories of Vedantism, however fine and wonderful they may be, are entirely valueless to the vast mass of mankind. For our own Motherland a junction of the two great systems—Hinduism and Islam—Vedantic brain and Islamic body—is the only hope I see in my mind's eye the future perfect India rising out of this chaos and strife, glorious and invincible, with Vedantic brain and Islamic body."

Writing, after his judgment had attained full maturity, to a gentleman and scholar for whom the Swami had the greatest regard and whom he had approached in his younger days for the solution of many doubtful points in our Shastras, he says:

The conversion is daily gaining on my mind that the idea of caste is the greatest dividing factor and the root of Ateya,—all caste either on the principle of birth or at least is bondage. Over and above, if we can see from my studies that the disciplines of religion are not for the Sudra, if he exercises any discrimination about food or about going out to foreign lands, it is all useless in his case, only as much labour lost. It is in the books written by priests that madnesses like that of caste are to be found and not in books revealed from God. Let the priests enjoy the fruits of their ancestor's achievement while I follow the word of God, for my good is there!

In the Belur Math, the Swami, during the last years of his life, invested many non-Brahmins with the sacred thread. A Kanyakubja lady disciple having signed her name as Dasi, which is a humble form of address literally meaning 'maid servant' he replied:

"Why have you signed yourself as Dasi? the Brahmins and the Kshatriyas should write Dera and Devi [meaning god and goddess]. Moreover, these distinctions of caste and the like have been the invention of our modern sapient Brahmins. Who is a servant and to whom? Every one is a servant of the Lord. The Kshatriyas are the fathers of all that is noble and beautiful in Hinduism. Who wrote the Upanishads? Who was Rama? Who was Krishna? Who was Buddha? Who are the Tirthankaras of the Jains? Wherever the Kshatriyas have preached religion they have given it to everybody, and wherever the Brahmins wrote anything they would deny all right to others."

Turning now to Vivekananda's speeches, we find the same attempt to soothe the susceptibilities of the orthodox, but for a man of the Swami's genius and passionate humanitarianism, it is difficult to maintain the mask long, and his real views are soon apparent.

"Caste is good. That is the only natural way of solving life. Men must form themselves into

groups you cannot get rid of that. Wherever you go there will be caste. But that does not mean that there will be these privileges. They will be knocked on the head. If you teach Vedanta to the fisherman he will say, I am as good a man as you, I am a fisherman, you are a philosopher, never mind I have the same God in me as you have in you. And that is what we want, no privilege for any one, equal chances for everyone, let everyone be taught the Divine within and everyone will work out his own salvation. Liberty is the first condition of growth.

Not the English, no, they are not responsible, it is we who are responsible for all our misery and all our degradation, and we alone are responsible. Our aristocratic ancestors went on treading the common masses of our country under foot, till they became helpless, till under this torment the poor, poor people nearly forgot that they were human beings. They have been compelled to be merely hewers of wood and drawers of water for centuries, so much so that they are made to believe that they are born as slaves, born as hewers of wood and drawers of water. Not only so, but I also find that all sorts of most demoralising and brutal arguments, culled from the crude ideas of hereditary transmission and other such gibberish from the western world are brought forward in order to brutalise and tyrannise over the poor all the more. Yet, let every man or woman and child without respect of caste or birth or weakness or strength, hear and know that behind the story of the weak, behind the high and the low, behind everyone, there is that infinite soul assuring the infinite possibility and the infinite capacity of all to become great and good.

In the Satya Yuga there was only one caste to start with and that was that of 'the Brahman'. We read in the Mahabharata that the whole world was in the beginning peopled with Brahmins, and that as they began to degenerate they became divided into different castes, and that when the cycle turns round they will all go back to that Brahmanical origin. This cycle is now turning round, and I draw your attention to this fact. The command is the same to you all and that command is that from the highest Brahmin to the lowest Pariah, every one in this country has to try and become the ideal Brahmin.

The days of exclusive privileges and exclusive claims are gone gone for ever from 'the soil of India and it is one of the great blessings of the British rule in India. Even to the Mohammedan rule we owe that great blessing destruction of exclusive privilege. The Mohammedan conquest of India was as a salvation to the downtrodden to the poor. This is why one-fifth of our people have become Mohammedans. And one-fifth—one half—of your Madras people will become Christians if you do not take care. Yet with all this there ought to be no more fight between the castes. The solution is not by bringing down the higher, but by raising the lower up to the level of the higher the whole work is to raise the Chandala up to the level of the Brahmin. There are books in which you read such fierce words as these: 'If the Sudra hears fill his ears with molten lead, and if he remembers a line, cut him to pieces.' If he says to the Brahmin you Brahmin, eat his tongue out. Diabolical old barbarism no doubt! It goes without saying, but do not blame the law givers simply for recording the customs of some section of the community

what prevents any caste from declaring they are Brahmins? This caste with all its rigour, has been made in that way—Say there are castes here with ten thousand people each. If these put their heads together and say 'we will call ourselves Brahmin,' nothing can stop them, who is to say nay? Those great epoch makers, Sankaracharya and others, were the great caste makers. I cannot tell you all the wonderful things they manufactured, and some of you may be angry with me. But in my travels and experiences I have been tracing them out, and most wonderful results I have arrived at. They would sometimes get whole hordes of Beluchis and make them Kshatriyas in one minute, whole hordes of fisherman and make them Brahmins in one minute. They were all Rishis and sages and we have to bow down to their memory. Well, be you all Rishis and sages. That is the secret. I am extremely sorry that in modern times there is so much fight between the castes. This must go. It is useless on both sides on the side of the higher caste, specially the Brahmin, because the day for these privileges and exclusive claims is gone. The duty of every aristocracy is to dig its own grave and the sooner it does, the better. The more it delays, the more it will fester and die a worse death. It is the duty of the Brahmin, therefore, to work for the salvation of the rest of mankind in India. So this accumulated culture of ages of which the Brahmin has been the trustee, he must now give to the people at large, and it was because he did not give it to the people at large that the Mohammedan invasion happened. It is because he did not open this treasury to the people at first that for a thousand years we have been trodden under the heels of everyone who chose to come to India the Brahmin must suck out his own poison.

Elsewhere the Swami spoke of 'the crushing tyranny of caste,' and he repeatedly pointed out that the soul has neither caste, nor creed, nor sex, and in one of his letters he advocated perfect freedom of marriage as well as food and dress, but it is needless to dilate at greater length on the subject. As there is nothing in the world which is wholly evil, caste has one good point which did not escape the Swami's notice. In his "Modern India" he says "The sages Vasistha and Narada, who were sons of prostitutes, Satyakama Jabala, the son of a female slave, Vyasa the fisherman, Kripa, Drona, and Karna, of unknown paternity, were raised to Brahmanhood or Kshatriyahood on account of their knowledge or heroism, what the communities of prostitutes, slaves, fishermen, or chariot drivers gained thereby, is to be considered. On the other hand those who had fallen from the Brahman, Kshatriya, and Vaishya castes were constantly accepted in Sudra society. In Modern India, not even a great scholar or a millionaire sprung from the ranks of the Sudras has the right to leave his own society. Consequently the influence of

their intelligence, learning, and wealth, being confined to their caste is being applied to the improvement of their own social circle. In this way the hereditary castes of India, unable to alter their social

status, are slowly raising the individuals within the boundaries of each district caste group."

(To be concluded)

A HINDU ADMIRER

THE CHOICE BEFORE THE WESTERN WORLD

By Mrs ST NIAL SINGER

ALLED Europe, as well as America is passing through a great moral and spiritual crisis. In essentials they are seeking to get out of the same darkness—they are struggling against narrow mindedness and selfishness. But outwardly they are attempting to solve problems that, to a casual observer, bear no relation to each other.

For Allied Europe the struggle is to achieve a peace of justice and not of conquest. Her higher impulses tell her she must not let her land hunger or vindictiveness dictate the terms. She can either abuse her late enemies, increase their hatred for her, and drive them to resort to cunning to encompass her downfall, or she can pave the way for reunion, make reconstruction possible in countries that, not so very long ago, were bent upon destruction as well as in lands that have been wantonly devastated, make it possible for democracy to prevail in communities that have tasted the bitterness of defeat, and help those nations towards the old ideal, rediscovered during the war, of human fellowship and co-operation.

Which alternative will she choose?

The last election in England was fought on such cries as "Kill the Kaiser," "Make the Hun pay," and "Bamsh the Hun." The same sentiments prevail now though not with quite the same intensity. The same is true of the other Allied countries. Throughout the war Imperialists everywhere in Europe saw the chance to extend their territories and, under the guise of one pretext or another, or quite openly, agitated for annexations.

The French, not content with "dis-annexing" Alsace Lorraine, laid claim to the rich Saar coal fields, to Syria, and to

a share of the ex-German colonies in Africa. When reminded of the formula of national rights on which the war was fought, they quickly shifted their ground to economic necessity—the Saar coal fields might be given to them as a compensation for the havoc wrought by the Germans in the French coal fields under their occupation. In regard to Syria, the expansionist party set up the cry for what it called *La Syrie Integrale*, that is to say, Palestine as well as Syria and based its claims upon 'historic grounds' and 'community of culture.' By historic grounds the expansionists meant that the French had taken part in the Crusades, and by community of culture that they had a few missionaries in the Levant who had established a few churches and schools and converted some of the population. Ever since Togoland was wrested from the Germans in 1914, it has been almost equally divided between the British and the French while German South West Africa and German East Africa have been administered by the British. The French expansionists desired, no doubt, the extension of their half of Togoland, and slices of the other territories, if not "compensation" for them.

Belgium, too, has pressed her claim for the rectification of her boundaries. She has been anxious not only for slices of contiguous land, but also for bits of Africa.

Italy's ambitions have, likewise, been whetted by the war. Her claims for Austrian territory have brought her into conflict with the Czechs-Slovaks—a conflict that statesmen are finding it most difficult to settle. Her Imperialists have desired to extend and improve their

African Empire, and have staked out claims in the Eastern Mediterranean, basing such claims upon historic and other rights.

Sigaur Girodani says, for instance, in his book, "The German Colonial Empire, Its Beginning and Ending," that the remembrance of "the tradition of Imperial Rome and that of the maritime and colonizing supremacy of" the Italian Republics, has not yet been extinguished in these places. He adds that "until a few years ago the only European language spoken along the whole Asiatic coast and even in upper Mesopotamia, in the Vilayet of Orfa besides Greek, was Italian, and Italian is still the language used by sailors." He further says that Italy has convent schools, hospitals, and religious institutions throughout the Turkish Empire, and that the guardianship of the Holy Land was founded by St Francis of Assisi and despite French claims to the contrary is entirely Italian. He claims that even more than tradition, religious institutions, military occupation, and industrial concessions, Italy derives her right to the Mediterranean territory from the emigration of her sons to those parts. Italian "Artisans, navvies, masons," he says, have given their hand—badly recompensed for the most part—in the construction of French harbours, the work of English railways and mines, and in the German *Bagdadban*. He further asserts that Italian engineers have given their best talents, and humbler merchants and employees are in every town of the Turkish Empire very indifferently protected. Hence Italy must have a slice of Turkey.

How bitter indeed, is this writer against the Japanese! He exclaims "Think of the dark and tragic situation created by the Japanese occupation of

Chao, which took place with the assistance rather than with the effective participation of England, but which for Japan has been the key, rubbed from Europe, for the conquest of the greatest colony of the world—China." He dislikes Japan not because that country is aggressive and expansionist, how could he indeed? but because it is not European, and because the Japanese hegemony in the Far East bodes no good for European influence in Asia.

Greece, from the moment she came into the war, has clamoured for choice bits of

Turkey. M Venizelos, her trusted leader, is a "strong man" and the claims that he has put forward certainly show extreme candour.

British Imperialism has not been so blatant as Imperialism in the Continent, but that does not mean that British expansionists are not anxious to get the lion's share out of the scramble. The bulk of the African and Asiatic territories wrested from the enemy has been in their possession. They are pressing for the conversion of Jerusalem into a British Dominion colonized by Jews and governed on the "Crown Colony model" by Jews, preferably British Jews. They desire the new Arab State to be under their protection. Little is said about the future of Mesopotamia, which is, in effect, an "Indian" province, and the claims of the Egyptians who demand that their country be returned to them are condemned by British Imperialists as extravagant.

Perhaps the most illuminating statement that has been made on the subject is contained in an article recently contributed to the *Pall Mall Gazette* (London) by Colonel Sir Francis Younghusband, whom Lord Curzon chose to head his Tibetan Mission. Sir Francis writes that in addition to the satisfaction and pride resulting from the good work done in India and Egypt, the British got considerable material benefits from increased prosperity, which efficient administration brings. Increased production, he says, enables the British to obtain more raw materials and food. The rise in the standard of living and greater purchasing power enable the British to sell more manufactures, especially cotton goods. Capital investments yield good interest. He urges, therefore, the taking over of Palestine and Mesopotamia, where heavy cost has been incurred upon military operations, roads, and railways.

If Egypt, Palestine, Mesopotamia, and India are considered together, Mr Francis Younghusband declares, and troops are properly distributed and means of quick transport made abundantly available, the British garrison for all four lands need not exceed the pre-war garrison in India and Egypt.

Unlike Europe, America has no ambition for territorial expansion or for any other sort of aggrandisement or gain.

She is however in the throes of a struggle to look beyond the American Continent.

America waited and watched the course of the war year after year hoping against hope that she would not be drawn into the European welter of blood. When Germany made it impossible for her to remain an onlooker she took up the weapons of war in the spirit of a crusader to deliver European peoples from militarist madness. Most Americans looked upon it as an adventure—noble but limited—and they felt that after it was over their country would be able once again to slip back into that state of lofty detachment from which she had emerged for a specific object.

With the defeat of Germany and her satellites Americans who believed in keeping America free from the muck of the Old World returned to their charge with increased vigour. As the days lengthened into weeks and months after the signing of the armistice their campaign became more intensified and at the time of writing Dr. Wilson and all the other Americans who can see beyond the Monroe Doctrine find themselves assailed by these forces.

The President and other far-sighted Americans fully realized however that in undertaking a large honourable and determining part in the conflict the United States was committing herself to responsibilities from which it would be impossible for her to extricate herself. Even those who were opposed to the President's way of thinking not necessarily for party reasons had a shrewd idea of whether participation in the European war was leading their country and that was perhaps the most potent reason why they fought to the last moment to keep the United States neutral.

It was a correct reading of American character that led Dr. Wilson to declare war and it was an equally correct reading of American character that has made him commit his country to the League of Nations idea. Whether the present United States Congress will or will not endorse the President's policy in this respect is problematical but it is pretty certain that the American people outside Congress will accept the responsibility to which he has committed them.

Americans are an emotional idealistic and imaginative people and this expan-

sion of what they regarded as a noble but limited adventure into permanent responsibility for the peace of the world will captivate them. While they will undoubtedly insist upon a special guarantee for the perpetuation of the Monroe Doctrine and also for the preservation of American freedom to deal with such questions as immigration the agitation against any participation in world responsibilities whatever will die out in course of time.

Is it not significant that Dr. Wilson, some of whose people are clamouring for isolated existence should have been the man but for whose influence the Peace Conference at Versailles may not have given precedence to the consideration of ways and means to secure international co-operation and to ensure permanent peace over the discussion of all other issues? In doing so the American President has shown that he possesses the rare faculty of discriminating between dominant rival interests and assigning to them values in strict relation to their effect upon human well-being and progress. Had he lacked strength of will his power of perception would have been of little avail for friend and foe alike clamoured for the solution of other problems.

The presence of the New World at the Peace Conference has certainly imposed some check upon the European appetite for expansion. The American President supported by European democracy has already succeeded in moderating the demand for indemnities and has been able to prevent conquered territories in Asia and Africa from being annexed by European Powers.

The Conference has however refused to arrange for international control of these territories providing for a system of administration by trustees each portion of such territories being entrusted for administration and development to one or the other of the Powers (or Dominions) acting as the League's agent. Even that compromise has rendered the expansionists of all nations speechless.

It is now an open secret that the President was not able to persuade the Commission over which he presided to adopt the scheme that the American delegation presented to it. The draft on which the Covenant of the League of Nations published on February 14th, 19

based was British. It appears to me to be a cross between the scheme propounded by the League to Abolish War, of which Mr. F. Harbert Stead, a younger brother of the late W. T. Stead, is the convener, and the Rt. Hon. George N. Barnes of the British War Cabinet, is Chairman, and the plan elaborated by the Rt. Hon. General Smuts in the pamphlet that he recently issued through Messrs. Hodder and Stoughton, London.

The authorship of the covenant does not matter so long as the machinery designed by it is international and democratic in character and so long as it is capable of working efficiently and smoothly. Does the covenant fulfil these conditions?

The Executive Council that will dominate the League, as at present designed, will be unsatisfactory from the international point of view. Only one seat out of nine is earmarked for the United States—all the other American countries are left to scramble for one or more of the four unassigned seats. Similarly, only one seat is set aside for Asia—and that for Japan, whose ambitions lay her open to Asiatic suspicion. Africa has no place whatever in the Executive Council. No definite place has been set aside for Germany, Russia and whatever may remain of Austria-Hungary after the former dual monarchy has been reorganized. The enemy countries and neutrals have not been debarred, but their election depends upon the votes of the five associated Powers which so long as the covenant is not amended, will enjoy a clear majority.

The constitution is moreover, undemocratic. As at present contemplated the Executive Council will be composed of Prime Ministers or Foreign Ministers

of various nations and not of representatives specially chosen by the various peoples themselves. Besides, the Council will not be responsible to the body of Delegates, to be composed of representatives of all the nations admitted into the League.

The League of Nations is not prepared to make its own arrangements for the administration of territories wrested from the Germans and the Turks and not to be returned to them. Some of them are to be organized into States which will be subject to advice and assistance from individual members of the League, while the others will be administered, in nearly every case, as if they were integral parts of territories belonging to one or the other members of the League.

The Covenant does not forbid the manufacture of arms by separate nations, or even compel nations to nationalize such industries. It does not call, with a clear voice for the reduction of armies, navies, and air forces to mere police establishments. It is silent about the creation of an international police force that would exclusively be responsible to the League, and would be used against recalcitrant nations as it might direct.

Since the constitution adopted for the League follows lines of the British Empire, the League will closely follow the pattern of the Imperial Conference and Imperial Cabinet. It is not to be a real federation, not a supernational authority or World State. Therein it falls short of the ideal, and may fail to be an efficient organ for the management of international affairs, about which the Covenant has very little to say. Democrats all over the western world are pressing for drastic amendment and I hope they will succeed.

REVIEWS AND NOTICES OF BOOKS

ENGLISH

JOHN CHRISTOPHER *By M. Romans Rolland*

This remarkable novel is the product of the pen of the celebrated French author M. Romans Rolland, a Nobel Prize winner. A cultured English lady who has never seen India but whose

sympathies are wide enough to embrace the world thus wrote from Scarborough to an Indian friend some time ago—War is terrible! No good thing can come out of it! I feel convinced; but I suppose it must be the natural result of causes we have ourselves set in motion. At any rate it should do us good one would think. But if it is

going to introduce a cast iron military system in Great Britain, it will only have plunged us further into the mire. I don't know what you think of our European civilisation: it shows how far we have wandered from the teachings of Jesus." The gospel of love which Jesus taught is indeed utterly repugnant to the spirit of rivalry and hatred which prevails in Christian countries and which was undoubtedly at the root of the recent Armageddon. There was no more earnest champion of Christianity in all Europe than the megalomaniac of Potsdam who brought about the dreadful conflagration; and it cannot be denied that there was ample infernal material all round him when he struck the match. How is this condition of things to be accounted for? It may at first sight look as if Christ was in robes earnest when he said "Think not that I am come to send peace on earth: I came not to send peace, but a sword." But as a matter of fact we know that the whole tendency of his teachings is towards humanity. For the Gospel of St. Paul we must indeed turn not to the New but to the Old Testament. The feeling of pity (not unmixed with contempt) for pagans and infidels which finds place in the new book can only be regarded as a survival of the baneful teachings of the old Jewish chroniclers.

The foregoing paragraph is only intended to draw the reader's attention to an illuminating page in 'JOHN CHRISTOPHER,' dealing with this subject. Christopher, the German musician, stands for the worship of force, *Taatsrecht*, he is a disciple of Nietzsche and a believer in the power of the mailed fist. He is imbued with the Old Testament spirit and he wants his friend Olivier, the generous young Frenchman to adopt the old decree of hate. *Jeune Barbare*, or "France for the French." Olivier is a typical Frenchman to whom all questions of race superiority are repulsive. He is *en rapport* with all humanity and his emphatic reply is "No. Such a decree is not for the French. Any attempt to propagate it among our people under cover of patriotism must fail. It is good for barbarian countries! But our country has no use for hatred. One genius never yet asserted itself by denying or destroying the genius of other countries, but by absorbing them." The book was written and published before the war broke out and to the student of history as well as to the general reader the following dialogue cannot fail to be interesting and instructive.

"There is no blood in your veins," said Christopher, "and on top of that all sorts of Christian ideas! Your religious education in France is reduced to the Catechism: the emasculate Gospel, the tame bloodless New Testament. Humanitarian clap-trap always fearful. And the Revolution Jean-Jacques Robespierre, 49, and, on top of that, the Jews! Take a drink of the full, unadulterated Old Testament every morning!"

Olivier protested. He had a natural antipathy for the Old Testament, a feeling which dated back to his childhood when he used secretly to pore over an illustrated Bible, which had been in the library at home, where it was never read, and the children were even forbidden to open it. The prohibition was needless! Olivier could never keep the book open for long. He used quickly to grow irritated and saddened by it, and then he would close it; and he would find consolation in plunging into the *Iliad*, or the *Odyssey*, or the *Arabian Nights*.

"The gods of the *Iliad* are men, beautiful, mighty, vicious. I can understand them," said Olivier. "I

like them or dislike them: even when I dislike them I still love them. More than once, with Patroclus, I have kissed the lovely feet of Achilles as he lay bleeding. But the God of the Bible is an old Jew, a maniac, a monomaniac, a raging madman, who spends his time in growling and hurling threats and howling like an angry wolf, saving to himself in the confinement of that cloud of his I don't understand him, his perpetual curses make my head ache, and his savagery fills me with horror."

'The burden of Moab -

'The burden of Damascus -

'The burden of Babylon -

The burden of Egypt -

"The burden of the desert of the sea."

"The burden of the valley of vision."

"He is a fanatic who thinks himself judge, public prosecutor and executioner rolled into one, and, even in the courtyard of his prison, he pronounces sentence of death on the flowers and pebbles. One is astounded by the tenacity of his hatred which fills the book with bloody cries: a cry of destruction... the cry is gone round about the borders of Moab the howling thereof unto Eglatim, and the howling thereof unto Beirelim."

Every now and then he takes a rest, and looks round on his massacres and the little children done to death, and the women outraged and butchered and he laughs like one of the captains of Joshua, feasting after the sack of a town.

"And the Lord of hosts shall make unto all people a feast of fat things: a feast of wine on the lees, of fat things full of marrow, of wine on the lees well refined. The sword of the Lord is filled with blood, it is made fat with fatness, with the fat of the kidneys of rams."

"But worst of all is the perfidy with which this God sends his prophet to make men blind, so that in due course he may have a reason for making them suffer."

"Make the heart of this people fat and make their ears heavy and shut their eyes. Let them see with their eyes and hear with their ears and understand with their heart and convert, and be healed—Lord, how long? Until the cities be wasted without inhabitants, and the houses without men, and the land be utterly desolate."

"Oh! I have ever found a man so evil as that I am not so foolish as to deny the force of the language. But I cannot separate thought and form and if I do occasionally admire this Hebrew God it is with the same sort of admiration that I feel for a viper or a (I'm trying in vain to find a Shakespearean monster as an example I can't find one even Shakespeare never began such a hero of hatred—mainly and virtuously hated). Such a book is a terrible thing. Madness is always contagious, but that particular madness in all the more dangerous inasmuch as it sets up its own murderous pride as an instrument of purification. England makes me shudder when I think that her people have for centuries been nourished on no other fare. I'm glad to think that there is the dyke of the Channel between them and me. I shall never believe that a nation is altogether civilised as long as the Bible is its staple food."

"In that case," said Christopher, "you will have to be just as much afraid of me, for I get drunk on it. It is the very marrow of a race of lions. Stout hearts are those which feed on it. Without the antidote of the Old Testament the Gospel is tasteless and unwholesome fare. The Bible is the

bone and sinew of nations with the will to live. A man must fight, and he must hate.

Have we here in part of the secret of the white man's race pride which manifests itself in his relations with 'coloured' people all over the world and is probably seen at its worst in the United States of America which lead the van of Christian civilisation?

S. H.

CIVIC AND NATIONAL IDEALS by Sister Nivedita, second Edition Price Rs 1 1918. Udbodhan Office, Calcutta.

The distinctive quality of Sister Nivedita's writings—that which gives them their peculiar charm—is their intense suggestiveness. Often as we read the sentences one after another, they fail to carry any distinct, definite, clear cut meaning to the mind. But the impression produced by the whole lingers in the brain, and gradually becomes more and more distinct, and gives an altogether new orientation to our thoughts, radically transforming our entire attitude, our whole outlook, and when, after a considerable lapse of time, we watch the result, we find that we have learnt to judge everything from the national point of view. And this national standpoint, at first latently aggressive, gradually takes on a more sober hue, and on second reading we lay the emphasis on many points which had escaped our notice in the first flush of our enthusiasm, and which show that though the Sister had so strong an admiration for India and her civilisation, she was not, in spite of occasional exaggeration and idealisation, unconscious of the serious drawbacks which must be overcome if India is to take her rightful place among the living nations of the world.

The little book under review is a collection of short essays on civism, nationalism and patriotism, and like all other writings from the same pen, amply repays perusal. We shall cull a few sentences by way of present to the reader. "The age which is discovering nothing new, is already an age of incipient death. That philosophy which only recapitulates the known, is in fact a philosophy of ignorance. It is because in our country [India] to-day great thoughts are being born because new duties are arising, because fresh and undreamt of applications are being made of the ancient culture, that we can believe the dawning centuries to be before us." "Not in history alone, but in history in common with every form of classical learning Indian criticism has to be redeemed from the elaborate pursuit of trifles. It is common enough to find that the study of the Bhagavad Gita has become mere hair splitting about a noun here or a preposition there. But this failure to see the forest for the trees cannot in any true sense be considered knowledge of the Gita. The power and habit of making large generalisations has to be recaptured by the Indian mind. And so, where more so than in dealing with history." "Buddhism was, in fact, simply Hinduism nation allied, that is to say, Hindu culture plus the democratic idea. Hinduism alone, in its completeness, can never create a nationality, for it then tends to be dominated by the exclusiveness of the Brahmin caste."

And to day the last trace of religious and social prejudice is to be swept away, and the idea of nationality itself, pure, radiant, and fearlessly secular, is to emerge in triumph, giving meaning and consistency to the whole of the previous evolution. The beneficial influence of caste in the development of art

industries has often been dwelt upon, and Sister Nivedita also admits that "caste education has the advantage of causing accumulation of skill from generation to generation." But she also points out the bankruptcy of creative imagination that resulted from the same cause, and ultimately led to their ruin. "For an art that is followed by a hereditary guild tends to an unendurable sameness tends to become ridden by conventions, till at last the mind of the community revolts, and seeks new ideals." Alluding to the tradition that royal ladies of the Mughul Court used to spend fabulous sums in the purchase of illuminated manuscripts the artistic value of which is appreciated only by trained connoisseurs, the authoress says: "In great ages, woman is always educated, always competent, and often literary. Her ignorance marks the on-coming of national decadence." "It was a Mahomedan who composed the Ascription in the Ganges that every Hindu child in Bengal learns in his boyhood. In doing so, he was the forerunner of a new era in literature. Even now we are only on the threshold of that great age. But many who are young to-day will not have grown old before these things shall come to pass. In Indian hearts, Hindu and Mahomedan alike, high caste and lowly born, woman and man, there will be no symbol so holy as, firstly, their mother land, and secondly, their city. The civic life will offer a conception as clear as that of family and home. The duties of citizenship will seem not less precious than those of *jati* and *samaj*."

The getup of this little book is all that could be desired. The paper, binding and letter press are all excellent, and we have noticed very few printing mistakes. In its present shape, it forms a beautiful prize book for freshmen in our colleges, especially as the price is quite moderate.

Q

THE SILKEN TASSEL by Ardesir T. Khabardar (Theosophical Publishing House, Adyar).

Mr J. H. Cousins in his introduction to this book says of the author: "He has lived and listened as closely to Keats and Francis Thompson and other masters of lyrical English, and he has made their speech and method so fully his own—in these English poems of his—that it is only on the rarest occasion that a close reader comes on an account which discloses the foreign lip." This is high praise. But the reader of these poems will acknowledge that there is little of exaggeration in it. We have been familiar with some of Mr Khabardar's productions through the pages of the 'East and West'. But one can never understand him truly without going through a connected series like the present one. He has tasted of the joy of human love and Divine vision and through these poems he gives us ample evidence of his genuine emotions. Like every truly feeling person he wavers between darkness and light, between tears and smiles. He is puzzled by the "Riddle of Life."

'Duty feels but it can move not,
Love appeals but it can prove not,
Hope entreats but Reason hears not,
Hope dith tremble but Truth fears not
Life is virtue, Life is Duty,
Life is but one painful beauty.
Then in all your circled pleasure
Keep for nye its central measure."

In this mood "When hopeless fancy finds a trembling fate and all—the world a starless darkness seems" he welcomes "sweet death" to approach

"Soft as the starry footsteps of the Night." He then feels "What are your smiles of the golden moro" and "what are your strides for a hope forlorn?"—"The world is all but a dream!" He looks forward to a release from these prison walls, to a journey to the 'Life Beyond' where 'Life is real, Life is true.' He thinks of the 'King of kings' and remembers the "Plate of Krishna" and the tale of Radhika, "thence he drifts away to thoughts of earthly love and feels that here is ground to take shelter in from the storms of worldly life, that here is "A rainbow bright between a smile and frown." Addressing him, Love laughs and says, "This fleeting world be thine! It dries and I with it all thy running streams, My throne is far above thy measuring clocks." "Love is unending light," "Love is eternal joy that flowers the sky" yet "Love is but grief that breathes a life-long sigh." This is the poet's philosophy of life and the critic need not pry into it and dissect it further.

Taking some of the individual poems we may say there is a beautiful music in the singing splashes of the 'Wheels of time.' "Ode to the Kold" and "To the Mina" are charming bird-pieces and facile comparisons with similar poems of the greatest masters. "Lines written on a blank leaf of the Crested Wood" are noteworthy because of their connection with a production of our poet the crowned king of our poetry—On the whole the volume is one to be read with appreciation and delight.

SHORT STORIES by Srimati Sureshkumari Devi
Ganesh & Co., Madras Price Rs. 2

This volume contains fourteen stories of the authoress, translated by herself from their Bengali originals. In the preface she discusses her aim in publishing this volume and says "The civilizations of the east and the west are in a sense directly opposed to each other"—the tendency of the former has been towards the development of the spiritual life, while the latter has proceeded in the direction of materialism. In presenting these little pictures of the life in his home, the authoress has tried to make her western reader appreciate a little of the quietness of Eastern life and in particular to bring the Hindu woman before the foreigner to whom she has been so long a complete mystery.

Taking the stories individually, we may refer to two of them,—"Immortals from a Daring Island" and "The Genius of the place"—the latter has attracted so much. The former gives us a page from a Hindu widow's life, it tells us of a single streak of light which enlightened the gloom of her soul for a day and left it darker than before. It is exquisite in its touches of concentrated pathos, but the effect would probably have been heightened if the world's present epics had been left out. The second of these two tales takes us to Bombay and shows us another melancholy picture of a maiden who has been waiting in vain for her lover, of a sleeping beauty of a lonely village a spirit animating the desert surroundings. "The sannyasi" is a strange tale of those taken from ancient Rajputana and the "Lajavati" is a perfect picture of a Hindu home. None of the other stories rise to the level of these, though "The Gift of the Goddess Kali" has the charm of weirdness. The two stories at the end are of the least importance since the aim of the volume is avowedly to bring the life of the East before the eyes of the West, and of this life they tell us but little.

THE POETICAL WORKS OF C. S. RAMANATHI
SERIAL VOL. I

The volume contains fourteen poems on some very common subjects, e.g., the Crow, the Pomegranate Tree, the Shambhika flower, etc. The subjects of poems should, of course, never affect our appreciation of them and a poet may clothe the most uninteresting object with such exquisite beauty as may touch the inmost chords of our heart. Mr. Ramaiah has not yet acquired this art of creating beauty and the themes are treated in a more or less colourless way, and the redeeming charm of the poems is an occasional phrase or a picture of a natural scene.

THE DRIPPING CLOUD, by M. C. Pillay

The interest of this book lies in the fact of its having been written by an inhabitant of Mauritius and Mr. Pillay is said to have opened a new era in the history of Mauritian literature. The most noteworthy pieces are "The Lament of the Pariah," "Dejection," "To Sarawati" and "To a friend on the death of his child." The first of these appeals to us because of its subject matter and a stanza or two is worth quoting.

"Why hast thou shaped one thus, O Lord!

Amidst the wretched pariah horde

A mad as a shame and sorrow-bored

Sea of misery!

Alas! The all now, a desert drear,

Groaning beneath Beahmiah's mangle and ire

Without e'en one greenish speck or spirit

O winless eye!"

Of genuine poetic inspiration there is little here, but one must not be extra critical in dealing with a new-born literature.

NKS

PRACTICAL SUGGESTIONS FOR TEACHING
ENGLISH BY THE PHONETIC METHOD Adapted
and arranged from the works of Profs. H. F. Palmer
and I. F. Cummings Price—At 3 To be had
of the Clerk, Friends High School, Nashikabad,
C. P.

This is an excellent little work which should prove helpful to teachers of English who wish to follow up-to-date lines in language teaching in schools, in which the direct method is combined with a phonetic study of the language. The sounds of English are considered organically, and their differences from similar ones of the vernacular, Hindi, are noted. This comparative way is the only way to impress upon the learner the peculiarities of the sounds of a foreign tongue. The work is thoroughly practical in its scope, being embodied in a scheme of work in the class for six terms. We heartily recommend it for the personal of people interested in the teaching of English.

THE PIONEERS OF SIMPLIFIED SPELLING FOR
FEBRUARY 1918 Published by the Simplified
Spelling Society, London

This has been sent to us together with other papers on the subject, by the Honorary Secretary of the 'South Indian Branch' of the Society. There can not be any difference of opinion as to the necessity for a reform of English spelling, but the system advocated by the S. S. Society, which is only Ellis's Classic System slightly modified, is impossible, although a

number of d stungalshed people seem to support it. This system adopts the ord nary English values of the letters and even then it is not cons steat—it does not follow the one sound one sign principle (Eg n has two values as in to and in tan the d p hong sound of [n] is represented by ie as well as by y, w i h has a consonantal value as well and an and o are both symbols for [ɔ]). It is not based on scientific phonetics although the S S S rightly enough takes the ear and not the eye as the guide to spelling. The system advocated by the S S S is a most half hearted compromise between English usage and scientific consistency to the unav avoidable d triment of both. The only scient fic svstem of or thography that has come to be recognised among phoneticians and ph ilolog ets in recent times is that of the International Phonetic Association. The I P A a ph abet however requires a study of phonetics in or der to be mastered and the average reader can not b ndu ed to study phonetics so as to be able to sp ll correctly. The question of spelling reform is still far from a satisfactory solution—at any rate the solution offered by the S S S has grave defects to remove which would be to undo it.

S K C

THE ETHICS OF PASSIVE RESISTANCE By M S Murti Ganesh & Co Madras As 4

Socrates, Christ, the Christian martyrs, Imam Hussain, Pralhad Mirabai were all passive resisters. Victor Hugo, Thoreau and Tolstoy advocated passive resistance, and the Japanese custom of Hara Kiri and the Indian Prayogvesha (hunger strike) are different ways of carrying it into effect. The motto of the pamphlet is 'All truth is safe and nothing else is safe and he who keeps back the truth or withholds it from men from motives of expediency is either a coward or a criminal or both' (Max Muller). If passive resistance on the part of a minority in a State becomes an imperative necessity then the majority cannot continue strong for long. It is bound to weaken and become effie as in its action in the matter of enforcing its power or its authority against that minority. Satyagraha is soul force as opposed to the force of arms. It is the religion of the mass. It is a panacea for all evils. Fear of God alone passes resistance a friend of no other power. Fear of kings can never make him for sake the path of duty. He discards violence but his resistance is only limited by his strength to suffer.

The pamphlet is nicely printed and beautifully got up.

Q

MARATHI

NATYARLI DHARATWARSHA OR INDIA IN DRAMATIC FORM By Mr V G Apte Editor Anand published at the Anand Karyalaya, Poona City. Pages 250 Price Rs 1

Mr. Apte hardly requires any introduction. He is well known in Maharashtra as the Children's Friend and his numerous publications all written for children have endeared him to his juvenile readers. Mr. Apte's latest juvenile book is the history of India in a dramatic form and like its predecessors in the same line viz. 'Natyamayan' and 'Natyamayan' will catch the eye and captivate the hearts of young readers. To make the subject of history attractive in better method could be suggested than to depict the principal incidents of

history in the dramatic form so as to make it suitable for being represented by children themselves on the little school stage. Mr. Apte has shrewdly observed the liking of children and carefully adapted the subject of history to their taste.

D V JOSHI, B.A.

SANSKRIT.

ADVAITAMODA By Pandit A. Vasudeva Shastri, Sanskrit Pandit Fergusson College, Poona. Published by Harinarayana Apte, Anandashrama, Poona. Pp 190 Price Rs 2

The book *Advaitamoda* 'The Fragrance of Non Duality' is included in the *Anandashrama Sanskrit Series*. It deals with the Vedanta philosophy. Here the author Pandit A. Vasudeva Shastri first describing the views of both Shankara and Ramana and showing clearly the points of their agreement and disagreement systematically refutes the views of the latter as expounded in his commentary on the *Brahmasutras*, establishing thereby the absolute non duality doctrine of the former, finally meeting all the objections raised by Ramana regarding the *avaya* of Shankara. The book has been written well by avoiding both much prolixity and brevity.

VIDYASREKHARA BHATTACHARYA

URDU

ARZ UL-QORAN By Maulana Syed Suleman 2 vols. Pp 575. Published by Shibli Academy, Azamgarh (U P). Price Rs 3 as 12

This is an exhaustive work (the title meaning the Lands of the Koran) on the Historical Geography of Arabia and the adjoining countries. It deals in a learned way with all the geographical and historical allusions occurring in the Koran in their archaeological, ethnographical, theological and sociological aspects, and embodies a considerable research and width of knowledge and supplements and corrects standard European works like Foster's.

MABADI ILMI INSAANI By Professor Abdul Bari. Pp about 150. Price Rs 2. Published by Shibli Academy Azamgarh (U P).

A liberal yet lucid and readable translation of Berkeley's 'Principles of Human Knowledge', with an interesting preface and a comprehensive glossary.

BERKELEY by the same author and publisher. Pp 125. Price Rs 1 as 8

A work on Berkeley both critical and expository. After giving the interesting events in the famous philosopher's life, the author gives an expository sketch of his doctrines and theories and then proceeds to examine them. His narrative is entertaining, exposition clear, and criticism judicious. The work on the whole evidences philosophical insight and acumen on the part of the author.

SHER UL AJAM by the late Maulana Shibli Noman. Shamsul Ulama. Published as above. Vol V pp 230. Price Rs 2

This volume brings to a close the compendious 'History of Persian Poetry' planned several years ago by one of the greatest Muslim scholars. Maulana Shibli lived to see the four volumes of this stupendous work come out of the press and he left the manuscript of the concluding volume in the hands of his pupils who have now published it. This

volume surveys the non-epic, that is the best of the didactic, and the mystical poetry of Persia. Those who are familiar with any of the author's previous writings need hardly be assured of the exceedingly high quality of the work.

A M

HINDI.

1. KRISHNARJUNA-YODHA. *by Makhmal Chaturvedi and published by Sivanarayan Misra, Pratap Press, Cawnpore 8vo pp 102, price 8 annas*

It is a drama in four acts which can be very conveniently staged. In fact it has already been and was adequately appreciated on the occasion of the Hindi Conference at Jabalpur. The author has adopted a novel style and deserves to be congratulated on the success of his attempt.

2. UPYOGI PURUSH, *by Rameswar Prasad Sarma and published by Sivanarayan Misra, Pratap Press, Cawnpore, 8vo pp 98, price 6 annas*

It is a translation of a Gujarati book 'Udyogi Purush' by Sriyut Narayan Hemachandria and contains sketches of the lives and doings of nine great men—two Indians and seven outsiders, besides a well written essay on Sadhana and Siddhi (endeavour and success). The book is worth reading, the language is felicitous and the ideas are good.

3. RUSA-KA-RAHU, *by Visrambhar Nath Sarma Kausik and published by Sivanarayan Misra, Pratap Press, Cawnpore 8vo pp 100, price 6 annas*

This is a sketch of the life and doing of Rasputin based on a book in French with this difference, as stated by the translator, that whereas the author of the original has tried to prove him a fool when describing events connected with him, the translator has taken a more charitable view. At a time when the recent revolutions in Russia have shocked the whole world, it may be worthwhile to recollect the state of affairs which preceded the present anarchical condition. This booklet in Hindi offers an opportunity to our countrymen to catch a glimpse of that period of horrible tyranny which has culminated in still more horrible revolutions.

4. BHISHMA, *by Visrambhar Nath Sarma Kausik and published by Sivanarayan Misra, Pratap Press, Cawnpore 8vo pp 100, Price 8 annas*

The main story of this drama in three acts is drawn from the Mahabharata. The language is simple and the style easy. It has been designed for the stage. It would be a happy day when such pieces will take the place of Bagla Bhagat and similar trash on the Hindi stage.

5. DHOL-ME-MOL. *Published by the Lakshminarayan Press, Moradabad, pp 60, Price 4 annas*

This little pamphlet contains six humorous essays satirising some of the evils of the present day.

6. PARIKSHAGURU, *by the late Lala Srimvasadas Published by Motilal Loh (Marwari Traders Association) Calcutta. To be had of the Publishers and the Hindi Pustaka Agency, 126, Harrison Road, Calcutta pp 310 Price 12 annas*

The Marwari Traders Association have rendered a great service to the cause of Hindi Literature by

bringing out this cheap edition of the late Lala Srimvasadas' classic, *Parikshaguru*. The author flourished in the 3rd quarter of the last century and wrote only four books of which *Parikshaguru* is at once the most fascinating being an original romance depicting the life of a Delhi youth of the trader class. Lala Srimvasadas enjoys a reputation among Hindi writers of the past century for his realistic delineation of character and ebullience of expression, and all students of Hindi Literature should procure a copy of this book.

SEVA SADANA. *By Sriyukta Premchand Published by the Hindi Pustaka Agency 126, Harrison Road, Calcutta. Cloth bound pp 512, price Rs 2-8 0 only*

This charming novel is an original work in Hindi and is of a high standard. The author is well known in Urdu literature and has already made a mark in Hindi. The printing is excellent. Considering the originality of the book and the excellence of the story, the book is moderately priced and it is expected, will command a speedy sale.

8. SATYA SOROJA. *By Sriyukta Premchand Published by the Hindi Pustaka Agency, 126 Harrison Road, Calcutta pp 111, price 8 annas*

It is a collection of seven short stories from the facile pen of Sriyukta Premchand. This is the second edition of the book and the artistic design on the paper cover is very pleasing. The stories are very interesting.

‘NUNA DEVA’

GUJARATI

1. UDBHIVIDYA NUN KAKHADARSHAN (ઉદ્ભવિદ્યા નિષા નું જાતરણ) *by Lalitprasad Shivprasad Datt, B.A., B.Sc., LL.B. printed at the Lokshmi Vilas Press, Baroda, Cloth bound, pp 181 Price Rs 1 (1919)*

(2) BRITISH RASHTRIYA SAMSTHA (બ્રિટિશ રાષ્ટ્રવ પસાથ) *by Harilal Madhavji Bhatt, M.A., Prof of Logic and Moral Philosophy, Bhaubhai College Junagadh, and Fellow of the Bombay University. Printed at the Arjunsudharak Press, Baroda. Cloth bound, pp 135 Price As 13 (1919)*

(3) JAGAT NO VARTIA RUPE ITIHAS (જગત નો વર્તાવે રૂપે ઇતિહાસ) Vol II (Parts 4-5) *by Gokuldas Mathuradas Shah, B.A., LL.B., Educational Inspector, Baroda. Printed at the Lokhona Mitra Press, Baroda. Cloth bound, pp 248+56 Price Rs 3 (1918)*

These three books are further contributions to the Shri Sayaji Sahitya Mela, inaugurated by the liberality of H. H. the Gaekwar of Baroda. The first is a translation of an English work Stope's *Bosany*, the Modern Study of Plants. The way in which the translator has handled his subject, together with the glossary given at the end, is sure to make it interesting to those who are interested in the subject, and we think it is a useful addition to the scanty literature in science which we have at present. The third, the history of the world, is a continuation of the former volume, and connected as it is with India and the modern history of England, is likely to find greater

favour than its predecessor, with its younger readers. The second, which is based on Anna Buckland's "Our National Institutions," is the most remarkable of the three. Its writer is Prof. Bharti, who has already won his spurs in writing on an allied subject, the constitution of the Indian Government. In thirteen chapters, he has put before the reader, in a popular form the institutions—political, administrative and constitutional—of our rulers. Beginning with an explanation of the foundations on which their liberal institutions are built, he treats of the House of Commons, the House of Lords, the Privy Council, the Army, the Navy, and lastly of the Empire. In a succinct form, the book gives all possible information on this important matter, and as each chapter has been written after close study, it would prove of great assistance to the student in making him familiar with a subject which every Indian should know well.

PUSHTI MARGA NO ITIHAS (इति मार्ग नो इति मार्ग) by the late Shakkur Liladhar Hari, printed at the Hindustan Press, Bank Street, Bombay Paper cover, pp 164 Price—As 12 (1919)

The first edition of this little book was published about thirty years ago. It contains precious little history of the creed of the Vallabhacharyas, and that too from a popular point of view. But its chief utility, when it was first published, lay in the fact of its having boldly and mercilessly exposed the evil paths into which these Vallabhacharya Maharajas had been leading their lady worshippers under the guise of religion. It required some courage to do so then, as those who were handed in this way, wielded great social powers. The book can still be regarded as an eye-opener for those who are even now blindly giving their all to these so called religious preceptors.

SHRI GITASINDHU TARANGVALI (श्री गीतासिंधु तरंगवलि) by Swami Sri Atmanand Saraswati of Nandan. Printed at the Lady Northcote Orphanage Printing Press, Bombay Paper cover, pp, 160 Price—As 8 (1918)

In this little book the Swamiji sets to himself the question as to why Arjuna fought after once declining to do so on the field of Kurukshetra. He tries to answer by reference to the various verses of the Gita, and thinks he has solved it correctly, by saying that he did so because it was his duty to do so.

BHARAT NO TANKAR (भारत नो टंकार) by Ardeshr Framji Khabardar. Printed at the Talta Vivechak Printing Press, Bombay Paper cover, pp, 74 Price—As 12 (1919, 0)

One of our most popular poets, translates the words, with which he has named this book containing a collection of his latest production, "The Call of India." The leaven of political aspirations which is leavening the mass of our country's mind, the stir and the restlessness that have been lately moving our hearts, these are the themes of the poet's song, and in no uncertain words does he speak. Indeed, when everything is in the melting pot, when we are struggling towards a goal, it is the duty of a poet to encourage his brethren and pour into their ears and their hearts, heartening words, and of all our poets, who could do it so well as Khabardar. The scheme of this work is that he first sees a dream, then cogitates over it, then hears a gentle murmur, and then a clap of thunder, which of course means the present Awakening. The allegory is well chosen. The songs are spirited and still sober. They are thoroughly suited to the heroic vein (वीररस) which runs through them. Patriotism, burning patriotism is their keynote, but they are all kept within the bounds of sanity nowhere do they overrun the boundary or degenerate into fanatic heroics. His love for Bharat is peeping out from every verse, and though we realise that this is not the first attempt in the direction of patriotic poetry, we have no hesitation in saying that his work stands head and shoulders over that of the lesser lights.

AROGYA NI VARTAO (आरोग्य नो वार्ता) PART I by Dr Hariprasad Vrajraj Desai, printed at the Sahitya Printing Press, Ahmedabad Paper Cover Pp 59 Price—As 4 (1919)

This is a small book but it contains very valuable matter. The importance of cleanliness requires to be inculcated into the minds of juveniles in a way which should impress and appeal to them without boring them, and that has been done here by the writer. As to why the teeth should be kept clean or as to why we should take exercise or live in well-ventilated houses, and many other equally important things have been hid in such a simple way, that they are sure to go home to the readers.

INDIAN PERIODICALS

Notes on the Origin of Civilisation

We take the following "Notes" from the January—March number of *The Mahabodhi and the United Buddhist World*.

The civilisation of Europe began about fifty years ago according to the opinion of scientists. The following quotation is from Harmsworth Popular Science—Genuine civilisation dawned within the

memory of the oldest inhabitant. Sanitary science began to be effective about fifty years ago. Light years ago the country was in a state of savagery so far as punishment of crime was concerned. Banishment and degradation from citizenship were among the most dreaded Roman punishments. It was the Teuton and the fierce Saxon, Dane and Northman—who established the most cruel code of retaliatory and vindictive laws. As late as 1831 forty people were hanged in England for offences other than murder; and in

1833 a child nine years old was condemned to be hanged for poking a hole with a stick through a papered up window pane and stealing two pence half penny worth of paint" Vol V p 3589

The Old Testament records the most atrocious and vindictive punishments inflicted on those found guilty according to the principles of jurisprudence instituted by Moses. The uncivilized Europe accepted the Mosaic law.

'Human ingenuity has never been employed for a more barren purpose than that of trying to break the will of man by pain. Death by the cord by the guillotine, by the axe by strangulation, by poison by flogging by fire by dismemberment and by boiling in oil have all been tried as deterrents, and have not deterred. Torture on the wheel, on the rack, by crushing weights by thumbscrews and ruficane in the piliory, the stocks, the ducking stool, the branding of cheeks, forehead, and breast, clipping off of the ears, slitting of noses and whippings innumerable have had a trial for centuries, and the misdeeds have continued.' Harmsworth Popular Science vol v p 3529

In the Buddhist sacred scriptures countries outside the sacred Aryavarta are called border countries (pacchanta janapada) whose people are given to un-Aryan habits and pagan practices and therefore called mlechha. The un-Aryan habits as regards food are eating earthworms and other kinds of flesh and speaking the mlechha languages, which have not the completeness of the Aryan language. According to Manus no true Aryan should speak the mlechha language.

Let us examine the history of the extinct peoples and their civilizations. Going back to primitive times according to the researches of European scholars there had been historic civilizations in Crete Egypt Assyria Babylonia, Persia China and in the Sumerian country. Egypt and Crete had a very ancient civilization. It is suggested that the most ancient civilization whose remnants have been found in Egypt discloses an Asiatic origin. The ancient Sumerian civilization shows traces of Chinese influence. Chaldea had a civilization many thousands of years ago. The Mesopotamian country was the cradle of past civilizations. The foundation of the legend of Adam's creation may be traced to Mesopotamia. The spirit of god resting upon the waters and the god rising out of the waters are both Mesopotamian and Brahmanical.

The ancient religion of Egypt may be called Osirism, and the following passages are from the "Book of the Dead."

"It is however perfectly certain that they believed that Osiris had the power to make men to be born after death into a new life, and that such life was everlasting and they ascribed to him this power because he had himself suffered death and mutilation and had arisen from the dead." P. xci

Similarly the sufferings, death and resurrection of Osiris were well-known in the period of early dynasties, and it is probable that he became the type of resurrection of man in Egypt.

"The doctrine of immortality and everlasting life and the belief in the resurrection of a spiritual body are the brightest and most prominent features of the Egyptian religion." paxiv

"Where and by whom the texts of the Book of the Dead were composed is also unknown. There is no

good reason for assuming that they are the offspring of the minds of Libyans or dwellers of Central Africa; they cannot be the literary product of savages or negroes; there is no evidence to show that they are of Semitic origin and the general testimony of their contents indicates an Asiatic home for their birth place." P. xxi

The prayer offered by the followers of Osiris is as follows—

"Behold grant thou that the Osiris Nu may be great in heaven as thou art great among the gods; deliver thou him from every evil and murderous thing which may be wrought upon him by the Fiend and fortify thou his heart." Book of the Dead. Chap cxxxv p 220

The offering of wine and cake was a part of the Dead ceremonial and the office was entrusted to a man who is clean and is ceremonially pure one who hath eaten neither meat nor fish and who hath not had intercourse with women. Book of the Dead. By Wallis Budge.

The first three chapters of the Book of Genesis, record a folklore story of the world that was current in Babylon and Mesopotamia, which the Jews heard when they were sojourning in Babylon after the destruction of Jerusalem by Nebuchadnezzar. The story of Noah and the flood was also borrowed from the folklore of the Babylonians. We read in Harmsworth History of the World—

But whereas in Babylon it had been the non-Semitic race from which the civilizing impulse was derived in Egypt it was the invaders from Asia who had brought with them the elements of a higher civilization. P 156

The legend of the spirit of God resting on the waters may be traced to the Babylonian tradition of the God Ea who had arisen from the waters of the sea bringing with him knowledge of all the arts. The legends of the resurrection of Osiris and the sonship of god were of Egyptian origin. The idea of the conflict between Satan and God was common to Persians and Babylonians and was accepted by the followers of Osiris. The ancient Egyptians were learned in the art of magic. Moses learnt it from the Egyptians and Jesus during the period he was away in Egypt from his twelfth year to his thirtieth year was initiated in the mysteries of Osirism. The dogma of the soul being taken before God and judged was a purely Egyptian origin. Osiris was the god of judgement and Osirism taught that the soul was weighed by Anubis. The Code of Hammurabi is dated 4000 B.C. The Laws were given by the Sun God to Hammurabi. The Mosaic legend that the ten commandments were given to Moses by Jehovah at the top of mount Sinai may be traced to the Babylonian legend.

Egyptian civilization goes back to 8000 B.C. "The art of Memphis which was as old as 4000 B.C. was supreme. The statue of Khafza the builder of the second pyramid at Gizeh is one of the finest in the world." Harmsworth History of the World P 156

The Jews were contented with the borrowings from Babylonia. They had no idea of the existence of the more ancient civilization of Egypt. They were in Babylon in captivity and when they returned to Jerusalem in the reign of Cyrus, the legends which they had collected at Babylon were incorporated in the traditions.

The forgotten legends and folklore stories of Babylon and Egypt at a later period became the foundations of a religion which kept the European world in darkness for nearly 1500 years.

The birth of Jehovah according to the Mosaic legend was 4004 B.C. But for the Jews there would not have been the Bible, but for the good Cyrus there would not have been a return of the Jews from their captivity to Jerusalem. But for Peter and Paul there would not have been Christianity, but for Constantine Europe would have remained like the ancient Romans and Greek Ceremonial paganism under the papal hierarchy was transformed into a religion. Roman and Greek wisdom still influence the civilization of Europe. The great authors of Greece and Rome of the pre-Christian era still speak to the progressive peoples of the West. Sophocles, Aeschylus, Aristophanes, Socrates, Plato, Aristotle, Virgil, Seneca, Ovid, Plutarch, Pliny, Juvenal, Cicero, etc., are perennial fountains whence Europe derives her inspiration.

When we approach the adytum of the modern scientists the few thousand years of civilization appears insignificant before the majesty of astronomical and geological calculations. Millions and millions of years ago there was life, and the law of progressive evolution was in operation. Countless millions of suns and solar systems following the law of immutability revolve and re-dissolve from eternity to eternity. Middle-headed materialists given to sensual enjoyments fail to comprehend this. In India the ancient religions taught the existence of countless millions of solar systems. They did not count the age of the earth by thousands, but by yugas and kalpas. A day of Brahma was equal to hundred millions of years, and millions of such days went to make a Kalpa.

From Asia's western limits went westward the religion which was first preached to the fisherfolk of a small village. Asia gave the West the religious instinct, and to the east the west daily makes obeisance and pays divine worship to the Semitic god and the four Asiatics who gave them religion.

Politics, Morality and Religion

In *Everyman's Review* for March 1919, there appears an article under the above heading above the signature of "Politicus", who writes:

The degenerate notion in fashion amongst some half-educated people that politics has nothing to do with morality and that a politician is exempt from all personal and private criticism, should be nailed to the counter and exposed in all its hollowness and absurdity. There are some immoral men and irresponsible youths who would be gladly rid of all moral restraints and checks to viciousness and would seek shelter from public reproof and ridicule for all their nefarious acts of omission or commission within the doors of high built office rooms or on the preserved asylums of political platforms. There is many a hero of eloquence, whose almost every word of platform utterance is applauded by admiring crowds but whose every action and performance in private life is questionable and suspicious, if not vicious and treacherous. Some blackguards in domestic and personal life have

so far advanced in their killing of all conscience and instinctive moral sensibilities that they could not see the necessity, the rhyme or reason for a reference to their private life, in order to establish the truth of their public professions. This is the case with all insincere public speakers and prominent orators, be they politicians or social reformers, Varnashramadharma-mites or vedantic cosmopolitans. "Leave alone personalities and incidents of private life," say they, and the grotesqueness of such a statement becomes very palpable only when in the next breath they begin to declaim about Absolute Truths, Universal Principles, Perfection, Purity, Unity, Co-operation, Home-Rule, Passive Resistance and what not.

"Politicus" concludes his article with the following wise words:

When we preach one thing in public and practise another in private, we can never improve our moral standard, still less climb to the heights of spirituality. There is but one Law, one Dharma, the realisation of which is possible for each and every one of us by fulfilling our immediate and indispensable duties to the fulness of our feeling heart and knowing mind. It is more of intensity, earnestness of application and particularisation we want. We want individuals to exemplify ideals and when we live in full to the height of all our inward ambitions and outward professions we become one with the Universal. This is the truest religion and the noblest morality. The end of all politics is the same—the well being of all those who constitute the political body, and in all general affairs of men the higher we aim, the deeper we plough and the broader we sow, the Moral grows the more and more important. The greatest moral law is Sincerity, which is only another name for God Reality.

Indian Culture and External Influence.

There appears an interesting article under the above caption, in the March number of *Arya* edited by Mr. Aurobindo Ghose, published from Pondichery from which we take the liberty, of making the following extracts

Any attempt to remain exactly what we were before the European invasion or to ignore in future the claims of a modern environment and necessity is foredoomed to an obvious failure. However much we may deplore some of the characteristics of that intervening period in which we were dominated by the Western standpoint or move away from the standpoint back to our own characteristic way of seeing existence, we cannot get rid of a certain element of inevitable change it has produced upon us, any more than a man can go back in life to what he was some years ago and recover entire and unaffected a past mentality. Time and its influences have not only passed over him, but carried him forward in their stream. We cannot go backward to a past form of our being but we can go forward to a large repossession of ourselves in which we shall make a better, more living, more real, more self-possessed use of the intervening experience. We can still think in the essential sense of the great spirit and ideals of our past, but the form of our thinking,

our speaking, our development of them has changed by the very fact of new thought and experience; we see them not only in the old, but in new lights, we support them by the added strength of new view points, even the old words we use acquire for us a modified, more extended and richer significance. Again, we cannot be "ourselves alone" in any narrow formal sense, because we must necessarily take account of the modern world around us and get full knowledge of it, otherwise we cannot live. But all such taking account of things, all added knowledge modifies our subjective being. My mind, with all that depends on it, is modified by what it observes and works upon, modified when it takes in from it fresh materials of thought, modified when it is awakened by its stimulus to new activities, modified even when it denies and rejects, for even an old thought or truth which I affirm against an opposing idea, becomes a new thought to me in the effort of affirmation and rejection, clothed itself with new aspects and issues. My life is modified in the same way by the life influences it has to encounter and confront. Finally, we cannot avoid dealing with the great governing ideas and problems of the modern world. The modern world is still mainly European, a world dominated by the European mind and western civilisation. We claim to set right this undue preponderance, to reassert the Asiatic and, for ourselves, the Indian mind and to preserve and develop the great values of Asiatic and of Indian civilisation. But the Asiatic or the Indian mind can only assert itself successfully by meeting these problems and by giving them a solution which will justify its own ideals and spirit.

The writer concludes :

The principle I have affirmed results both from the necessity of our nature and the necessity of things, of life,—fidelity to our own spirit, nature, ideals, the creation of our own characteristic forms in the new age and the new environment, but also a strong and masterful dealing with external influences which need not be and in the nature of the situation cannot be a total rejection, therefore there must be an element of successful assimilation. There remains the very difficult question of the application of the principle,—the degree, the way, the guiding perceptions. To think that out we must look at each province of culture and, keeping always firm hold on a perception of what the Indian spirit is and the Indian ideal is, see how they can work upon the present situation and possibilities in each of these provinces and lead to a new victorious creation. In such thinking it will not do to be too dogmatic. Each capable Indian mind must think it out or, better, work it out in its own light and power,—as the Bengali artists are working it out in the *own* sphere,—and contribute some illumination or effluence. The spirit of the Indian renaissance will take care of the rest, that power of the universal Time-Spirit which has begun to move in our midst for the creation of a new and greater India.

The Women of India.

Mr. H. K. Sorabji, M.A. (Oxon) concludes an article under the above heading in the March number of *The Hindustan Review*, in the following words :

How dare we cry out for the chance of 'self-determination' if we deny that right to our girls and women? Let us be consistent. A building needs a roof, but it needs above all things a sure foundation. We are tending to the error of laying too great stress upon the roof. The women are the foundation of our future greatness. Let us transfer some of our energy from the emptiness of talk to the fulness of action in promoting female education. Schools, and more schools, and well-equipped schools, and well paid efficient teachers must be provided. And when they have been provided we must combine to send our girls to them, and to let them have every chance to complete their studies before we call them away to enter the bonds of matrimony. As we are out to achieve greatness let us accept the measure based on the woman standard, and let us help our women to be great.

Three Methods of Uniting East and West.

Mr. Frederick J. Gould in the course of an article in the March number of the *East & West* writes :

1. *Political Method*—It is of vital importance that the people of India and the people of England should know each other's qualities, needs and history better. When I say "England," I also imply the whole British Commonwealth. And when I say the "people," I do not mean the aristocratic and middle classes of England, and the higher castes of India. I mean the vast mass of the workers,—the factory workers, miners, seamen, peasants of England, and the immense multitude of Indians who live in villages and till the soil. The upper and better educated classes are, of course, included also, for I am not writing in a Bolshevik temper! But when we talk of the people, either in India or England we ought to think of the majority, whose labour and endurance provide the material basis of civilization, art and religion. Political life in both countries will be benefited by mutual aid between the Indian masses and the English masses.

Hence, it would be good if, at Indian political congresses, delegates representing English labour could be present and take part. It would be good if at English congresses, Hindu, and Moslem delegates could be present and take part. In both cases, this delegation should be regarded as a normal procedure, and not as a remarkable incident once in 10 or 20 years.

Let me state frankly a defect which I observe in English circles and another defect which I observe in India circles. In England, the working class has no effective conception of Indian life and thought, partly because popular writers have not tried to picture the real India to the English imagination, and partly because Missionary Societies have given most one-sided views of the psychology and manners of the Indian people.

In India, so far as my observations have gone, the Home Rule party (or parties) have been so absorbed in criticising the Viceroy, the Viceroy's Council, the Governors, the Civil Service, and the rest, that they have forgotten the foundation on which all English officialdom rests, namely, the labour and life of the English masses. I wonder how many Hindu gentlemen

who spend time in censuring the British Raj could give an account, however elementary, of the growth of English Trades unions? Yet the Trades union is, in many respects, a more vital part of English history than even the House of Commons.

If I were a Hindu, my first thought would be, not for the Civil Service, but for the welfare of the hundreds of millions of peasant-folk, including the untouchables, and I should try to learn its secret of the progress made by the labouring masses of England, and apply its lessons to India.

2 *Educational Method*—I am an old teacher as well as an old politician, and it happens to be a theory of mine that History, in the richest sense of the term, should be the basis of education. In history, I include literature which reveals the history of man's thought. The *Ramayana*, for example, is a most important item in the history of India for this wonderful poem does so much to mirror the love, hope and admiration of the Hindu race. Indeed, I define the aim of education as Service of the common weal, realised in daily industry, and inspired by history, that is, the history of our nation or country, and the whole history of mankind. Hence, I think it of tremendous consequence that English young people should learn the best stories and teachings in Indian literature, and that Indian young people (Hindu and Moslem) should know what is best in English literature. I do not mean that Hindus should read and recite English poetry and prose, nor even that they should learn English at all. But, in their own vernaculars, they might be told the most beautiful stories out of Shakespeare, Milton, Tennyson and other great writers. All pupils in Indian schools should read plain, simple histories of the English peasants, miners, seamen, and so on, and all pupils in English schools should read the history of Indian villages, craftsmen, artists, and the rest.

I may add that it has been my business, for many years, to address children, and I have done so in America as well as Britain and I have made it a practice to introduce, with some frequency, stories of Indian life and virtues.

3 *Spiritual Method*—Superficial people sometimes say that the East is spiritual and the West is material, and I agree that appearances often suggest this comparison. But it is not a true observation. For underneath all its craze for mechanism in war or peace, we still find deep spiritual yearnings in the Western soul. Once when I was in Bombay for a few days, Sir Narayan Chandavarkar honoured me with an interview, and I shall never forget his saying that he thought the English people possessed profound spiritual qualities. I have read a good deal of Hindu philosophic and religious literature, and of English literature in the same fields of thought. I find different forms of logic, different language, different imagery, but I do not find any fundamental difference. What we want to do is to teach both peoples how great is their unity, in spite of divergences of expression.

In saying this, I am far from recommending that Indians should study English philosophy and religious doctrine, or that English people should pick up strange theosophical phrases, and talk in the style of Buddhists. I have read the Vedas, but they do not display the soul of India to me so well as the beautiful tales of

Rama and Sita, or the great primes of the war of Kurukshetra, or the lives of the Hindu saints and teachers. I wish the common people of England knew these things, and learned them in the same simple way that they learned stories from the Bible. And, in like manner, I wish that the common people of India could hear stories of our best English souls—Thomas Moore, Milton, Bunyan, Fox, Penn, Blake, Wesley, Wordsworth, Ruskin, Morris, our women-teachers, nurses, and social workers.

I should be sorry if the reader supposed I set no value on the efforts of University professors, pundits, Congress leaders, political journalists, and the like. These instruments of progress all have their value. But the main thing, to my mind, is to bring the soul of the multitudes of the West into fraternal relation with the toiling millions of the East. May the best Servants of India and the best Servants of England devote themselves to this supreme religious task.

Extinction of the Liquor Traffic in America.

Mr. Saint Nihal Singh contributes an article under the above heading in the March number of *The Indian Review* from which we make the following extracts:—

To India, as to the rest of the world, the American decision to abolish the liquor traffic from every square inch of American soil is a startling politico-social development. No other nation has had the courage to take such drastic action. Even under the stress of war, European peoples contented themselves with stopping the consumption of certain forms of liquor, such as vodka in Russia and absinthe in France, lowering the percentage of alcohol in intoxicating beverages, and curtailing the hours during which liquor could be bought. The American refusal to compromise with liquor in any way, therefore, is an epoch making event in the world's history.

The legislative decree by which the American will to suppress the liquor traffic will be enforced has taken the shape of an amendment to the United States Constitution. The Congress passed it on December 17, 1917, and specified that it must be ratified by the legislatures of the requisite two thirds of the States composing the Union within a period of seven years.

Within 13 months the amendment, which prohibits the manufacture, importation, exportation and sale of alcoholic liquors of all kinds anywhere in the United States except for purely medicinal and industrial purposes had been ratified by 36 of the 48 States comprising the American Union. On January 16, 1919 the House of Representatives and Senate formally announced the ratification of the amendment.

It matters comparatively little whether traffic in liquor ceases within a few weeks or within a few months. The main thing is that the victory has been won—won by constitutional agitation. People in America, and outsiders who closely follow American events are greatly surprised at the rapidity with which the prohibition movement gained support during the last few years.

Agitation for the suppression of the liquor traffic began in America 80 years ago. As long ago as

1816, a law to prohibit liquor was passed in the State of Maine. Five years later, a much more drastic Act was passed providing for the confiscation and destruction of intoxicating liquor, and has been in force ever since, with the exception of the years 1836 and 1837. The States of Vermont, New Hampshire, and Connecticut followed the example of Maine.

Similar attempts were made in the States of New York and Indiana, but failed. Prohibitory laws were passed in both States but were declared unconstitutional.

In 1869, the prohibition party was formed to carry on organized agitation for prohibition, as it was felt that the liquor interests constituted a tremendous disrupting force in American politics and unrecognized opposition had little chance against such a wealthy and resourceful combine. Though the leaders of the party had right on their side, and though they were zealous and determined men, they appeared to accomplish but little for many years. They did indeed, convert many individuals to their cause and here and there a State went "dry" (prohibitionist). But until quite recently the movement did not capture the American imagination, and remained more or less inert.

One of the strongest arguments employed by the anti-prohibitionists was that the State would suffer seriously by losing the excise revenue that the liquor traffic had brought in. But these critics forgot—perhaps conveniently—that, freed from the curse of drink, the capacity of the people to bear taxation would increase, as would also their purchasing power, so that revenue from other departments would expand, and more than offset the loss of excise.

Mr. Nihal Singh observes:

Wherever alcohol has been banished in America poverty and dependence upon charity have been reduced, homes show signs of affluence, the deposits in banks, especially savings banks have risen and facilities for education have increased. In every such place crime shows remarkable diminution. Convictions for disorderly conduct, vagrancy, assault and battery, and even more serious crimes such as rape and murder, have greatly decreased. For instance, I was told sometime ago that for two weeks after Helena, Arkansas, went "dry" there was not a single arrest. The business men of Little Rock, another Arkansas city, declare that their business has benefited from prohibition, and they would not change back to the old order of things if permitted to do so.

The writer concludes:

If the American earnestness in regard to ridding the nation of the evils of drink continues as it gives promise of doing, there is every reason to hope that the passage of the prohibition amendment to the Constitution has really sounded the death knell of the liquor traffic in the United States.

International Reconstruction

Mr. S. Jackson Coleman writes in *The Indian Review* for March:

The world is ripe for a new social programme. The War, with its unparalleled carnage and bloodshed, 65%—10

has materially altered the map of Europe, and it has similarly altered the map of men's minds. The great world-war has swept away old crusted conventions which cobwebbed the mind, and like foundations of social science upon which men laboured vainly to build Utopia. Now that a new mentality has been created, all these things must be reassessed at new values. All the great problems call for a broader view, a larger concept, and a more general action on with the dawn of this new social consciousness. We are coming to realise, indeed, that we cannot severally ply our part as citizens of our respective countries if we forget that we are also citizens of the world. This new spirit is arising everywhere, founding a New Era of international relationship, and the thrills of international good will are even now stealing across a war weary world.

Never before however has there been such hopefulness. The world may seem in disruption, and be hungry and sick, burdened with debt, and afflicted by the weight of its new problems. Nevertheless, the power of organised human resources has been amazingly shown, both for the arts of war and peace. The uprisings of the European peoples, and the political advances of organised democracy, open up an entirely new prospect for the employment of these limitless resources. The cynic, of course, will say that the better world to come lacks nothing for its construction except the best men. The spirit of the masses, with all its faults, however, is a more fraternal spirit than any previously abroad on the earth, and undoubtedly this spirit is almost daily making history for itself.

For four years the evil shadow of War has spoiled our outlook. Now that peace has dawned, we look with faith to the future, trusting that the terrible lessons of the catastrophe will not have been learned in vain. If the result of the terrible carnage and desolation is the birth of a real League of Nations—not one built on words, but on the desire to do what is right and just to all irrespective of race or creed—then the War will not have proved ineffectual. For helpful co-operation in the task of making this world safe for the common people by whom it is inhabited is, after all, the all important duty.

This great crisis, therefore, seems to be the great opportunity for which we have prayed. The old world is a ruin, a new world must be built. In former days, our home was indeed our world, in these days the world must be our home. Co-operation alone offers to the world a complete philosophy of life and a working model of a noble and enduring civilisation. The peace of the world entirely depends upon the universal application of these principles. For there is no choice except that which lies between co-operation and chaos, between associated freedom and Imperial despotism.

If Wordsworth could write one hundred years ago, as he saw the beginning of a new day of hope and liberty

"Bliss were it in that dawn to be alive,
But to be young, 'twere very heaven,"

with what added meaning may we quote these words as we herald the New Age! Let us not forget, however that the foundations of the New World have been well and truly laid by myriads of heroic men and women, and that this task must be approached with the spirit of sincerity. Peace has her tasks not less

arduous than those of War, and this present occasion is a time for the casting away all those sordid desires which are incompatible with the grand purpose of rebuilding human society on a stable foundation of mutual aid and wholesome rivalry.

Let us welcome the disappearance of racial, class and sex distinctions. For there are battles other than inter-racial. There are wars in social, mental and religious realms. In the religious world, few things have been more pitiful more humiliating than sectarian squabbles and differences over long-drawn-out controversies. Men will become more and more impatient in the future over the relatively frivolous issues which have distressed and divided the religious world, the core of the world's new creed will be

"For the love of God is broader
Than the measure of man's mind"

The work of reconstruction calls for a continuance of the spirit of self-sacrifice, self-restraint, and a realisation of a great end, which have stilled the cries of faction during the war and inspired all with a common aim. We shall certainly miss the central spiritual lesson of Germany's downfall if in our schemes of reconstruction we fail to realise that religion and morality, faith and idealism, are the only foundations on which national stability and progress can endure.

The fortunes of mankind, as never before are now in the hands of the democracy. The select classes of mankind in fact, are no longer its governors. For the real strain of four years unparalleled slaughter and bloodshed, as President Wilson has so ably reminded us, has come where the eye of Government could not reach, but where nevertheless the heart of humanity beats. We are bidden by these people to see that this strain does not come again.

FOREIGN PERIODICALS

Life-Work of a Hindu Chemist.

Under the above heading, the eminent Chemist, Sir T. C. Thorpe, reviews Sir P. C. Ray's "Essays and Discourses" in the columns of *Nature* [of London] to the following words:

Sir Profulla Chandra Ray, Professor of Chemistry in the Presidency College, Calcutta is well known to Chemists in this country, as the author either alone or in collaboration with his pupils of more than a hundred papers chiefly on the Inorganic and Organic Nitrites, published in the Transactions of the Chemical Society, in Continental Journals or in the Journal of the Asiatic Society of Bengal. In his own country he is also known as the founder of a successful chemical industry which from small beginnings now occupies factories spreading over an area of eight acres. It is one of the most successful concerns in India, and proved of considerable service to the Government during the war, when the supply of Western Chemicals and Drugs was seriously interfered with. It is entirely staffed with Bengali workers and its research chemists are of its creator's training.

Continuing the writer observes

Naturally, such a man has had a great influence in India. He has succeeded in founding a school of native chemists capable of attacking and elucidating modern scientific problems. He has roused and quickened the Bengali brain from the torpor which has overtaken it and by his example and precept has proved that the Hindu only needs training, encouragement, and direct aid to revive the ancient glories of his race in Philosophy and Science. The success of the commercial undertaking which he initiated also indicates that the Bengali is not lacking in the power of organisation, application, and steadfastness of purpose needed to conduct successfully a business enterprise.

It was to be expected, therefore, that Sir P. Chandra Ray should, as he expressed it, sooner or later find himself 'the property of anybody and everybody' and be called upon by various educational institutions, by conferences, and by the periodical Press and leading Newspapers interested in the social reform and development of the industrial and political life of India to address his countrymen on subjects which so closely affect their national welfare and prosperity, and it was equally certain that a demand should arise that these essays and discourses should be collected and published in some permanent form.

The little book before us is the outcome of this demand. It contains a series of addresses and articles on scientific education in India; on the dearth and progress of chemistry in Bengal, on science in the vernacular literature on the antiquity of Hindu Chemistry on the Educational Service of India on the Bengali brain and its misuse on Government and Indian Industries, together with a number of appreciations of men who have signalled themselves in the national evolution of India.

Sir T. S. Thorpe concludes.

The collection is prefaced by a short biographical sketch of the author and concludes with a list of original contributions from the Indian School of Chemistry.

Such a book as a literary production cannot be judged wholly from a western point of view. To do justice to it one must have some knowledge of, and sympathy with the oriental mind. Its language is at times affused with a glow characteristic of the East, and its excessive eulogy and allisonant phrases as Evelyn would have styled them, are apt to provoke a smile in the stolid and more cold-blooded Englishman. At the same time it is impossible not to recognise and appreciate the earnestness, courage, and sense of duty of the author, or fail to perceive his sincerity or strength of his convictions in warring against the

the galling restrictions of social inequalities and depression, which are at the bottom of India's degradation. Her elevation will not come in Sir P. Chandra Ray's time. A small, spare man, in feeble health, and a confirmed dyspeptic, he will be spent in her service. But the memory of these services will survive and the little book to which we direct attention will serve to perpetuate it.

The League of Nations—A Dutch View.

The following lines appear in the *Living Age* (of Boston) for week ending March 1, 1919:

Let us not delude ourselves. A League of Nations in the hitherto accepted meaning of the term—a combination of all, or nearly all, civilized nations for the preservation of peace—a League of Nations such as that is out of the question, for the present at any rate. And if, on the conclusion of peace, for the reason, perhaps, that we hanker after some sort of apotheosis, a League of Nations is proclaimed it will be something quite different from that.

It cannot be otherwise. When the war reached its final stage, this was made more evident. A war waged by one side *nichtsichtlos* with every available means thus engendering inordinate hatred among its opponents, and carried on by the latter until the enemy was utterly defeated and reduced to impotence—a war such as that cannot produce the atmosphere of conciliation, of forgive and forget which a League of Nations needs for its growth and success. Who, as the end approached, still dared cling to the hope that the Allies, who have all along openly declared that they regarded the Central Powers as the scum of humanity with whom henceforth they would hold no relations, would suddenly change their attitude and say to the leaders of the defeated enemy, 'Come now, and join us at Conference table, and we will jointly and harmoniously institute a new international organization?'

That, of course was unthinkable.

A universal League of Nations is, therefore, out of the question. But, if so, what then? A return to the old conditions—but without for the present, any greatly preponderating group of Powers?

But, as a result of antagonistic policies or economic or merely personal interests, even the most powerful grouping of States may lose its ascendancy within a few years. History is full of examples, and already contending interests have manifested themselves—those for instance of America and England at sea, of England and France on the continent of Europe, of India and the Balkans, of America and Japan to name only a few. The new conditions, therefore, would scarcely differ from the old international relations before the war, and must lead, within a certain number of years to the nations seeking escape from the unbearable strain of suspense on world was increasingly fierce and devastating. Anyone taking that view of the situation must be amazed that there are still statesmen to be found who would make a return to the old regime, just as if nothing had happened with merely a change in the grouping of

Powers, still seeking salvation in that balance of power so strongly denounced by President Wilson a couple of years since.

Wilson—is it possible to imagine him as having in any way changed his opinions under force of circumstances, and as no longer cherishing his earlier ideals? Such is not the case, as is proved by his visit to Europe, where he has not allowed himself to be converted to the theory of Lloyd George, that a British world empire, if needs be acting in co-operation with like minded Allies, is sufficient for the task of policing the world, nor to that of Pichon and Clemenceau the latter of whom openly declared in the French Chamber that he remained an advocate of the balance of power.

I remained true to the old system, that States must organize their own defense, have frontiers that can be adequately defended and continue armed, and, further, that he would not give up the system of alliances, although he would not reject the supplementary guarantees of an international organization.

It speaks for itself that this last arrangement is something quite different from the international organization which Wilson looks to as the indispensable crowning achievement of the present Peace Conference.

We quote from the President's speech at New York on September 27, 1918:

Shall the military power of any nation or group of nations be suffered to determine the fortunes of peoples over whom they have no right to rule except the right of force? Shall there be a common standard of right and privilege for all peoples and nations or shall the strong do as they will, and the weak suffer without redress? Shall the assertion of right be haphazard and by casual alliance, or shall there be a common concert to oblige the observance of common rights?

And further: Once for all the principle must be established that the interest of the weakest is as sacred as the interest of the strongest. That is what we mean when we speak of a permanent peace.

And, while on his visit to Europe Wilson also declared at Manchester: 'If the future had nothing for us but a new attempt to keep the world at a right posture by a balance of power the United States would take no interest because she will join no combination of Powers which is not a combination of all of us.' At Rome on January 3 he said again emphatically: 'We know that there cannot be another balance of power. And he frankly warned the Italian Government: 'Our task at Paris is to organize the friendship of the world—to set up a new international psychology to have a new atmosphere.' We cannot stand in the shadow of this war without knowing there are things awaiting us which are in some senses more difficult than those we have undertaken because, while it is easy to speak of right and justice, it is sometimes difficult to work them out in practice.

It is evident therefore that President Wilson has nowise relinquished his ideal, and as we may assume that he is enough of a diplomat not to attempt to force the realization of that ideal, in spite of the opposition of his Allies, we will be greatly interested in seeing how the President will pave the way for the future establishment of a real universal League of Nations, even though it is beyond the bounds of immediate realization.—*Het Nieuws Van Den Dag*

HUMANISM IN HINDU ART

IN Kalidasa's play, *Shakuntala* (fifth century AD), we have among the *dramatis personæ*, Anasuya, a damsel of the hermitage, who is skilled in painting. Besides, a considerable portion of Act VI, Sc II is a study in art-criticism. It introduces us to some of the themes of the Hindu painters, their methods of execution, and the aesthetic taste of the spectators.

King Doosyanta has through inadvertence dismissed his wife Shakuntala from the palace. He soon perceives his mistake and becomes lovesick. Chatoorika, a eunuch lady, is asked to paint a picture of Shakuntala. The king hopes to derive some relief from this likeness.

"A damsel enters with a picture.

Damsel Great klag the picture is finished.

Doosyanta Yes that is her face: those are her beautiful eyes: those her beautiful lips embellished with smiles and surpassing the red lustre of the karkandhu fruit. Her mouth seems though painted, to speak and her countenance darts beams of affection blended with a variety of melting tints.

Madhavya Truly my friend it is a picture sweet as love itself, my eye glides up and down to feast on every particle of it and it gives me as much delight as if I were actually conversing with the living Shakuntala.

Mishrakeshu (aside) An exquisite piece of painting!—My beloved friend (Shakuntala) seems to stand before my eyes.

Doo Yet the picture is infinitely below the original and my warm fancy by supplying its imperfections represents in some degree the loveliness of my darling.

(Sighing) Alas! I rejected her when she lately approached me, and now I do homage to her picture.

Ma There are so many female figures on this canvas that I cannot well distinguish the lady Shakuntala.

Doo Which of the figures do you conceive to be the queen?

Ma (examining the picture) It is she I imagine who looks a little fatigued, with the strings of her vest rather loose, the slender stalks of her arms falling languidly; a few bright drops on her face, and some flowers dropping from her untied locks. That must be the queen and the rest, I suppose, are her damsels.

Doo You judge well, but my affection requires something more in this piece. Besides, through some defect in the coloring a tear seems trickling

down her cheek, which ill suits the state in which I desired to see her painted (*To the damsel*)—The picture, O Chatoorika is unfinished. Go back to the painting room and bring the implements of thy art.

Ma What else is to be painted?

Mi (aside) He desires I presume, to add all those circumstances which became the situation of his beloved in the hermitage.

Doo, In this landscape my friend, I wish to see represented the river Mallin, with some amorous flamingoes on its green margin, farther back must appear some hills near the mountain Himalaya, surrounded with herds of chumaras; and in the foreground, a dark spreading tree with a pair of black antelopes couching in its shade, and the female gently rubs her beautiful forehead on the horn of the male.

The artist had omitted a shrira flower with its peduncle fixed behind her soft ear.

Ma Why does the queen cover part of her face, as if she was afraid of something? Oh! I now perceive an impudent hee, that thief of odours, who seems eager to sip honey from the lotus of her mouth.

Doo Shouldst thou touch O bee the lip of my darling thou shalt by my order be imprisoned in the centre of a lotus—Dost thou still disobey me?

Ma Why, friend it is only a painted hee.

Mi (aside) Oh! I perceive his mistake, it shows the perfection of the art.

There is no touch of pessimism, or subjectivism in all these remarks and suggestions. A modern lover examining the photograph or oil painting of his darling could not be more realistic.

Does this conversation open up to us a society of ascetics waiting for Divine illumination to evolve art out of the neoplatonic meditation or the Hindu dhyana? Or does it make the India of the fifth century a cognate of the modern world in its matter-of-fact sober grasp of the realities of flesh and blood?

It is really a specimen of Hindu positivism that Kalidasa, the Shakespeare of Hindu literature, has furnished in this bit of discussion in pictorial art. We feel how profound humanists the Hindu audiences were in their outlook, how non-mystical in their views and criticisms.

And yet European and American scholars have tried to demonstrate an

Oriental pessimism in the arts and crafts of the Hindus. It is generally held that the inspiration of the Hindu painters and sculptors is totally different from that of the Westerns. The images and pictures executed by the artists of India are believed to have been the products of an ultra-meditative consciousness. They are said to reveal a much too subjective or aesthetic temperament. Further they are all alleged to be religious or mythological in theme.

Comparative art history would indicate however that Hindu plastic art or drawing has not been the handmaid of theology to a far greater extent than the Classical and medieval works of Europe. Is it not Greek mythology that we see embodied in the sculptures of India? Similarly are not the Catholic paintings mere aids to the popularization of the Bible stories? Indeed art has long been more or less illustrative of history, legends, traditions and myths both in the East and the West.

We do not know much of the Greek paintings. But we know the legends in the drawings on the Greek vases of the fifth century B.C. In one the serpent is being strangled by Heracles almost as if the hydra Kaliya is being quelled by Krishna, in another Theseus is fighting the Amazons and in a third Gorgon is pursuing Perseus or Kadmos killing the dragon. What else are the themes of the *Purana* painters? And Hindus whose infancy is nurtured on the stories and paintings of the *Ramayana* would easily remember familiar scenes in the colored terra cottas of Hellas which portray for instance a Paris in the act of leading away Helen or the parting of Hector and Andromache.

It may be confidently asserted besides that the spiritual atmosphere of Gothic Cathedrals of the thirteenth century with their soul inspiring sculptures in alabaster and bronze has not been surpassed in the architecture of the East. The pillars at Chartres with bas-reliefs of images and flowers could be bodily transported to the best religious edifices of Hindustan. The elongated Virgin at the Paris Notre Dame is almost as conventionalized as a Kirtimukha. The representation of virtues and vices on the portal of the Bayeux at the Amiens Cathedral suggests the moralizing in woodwork on the walls of Nikko

and scenes from the Passion of the tyrant at Strassburg or from the Last Judgment on the tympanum of the north door in the cathedral at Paris are oriented to the same psychological background as the bas-reliefs depicting ascents in the holy career of the Buddha with which the Sootras of Central India make us familiar or of the Dalai Lama on the surface of the marble god at Leking.

Further it may be asked can any Classicist rationally declare that the Greek Apollos are not the creations of subjective experience? In what respects are the figures of the Hindu Rudras and Shivas more idealistic? Polykletos for instance dealt with abstract humanity ideals or any notions in the same sense as the artists of the Gupta period (A.D. 300-600) or Bhamban and Vitapala of the Pala period (750-1175) in India. Nowhere has a sculptured image bas relief or coloured drawing been completely photographic. Art as such is bound to be interpretative or rather origina-

We have to recognize moreover that saints and divinities are not the exclusive themes of art work in India. Hindu art has flourished in social natural plant and animal studies as well. Physical beauty was not a taboo in Hindu art psychology. The dignity of the flesh has left its stamp on India's water colours, gouache paintings, and stone and bronze. Even the figures of the Hindu gods and goddesses are to be perceived as projections of the human personality. The medieval Rajput paintings of the Ladha Krishna cycle and the Shiva Durga cycle can have but one secular appeal to all mankind.

Lastly can one forget that the conditions off which that produced the Byzantine and Italian masterpieces were almost similar to the milieu under which flourished the celebrated Ajanta painters and Bharhut sculptors? For in the Middle Ages in Asia as in Europe the church or the temple was the school the art gallery and the museum the priests and monks were painters poets calligraphists and pedagogues and the Scriptures constituted the whole encyclopedia. And if today it is possible for the Western mind to appreciate Fra Angelico, Masaccio and Giotto it cannot honestly ignore the great masters of the Hindu styles especially in view of the fact that the works of the

Oriental mediævals are not more imperfect in technique according to modern ideas than those of their Occidental contemporaries.

The fundamental identity of artistic inspiration between the East and the West is incidentally borne out by coincidences in social life for which art work is responsible. Thus the interior, nave and aisles of the Buddhist cave temples do not impress an observer with any feelings different from those evoked by the early Christian churches and Norman Cathedrals. The towers and contours of the twelfth century Romanesque Cathedral at Ely and the sixteenth century Gothic structure at Orleans have the ensemble of the *gopurams* of Southern India. And the Gothic tapestries representing the hunting scenes of the Duke of Burgundy suggest at the very first sight the aspects of mediæval Hindu castles and the figures and head dresses of the Indo Saracenic Moghul styles.

It may sometimes be difficult for a non-Hindu to fully appreciate the images and paintings of India because their conventions and motifs are so peculiarly Hindu. Exactly the same difficulty arises with regard to Western art. Who but a Christian can sympathise with a 'Last Supper' or a 'Holy Family' or a 'God dividing light from darkness'? In fact, even the 'Aeneid' would be unintelligible to the modern Eur. American lovers of poetry unless they make it a point to study Roman history. Nay, a well educated Jew may naturally fail to respond to the sentiments in the *Duine Comedy*; or Signorelli's 'Scenes from Dante'.

But the difficulties of appreciation by foreigners do not make an art work necessarily 'local' or racial. It may still be universal in its appeal and thoroughly humanistic. There are hardly any people who in modern times can enter into the spirit of the 'Ka' statues which stand by the sarcophagi in the cave tombs of the Pharaohs. And yet how essentially akin to modern mankind were the Egyptians if we can depend on the evidences of their letters? A Ka is described in one of the inscriptions thus: "He was an exceptional man, wise, learned, displaying true moderation of mind, distinguishing the wise man from the fool; a father to the unfortunate, a mother to the motherless, the terror of the cruel, the protector of the disheartened, the defender of the

oppressed, the husband of the widow, the refuge of the orphan." There is no gap in fundamental humanity between the men and women of today and the race that could write such an epitaph, in spite of the fact that many of its conventions and usages seem entirely meaningless.

The student of foreign literature has to specially qualify himself in order that he may understand the unfamiliar idioms of its language and the peculiar turns of expression. No other qualification is demanded in modern men and women for an appreciation of the old and distant carvings, statuettes and drawings. The chief desideratum is really an honest patience with the racial modes and paraphernalia of foreign art.

With this elementary preparation the Occidental connoisseur should be able to say about the Hindu sculptures and paintings what Max Weber says about all antiques in his essay on 'Tradition and Now'.

'Whether we have changed or not I believe in spite of all the manifestos to the contrary, in what ever tongue they be written or spoken that the antiques will live as long as the sun shines, as long there is mother and child, as long as there are seasons and elmes, as long as there is life and death sorrow and joy.'

In Shookrn's treatise, a Hindu sociological treatise, we read a few injunctions against the construction of human images. We are told that "the images of gods, even if deformed, are for the good of men. But the images of men, even if well formed, are never for human good." Shookrn's generally recognised dictum seems to be that 'the images of gods yield happiness to men, and lead to heaven, but those of men lead away from heaven and yield grief.'

Verses of a similar import may be used as texts by those who want to prove the wholly non-secular character of Hindu art. But such art critics would commit the same fallacy as those psychologists who formulate the race ideal of the entire Hindu population of all ages on the strength of a few sayings of Shakyas, Buddhas and other muralists. In spite of Shookrn the Hindus have had sculptures of human beings in the streets and public places, bas-reliefs of warrior-kings on coins and paintings of men and women on the walls of their houses, palaces, and art galleries. Secular art was an integral part of their common life. Imagery and

smiles from the worldly paintings and sculptures are some of the stock in trade embellishments of every literary work, e. g., poetry, fiction, drama, in India.

In Soobandhoo's prose romance, *Vasavadatta* (sixth century A.D.), there is a description of the Vindhya mountain. One of the objects mentioned is the lion "with his sinewy frame, now rising high behind and now before." And the author is at once led to think of the scene as a possible theme of painting. Thus

' His ears erect in sudden onslaughts
His mane astart and jaws all hideous
His stiffened tail high waving in the breeze—
No artist could portray the awful beast
What time he croucheth on the mighty brow
Of some great elephant, shrill trumpet
Adown the lonely dells of Vindhya's mount

Painting was an accomplishment of literary women. The box of paints, canvas, pencil, tapestry and picture frames are referred to in the *Clay Cart Raghuo-vamsha Uttara rama charita* and *Kadamharee*. All these references apply to mundane paintings. In *Vasavadatta*, again, *Kusumapura* or *Patalipootra* (Patna) is described as a city of which the conspicuous objects are the statues which adorn the white washed houses.

It is almost a convention with the heroes and heroines of Hindu literature to speak of the faces of their beloved as 'pictures fixed on the walls of the heart'. This conceit occurs even in Krishna Mishra's morality play *Prabodha chandrodaya* (eleventh century).

In Soobandhoo's romance the heroine Vasavadatta is seen by Kandarpaketoo in a dream. She "was a picture as it were, on the wall of life." And when he awoke he "embraced the sky, and with outstretched arms cried to his beloved as if she were painted in the heavens, graven on his eyes, and carved on his heart." Kandarpaketoo gets to

sleep "looking on that most dear one as if limned by the pencil of fancy on the tablet of his heart."

Similarly Vasavadatta thinks of Kandarpaketoo "as if he were carved on her heart" "as if he were engraved there, inscribed, riveted." She exclaims to one of her maidens "Trace in a picture the thief of my thoughts." And, Over and over thinking thus, as if he were painted on the quarters and sub quarters (of the sky) as if he were engraved on the cloud, as if he were reflected in her eye she painted him in a picture as if he had been seen before."

The joy of life in all its manifestations is the one grand theme of all Hindu art. It is futile to approach the sculptors and painters of India with the notion of finding a typically Hindu message in them. The proper method would be to watch how far and in what manner the artist has achieved his ends as artist, i.e., as manipulator of forms and colours. Interpretation of life or criticism of life may be postulated of every great worker in ink, bronze or clay, whether in the East or in the West. The only test of a masterpiece, however, is ultimately furnished by the questions "Is it consistent in itself?", "Does this handiwork of man add to the known types of the universe?", "Has it extended the bounds of Creation?"

Human ideals are the same all the world over. One piece of art in India may be superior to another in Europe, and vice versa. But this superiority is not necessarily a superiority in art ideal or race genius. It has to be credited to the individual gifts of the master in workmanship. There is but one standard for all art but one world measure for all human energy.

New York City, BRJOT KUMAR SARKAR

ASIAN IMMIGRATION IN THE UNITED STATES

BY DR. SUDHINDRA BOSE, M.A., PH.D.,
LECTURER IN POLITICAL SCIENCE, STATE UNIVERSITY OF IOWA, U.S.A.

JAPAN is now being recognized as one of the "big five" powers at the Paris Peace Table. And having been admitted to the charmed circle, it is interesting to

note, the representatives of Japan—the Oriental Asian Japan—are demanding that racial discriminations and restrictions be placed against the natives of Japan.

should be dropped forthwith. The statesmen of France, Italy, America, and England are being plainly told the time has come when the Nipponese should be welcomed into the allied countries as their Western equals, and not excluded on the ground of their supposed Asian inferiority. What will be the answer to this Japanese demand by the League of Nations? At present the subjects of the *Mikado*, along with many other Asian peoples, are shot out from Australia, New Zealand, Canada, and especially from the United States. How is this problem of Oriental immigration to be solved? Will it yield to cool, wise, sagacious statesmanship, or, will it lead to another and still more disastrous world war?

It is my object at present to discuss the Asian immigration, especially the Indian immigration, in the United States. Chinese have been excluded from these shores by special enactments of Congress. And the Japanese laborers since 1907 have also been kept at arm's length by an informal agreement between Washington and Tokio, popularly known as the Gentleman's Agreement. Now the circle of exclusion has been still further deepened and widened, not by an international agreement, nor by the mention of any race or people, but by the following arbitrary, haphazard geographical boundary line fixed by the Immigration Law of 1917:

"Persons who are natives of islands not possessed by the United States adjacent to the Continent of Asia, situated south of the twentieth parallel latitude north, west of the one hundred and sixtieth meridian of longitude east from Greenwich, and north of the tenth parallel of latitude south, or who are natives of any country, province, or dependency situated on the continent of Asia west of the one hundred and tenth meridian of longitude east from Greenwich and east of the fiftieth meridian of longitude east from Greenwich and south of the fiftieth parallel of latitude north, except that portion of said territory situated between the fiftieth and the sixty-fourth meridians of longitude east from Greenwich and the twenty-fourth and thirty-fifth parallels of latitude north, and no alien now in any way excluded from, or prevented from entering, the United States shall be admitted to the United States."

Take down your atlas from the shelf and draw a red pencil through the map of Asia as indicated by this Immigration Law. You will see that it prohibits the people of India, Indo-China, Siam, New Guinea, Borneo, Sumatra, Java, and some of the other islands of southern and southwestern Asia from setting foot on American

soil. Roughly speaking, the law excludes from entrance into the United States the inhabitants of more than one-quarter of Asia; to them America is a "forbidden land." Curiously enough the longitudinal and latitudinal provision of the measure leaves untouched the people of Turkey, Persia, the greater part of Arabia, northern Asian regions as well as the Philippine Islands.

The law provides, of course, for a class of exemptions. It says that the exclusion provision "shall not apply to persons of the following status or occupations: government officers, ministers or religious teachers, missionaries, lawyers, physicians, chemists, civil engineers, teachers, students, authors, artists, merchants and travelers for curiosity or pleasure, nor to their legal wives or their children under sixteen years of age who shall accompany them or who subsequently may apply for admission to the United States." But the act also lays down with emphasis that the exempted persons "who fail to maintain in the United States a status or occupation, placing them within the excepted classes shall be deemed to be in the United States contrary to law, and shall be subject to deportation."

So far the law has been applied leniently against Indian youths who come here for education with limited means; but should the law be enforced rigorously, it would exclude all who may desire to earn their way through college.

One cannot help wondering why Congress did not put Africa in the excluded area. Why does it exclude the citizens of India, whom the courts of America repeatedly held to be white people? Why does Congress permit to come to America all the natives of every part of the darkest Africa and place the ban on the Indians, the possessors of a great literature, the inheritors of a noble civilisation, and the comrades in arms of the Americans in the world war? A few of the sane and sober statesmen in Congress saw the injustice of the measure and characterized it as "fantastic." There never was anything more farcical attempted in legislation," declared Hon. Miles Poindexter on the floor of the United States Senate, "and there never could be anything that would be more offensive to intelligent people in foreign countries affected than that sort of arbitrary, unreasonable, inconsistent

arrangement, to exclude one and to admit the other when there is no difference whatever between them. It may be that in the case of members of the same family, born of the same parents, one should be excluded and the other admitted. They would be excluded because they happen to be on the wrong side of a red line that is drawn on the map, a line that includes . . . countries containing white people."

Long and strenuous attempts were made to bring Japan within the scope of the exclusion law of 1917. Japan, however, objected to being excluded by a congressional act. It is an open secret that Nippon entered vigorous protests against the bill as it affected its national honor, and secured changes to suit itself. There is no more valid social or economic reasons to exclude Indians than there is to exclude the Japanese.

To be sure, there is the Gentleman's Agreement to keep out the natives of Japan from this country, but it should be clear at once to students of international politics that by virtue of this understanding the condition of exclusion is carried out through the Japanese government, and that it is Japan itself which retains in its own hands the power of controlling its immigration to the United States. When ever the Gentleman's Agreement is abrogated in any way by Japan, then the doors are open to Japanese immigration into America. Hon. Anthony Caminetti, the United States Immigration Commissioner General, was shrewd enough to see this point. "The law, regulations, and understanding," said Mr. Caminetti, "by means of which the regulation of the admission of Japanese laborers is sought to be accomplished, while in many regards they have operated to the satisfaction of both Governments concerned, contain so many exceptions of a constantly broadening nature that they can not be expected to be fully effective of their purpose. Modifications of several kinds are needed in these laws and regulations."† His warnings have been given small heed. As it is, Japan has wrested especial favors from America.

Some time ago I addressed a letter to Sir Cecil Arthur Spring Rice, then the

British ambassador in Washington, asking what steps he had taken to protest against the immigration act which discriminates against the people of India. The astounding reply that came from the British embassy was that "no protest was lodged against the clause excluding Hindus [meaning Indians] from the United States since it was considered that the Embassy could not properly interfere in a matter of domestic legislation."

Hon. Cecil Arthur's arguments for failure of action in this crisis were more than amusing, if it were not such a serious affair, laughter would strain the walls of the stomach. Interference with domestic legislation! What bucombe! What sickening cant! Suppose India undertakes to pass a law excluding Americans from its shores will the American consul general in India, Mr. James A. Smith, stand by and enter no protest with the Delhi government because it might be construed as an interference in a matter of domestic legislation? I should say not. If Mr. Smith does anything of the kind, the presumption is that he will have to pack his grips in a hurry and race for home.

An inquiry was sent to the Chinese minister Dr. Yi Kypin W. Koo at Washington asking if he had made his wishes known to the United States government concerning the immigration bill which affected his country. The Chinese legation answered that "when the Bill was in Congress we entered a protest with the State Department."

I also wrote a letter to Viscount Suterri Chinda, then the Japanese ambassador in Washington, asking if he had taken any action against the immigration bill which threatened to exclude the Japanese from the United States. His prompt reply was that he "has had occasion to interpose protests at several stages of its enactment for the reason that the bill contained

* Letter to the writer from British Embassy, Washington D. C. dated April 25, 1917.

† The influential Chinese daily newspaper of New York City, *Yang Ko Ku Pao* on May 20, 1916 wrote: "The Chinese Minister Dr. Koo went to see Secretary of State Lansing yesterday about the pending immigration bill Dr. Koo presented and demanded . . ."

* 1. Recognition of the Chinese as citizens of the disfavored nation.

* 2. Repeal of all the racial discriminatory laws against China." (Translated from Chinese by Mr. T. S. Chang of the State University of Iowa.)

* Congressional Record December 13, 1916 Vol 54 No 9, p. 276

† Annual Report of the Commissioner General of Immigration to the Secretary of Labor, 1916 p. 11

passages directly or indirectly discriminatory toward the Japanese people."

I do not pretend to be up on all the subtle tricks of secret diplomacy, but any body with half an eye can see that Mr Spring Rice's understanding of the spirit of international courtesy, if not of international law, is very odd. If the Chinese and Japanese ministers could protest against a discriminatory measure, why could not the English minister who is supposed to represent not only England but also India?

Strangely enough the United States government never did say that it would regard any move on the part of India as an interference in her domestic affairs. In fact in 1914, when the Hindu immigration bill first came up before Congress, Hon. William Jennings Bryan then the United States Secretary of State, told me in an audience I had with him that he would heartily welcome any co-operation from the British embassy. In response to his request I called on the ambassador. Instead of giving any active assistance, Mr Spring Rice went rambling along and spoke an infinite deal of nothing. The upshot of the conference was that he practically banged the door on Mr Bryan's appeal for co-operation. Provoking as was his indifference, I was able to secure an important hearing directly before the House Committee of Congress on Immigration. I sought for no especial privileges, I asked for no especial favors. I asked that Indians be admitted on the same terms as are the other peoples of the world. To the members of the Committee I further represented that if absolutely necessary, Indian immigration like the Japanese immigration, be regulated by an agreement, a diplomatic arrangement rather than by a statutory enactment. The Committee was convinced of the reasonableness of my plea, but as it was not backed up by English authorities, any chance that might have existed of substituting diplomacy for an act of

Congress went glimmering by. Today India is humiliated by a most hide bound rigid exclusion law. Is this another rebuff of a subject nation? Will the Indian people be reconciled to such a disgrace?

America has undoubted right to select her prospective citizenship, but it is the discriminatory policy which affronts the dignity of the Indian nation. Hindustan is not particularly anxious to send out her sons to countries where they are not welcome, especially since there will be developments right in India to absorb all her own supply of labor. Even now Indians do not come here in any appreciable numbers like those of other nations. If the cheap street corner labor agitators, who keep alive the fire of narrow race prejudice against the Indians, will turn to *Reports of the Department of Labor* ending 1917, they will find that while the number of Indians admitted in 1916 was 272 the number departed was 259, and again in 1917 the number that entered this country was 263, while the number of immigrants that went back to India was 295, thus there was an actual decrease of 32. Hence the wild assertion that America is in imminent danger of an "overwhelming invasion" from Indian immigrants is a mere pipe dream.

Time and again the question has been asked, Can Hindus—Americans call all Indians by that name—the Americanized? They can be, of course. Prof. John K. Commons of the University of Wisconsin says "To be great, a nation need not be of one blood, it must be of one mind. It is not physical amalgamation which unites mankind, it is mental community." This mental community can be best secured through education in the public school. It is the first aid to the nation, the greatest Americanizing agency, the most potent specific for assimilating foreign elements. Of the thirteen million men and women in America who were born in other lands, three million were not able to speak English according to the last census. These foreign born peoples were not given up as unassimilable. On the contrary, numerous agencies were set up for their reclamation. Thousands of these immigrants were enrolled in public schools, hundreds of others were reached through the machinery of night schools. And just as Armenians, Lithuanians, Slovaks, Ruthenians, Syrians, Turks, Arabs, and

* Letter to the writer from Imperial Japanese Embassy Washington D.C. dated April 12, 1917.

Persians could be Americanized so could the Indians

Another argument against the Indians is that they will cut in the wages of American laborers. This apprehension it appears to me is not well founded. Owing to their increased standard of living in this country Indians cannot afford to underbid their American competitors. The main reason for Indians to come here is to better their economic condition. Whatever the scale of wages in India may be, Indians do keep up wages to the American standard. They are forced to do it in order to meet increased expenses. The change of conditions in climate, work, and customs make their wants in the new country far more numerous than in Hindustan; they need several changes of clothing, several pairs of boots, better food and better living accommodations. All this makes it imperative for Indians to demand higher wages. The plain truth is that Indians for the same kind of work ask and receive the same remuneration as do American laborers.

Sometimes it is also argued that Hindus send away American money to India. That is true. I will admit to a certain extent, but a part of American money has always gone to foreign lands and it ever will. America pays her good money to foreign countries for many commodities such as tea, coffee, sugar, woolen goods, and dyestuffs before the war. America also pays interest on her national bonds held abroad. Furthermore, American travelers in Europe and those who have permanently settled there spend annually millions of money. Prof. F. W. Taussig of Harvard University estimates that in antebellum days this amount has not been less than three hundred million rupees a year.* What an Indian laborer takes away from America is comparatively a paltry amount for the labor he has actually performed. This sum small even in exaggerated terms is an inevitable incident of his employment. Why then should there be an outcry against him?

In many respects Indian immigrants are much better than those of Europe who not infrequently turn out to be bloodthirsty anarchists, black handers, and Bolsheviks. Hindus are as a rule

peaceful, law-abiding, honest, industrious, faithful, and frugal. Is it possible for anybody to ask for more? Again, never has a Hindu become a public charge, never has he been known to be an inmate of the poor house. On the other hand, many European immigrants habitually frequent drinking saloons, fill city slums, crowd into gambling dens, and even become guests of bridewells. Can therefore anyone have sufficient reason for preferring Europeans to Indians on moral grounds?

Hindus in America did all they could to register their protest against the exclusion law. Here and there mass meetings were held and petitions were sent to Washington when the Immigration Bill was under discussion. The following is one of the many protests wired to Secretary of State Robert Lansing:

The Hindus of California beg to record their protest against the proposed legislation to exclude Hindus from this country. Compared with few Hindus are able to come here. There will be some students and some laborers.

Those who have already come here have proven themselves peaceful, industrious, and law-abiding. They came to escape the unspeakable poverty of their land and in the hope of bettering their condition, to this land of freedom and opportunity. To exclude them would be unjust. A few thousand laborers and students are not enough to make so much of a problem, and as for the few Hindu laborers, they are so much poverty that it is impossible for them to come here in great numbers. The average income of a Hindu is \$500 a year. How can they come here? It is not worthy of the traditions of this great country to exclude the few who may be able to get here.

Thousands of open-minded American citizens saw the justice of the Indian cause. They generously lent their aid in making an honorable settlement. To them the Indian nation owes a debt of gratitude. To them the Indian nation owes a debt of gratitude. These American citizens memorialized the United States Congress with a petition. The protest which now lies buried deep among other government documents is as follows:

To the Senators and Representatives of the Sixty-fourth Congress of the United States:

The undersigned petitioners citizens of the United States respectfully show:

First, That the same is now pending before the United States Senate an act passed by the House of Representatives known as H. R. 10384 and entitled "An act to regulate the immigration of aliens and the residence of aliens in the United States."

Second, That said proposed act unduly discriminates against an entire race of a great and worthy people of the same Aryan stock to which the

* Taussig's Principles of Economics Vol. I p. 472 (New edition)

great majority of our fellow citizens b-long and the inheritors of a civilization which has conferred benefits upon the whole human race—the Hindus.

"Third. That the retention in said proposed act of the provisions which would exclude any of the Hindus who have formerly come to this country to reside, or who are likely to do so in the near future, merely because they are Hindus, would be a lasting stain and disgrace to the honor and humanity of our country, which has hitherto stood for equal opportunity for all and an open door for the oppressed of all nations.

"Fourth. That at the present time, owing to the wise and humane laws of the country respecting immigration which have hitherto prevailed, a considerable number of Hindus of the student, scholar, and professional classes have availed themselves of the educational and other opportunities which our country offers them and are now residents there; that said proposed act places upon these classes humiliating and quite unnecessary hardships, such as deportation at any time within five years, making that provision retroactive, and, in case of deportation, exposing them to possible prosecution in their own country for political opinions expressed by them during their residence here.

"Your petitioners therefore respectfully pray that all said odious and harmful provisions be stricken from said proposed act."

The American press on the whole maintained a conspiracy of silence on the subject of Indian exclusion; but the following from *Los Angeles Times*, a leading paper of the State of California, where most of the Hindu laborers are, is worth quoting:

"The American missionaries and merchants have gone to India and carried to the natives the glad-some tidings that this is the land of the free and the home of the brave; that all men are created equal, and that in this country at least the lamp of education is lit and that its beams are free to all. They have merely represented what our Constitution and Declaration of Independence apparently guarantee.

"Yet by the terms of the Immigration Bill the people of India as a whole, are excluded from entry into the United States.

"There is a definite and organized opposition to these discriminating provisions of the bill—not only on the part of the educated Hindus, but through various educational societies who have memorialized the Senate and the President on the subject."

"There is no warrant whatever for incorporation in the law of the land of a registered hostility against the Hindu race. This seems odd on the part of a country that has a massive statue of universal liberty standing at its front door."

"As a nation we are seeking enlarged market in the far east, while the politicians and demagogues

are doing what they can to nullify all chance of trade expansion."

There was persistent rumor that the most effective opposition to the presence of Indians in America came from London, and that American legislature at Washington was a poor second. Personally, I do not think that all the stories are true; but the silent careful indifference of the English embassy, which gave additional color to the rumor, was very eloquent. It paralyzed the efforts of the Indians to improve their conditions in America.

Hindustan has been called upon during the past four years to defend the English empire by her good will as well as by the expenditure of blood and treasure. Her brave sons during this mighty world war have been in the forefront of every battle for England's freedom and democracy. Indians have fought and bled wherever men have fought and bled. They have accomplished untold deeds of courage and heroism which have seldom before been recorded in human history. By her unprecedented sacrifices India is of right entitled to a *quid pro quo*. Now that Indian blood has mingled with the rivers flooding Europe, will England recognize its obligations to Hindustan? As India has helped Great Britain in its distress, will it betray India? As a reward for their many magnificent services, will the people of India continue to be discriminated against as immigrants both in the English empire and in countries allied with it? That is the vital issue, and there can be no dodging it. It is now squarely up to the people and the government. Will India triumph? I think I hear across the ocean India asking in tones of iron determination and in a voice of grim imperative command that her problems, foreign and domestic, be solved, and solved now—now, not after dismal months and years of delay, confusion, and humiliation—now, not after it is too late—after the "unforgettable gratitude" of England to India is forgotten. India will not be denied. Indians set their jaws and put iron in their minds. They can, must, and shall win their legitimate rights.

AGGRESSIVE HINDUISM *

THE interpretation of 'Aggressive Hinduism' to be gathered from a careful perusal of this little booklet is not the one which suggests itself to the mind at first sight. For here we find Sister Nivedita exhorting us to become aggressive by determining, not merely to keep what we had, but to win what we never had before. The question we should ask ourselves is not how much we kept but how much have we annexed? It is the Sister's emphatic and deliberate opinion that there is no possible goal for the Indian people but a complete assimilation of the modern consciousness. To do this, we shall have to cancel all the elements of local prejudice in a given problem and 'extract the root fact from all the diversity of phenomena in which it clothes itself'. This will not be possible unless the Indian mind can deliberately discipline itself to the historic point of view. We must 'analyse and compare various methods' and 'add to our own the virtues of others'. It is no longer enough to know one thing well. It is also incumbent on us to understand its place amongst other things, and its relation to the scheme of knowledge as a whole. The outstanding distinction between Medievalism and Modernism lies in the geographical discovery of the world as a whole. 'The great intellectual and social failure of to-day lies in provincialism. The cultivation of the sense of humanity as a whole is the essential feature of a modern education'. Just as the man who merely by imitating the habits and manners of the European democracy considers himself an exalted and competent critic of his own people is nothing but a contemptible snob so to take one's stand persistently on local prejudices is almost as futile, and both miss the effective achievement. Only the fully national we should also remember, can contribute to the cosmo-national Selfidealism now shipping our own past praising our

ancestors is meant for encouragement, not for conceit.

Children of the *rishis* exclaim a great orator to the crowd before him but if some common man derives from this the idea that he is a *rishi* he shows his own *tamas* and nothing more. Only *tamas* makes this mistake. The methods of Christ will not bring the victory of Christ to the man who is not Christ. In him the dumbness of the sheep is more sheep than Christ like consciousness.

Laziness and defeat are not renunciation. To protect another is infinitely greater than to attain salvation. *Mukti* lies in overcoming the thirst for *Mukti*.

Not for most of us to reach the Absolute now for most of us only the immediate end whatever it be and for that to forget self! Only through action can we rise to that which is beyond action. The world is full of causes for which a man may give his all. Ladders of rope by which we may draw ourselves up to the *Mukti* at present out of sight. It is not a *gerau* cloth but his selflessness that makes a monk. There may be monks of science and learning, monks of art and industry, monks of the public life and service and monks for the defence of the defenceless. Great is the impulse of renunciation greater is the sustained self-sacrifice of a heroic life.

Society in India watches over the minutest details of a man's life and through out his life and for ages and ages it has taught man the social value of quietness, docility, resignation and obedience. But a social evolution which in Asia has occupied many centuries is in the West relegated to at most the first ten years of a child's upbringing, and after that, strength, initiative, sense of responsibility, the power of rebellion, disciplined and subordinated to impersonal ends coupled with a sense of fairplay, are the lessons which his teachers and guardians strive to foster in him. Instead of being the preserver of Hindu custom Hinduism should henceforth be the creator of Hindu character.

This dynamic transformation of character is what Sister Nivedita means by Aggressive Hinduism. It is only thereby that Hinduism can contribute to the world's sum of culture not merely to make adaptations from it.

Our past henceforth is active and not passive. Our task is to translate ancient knowledge into modern equivalents. Spiritually Intellectual.

* Aggressive Hinduism by Sister Nivedita, Ltd Bodhan Office Calcutta, 1918 Price Annas four

there is no undertaking but we must attempt it we must create a history of India in living terms Great literatures have to be created in each of the vernaculars Art must be reborn Not only to utter India to the world but also to voice India to herself—this is the mission We look to make our descendants greater than our ancestors

Complete assimilation of the modern consciousness all round development of character and striving to attain the highest spiritually and intellectually in all spheres of action—this is thus the sum and substance of what Sister Nivedita wrote to designate by the expression Aggressive Hinduism which has however been interpreted by many as a militancy of the Hindu faith in the spirit of 'my religion right or wrong' That this latter interpretation was not the one which Sister Nivedita the inventor of the phrase, wanted it to bear admits of no doubt, for when properly analysed, it

will be found that the association of the name 'Hinduism' with the cult thus advocated is due to the fact that it was addressed to and meant for Hindus and has no other necessary or logical connection with them, and the epithet 'Aggressive' is given to it because it is a protest against the passivity of inaction which characterises the Hindu race. Really speaking, what Sister Nivedita under the guise of Aggressive Hinduism preaches to us is nothing more nor less than what she calls 'cosmo-nationalism'—the harmonious union of the racial with world culture—which is the highest ideal of cultured manhood all the world over at the present day, and this is the ideal transformed into purposive and fruitful action, which she holds up before the Hindus as the only one worthy of their acceptance

Q

THE BRITISH CONGRESS COMMITTEE

1. A RETROSPECT

AN INTERVIEW WITH DR G. B. CLARK OF THE COMMITTEE

By St Nihal Singh

I

THE affairs connected with the British Congress Committee in London are at present in such a tangle that I thought it might serve a useful purpose if I asked Dr George Brown Clark who is the oldest living member of that body and who since the death of Sir William Wedderburn in 1917 has been acting as its chairman to explain to me (1) how the Committee came into being (2) what work it has done (3) what its present activities are (4) what connection it has with the newspaper *India* and (5) what may be expected of it in the immediate future

A Scotsman by birth and a radical by city and inclination Dr Clark for more than half a century has been fighting for all manner of reform—fighting hard and persistently without caring whom he hit. The more unpopular the cause the more could it count upon his sympathy and active support. Many attempts were

made to buy him up with a knighthood or an office but he refused to give up the freedom that enabled him to call men in power to account for their indiscretions and follies whether such highly placed men belonged to his own (Liberal) party or otherwise

Dr Clark began to take an interest in India early in his life. When only 19 he entered the service of the Great Indian Peninsular Railway. At that time (1865) the railway from Bombay to Poona had not been built and communications in all parts of India were extremely deficient. University education had hardly begun, and there was no sign of political activity in the country

Though he remained with the G. I. P. Railway only three years Dr Clark used his opportunities to great advantage to learn as much as he could of the people and of the land. Even after his return to Britain his brother engaged in medical work in Rajputana formed a link between

him and India and drew him on several occasions to that country. In 1875 he saw, in the suite of the Maharaja of Jeypur Lord Lytton's great *tamasha* at Delhi when Queen Victoria was proclaimed Empress of India. He paid India other visits and twice attended the Congress.

The agitation set on foot by the 'Indian Civil Service to defeat the Ilbert Bill' was responsible for drawing Dr Clark into the Indian political movement. The conservatives in Great Britain took up the cry set up in India against the late Lord Ripon and his law member Mr (now Sir) Courtenay Ilbert both staunch liberals sent out to India by a Liberal Government. The Conservative leaders placed their entire party machinery at the service of the deputation that the civilians in revolt sent here to press their case and the whole country rang with accusations against the people of India and the Liberal party which was bent upon placing Englishmen in India in a position of abject subservience.

Dr Clark and Mr William Digby (who had spent many years in journalism in Ceylon and India) readily realised the necessity of doing all they could to counteract the conservative movement. Liberals with knowledge of India—notably Sir David Wedderburn the elder brother of Sir William Wedderburn and Mr George Fogg—joined them. They found the Liberal party ready and anxious to help them in every way it could. They revived the Indian reform committee which I believe, had been originally established by John Bright and Dr Clark became its Chairman. Under its auspices and assisted by the Liberal party they went about the country addressing meetings, controverting the Tory statements and setting Indians and Indian institutions in their proper perspective.

The late Mr A. K. Sethna and Mr Lal Mohan Ghose were at that time in this country and rendered great assistance in the campaign. Mr Ghose stood, in 1884 for Deptford as a Liberal candidate—the first Indian who ever sought to enter the House of Commons. Though he failed to get in his electioneering campaign served to arouse great interest in India. I may state parenthetically that in 1892 Mr (afterwards Dr) Dadabhai Naoroji was elected as a Liberal M. P. for Central

Finsbury, followed in 1885 by Mr (now Sir) Mancherji Bhownagree as Conservative member of Parliament for Bethnal Green, East.

In the meantime, Indians in India were not inactive. Lord Lytton's show at Delhi demonstrated to thoughtful Indians the possibility of reconciling the clash of creed and caste and political associations began to be formed. The 'civilian revolt' made them realize the necessity of organized agitation.

In 1883 Mr Alan Octavian Hume retired from the (Bengal) Civil Service, and threw himself into the movement for Indian political reform and the Congress was established. Its first session was held during the closing days of 1885. Two years later Sir William Wedderburn retired from the Indian Civil Service, and returned to Britain. About that time Mr Naoroji also came back to this country, which he had first visited in 1858. Mr Womesh Chunder Bonnerjee was about that time enjoying a large Privy Council practice and every year was spending many months in this country. Acting in co-operation with Mr Andrew Yule and others Hume, Wedderburn, Naoroji and Bonnerjee formed the British Congress Committee into which the Indian Reform Association was merged in 1889 and which three years later absorbed the Indian Political Agency which had been started in 1887 by Mr Digby.

II

I asked Dr Clark what relationship the Committee was to bear with the Congress in India. He answered that the two bodies were designed to work hand in hand. The men who had been mainly responsible for the organisation of the Congress composed the Committee and in consequence the Committee from the very beginning enjoyed a great prestige—a prestige that placed it above control or even criticism from India.

In response to my query about the Committee's functions Dr Clark said that they were of a dual nature.

(1) The Committee was to keep the Congress in India informed of Indian affairs in this country and to advise it about the policies that required to be formulated, and the measures that ought to be taken.

(2) The Committee was to carry on

propaganda in this country to advance India politically.

The first object was served through correspondence that was carried on officially by the Committee, or privately by its members, with the Indian Congress leaders. For years Mr. Hume and some of the other members of the Committee were in the habit of sending an annual message to the Congress. Every now and again one or another member of the Committee went out to India to preside over or to attend a session of the Congress.

Indian propaganda—the second object of the Committee—was carried on through various ways:

(1) Several of its members were in Parliament: W. S. Caine (1880-89, and 1892-95), Dr. G. B. Clarke (1885-1900), Dadabhai Naoroji (1892-1895), Sir Herbert Roberts (1892-1918), Sir William Wedderburn (1893-1900), Mr. Thomas Hart-Davies (1906-1910), Mr. C. J. O'Donnell (1906-1910), Dr. V. H. Rutherford (1906-1910), Mr. James O'Grady (1906-1918), and Mr. A. Mac Callum Scott (since 1910). They gathered together as many friends of India in Parliament as they could and formed a Parliamentary Committee, which asked Indian questions in the House, raised Indian debates, and otherwise kept India to the fore.

(2) India (of which more later) was sent to members of Parliament and others especially interested in Indian affairs to keep them informed of Indian developments. Whenever necessary additional information was supplied by the Committee.

(3) Members of the Committee—notably Mr. Dadabhai Naoroji—carried on correspondence with persons interested in India and wrote to the press to convey information or to support an Indian movement or contradict or correct a wrong impression that was sought to be given.

(4) The Committee whenever occasion arose, published pamphlets written by members and other friends of India.

(5) Various members delivered addresses from platforms in London and in the provinces.

Dr. Clark does not remember the exact date when India was started. Perhaps it was in 1890. He thinks, however, that it began as a monthly, and was afterwards converted into a weekly. Hume,

Wedderburn, Dadabhai Naoroji, Bonnerjee and Digby all co-operated in conducting it.

Digby edited India until 1892. Among those who followed him as editor, Mr. (now Sir) Gordon Hewart (Attorney General in the present Administration), Professor Muirhead and Mr. H. E. A. Cotton may be mentioned. Mr. Cotton was appointed shortly after he returned from India in 1906 and resigned his position only a short time ago. Mr. Ratcliffe, who more than once had relieved Mr. Cotton, succeeded him, but shortly afterwards was called to the United States of America, Mr. H. S. L. Polak being appointed to act for him. Mr. Ratcliffe returned from America a short time ago, but since his movements are uncertain he has not taken up the editorship of India which pending other arrangements, continues to be conducted by Mr. Polak.

At first India was privately owned belonging to a company composed of men interested in Indian affairs. After a few years, Dr. Clark does not remember how many, the British Committee took it over and conducted it. The paper did not, however, go well and entailed a considerable loss—something like £2,000 in a few years. In 1903 it was, therefore, decided to transfer it to a limited liability company, specially formed to conduct the paper. The ordinary shares were taken by the committee as payment for the paper, and preferential capital was subscribed by friends interested in India. Mr. G. K. Gokhale and other Indian friends helped to secure a large number of subscribers in India, at one time numbering something like 5,000. In consequence the newspaper not only paid its way, but in some years even returned profit.

Before the war began, however, the number of subscribers was going down and when hostilities commenced and sent up the cost of production (the cost of paper alone rose from something like 2d. to 1-2d per lb.), printing and other expenses, India began to entail heavy loss. Two years ago the Committee undertook to meet the deficit, and last year it came up to something like £900. This year the loss may not exceed £700. The obligation was assumed by the Committee for a definite period and will end in June, unless that body undertakes to renew it.

I asked Dr. Clark what the committee

has been doing during recent years besides subsidising India. He was frank enough to confess that of late its activities have grown less and less. The reason for this, he said, is not that the interest taken by the members in India is waning but because so many of the members have died or have drifted away from London and no new members have been added with the exception of Sir Herbert Roberts who like his father in law the late Mr Caine is greatly interested in the Indian Temperance Reform movement and Mr S H Swinney President of the London Positiv-ist Society.

First Dadabhai Naoroji retired and went away to India. Next Mr Hume and Sir Henry Cotton died. For many years before his death Sir William Wedderburn lived in his home in Gloucestershire and found it increasingly difficult to journey back and forth to London. Mr Hart Davies, who at one time took a keen interest in the Committee and Mr Bernard Houghton who wrote a masterly indictment of government by bureaucracy live far away from London and practically never attend meetings. Since he became Secretary to Mr Winston Churchill Mr MacCallum Scott seldom comes in. For some reason or other the same is true of Mr O'Donnell and Mr O'Grady.

For practical purposes therefore the Committee consists of Dr Clark, Mr Parekh, Dr Rutherford, Mr Delgado, Sir Herbert Roberts and Mr Swinney with Mr Douglas Hall as Secretary—a post that he has occupied continuously for about 26 years. As ex-Presidents of the Congress Mr B N Basu and Lord Sinha are members of the Committee and Mr Polak, Mr St Nihal Singh and Dr Rao attend as visiting members.

I asked Dr Clark why it was that after the death of Sir William Wedderburn no attempt was made to reorganize the Committee and to transfuse new blood into it to make it a vigorous organization capable of coping with the existing exigencies. He replied:

After Sir William's death we resolved not to expand ourselves because we thought that the situation in India was extremely vague and we waited until we could receive first hand information about it. When Mr Basu arrived in the spring of last year and told us how things were there, we decided to continue that policy

until the Montagu-Chelmsford scheme was out and India had declared herself. Since that report appeared there has been a very sharp division in Indian opinion and in that of the Committee. The only thing that we thought possible if we were to work together was to preserve as neutral an attitude as possible until such time as the various deputations could come from India and we could ascertain from them just what the position was there and to what extent we could co-operate. These deputations will arrive towards the end of May and after conferring with them it will be possible for us to make up our minds what course we will take.

I do not mind telling you, added Dr Clark, that the men in India whom we knew and with whom we have worked are the Moderate leaders who have seceded from the Congress. It is but inevitable that many of us should want to continue our association with them. But then the question arises: How can we work with those who have seceded from the Congress and still remain a Committee of the Congress whose name we bear and which has met our expenses not wholly but largely? But as I have said before no decision is possible until we meet the deputations—especially the one that the Congress is sending here with general authority to confer with us.

III

My complaint is that the Committee has been following a policy of *laissez faire* at a time when it was necessary that a strong and a propaganda should be conducted. While that body has been in a state of suspended animation persons and societies inimical to educated Indians have been carrying on an active persistent and vicious campaign which needed to be counteracted by equally active and persistent pro-Indian propaganda. Indians have for a generation made it possible for the British Congress Committee to exist and they had every right to expect that the Committee would carry on such propaganda especially at a time when grave changes in the Indian constitution were impending and the British needed to be educated in regard to Indian aspirations and Indian capacity for self government.

If India had been conducted with skill

and vigour, and if it had championed the Congress cause, it could have served a most useful purpose—a purpose for which it is maintained by Indians. But as a subsidized organ of the Congress, and even as a newspaper, it has been far from a success—especially ever since the Montagu-Chelmsford scheme was published. Of all the views put forward since then by Indians the one that has received the least backing from it is the Congress view.

Dr Clark admits quite frankly that the Committee has had funds at its disposal to undertake special propaganda—indeed he says that the Committee never possessed so much cash in hand as it did at the time Sir William Wedderburn died.

It is a great misfortune that this policy of drift is to continue for at least several months.

IV

Though I am greatly disappointed in the Committee, as it is and as it has been for years, I am not one of those who think that it should be ended. That would be, to my mind, a great misfortune to the cause of India in this country and in India itself.

It must be remembered that the Committee has been in existence for a generation, and that the organizations that were merged into it existed even before the Congress came into being. In consequence it has accumulated a great mass of experience of inestimable value to the Indian movement. It has established connections with various political associations. It has acquired a small but a useful library, and through a subsidiary organization maintains a weekly organ of its own.

Greater than all these assets put together are the men who have devoted much of their time and talents without compensation of any kind, to the work of the Committee—men who possess intimate knowledge of the political machinery in this country and who are genuinely and deeply interested in India. There is for instance Dr Clark, who in spite of his three score and thirteen years has

a clearer brain and greater vigour than most men in the prime of life, and the longer he lives the more radical he becomes. There is Mr Parekh, who has been in this country for more than a quarter of a century and who has not spared himself in serving his Motherland. Dr V N Rutherford's strong democratic tendencies and his keen interest in Indian reform are too well known in India to need even a casual reference here. There are others, but let these names suffice. Such men are a valuable asset to any movement and I can conceive of no greater disaster to our cause in this country than that it should lose their active support. Indeed we cannot afford to lose any of our friends no matter how very cautious and halting the Indian Nationalists may find such a friend.

I am afraid some of us Indians, in our zeal for our cause, talk and write in a manner that is likely to wound the susceptibilities of our British supporters. For instance, I notice that it is being said in India that the men composing the British Committee propose to continue to dominate the Indian political movement from London. Any one who knows how very democratic Dr Clark and his colleagues are will contradict such rumours without a moment's hesitation. I should like to take the present occasion to request my people in India not to indulge in talk that is likely to lose us our friends here.

That request does not, however, imply that we must not urge upon the Committee the immediate necessity of reorganizing itself and do anything in our power to bring about such reorganization as speedily as possible. But while performing this task we should not forget that we are dealing with colleagues and not with men in our pay. Nor should we forget that, as a nation we are famed for our innate courtesy.

I propose, in the following article, to suggest the lines along which in my judgment, reorganization of the British Committee should take place.

A MENACE TO HINDU SOCIETY *

IT is surprising to note how much information of a varied and useful character has been packed within this small but closely-printed volume of 178 pages. The Englishman's love of method, order, and logical arrangement of thought is evident everywhere. There is a copious Index. A few pages here and there are specially devoted to missionary work and may not appeal to the general reader, but the rest of the book will be read by Indians with profound interest. Hinduism, past and present, Indian nationalism, the Indian home, and many other things of vital importance to us have been dealt with in a spirit of discriminating sympathy and in language often rich and poetic. Of course the special standpoint of the author, his fixed belief that all Hindus will ultimately be converted to Christianity, cannot be shared by any who does not belong to his religious persuasion. Educated Hindus have a profound reverence for Christ but the author nowhere seems to perceive the distinction between Christianity and Christ. The bundle of dogmas, creeds, doctrines, theories, superstitions, prejudices, nay even untruths, which make up any particular denomination of the very large number of sects into which Christianity is divided, is more likely to kill than to kindle the Indian's admiration for the saintly character of Jesus. The tone of the book is praiseworthy and the knowledge of Hindu philosophy, religion, and culture which the author displays in this book is typical of the new type of missionary literature which it has become impossible for the Higher Hinduism to ignore. The attitude of the learned author will appear from the following, taken from the peroration of the book:

'The earnestness of the millions of her pilgrims the absorption of her mystics in the unseen but ever present One, the unmeasured sacrifice of her ascetics, the otherworldliness of her true monks and friars, the contempt for material greatness and the things of sense beside the majesty of the spiritual

and the things unseen, the indifference to food and comfort and all things earthly of only the things eternal can be assured the worship that sees God everywhere and makes all life divine, the piety of the simple householder for whom each act of daily life each family event is part of his religious life, the tireless aspiration away from this world in the search for God, the reverence for religious guide and teacher, the caring for the poor, the hospitality for every guest, the simplicity of life and the honourableness of poverty above all India's worship of Goopness, her sense of the strength of patience, the grandeur of gentleness, the nobility of meekness, the dignity of submission, the glory of humility, this wealth of spiritual instinct, this fervour of religious passion, purged of all dross."

The weak points of Hinduism, delineated by such a sympathetic hand, should not be met by a blind fanaticism, but should be seriously thought over, and remedied, if found true on examination. We have space here to notice only one such point, the most serious in our opinion, than which there is no greater danger threatening Hinduism at the present moment. We allude to the recent growth of mass movement towards Christianity by which entire villages and communities numbering several thousands have been converted at one stroke. In the ten years preceding the last census a million converts were thus added to the Indian Christian Church, and at the present day, says the author, 'we are baptising at the rate of about 350 converts a day or over 10,000 a month'. If proselytism goes on at this tremendous pace, there will soon be very few Hindus left in districts where the depressed classes, among whom these conversions were made, form the bulk of the population. 'The desire for social betterment', and 'the first experience of human kindness and brotherhood in the missionary', are said to be among the causes of such group conversions. To these converts, "Christianity has set a new value on personality. The individual counts. He has come to know himself a man. There is nothing human to which he may not hope to rise by merit. Religion, which has so long barred the way up, now opens it. Hope, enterprise, effort, are the natural result. There are literally hundreds of thousands of persons in

* *The Goal of India*, by Rev. W. L. S. Holland, Christian Literature Society for India, Calcutta, 1919. Price annas twelve.

India to-day whom the Church has lifted from a condition of degradation almost lower than humanity to economic freedom, social self respect, and religious manhood." True, these conversions in the mass give the genuine missionary many qualms of conscience. But our author says apologetically 'he must take them all together, or none at all.' So if the opportunity be missed by insisting too much on the sincerity of the change of spirit, it will not come again, for these outcaste tribes are being incorporated by Islam almost as rapidly as by the Church. It is not unfair to say it is a race as to which religion will get in first. The author truly says that "Caste, in the case of these down trodden multitudes, who are brought in masses to the Church, is our present greatest opportunity." And what is Hinduism doing to meet this wholesale defection? We shall quote once more from the book.

Hinduism is at last bestirring itself about the bettering of the condition of these fifty million serfs. But the principles of the movement are far from clear. Is the pariah to be made less miserable but to be kept in his place all the same or is he to be no longer untouchable and to be admitted to ordinary social intercourse? No one dare give a

plain answer to the question. On the (Hindu) committees of the movement there are two sets of leaders—those who are prepared to give up caste distinctions and treat the pariahs as the missionaries treat them and those who are nervous about going too fast and anxious only to make the pariah's lot a little better. It is the latter party which at present always carries the day. (Quoted from Phillips *The Outcastes Hope* p 23)

Mrs Besant loudly trumpets social reform but her Central Hindu College at Benares and the Theosophical schools at Ernakulam and Madanapalle refuse admission to all outcastes and Panchamas. At the annual gathering of a large Hindu sect held recently the audience that listened enthusiastically to an eloquent address on universal brotherhood dispersed to hold their separate caste meals.

It is not by bludily abusing the missionaries, but by setting our own house in order in regard to the vital defects pointed out by the best among them, that Hinduism will have the chance to survive. Thoughtful and patriotic Hindus who are of this opinion will find ample food for reflection (and stimulus to action) in the present volume.

A BRAHMIN WITHIN THE PALE OF HINDUISM

* Is this true?—Editor M R

PROF. A. B. KEITH AND THE SANKHYA SYSTEM

By DHYENDRANATH TAGORE

A NEW book has quite recently appeared in the 'Heritage of India' series on the Sankhya System of Indian Philosophy, which deserves more than a passing notice. The learned author Professor A. Berriedale Keith—Regius Professor of Sanskrit and Comparative Philology in the University of Edinburgh and translator of the Taittiriya Samhita and other works,—is already known to the world as a Sanskrit scholar of repute. In this present book, he has succeeded to a considerable extent, in setting forth before his readers a scholastic interpretation of the Sankhya system so far as it can be explained by one who appears to have no direct and intimate contact with Indian religious life. He seems to suffer—as so many Sanskrit scholars from the West seem to do,—from the confident assurance,

hardly justified by the results, that he is able to get to the bottom of a whole vast system of Indian philosophy by the prolonged, dry study of our written books. Like a traveller on a railway train, he has succeeded in obtaining a few brief passing glimpses of the historical mile stones, as he looks out of his carriage windows on his long journey from one end of India's philosophic boundary line to the other, and this peculiar method of prying and abstruse research, combined with his own self confidence about results, causes him to imagine that when this feat has been accomplished nothing more is required and that the whole inner content of the Sankhya philosophy has, in this way, been laid bare.

Yet, all the while, he has been making one capital mistake which those who live

रजस्य सच्चिदिति प्रविष्टा

सुखासदीया प्रविष्टे सुखाय ॥

This might be translated literally,—“The transcendent power of the Great Lord known by the name of the unmanifested,—it is beginningless avidya (Nescience), whose very essence is the three Gunas, it is called by the learned, *Maya*, inferable by its products, from whom the world is brought forth, it is neither being, nor non being, nor both it is a thing of greatly wonderful and undefinable character

“It is destroyed by the knowledge of the pure *Brahma* without a second it is known everywhere as *Rajas*, *Tamas*, *Sattwa*, these three Gunas are revealed by their products”

Such a passage as this seems clearly to prove that Sankara accepted the three Gunas and actually gave them a place in his own system. It seems also to show how the great practical thoughts underlying the Sankhya philosophy penetrated Indian life and moulded it both consciously and unconsciously—in a permanent manner.

In conclusion, I feel it necessary to call attention to the very inadequate way in which Professor A. B. Keith has dealt with the question of the relation of the Greek philosophy to Indian thought. The evidence for a direct borrowing from India is far stronger than the author of this book supposes. To take the case of Pythagoras only,—what little we know about him points to such a direct borrowing from India. Throughout the Greek and Latin Classics, for instance, we find the curious prohibition about eating beans, which no one understood. In the *Katha Samhita* (*Yajur Veda*) 1st *Adhyaya*, 4th *Sthanaka*, 10th *Anvaka*,

we find the passage—“न माषाणां अन्नोपाद भवेद्वा नै माषा”

“Eat not beans, beans are unholy”

Again we have references to the Pythagorean prohibition concerning spitting in the fire, which Greeks and Romans could not understand. But in the *Chhandogya Upanishad*, 2nd *Adhyaya*, 12th *Khanda*, we read “न प्रबद्ध उग्रि माषमेतु न जिह्वीवेत्”

“Standing before the fire, spit not water from the mouth, neither spit in it”

Once more, in the *Sulva Sutra* by Baudhayana Acharya, translated into English by Dr. Thibaut in the Journal of the Asiatic Society Vol. XLIV, we have the words—

(i) “The cord which is stretched across (i.e. in the diagonal of) a square produces an area of double the size

(ii) The cord stretched in the diagonal of an oblong produces both (areas) which the cords forming the longer and the shorter sides of the oblong produce separately”

These two propositions evidently constitute the famous 47th proposition of the 1st Book of Euclid, which Pythagoras is said to have discovered. How far it can be truly called a ‘discovery’ of Pythagoras the reader can judge for himself.

The evidence here given is only a small part of that which points to a direct connection between Greek philosophy and Indian. The subject is far too important to be dismissed in two or three pages. It needs a full and thorough investigation and a careful examination of existing texts. Indeed the whole history of the interrelation of India and Greece has yet to be critically written. When this is done, I feel very little doubt that the connexion will be found to be far closer than is generally supposed by western scholars.

NOTES

The Peace Treaty

There are said to be between 800 and 1,000 clauses in the draft of the Peace Treaty. The complete text will fill 350 pages,—it is not stated of what size. Clauses referring to the disarmament of

Germany alone number a hundred, while clauses relating to the Saar Basin also number a hundred.

The Havas Agency states that the German Government has accepted all the Allies' conditions and will send to Versailles a delegation headed by Count

Brockdorf Rantzau, the total number of the German delegation being about 75.

As a monthly Review is not a news paper and as a full summary of the most important clauses of the peace treaty may be expected to be available at no distant date, we refrain from commenting on the scraps of information hitherto cabled out by Reuter. Comments on one or two points may, however, be made.

Mr. Lloyd George made himself responsible for the promise that the people of the German Colonies in Africa would be allowed to choose their own form of Government, that is to say, they would be allowed to exercise the right of self-determination. The Allies have retered from this promise. No non European people, directly or indirectly concerned in the war, is to have the right of self-determination. The territories of some of these non European peoples are to be administered as practically forming integral parts of adjoining British or other Allied European Colonies, whilst the rest are to be administered by the British or some other European Allied government under a mandate from the League of Nations. In plain language it may be said that the former class of territories are to be annexed, and the latter class may for all practical purposes be considered as annexed,—which means that so far as non European peoples are concerned the recent war was not fought for the world's freedom. If, however, the mandatory system works well, that is to say, if it works entirely and solely to the advantage of the dependent peoples, which is very doubtful, there would be some improvement to their lot. If the League of Nations can secure from the Mandatories periodical administration reports of the territories under their charge and if the League can also take effective action whenever any report proves unsatisfactory, the system would work well and might in course of time lead to the autonomy or independence of these territories.

The Peace Conference or its child the League of Nations may thus be able to do some good to the quodam German dependencies in the long run. But it has not been able to do, has not in fact attempted to do anything for the British and other Allied dependencies and protectorates. It has been taken for granted that their lot leaves nothing to be desired, which is not true. Nor is it

proper to take it for granted that the British Government and the other Allied European Governments would do as much for their present dependencies and protectorates and do it as quickly, without any outside pressure, as they would have to do for territories to be governed by them as Mandatories, if the League of Nations can effectively exercise the right of obtaining reports from the Mandatories and taking action thereupon. It would have been only consistent and right if all European powers governing foreign territories from before the war could have been prevailed upon to administer them hereafter as mandatories. But as the British Empire is at present the strongest fighting unit, this obviously righteous course could not even be thought of.

It has no doubt, been said that the Peace Conference or the League of Nations can not interfere in the internal affairs of a State. But Poland was as much a part of the German Empire, the Czechoslovak territory as much a part of Austria Hungary, as Ireland, India and Egypt are parts of the British Empire. If the bringing about and recognition of the independence of the Poles and the Czechoslovaks was consistent with the political doctrines regulating the proceedings of the Peace Conference, why could it not be consistent with these doctrines to ask that Britain should hereafter govern India, for example at least according to certain liberal and enlightened political principles (like those followed by America in the Philippines) agreed upon in the Peace Conference? This would probably have wounded the *amor proprio* of Britain, and no power could or can think of giving her offence. So though the war was professedly waged for the substitution of right for might—a very utopian or quixotic object, in the opinion of cynics, in the present state of the world—no State represented in the Peace Conference could afford to forget the relative might of the States.

It is some consolation to find that at least one State, the U.S.A., has not fought for any territorial aggrandisement or made any acquisition of territory.

Korean Independence.

The following Reuter's telegram will be read with interest —

PHILADELPHIA APRIL, 16
A petition for the recognition of the Provisional

strength by its fearlessness, by its refusal to accept any imposition which depends for its success upon its power to produce fightfulness and is not ashamed to use its machines of destruction to terrify a people completely disarmed. We must know that moral conquest does not consist in success, that failure does not deprive it of its dignity and worth. Those who believe in spiritual life know that to stand against wrong which has overwhelming material power behind it is victory itself, it is the victory of the active faith in the ideal in the teeth of evident defeat.

I have always felt, and said accordingly, that the great gift of freedom can never come to a people through charity. We must win it before we can owe it. And India's opportunity for winning it will come to her when she can prove that she is morally superior to the people who rule her by their right of conquest. She must willingly accept her penance of suffering the suffering which is the crown of the great. Armed with her utter faith in goodness, she must stand unabashed before the arrogance that scoffs at the power of spirit.

And you have come to your motherland in the time of her need to remind her of her mission, to lead her in the true path of conquest, to purge her present day politics of its feebleness which imagines that it has gained its purpose when it struts in the borrowed feathers of diplomatic dishonesty.

This is why I pray most fervently that nothing that tends to weaken our spiritual freedom may intrude into our marching line that martyrdom for the cause of truth may never degenerate into fanaticism for mere verbal forms descending into the self-deception that hides itself behind sacred names.

With these few words for an introduction allow me to offer the following as a poet's contribution to your noble work —

I

I let me hold my head high in this faith that thou art our shelter that all fear is mean distrust of thee.

Fear of man? But what man is there in this world what king O king of Kings, who is thy rival, who has hold of me for all time and in all truth?

What power is there in this world to rob me of freedom? For do not thy arms reach the captive through the dungeon walls bringing unfettered release to the soul?

And must I cling to this body in fear of death, as a miser in his barren treasure? Has not this spirit of mine the eternal call to the feast of ever lasting life?

Let me know that all pain and death are shadows of the moment that the dark force which sweeps between me and thy truth is but the mist before the sunrise, that thou alone art mine for ever and greater than all pride of strength that dares to mock my manhood with its menace.

II

Give me the supreme courage of love this is my prayer the courage to speak to do, to suffer as thy will to leave all things or be left alone.

Give me the supreme faith in love, this is my prayer, the faith of the life in death of the victory in defeat of the power hidden in the frailness of beauty, of the dignity of pain that accepts hurt, but disdains to return it.

Very sincerely yours
(Sd) RAJENDRANATH TAGORE

Spying and the Atmosphere of Pure Study.

Some time ago Mr. C. F. Andrews wrote a letter to the Press strongly denouncing the Rowlatt Act and mentioned incidentally the fact that he had himself been subjected to spying, two of the spies being his own students. Thereupon some Anglo Indian papers demanded that he should give particulars. This Mr. Andrews has now done in the following letter —

TO THE EDITOR OF "THE STATESMAN"

SIR,—In a recent issue you quoted an article from the *Madras Mail* throwing doubt on the veracity of my statements about 'Government Spies'. I have waited till my return to Delhi, in order to get accurately the particulars as to the dates and names and places which the article you quoted required from me, to substantiate the truth of what I wrote. The facts are as follows —

The time when I caught red handed a Government spy searching my private papers was during the Deputy Commissionerhip of Mr. Humphreys in the year 1907. Mr. Humphreys was at Cambridge with me and a personal friend. I caught the man (who had come through a back door) with his hand actually in my study table drawer, and he confessed that he had been sent by the Police. I was naturally indignant and sent at once to the Deputy Commissioner demanding an instant apology. A mounted policeman came back post haste with the following words in a letter — 'My dear Andrews, it's nothing to do with me, it's those damned C.I.D. people! The epithet he used made any further apology from himself unnecessary.'

The two authenticated cases of Government spies being planted to the college, where I was teaching, were as follows — The former was a student named Gokal Chand, whose testimony appeared in the Delhi Club Bomboise. In the evidence it was made clear that he had been tempted by the C.I.D. to bring their specimens of his comrades' handwriting and to act as a spy in other ways. What made the case more vile was this, that the boy was quite young. The evidence he gave on these points at the trial was not challenged or disputed.

The second case was that of an exceptionally bright Muhammadan boy, whom I fully trusted as a friend. As he has, since that time, confessed fully his past misconduct, I do not think it right to give his name in the general public, but I am perfectly ready to give it to any one who might wish, for good reasons, to pursue this inquiry. — Yours, etc.,

Delhi, April 20, 1919

C. F. ANDREWS

The employment of students as spies is, no doubt, in pursuit of the ideal of creating an atmosphere of pure study, an ideal on which not a few Viceroy, Governors, Lieutenant Governors, and Chief Commissioners have held forth time and again. We have heard of student spies, and even professor spies, in other places, too, than Delhi.

"The Amrita Bazar Patrika" and the Press Act

The security of Rs. 5,000 taken from the *Amrita Bazar Patrika* some years ago has been forfeited, which means that it has been compelled to pay a fine of Rs. 5,000 *without any sort of trial*, and that its usefulness and its business must come to an end unless it deposits a further heavy security, which has been fixed at Rs. 10,000 and has since been deposited.

In Lord Morley's *Recollections* (Vol II pp 259-60), we find a letter written on May 28, 1908, by that ex-Secretary of State for India to the then Viceroy Lord Minto, in which it is said

I have been very busy for a good many hours about your *Press proposals*. Luckily a Cabinet had been fixed for the forenoon to-day and to the Cabinet I propounded the case; that is to say I told them the provisions desired by the G.O.I. with the modifications that I had to suggest after working the matter over under the sensible and highly competent legal guidance of Sir Lawrence Jenkins. In the Cabinet Room was very restful remembering his own reversal of Lytton's Press policy. I do believe our introduction of a judicial element at every stage is an improvement apart from general principles of a Free Press on the one hand and the maintenance of Law and Order on the other. In the first place it will tend to reconcile liberal opinion (not in a party sense) here and that is something. In the second place, it will make it easier for the Moderates to resist the Extremist attack. Such an attack is sure to come and it is our business as I think not to do anything that will give substance to Extremist taunts and reproaches against their Moderate opponents. Of course our proceeding must be effective but I do not think that any of the modifications suggested here will at all impair your purposes.

After reading the above, well may Indian journalists wonder what became of "a judicial element at every stage" of proceedings under the Press Act. Did the judicial element at every stage evaporate and vanish into thin air while crossing the Red Sea, after it had served its purpose of conciliating 'English opinion'? What too, has become of the pledges of the then law member who is now Lord Sinha? Without an open judicial proceeding no reasonable man can be convinced that the forfeiture of security is just. But probably the bureaucracy do not care to convince but only to punish and prevent the publication of that which they do not consider proper. In the case of the *Patrika*, the public will remember only the sterling services rendered by it to the popular cause, in politics, very few will have either the opportunity or the occasion to

read the articles for which it has lost Rs. 5,000. Even the discussion of the justice or injustice of the executive order of forfeiture is not lawfully feasible, for every copy of the issues of the *Patrika* containing those articles has been declared forfeited, so that any one quoting from them in course of the discussion would render himself guilty of possessing proscribed literature.

The *Patrika* once editorially wrote that the editor of this Review was guilty of lying its policy in matters of social reform is directly opposed to ours, the unfair partisanship displayed and the ceaseless personalities indulged in both by the *Patrika* and the *Bengalee* are repugnant to us the unfavourable criticism of the Government's excise policy and at the same time the publication of advertisements of alcoholic liquors by both the *Patrika* and the *Bengalee* cannot but be regretted by sincere patriots. But in spite of all these facts, we cannot but recognise that in politics the *Patrika* has consistently and courageously espoused the cause of the people has boldly exposed bureaucratic vagaries and high handedness and has never sought to bask in the sunshine of official smiles. Bengal nay the whole of India would be the poorer for the disappearance of the *Patrika* should such a thing ever come to pass.

Moderates and Extremists

Incidentally the extract from Lord Morley's letter given above, and other similar passages in his *Recollections* remind one of the Divide and Rule policy which prompts British Statesmen constantly to put Moderates against Extremists. Not that they really care for Moderate opinion any more than they do for Extremist opinion, they would seem only to want to use the name of the Moderates for doing what they want to do or not doing what they do not want to do.

A recent example will prove the truth of our observation. In reply to a question asked in the House of Commons it was officially stated that protests against the Rowlatt Act and requests that it should not be sanctioned have been received from individuals and associations in India, but that no such communication has been received from the Moderate party. This attempt to take shelter behind the name of the Moderates is disingenuous. For, as

Government of the Korean republic has been sent to Paris by the Korean Congress here.—*Reuter*.

Korea is an Asiatic dependency of an Allied Asiatic power, Japan. We shall be greatly and delightfully surprised if the petition is justly disposed of.

Philippine Independence.

President Wilson has declared that the time has come for the Philippine Islands to obtain independence. Nothing less was expected. America has set a noble example for all dominant nations to follow.

Indian Hospitality.

Reynolds's Newspaper

[London

Awaiting Demobilisation.

"Altho" to us it may seem sad
We mustn't be surprised

If everybody else is glad
When we're demobilised!"

The cartoon printed above has appeared in *Reynolds's Newspaper*, London. We have not had any food coupons, but there is a food-controller or director or controller of civil supplies, or some officer or officers whose business it is to decide how much food should be imported and how much exported, and by whom. This sort of activity has made food dear in Madras and at the same time filled the coffers of a European firm in that province. Moreover, as there is famine in many districts of the United Provinces, Behar and Orissa, Bengal, Bombay, Central India, and Madras, the people are worse off than there were food coupons. So in India, England, the presiding deity of

Food Coupons need not look anxious just now;—he is not going to be demobilised.

Dora is the pet name given to that amiable fairy, the Defence of the Realm Act, in England. Her twin sister in India is the Defence of India Act. Recent events show that this Act is very much alive and kicking. While Dora looks dolorous in anticipation of demobilisation, her twin sister in India ought to be in high jinks, for she has been re-incarnated (or duplicated), even before her demise, in Rowlett Act No. 1 of 1919. So in this case, England is the Land of Regrets and India the Land of Rejoicing. Censorship has not yet been formally demobilised in India; and, even when for-

mally demobilised, the C I D may be fully trusted to keep it up. So in this most fortunate of countries the Guardian Angel of censorship need not look morose.

Even before the war, 99 per cent of Indian passengers were accustomed to be carried like *Non living* (pace Sir J C Bose) Goods. And during and after the war, up till now, travelling facilities for this majority have been still further cut down and the accommodation provided in lieu of increased fares has been still more inadequate, if possible, than before and of a disgusting kind as regards cleanliness. Therefore the Patron Saint of Travel Restrictions in India need not look cross and ferocious in apprehension of imminent demobilisation.

We are going to have a good many disabled European soldiers, officers, red cross women, and others dumped upon us. Surely we can be hospitable to Food Coupons, Dora, Censorship, and Travel Restrictions too.

Censorship has been particularly kind to us i.e., to the Editor of this Review. It has deprived us of almost all our foreign subscribers and exchanges. We rejoice over this involuntary sacrifice, as we are firmly convinced that if our Review had been allowed to reach all our foreign subscribers and exchanges, and all our foreign exchanges to reach us, the Allies could not have come out triumphant in the war. Anglo-Indian [old style] journalistic traducers of educated Indians should note that we and our contributors have thus helped to win the war.

'Ramdas and Siraji'

In the introduction to H A Acworth's *Ballads of the Marathas* (pp xxvi-xxvii) it is stated that Siraji had the highest reverence for Ramdas, 'who was his guru, and whom he invariably consulted before every great undertaking. He is said to have given a striking proof of his respect by making over to Ramdas his whole dominions in free gift, in token of which he adopted as his royal standard the religious flag or Bhugwa Zenda. The story goes that from the fort of Satara Shiwaji saw Ramdas begging in the city below. He went to his chitnis (head writer), Balaji Abaji, and dictated an order, sealed it with the royal signet, and when Ramdas came to the palace to beg, placed it in his wallet. Ramdas, on open-

ing the paper, found it contained a gift of Shiwaji's whole kingdom. He asked the king what he proposed to do after he was dispossessed of his dominions, to which Shiwaji replied that he would pass his life in the service of his preceptor. 'Very well,' said Ramdas, 'follow me now.' He threw his wallet over the king's shoulder, and ordered him to ask alms. They went from house to house and when they had collected grain enough they went to the river where Ramdas baked two cakes, one of which was eaten by him and one by Shiwaji. He then inquired how Shiwaji liked this new calling to which the reply was that he was perfectly satisfied with it. Having then inquired whether Shiwaji would obey his commands, and being answered in the affirmative, he bade him go back to his palace and rule his kingdom for his preceptor. The monarch obeyed, and from that day as a sign that the kingdom belonged to an ascetic, he adopted the ascetic's orange banner."

The frontispiece to this issue illustrates this anecdote of Ramdas and Siraji.

Sir Rabindranath Tagore's Letter to Mr Gandhi

On the 12th April last, Sir Rabindranath Tagore wrote the following letter to Mr M K Gandhi, from Santiniketan —

DEAR MAHATMAJI

Power in all its forms is irrational; it is like the horse that drags the carriage blindfolded. The moral element in it is only represented in the man who drives the horse. Passive resistance is a force which is not necessarily moral in itself. It can be used against truth as well as for it. The danger inherent in all force grows stronger when it is likely to gain a success for then it becomes temptation.

I know your teaching is to fight against evil by the help of the good. But such a fight is for heroes and not for men led by impulses of the moment. Evil on one side naturally begets evil on the other; injustice leads to violence and leads to vengeance. Unfortunately such a force has already been started and either through panic or through wrath our authorities have shown us their claws whose sole effect is to drive some of us into the secret path of resentment and others into utter demoralisation.

In this crisis you as a great leader of men have stood among us to proclaim your faith in the ideal which you know to be that of India, the ideal which is both against the cowardliness of hidden revenge and the cowardishness of the terror-stricken. You have said as Lord Buddha has done in his time and for all time to come:

Akkodham, ye kodham, asaddham, sadham, jao.
Conquer anger by the power of non anger, and evil by the power of good.

This power of good must prove its

has been pointed out by the *Leader*, the *Bengalee* (which are Moderate organs) and other papers, neither the Moderate nor the Extremist members of the Viceroy's council supported this particular legislative measure. No Moderate newspaper has written in favour of it. And seeing that the Extremist party, as a party, have not sent their protest against the Act to Mr Montagu, there is no point in saying that the Moderate party has not protested against it.

It cannot always be said definitely whether, whenever an Englishman draws a line of demarcation between Extremists and Moderates—in truth there is no such definite line—and wishes that there should be no *rapprochement* between the two, there is any underlying unworthy motive. But the attempt to draw such a line often occurs even to otherwise fair-minded Englishmen, because perhaps in their own country they have been accustomed generally only to party politics. In support of our assertion we quote a passage from "*England and India*" by Mr. R. Gordon Milburn, who has tried to write his book impartially. The passage is taken from the second chapter in which a conversation with Mr. G. K. Gokhale is reported.

"Milburn: There are some Indian leaders we might be quite willing to work with, but—

Gokhale (*much moved*): I know what you mean—you want us to repudiate the Extremists. But that is a thing we could never do, and it is an insult to demand it of us. How would you like us to demand that you should never dine with such and such Anglo-Indian civilians?"

M.: But surely, Mr Gokhale, what Anglo Indians ask for is not that you should abandon all social intercourse with Extremists?

G.: Well, perhaps not. But what do you want of us, then? It is well known that our political opinions are different from theirs. If we were to repudiate the Extremists, political life would become a hell. They would retaliate, and Europeans would simply stand by and watch us fight. We do fight, as it is, now. If you read the Vernacular Press you would know how bitterly they attack us. But we do not repudiate them, and you have no right to demand that we should repudiate a brother Indian. We would not accept European co-operation on such terms. *Unity is necessary for the future*. Both sides are struggling to win the rising generation. Neither I nor Mr. Surendranath Banerjee is immortal. We do not want to leave India divided and in disunion. [The italics are ours.]

Mr. Gokhale then rose to go, and, becoming calmer, added: "I don't think much is likely to come of your idea of the co-operation of Anglo Indians with Indians. We Indians are very suspicious. It may be very wrong of us, but we cannot help it. When any Englishman makes himself very

friendly to us we can't help thinking that he wants to persuade us to give up something. I don't think there are many Indians who would join you. A man like Mookerjee" might." Pp. 20-21.

We have always tried to avoid thinking and writing upon party lines. We have tried to recognise the good and criticise the evil in all public activities irrespective of considerations of party. Calm thinking cannot but convince every sane man that in things in which they agree Hindus and Muslims and men belonging to other sects should work together and that Moderates and Extremists should co-operate in all things in which they agree,—however much they might differ in other matters. And both when Mr. Gokhale was alive and now, there are many things in which men of different religious persuasions and political parties do agree. They alone are the true servants of India who try to bring about united action, believing that unity is essentially necessary for the present and for the future. We do not care a straw for party triumphs and personal triumphs. Every Ram, Shyam and Hari among us, however "eminent" or "prominent," will die, and be forgotten, more or less or entirely; but India will live and must live. Blessed are those who would live only in her life of enlightenment and beneficence to mankind. And they alone would live in that life who would be able to get rid of all selfish considerations in their individual or collective life-work.

Mr. Gokhale indignantly refused to repudiate any brother-Indian. It is deeply to be deplored that our political activities are not marked by this eminently honourable and patriotic spirit. At present, the parties are practically repudiating one another almost to a man. The least that can be hoped for is that this suicidal partisan spirit will not be carried to England, too, by the delegates of different parties, but that they will work together in unison there.

Sir J. C. Bose's New Discovery.

A new discovery of great scientific interest has just been made by Sir J. C. Bose in his Research Institute, which proves that plants in general perceive and respond to long ether waves used in wireless signalling. Plants are extremely sensitive to the ultra-violet rays of the vast

* Now Sir Rajendranath Mookerjee [—The Author]

etherial spectrum, whose wave lengths are shorter than 7 hundred thousandth part of an inch Prof Bose has shown that plants also perceive and respond to the in visible heat rays of wave lengths of about a ten thousandth part of an inch, at the other end of the visible spectrum Heat rays are perceived by us as sensation of warmth But we have no organs to perceive the wireless messages where the electric waves employed vary from many yards to miles in length Sir J C Bose's recent discoveries prove that the range of perception in plants is far more extended than in human beings His newly invented Balanced Crescograph gives striking records of response of various seedlings to those long waves Two additional methods of mechanical and electrical response give independent corroboration of his results The sign of response is found to be either positive or negative according to the intensity of the impulse received

The devotee of pure science cares only for the scientific interest and value of a new discovery or of a new invention It is far others to think of utilitarian uses though as in the case of Lord Kelvin, sometimes the same person has made both the scientific discovery and reaped the worldly advantage accruing there from When Faraday worked at the foundations of the science of electricity, he did not perhaps dream how electricity would one day help in changing the face of the inhabited portion of the earth

We are led to these reflections by the absence of any efforts in India on any one's part to utilise Prof Bose's discoveries and inventions in furthering the causes of medicine, agriculture, &c Considering that he has proved that drugs act in the same way on plants as on animals, why should not the properties of medicines be tested on plants? If such experiments succeed, as we hope they may the methods of the vivisector may, at least in part, be replaced by those of the plant physiologist and plant pathologist As laymen we cannot say whether this is feasible but it seems to us that it is Similarly Prof Bose's new balanced crescograph may be used to test the effects of different kinds of manures, of a humid and a dry atmosphere of different degrees of heat of sunlight or other light and of its absence, of electricity, of different coloured lights and of various other factors and condi-

tions on plant growth We do not know why crescographs are not being used in experimental farms in India They ought to be, as agriculture is the greatest and most important industry in India

A Royal Society Research Grant to Dr. R Datta

To the readers of the *Modern Review* the name of Dr Rasik Lal Datta, M Sc, is more or less familiar He is one of the most brilliant products of the Indian School of Chemistry It will, no doubt, gladden the hearts of those who are interested in the progress of scientific education in India to learn that Dr Datta has been the recipient of a handsome grant of £75 from the Royal Society of London to enable him to continue his work on "The Determination of D-tonating Temperatures" begun in collaboration with Mr Nihar Ranjoo Chatterjee, M Sc, of Dacca College This marked appreciation of Dr Datta's work by the premier British scientific society adds a new feather to his cap It is no wonder that the Council of the Chemical Society of London in congratulating Dr Ray on his recent knighthood wishes him success and long life so that he may continue the unique work of promoting scientific research in India

Resolutions of the All India Congress Committee

The following resolutions were passed at the meeting of the All India Congress Committee held in the Bombay Presidency Association rooms on the 20th and 21st April last, Pandit Madan Mohan Malaviya presiding —

(1) That the All India Congress Committee emphatically protests against the passing of what is commonly known as the Rowlett Act and, in view of the fact that the entire Indian public opinion is strongly opposed to the measure the Committee urges upon the Secretary of State for India to advise His Majesty the King Emperor to disallow it.

(2) That the All India Congress Committee deprecates and condemns all acts of violence against persons and property which were recently committed at Amritsar Ahmedabad Kanamangam and other places and appeals to the people to maintain law and order and to help in the restoration of public tranquillity and urges upon Government to deal with the situation in a sympathetic and conciliatory manner immediately reversing the present policy of repression.

(3) That the All India Congress Committee places on record its strong condemnation of orders under the Defence of India Act by the Government of the Punjab, the Administration of Delhi and by the Government of India against a person of the well-known noble character and antecedents of Mr N. K. R. Committee cannot help feeling

if these orders had not been passed some of the regrettable events which followed them may not have happened. The Committee requests the Government of India to withdraw its own order and to ask the Local Governments in question to do the same.

(4) That a committee consisting of the gentlemen named below, namely, the President Mr. Janab, Mr. Jayakar, Mr. Kasturi Ranga Iyengar, and Mr. Patel be appointed to prepare a statement—(a) replying to the communique issued by the Government of India dated the 13th instant in which they justified the Rowlatt Act, condemned agitation against it and characterised it as calculated to mislead people; (b) stating the various causes that have led up to the present grave and deplorable state of things all over the country; and (c) making a demand for a public enquiry into the events that have happened in Delhi, Punjab, Bombay and Calcutta, drawing particular attention to certain measures reported to have been taken by the executive which seem obviously objectionable, such as dropping of bombs from aeroplanes, use of machine guns and whippage, and submit it to the Prime Minister, the Secretary of State for India and the Viceroy.

(5) That the All India Congress Committee here by authorises the members of the Congress Deputation proceeding to England to place the actual political situation consequent on the passing of the Rowlatt Act before the Secretary of State and the British public and to urge disallowance of the Rowlatt Act, the reversal of the policy of repression and the immediate adoption of the policy of conciliation and reform.

We support all those resolutions which urge the people and their leaders to take action. We are averse to protesting and petitioning.

We urge that the statement to be prepared in reply to the Government communique justifying the Rowlatt Act should be drawn up and published with the utmost expedition consistent with fulness, accuracy and careful composition.

The Demand for a Public Enquiry

The demand for a public enquiry under official auspices made by the All India Congress Committee has been also made in the indigenous press of India before and after the passing of the resolutions by the committee. We could have supported this demand if we had been confident that it would be possible to have a really independent committee entirely official in its personnel or consisting of both officials and non officials, that it would be possible to have a full and public enquiry made by such a committee, and that effect would be given to its recommendations. We do not remember that the Government of India ever before appointed any such committee of enquiry whose personnel, procedure and conclusions were accepted by the public as satisfactory.

Enquiries conducted under official auspices have hitherto been of the white washing variety. We are, therefore, against the expenditure of public money on any such committee. The amount needed for conducting such an enquiry may be more usefully spent in increasing the emoluments of the Indian Civil Service or some other impecunious and half starved Imperial Service. We support independent non official enquiries.

The Namasudras of Bengal

Mr. B. Ray, Joint Secretary, Calcutta Namasudra Association, has written us another letter in reply to the comments on his first letter which appeared in our last issue. As in our opinion the publication of his second letter will not be of any advantage to his community, we refrain from doing so. From what some educated Namasudra gentlemen have told us it appears that the Namasudra contention is that the opprobrious name given to the community by those outside the community is highly resented, as it certainly may, that the Namasudras do not call themselves by that name, that the identification of the Namasudras with the Chandalas is wrong, &c. We have already said in our last issue what we had to say on the matter. As we are entirely against giving any name to a community which it resents as derogatory to its self respect, we are not at all interested in disputing the contentions of the Namasudra community. In fact, we should be pleased if it should be established that the Namasudras have the same status as Brahmans or even a higher status according to the traditions or rules of the caste system. We do not believe in caste, and do not care who is called by what caste name.

Society for the Promotion of National Education

All endeavours for the promotion of good education deserve support. The Society for the Promotion of National Education has been making efforts for providing good education along lines somewhat different from those followed in the State, State aided, and State recognised institutions in the country. It is, therefore, encouraging to find that, in spite of the agitation against the Rowlatt Act, the Satyagraha movement, and the disturbances in various provinces which occupied public attention during the last month, the Society received an appreciable

amount of pecuniary help from the public during National Education Week which lasted from April 6th to 13th both days inclusive. It is able this year to point to a considerable progress made in the direction of establishing experimental institutions of all types. During the year it has established (1) an Agricultural College with a science department under the principalship of an vice of Manchester University (2) a Women's Training College under the principalship of a leading expert from the U S A (3) a National Training College for men teachers under the supervision of Mr G S Arundale M A (Cantab) (4) a National College of Commerce under the principalship of Mr B Sanjiva Rao M A (Cantab) (5) a National High School for boys under the head mastership of a very experienced M A of Allahabad University assisted by an unusually qualified staff, and (6) a National High School for girls under the guidance of Miss F Arundale who has for many years been principal of the Benares Girls School. In addition the society has subsidised a number of institutions including the Andhra Jatiya Kalashala, Unsuhpatam and it has taken over almost all the institutions of the Theosophical Educational Trust—giving financial assistance to them. For example, it makes a grant of Rs 1,000 per mensem for the Girls College and Girls School in Benares. Thus the Society has a record of very good work to its credit.

Scholarships for Education in Foreign Countries

Institutions are wanting in India which can give the highest modern education in all branches of learning. For this reason it is necessary for capable young Indian men and women to go abroad for the highest education in the subjects of their choice. But even if in future India can provide herself with the highest grade of educational institutions, as we hope she will be able to, going abroad for education will still be necessary for no man or woman can be said to be truly educated whose experience of the world and of educational institutions is confined to his or her own country.

For Indian women, who wish to be useful to society it is of the greatest importance to go abroad and receive education and spend some time in some advanced free

country where women can freely move about and be useful both in their home lives as well as by rendering social service of some kind. Both Indian men and women should of course go abroad only after they have been well grounded in the fundamentals of Indian culture and spirituality.

The State in India has not yet adequately realised and done its duty in the province of education either in the matter of providing a sufficient number of institutions of all grades or in giving a sufficient number of scholarships to young men and women to enable them to receive education abroad. For men these scholarships are not even as many as would enable one young man in each major and minor province to annually go to some foreign university which means that they are not even a dozen in number. For women of pure Indian descent there is only one such scholarship. Supposing, however, there were even a dozen such scholarships for our young men and women they must be considered too few for a vast country like the British Indian Empire having a population of some 245 millions. In the Philippine Islands with a population of only 9 millions there are 124 scholarships for them to receive education to the United States of America. We reproduce below a list of these scholarships from the *Burma Observer*.

Government General's Office. Bureau of Civil Service one employee with B A degree to take up English and English literature history and economics political science busness efficiency and management and to make an investigation on United States civil service methods.

Department of Public Instruction—total 43 to be apportioned thus: Education 39 12 to study normalisation 10 English 5 supervisors on 6 physical education 1 commercial 2 agricultural 1 trade 1 marine engineering 1 deaf and blind and Philippine university graduates; and Philippine health service 4.

Department of Finance—12 to be apportioned thus: customs, 4 to study industrial engineering mechanical engineering customs supervision tariff loading and discharge of cargo and free zones internal revenue 2 to study economics and finance treasury 3 to study actuary busness administration accounting and busness administration in banking and printing 3 craftsmen not necessarily school graduates, to study technique of printing and office management.

Department of Justice—11 1 from prisons to study penology prisons and reformatory administration and 10 from the Philippine Library and Museum to study the organization and equipment of the Department.

ment of State of the United States and diplomacy, library social organization and activities, social and economic problems, political and administrative science. Of these 10, five are already in the United States.

Philippine University—10, to be apportioned thus: 3 from engineering, 2 from agriculture, 1 from veterinary, 2 from medicine and 2 from liberal arts.

Department of Agriculture—18 to be apportioned as follows, each of the pensionados to study the following courses:

Bureau of Agriculture: Comparative rice culture, Economic Entomology, Plant Pathology, Sugar, Tobacco, Crop reporting (to be combined with agricultural journalism).

Bureau of Forestry: Forestry course, specializing on Forest Management, 1 forestry course, specializing on Lumbering Forestry course specializing on Wood Technology, 1 forestry course specializing on Logging Engineering.

Bureau of Lands: Investigation concerning the methods followed in the States in the administrations of mineral lands and incidentally of other classes of lands, specially in the economic questions connected therewith.

Weather Bureau: Modern Meteorology, Modern Serology.

Bureau of Science: Geology, Industrial inorganic chemistry, Bacteriology, Cerology, Vinerology and Metallurgy.

Department of Commerce and Communications—14, to be distributed among the bureaus under it, in this form: public works, 4 to study irrigation and structural engineering posts, 3 to take up general postal work and administration, telegraph and cable service and wireless, coast and geodetic survey, 2 to study lithographic methods and map printing, and commerce and industry, 5 of whom 4 shall be B. A. and 1 a lawyer, to study commercial administration and organization, industrial administration and organization, foreign trade service, and stock and produce exchange.

Department of the Interior—15, to be divided as follows: executive bureau, 4 to study political science, political economy and local government, Constabulary 3, must be graduates from the Constabulary Academy at Baguio, to study military infantry, military accounting and small arms, Philippine General Hospital, 4, 1 physician and 3 nurses, one of whom is already in the States, Welfare Board, 3, to study campaigns against tuberculosis, protection of infants, social service, civic organizations and government orphanage, 1, to study administration and organization of dependent children.

From a very interesting article by Adelia H. Taffader published in the *Commonweal* we learn that "over 2000 college men from Latin-American Republics are mingling in class room, laboratory, and athletic field with their cousins in North America. Filipino students, 600 strong, are found in the universities from California to Maine. They are becoming enthusiastic about the organization of an Inter-Island student conference in the Philippine Islands." "As a result of recent

enquiry into this subject, information is given that there are fully a thousand Chinese students in the institutions of highest learning in the United States; about half of them are Government scholarship men, representing every province of China. The Japanese Empire is represented in North American student life, by over 1200 members; while about 300 Korean students are studying here. An estimate is given of over 5500 foreign born students, from forty nations, enrolled in the Colleges and Universities of this nation and Canada. There is also a considerable number in preparatory and high schools, trades schools, and business colleges. Many of these students have received Government scholarships."

The Indian Social Reformer has informed the public that the university of Michigan in America has ten scholarships for Indian women. Applications for these scholarships may be sent to Mr. K. Natamjan, editor of that paper, in Bombay. A letter from the head of the institution where the applicant has last studied should be included with the application. Further information may be had from the same gentleman. We understand, the State University of Iowa in America has also one or two scholarships for Indian women. We do not know of any British university which has any such scholarship, though Britain ought to feel far more interested in India than America, as British power and prosperity have depended in their origin and continuance far more on the possession of India than on any other circumstance.

We should not, however, look abroad for help with meek eyes. The people of India should themselves, in addition to founding and endowing schools and colleges, food scholarships to enable young men and women to receive education in foreign universities.

Hindus in the United States Army.

In our last issue we made a mistake in saying that Duggu Ram was the only Hindu in the United States Army. Mr. R. Ahmed, D. D. S., points out that there are more. He has sent us a copy of *Young India* (for August 1918) which is published monthly by the India Home Rule League of America from 1400 Broadway, New York. In this magazine there is an incomplete list of the men who

adopted Uncle Sam's uniform and fought for the war aims of the United States. This list contains the following 15 names: Ahmad Ali, K C Kerwell, D N Mitra, Amulya Mukerji, S A Mullah, M K Pandit, K H. Patel, R D Shelke, C L Singh, Devi Singh, Iswar Singh, Haqiqat Singh, Karm Singh, Sher Singh, Lab Singh, Tehara. To these Mr R Ahmed adds the names of Lieut Dhuren Roy, Lieut B Sarma and Chandra Singh. It is to be noticed that some of our boys got commissions too, in the U S Army. Considering that there are only about 125 Hindu Students (any native of India Hindu or Musalman or of any other sect is called Hindu in America) in the American Universities, those of them who volunteered for fighting for the 'world's freedom' do not form a negligible proportion.

Negro Officers in U S Army

Young India of New York writes that "While ten million negroes in this country are represented by about a thousand commissioned officers in the United States Army from Lieutenant to Colonel over 315 millions Indians have only 9 commissioned officers in the British Indian Army—mostly Lieutenants."

Osmania University

We thank Mr A. Hydar, Secretary to His Exalted Highness the Nizam's Government in the Judicial, Police and General Departments, for a copy of the English translation of the Royal Charter of the Osmania University. It cannot but be a source of genuine pleasure to find the Nizam's government taking an enlightened interest in education.

It is also noteworthy that "the chief characteristic of the Osmania University will be that instruction will be imparted in all branches of learning through the medium of the Urdu language, while a study of the English language and literature will be compulsory." Osmania University will thus be the first university in India where high education will be given and the results of research will be recorded in a Vernacular of India. This cannot but enrich Urdu literature particularly as the translation department of the university is well staffed and thousands of rupees are being spent for it. All this will mean a great advantage to the Urdu speaking population of India,

and also to the Hindi speaking public, for Urdu and Hindi are practically the same language written in two different scripts and with greater or less infusion of Sanskrit or Sanskritic and Arabic Persian words.

While all this can be said in praise of this University it must also be pointed out that Urdu is the vernacular of a very small proportion of the Nizam's subjects. The vast majority of them will have as much difficulty in learning Urdu as in learning English. In pursuing higher studies in Osmania University they will, therefore, have to learn two languages which are not their vernaculars viz, Urdu and English. This is not desirable. If in any Province or State of India, it is decided to impart education through a vernacular medium the vernacular should be that which is spoken by the largest number of its inhabitants. Other vernaculars may in addition be chosen for the purpose if sufficient funds are forthcoming. It is unjust to spend the taxes received from the entire population for the convenience of a very small minority and in a way which causes inconvenience to and places a handicap on the vast majority.

The constitution of the university is overwhelmingly official whereas it ought to have been popular, either actually from the present time or prospectively in the future. The Chancellor and the Vice Chancellor are to be state officials. The Council of from 9 to 11 members, is to consist of at least 6 officials and the principals of constituent colleges and the remaining members being appointed by the Government. The senate of from 40 to 60 members, will have as its first members only those who are appointed for a period of two years by Government. After the lapse of two years, it shall be composed of—(a) The Vice Chancellor and the other members of the Council, (b) The University Professors, (c) Four members elected by the Senate, two from the list of registered graduates and two from members of the Faculties (d) The remaining members nominated by the Chancellor provided that the election and nomination of persons as Fellows shall be so regulated as to secure in the Senate a majority of persons connected with or following the profession of education.

This last proviso would prove a salutary one, provided the majority of educa-

tionists mentioned therein were not government servants

It may be that the constitution of the Senate has been made predominantly official, because in Hyderabad most of the highly educated persons competent to discharge the duties of Fellows are government servants. In that case, some provision should have been made in the charter by which in future, when education had made sufficient progress in the state, the constitution of the university could have been made more popular.

The Meaning of Martial Law

On February 3 1910, Lord Morley, as Secretary of State, wrote a letter to Lord Minto, then Viceroy of India, from which an extract is given below

'Your mention of Martial Law in your last private letter really makes my flesh creep. I have imagination enough and sympathy enough thoroughly to realise the effect on men's minds of the present manifestation of the spirit of murder. But Martial Law which is only a fine name for the suspension of all law would not snuff out murder-clubs in India any more than the same sort of thing snuffed them out in Italy Russia or Ireland. The gang of Dublin Invisibles was reorganised when Parnell and the rest were locked up and the Coercion Act in full blast. On the other hand it would put at once an end to the policy of rallying the Moderates and would throw the game in the long run wholly into the hands of the Extremists. I say nothing of the effect of such a Proclamation upon public opinion either in Parliament here or in other countries. It may be necessary for anything I know some day or other but to-day it would be neither more nor less than a gigantic advertisement of national failure. Lord Morley's *Recollections* Vol II p 328 (The italics are ours)

The advocates of Martial Law would, we know, exultantly say, "the day has come when Martial Law has become necessary." Let them say what they will. But the impartial student of history cannot assert that the very fact of an anarchy arising, in a *disarmed* country which has only recently taken a prominent part in the Empire's fight against a powerful enemy, when martial law was considered necessary, is "neither more nor less than a gigantic advertisement of national failure."

"A Reply to Sir P C Ray"

Under the above heading, *The Statesman* prints about two columns of extracts from a letter from Mr Alfred Chatterton, C I E, criticising Sir P C Ray's article in the March number of the *Modern Review*. Sir P C Ray is well able to take care of his reputation and will, no doubt,

pen a rejoinder if he thinks it necessary. In the meantime let us give the reader a sample of Mr Chatterton's honest criticism. He writes:—

Much is made of the slow but continuous exhaustion of the mineral wealth of this unhappy land by which infelicitous term he designates India. Nothing is said of the similar exhaustion going on everywhere else. The elementary axiom that you cannot eat your cake and have it would destroy this grievance and it must therefore be ignored! Would Sir P C Ray close the Bengal coal mines to the Tata Iron and Steel Company and stop work on the iron fields of Chota Nagpur till the Santals and other aboriginal tribes are able to make use of what I presume he would consider their natural birthright? The exhaustion of mineral wealth looms ahead all over the world but what it will mean to the inhabitants when this occurs we do not know and therefore need not worry over

The passage in Prof Ray's article which Mr Chatterton criticises is given below

"After all, India is progressing and waking up and if her sons to day are unable to work her own mines, their children or children's children will be able to do so. If in the meantime all the mining rights and concessions in Burma, and in Assam and other provinces of India proper are leased out to foreign exploiters nothing will be left for future generations. The late Mr Gokhale often used to tell the present writer that the greatest injury which the British Government is inflicting upon this unhappy land—an injury which is beyond her powers of recuperation—is the slow but continuous exhaustion of her mineral wealth. As the Statesman put this point with great clearness

'In the case of the mining industry, for instance it (i.e. the development of the country's resources—by English Capital) means not merely that the children of the soil must be content for the time being with the hired labourer's share of the wealth extracted but that the exportation of the remainder involves a loss which can never be repaired. Though the blame largely rests with them we can well understand the jealousy with which the people of the country regard the exhaustion mainly for the benefit of the foreign capitalist, of wealth which can never as in the case of agriculture be reproduced. It is in short, no mere foolish delusion but an unquestionable economic truth that every ounce of gold that leaves the country, no far as it is represented by no economic return and a large percentage of the gold extracted by foreign capital is represented by no such return, implies permanent loss."

As we said in a previous article the exploitation of the mineral resources of the country by the foreign capitalist stands on a different footing; for, in this case the wealth extracted is not reproduced and, on the not unreasonable assumption that it would sooner or later have been exploited with Indian capital, may unquestionably be said to deprive the people

of the country for all time of a corresponding opportunity of profit.

Yade G. V. Joshi's Writings and Speeches pp 304-55

"The future historian of India will have to write a dismal chapter indicating that when her people at last woke up they found all the wealth in the bowels of the earth carried away by foreign exploiters and only empty dark caverns and subterranean vaults and passages left behind."

Any honest reader of Prof Ray's article will see that what he complains of is not the exhaustion of the mineral wealth of India in itself but its exhaustion by foreign exploiters. But Mr Chatterton complains. Nothing is said of the similar exhaustion going on everywhere else.

'Similar' exhaustion indeed! Is the mineral wealth of Great Britain being carried away by the Japanese? Is the mineral wealth of America being exhausted by the Chinese? Is the mineral wealth of France being exploited by the Turks? The exhaustion which is taking place in independent Western countries is due to the exploitation of their mineral resources entirely or almost entirely by the children of the soil. Is that the case in India? Of course not. And yet Mr Chatterton writes as if there was no difference between the exploitation of Europe and America's mineral wealth by their natives and the exploitation of India's mineral resources by foreigners.

Mr Chatterton asks with the seeming simplicity and innocence of a child

Would Sir P. C. Ray close the Bengal coal mines to the Tata Iron and Steel Company and stop work on the iron fields of Chota Nagpur till the Santals and other aboriginal tribes are able to make use of what I presume he would consider their natural birthright? If Mr Chatterton has not been deliberately disingenuous he should read Dr Ray's article again. Dr Ray speaks of the sons of India of the people of India not of particular provinces, sub-provinces or districts. The Tatas are not foreigners in any province or district of India. The Parsis came to India and settled here and made this country their home and only home more than three centuries before the Normans set foot in Great Britain. Just as the descendants of the Norman invaders of England are today as good Englishmen as any other men bearing that

name so are the Parsis as good Indians as the Santals or the Marathas or the Panjabis. And it is also anthropologically incorrect to assume that the Santals and other aboriginals who have remained till this day distinct from the Hindu population are the only descendants of the ancient primitive population of India. Many aboriginals have been bodily absorbed into Hindu society forming separate castes, and many have become mixed up with other castes. For this reason European anthropologists and ethnologists consider almost the entire population of Bengal Dravidian-Mongolian. It is ludicrous that whenever any question arises in this country regarding the rights of the children of the soil Anglo-Indians pretend to think that the Kols Bhils Santals &c. are the only people who can claim to be the natives of the country. Certainly neolithic and palaeolithic men lived in India even before the present day aborigines. Why not say then that as these neolithic and palaeolithic men are now extinct or as in any case their descendants cannot be traced therefore no present day Indians can claim to be the natives of India and hence they have no rights like those which the natives of other countries have in their motherlands? As an Englishman Mr Chatterton will have no objection to admit that the Germans are capable of any kind and amount of political sophistry. But even German political sophists never, we believe, said to the French with reference to any French territory which the Teutons had annexed: You French people have no right to complain because it is the Basques and not yourselves who are the original inhabitants of France; you are later settlers or invaders.

If the British conquerors (it was not all conqueror in the absence of a more appropriate word) of India had permanently settled in India and made it their home and only home as for example the Mughals did there would not have been any economic objection to the exploitation of India's mineral resources by those Indo-Anglians.

Mr Fisher on Universities

At the Oxford Union on February 22 1919 Mr Fisher the British Education Minister, prophesied that thirty years hence the university grade of education

would be recognised by all as a democratic institution open to all." On this the *Times Educational Supplement* (Feb. 27, 1919) observes: "It was a safe prophecy and would have been safe had he said ten years. National education is moving at a pace that even Mr. Fisher does not measure." The university grade of education is already recognised in America and some countries of Europe as a democratic institution open to all. But in India big and small Anglo Indian officials still continue to speak of university education as suited or not suited to a boy according to his "station in life," whatever that may mean. Any boy or girl is entitled to any kind and grade of education he or she desires, provided there is the capacity to receive it. We include girls deliberately. The *Times Educational Supplement* writes: "Elizabethan education, while it looked for the apprenticeship of girls, never took in hand the education of women. For three centuries the views of Mrs. Malaprop on the education of women prevailed. These views we are slowly living down, and the university belongs today to women as well as to men."

Technical Training and a Liberal Education.

One of the questions with which the Calcutta University Commission was expected to deal is the relation between technical training and a liberal university education. On this question the *Times Educational Supplement* writes:

"The university must not only complete physical, moral and intellectual training it must crown technical training of all kinds. A year ago we urged that technical education is ever to become living thing in intimate relation on the one hand with the industries of the country and on the other with the universities, it must be founded on a liberal education and it must avoid, despite all temptations, early specialization. Universities and industries alike must be directly interested in the system of technical schools and colleges. A full University education must be open without let or hindrance, financial or social, to the best students. It is from this University grade that the great applied mathematicians, chemists, electricians and engineers will spring. The great industries will in future depend for their thinkers on this University source. We do not believe that Universities of technology would be nearly so fruitful in this respect as Universities in the full sense of the term. The great technical colleges must take their place as a part—an essential part—of a University which collates all forms of human thought and aspiration. Most eminent scientists are at one on this elementary proposition."

The Recent Disturbances.

In the recent disturbances in many parts of India, men have been killed or injured, public and private property destroyed or damaged, railway lines torn up, telegraph wires cut and property looted. These occurrences and the excess of the police and the military are greatly to be deplored. The wicked and wanton acts connected therewith deserve the severest condemnation. It is the duty of all citizens to work for the restoration of quiet and order.

No local authority, however, ought to feel that he is justified in doing whatever he likes in the name of the restoration and maintenance of law and order. Not more physical force should be used than is absolutely necessary. And in most cases, where the police or the military have to deal with crowds (however vast) which are unarmed or possess only a few brickbats or pieces of stone, as Indian crowds generally are, only a show of overwhelming force should be sufficient to disperse them. But unfortunately this humane and bloodless method is seldom resorted to. We condemn the policy of bullets for brickbats,—a policy which is not followed in independent countries.

Of the disturbances in many places only official or semi-official accounts have been published. Without the peoples' versions before us, these official or semi-official accounts can neither be believed nor effectively criticised. In the case of disturbances in some places on some days, non-official narrations of events are also available. Some of these,—as those relating to the occurrences in Delhi on March 30, described by Swami Shradhdhananda, and to the firing on the crowd in Harrison Road, Calcutta, described in the interview with Mr. B. Chakrabarti published in the *Amrita Bazar Patrika*,—show that there has been most probably unnecessary and sometimes wanton firing on the crowd. Such firing on unarmed crowds, when it takes place, must be considered the height of cowardice. They also cause excitement leading to acts of violence on the part of the mob, like the burning of houses, tearing up railway lines, and the murder of innocent men, which also can certainly not be justified, but must be unequivocally condemned, whatever the provocation.

Most often Indian crowds have no

sinister object. They prove entirely harmless if simply allowed to pass on, it is the attempt to disperse or turn them back by force which sometimes leads to disaster. Of course, all crowds are not of this harmless description. For example, mobs engaged in burning or looting houses, or in killing or wounding men, must be sternly dealt with. It requires much knowledge and experience of India, great coolheadedness and much tact to deal with crowds with firmness tempered by humanity.

Our observations find support from some passages in the report of the non-official commission which enquired into the circumstances of the Calcutta disturbances in September, 1918, and of which the members were Messrs L. F. E. Pugh, Abbas Tyabji, H. D. Bose, C. Vijayaraghavachari and Ajit Prasad. With regard to the crowd proceeding towards Government House, Calcutta, the report states —

We desire to note that on the 8th September, which was the first day of the proposed meeting, large crowds of Moslems visited the vicinity of the pandal and of the Nakhoda mosque, that the crowds were peaceful and orderly and dispersed as soon as they were requested to do by the convenors of the meeting or the members of the reception committee. In view of this there is no reason to presume or suspect that the crowd which was marching towards Government House would not have been equally tractable and peaceful. We are of opinion that with the exercise of a little tact and the adoption of a conciliatory attitude that crowd could have been easily induced to disperse without the necessity of resorting to the extreme step of dispersing it by force of arms.

NO UNLAWFUL ASSEMBLY

We fail to appreciate the necessity for the action of the police in preventing the crowd from proceeding towards Government House. A large number of Moslems were on their way to Government House anxious to hear the result of the deputations and in the hope that the decision of the Government on reconsideration would be to allow the proposed meeting to be held. This was an altogether innocent object and the crowd was not and could not be treated as an unlawful assembly. So far as we are aware there was no trouble or disturbance anywhere before the police attempted forcibly to prevent the progress of the crowd towards Government House nor does the Government resolution suggest that there was any. In our view if the crowd had been allowed to proceed towards Government House there is no reason to think that there would have been any disorder or breach of the peace. If the crowd had been induced to proceed towards the Mall and listen to speeches there it would have been incapable of doing any damage.

On the firing and shooting in Zakaria Street and the Nakhoda mosque, the opinion of the commission is as follows. —

With regard to the firing and use of firearms on

the afternoon of the 9th of September in Zakaria Street and in other streets and lanes that branch off from it, in the absence of evidence that could have been adduced by the police and the military it is difficult for us to arrive at a definite conclusion. The evidence as it stands, however, suggests that the firing was unauthorised, reckless and unnecessary.

The entry into Nakhoda mosque and the shooting of a number of persons, there, by a few soldiers (see para. 43 and 34) is a most regrettable occurrence for which on the evidence there was no justification. This incident seems to be established by reliable evidence. It is unfortunate that the Government have declined to adduce any evidence which might indicate that the firing was provoked by stone-throwing or attack on the military or justified on any other grounds.

In the opinion of the commission the shooting at Garden Reach was also unnecessary and unjustifiable.

UNJUSTIFIABLE SHOOTING

The shooting at Garden Reach seems to have been unnecessary and unjustifiable. The occurrence took place at a distance of more than 7 or 8 miles from the Nakhoda mosque and the pandal. The number of the killed and the wounded was appallingly large, and included, we are told, a very large number of boys some of whom were merely 8, 10 or 12 years old. There could have been no imminent danger of a riot or of injury to life or property by the crowd at a spot so far removed from what may be termed the centre of disturbance. The people of the locality were mostly Mohammedans. The crowd would have had to pass the Dock bridges to get to Calcutta and it was desired to prevent the crowd from proceeding towards Calcutta nothing would have been easier than to have opened the Dock bridges when the crowd would have been compelled to come to a stand still. The evidence before us suggests that the crowd was peaceful and orderly, but enjoying a holiday. The Government resolution, on the contrary, says that a large number carried formidable lathes, and they were led by some fanatical Mohammedan shooting and dancing with bodies smeared with mud. Assuming the latter version to be correct, in our mind it shows that it was composed of the class of people who form Moharram processions. The resolution states that the additional superintendent of police and two military officers endeavoured to persuade them to disperse but without effect. The crowd pushed on till they were close to the troops who were then compelled to fire, though some of the British officers were still in the middle of the mob. It does not suggest, that when they were asked to disperse the crowd or any of the members became disorderly, riotous or violent, or inflicted any injuries on the superintendent or the soldiers. It does not mention any throwing of stones, brickbats or other missiles by the crowd. The only indictment against the crowd is that it pushed on towards Calcutta in spite of dissuasion. It is not suggested that the crowd was warned that it would be fired upon if it persisted in its progress or that any order for firing was given by any magistrate or any police officer. We are constrained to come to the conclusion that a large number of persons were

UNNECESSARILY KILLED AND WOUNDED

at this occurrence in circumstances in which it is doubtful whether the law gave immunity to the

soldiers. Upon reading the resolution carefully, it appears to us that the troops fired upon the crowd not only without any order from their officers, but at a time when the latter and the additional superintendent of police were still in the middle of the crowd or the mob, attempting to persuade them to disperse, as the expression 'some of the British officers' to our mind, refers to the additional superintendent of police and the two military officers.

Some Anglo Indian papers have sought to minimise the value of this non-official commission's findings by saying that their report is an *ex parte* statement. Literally, it is so; but the members were not to blame for its *ex parte* character. They invited Government to place all facts in its possession before them, but without any response, as the following extract from their report will show:

GOVERNMENT'S ATTITUDE.

'Before commencing the enquiry Mr. Pugh (whom we had chosen as our President) wrote, on our behalf, letters to the chief secretary to the Government of Bengal and to the commissioner of police, Calcutta, inviting their co-operation and requesting production of evidence, oral and documentary, which might assist the commission in its investigation. Some of the hospitals, where wounded persons were known to have been removed for treatment, were similarly invited. Notices were published in some of the Calcutta daily and other papers giving information of the sittings of the commission and inviting evidence regarding the disturbances.

'It is to be regretted that the opportunity thus offered by us was not availed of by the Government and the commissioner of police. There can be no doubt that on many matters of the utmost importance and consequence, very valuable evidence could have been adduced and material information could have been supplied by them.

'As they were not represented evidence has been recorded at the commission practically *ex parte*.'

'The Commission held its enquiry publicly at the Bangiya Janna Sabha Hall, No. 10 Old Post Office Street. The Bengal Presidency Moslem League, the Marwari Association and the Janna Sabha were represented; and though the Government of Bengal was not represented, we were informed that it had a well-known reporter who was taking notes of the proceedings throughout. The Commission held in all 17 sittings and examined 61 witnesses.'

The report of this non-official commission of enquiry is not less but more valuable and reliable than the reports of official enquirers. For, (1) the non-official commissioners were all trained and experienced lawyers (one of them had been a chief justice in a Native State) and therefore at least as competent as the members of any official committee of enquiry; (2) their proceedings were public and conducted after due advertisement of place and dates in the Press, official enquiries being seldom conducted in this open

manner; (3) the non-official commissioners invited official evidence also, but official committees of enquiry or officials charged with enquiries of this character seldom invite non-official evidence; (4) in the non-official commission both the European and Indian sections of the public, and the Hindu, Musalman, Christian and Jaina sects were represented, official enquirers are not of this representative character.

From the extracts given from the report of this non-official commission, it would not be unreasonable to suspect that in the recent disturbances, too, there has been in some places some unnecessary and unjustifiable firing and shooting.

The use of machine guns in dispersing unarmed crowds in a disarmed country is absolutely unjustifiable terrorism. Where firing is really necessary, it should be calmly considered whether rifles would not serve the purpose. The very fact that Indian crowds are generally without firearms and cannot shoot back when fired upon, ought not to be a temptation to fire upon them without sufficient cause. There is no heroism, but rather its opposite, in such firing.

As for bombing a crowd from aeroplanes, we cannot think of any justification for it. British statesmen and newspapers used the strongest language against the Germans because they used to bomb the civilian populations of British towns from aeroplanes during the War. In the Punjab, there is no war. The name of "open rebellion" given to the disturbances there, cannot alone suffice to satisfy people that bombing was necessary. Unless it can be proved that there was an organised and armed insurrection led by commanders, and that the rebels had been fighting a battle or were proceeding in battle order to fight or to do other act of war, it cannot be confidently anticipated that the verdict of history would not be that this bombing was a cowardly and wanton act of barbarism. The Government of India ought to ascertain whether such a verdict would be wrong.

The Situation in the Punjab.

No one can think of the situation in the Punjab without profound sorrow. From the plague the Punjab has been the worst sufferer, from the Komagata Maru incidents it was the worst sufferer, from influ-

enza it has been the worst sufferer and in a recent year some parts of the province suffered for days from anarchy plunder and rapine which had to be sternly put down by Sir Michael O'Dwyer's government. Of all provinces of India the Punjab had contributed the largest number of soldiers to the war and it is therefore probable that the number of casualties among the sons of the Punjab has been the greatest in India. Sorrow has thus been the share of innumerable Panjab homes during many a year. So it deserved a far different fate from what has fallen to its lot.

During the war the loyalty of the province was extolled in high terms by its ruler and he even made invidious comparisons between its active loyalty and the passive loyalty or sedition in other provinces. But now parts of his province have been officially declared to be in open rebellion and are under martial law. All this is very mysterious.

How has the province officially declared the most loyal in India by its ruler come to be in open rebellion and under martial law? And that even before the War has been officially declared closed? It is very easy to blame agitators, rumour mongers, Bolsheviks and others. But why have not these people succeeded in producing a rebellion in other and in Sir Michael O'Dwyer's opinion less loyal parts of India? Incendiaries are undoubtedly very wicked people but they cannot set fire to water. There must be inflammable and combustible material fit for their nefarious work. If agitators and Bolsheviks have played the devil's part in the province Sir Michael O'Dwyer must explain how in his most loyal province there was so much more matter of sedition (to quote Bacon's words) so much more inflammable material than in other parts of India. Is it possible that the explanation may be found in the very nature of a strong man's strength—in that it can both irritate and pacify.

We take it for granted that mischievous rumours have been spread in the Punjab by some wicked people. But why did the people believe in them? It is well known that ignorant people are more credulous as regards rumours than those who are truly educated. Why has Government left so large a proportion of the people in the Punjab sunk in ignorance?

It is no doubt one of the latest additions to the Empire but it has been very much longer under British rule than the Filipinos have been under American rule and the Japanese under a constitutional monarchy. And yet within these much shorter periods there has been a phenomenal spread of literacy and education among both these peoples. Why could not Government do in India in the Punjab what has been done in Japan and in the Philippines? Posters and communiques explaining Government's real intentions and laws are good. But who will read and understand them? Certainly not the illiterate masses who are the victims of wicked rumours. If the majority of the people had been able to read newspapers and the Press had been free there would have been at the worst only sensational and inaccurate newspaper reports (instead of so many false rumours) which could at once have been contradicted and the deliberate falsifiers of news brought to book. But what is the present state of things? The majority of the people are illiterate and their only purveyor of news is not the journalist but Dame Rumour. And on account of the Press Act and other repressive laws all rumours cannot be printed most of them therefore remain uncontradicted. It is impossible for even the most efficient system of spying known in history to nail all lying rumours to the counter and some rumours may be true. The only effective remedy lies in universal literacy, a large number of cheap newspapers for the many and freedom of the press. If Government understood its true interests it would move towards this goal with all possible expedition.

We have said above that ignorance makes men credulous and prone to believe in rumours. Ignorance also prevents them from understanding the true motives and justification of good official measures. There is another reason why rumours attribute sinister motives to Government and receive credence. Official and non-official Anglo-Indians (old style) believe or pretend to believe that it is the educated Indians who are seditions and doubt the sincerity and philanthropy of the Sarkar but that on the contrary the mass of the people have unquestioning faith in the justice and beneficence of the Sarkar. There can be no more unwise and unfounded belief. Whatever the uses of the educated they do not at least believe for example that the

Sarkar wants hundreds of heads to be cut off when sometimes a large river has to be bridged in order that the angry river deity may be propitiated by such human sacrifices, or that whenever the Sarkar takes a census, the underlying motive is fresh taxation. The Sarkar's justice and beneficence are not at all always axiomatic with the dumb millions. It is for this reason that they can be misled into believing that officials may be capable of this act of injustice or that enmity, when the Sarkar does not really at all intend to be unjust or cruel. Let official and non official Anglo Indians cease to believe (1) that the voiceless millions of India always worship them in their hearts as beneficent divinities, though they generally fear the Sarkar and sometimes appreciate its justice, (2) that these millions are gullible fools who do not understand what is good for them (3) that they cannot vaguely trace acts of oppression, spoliation and exploitation by underlings and traders to their ultimate causes, (4) that they do not feel the difference between a relative dead and a relative alive, between health and illness and between a full and an empty stomach, and (5) that they cannot understand the difference between profession and practice. Instead of merely trying to convince the educated and uneducated people of India that all Europeans are out here on a mission of justice and beneficence, let these persons be thoroughly sincere in the first place, and, if possible, let them afterwards also be really just and fraternally philanthropic. Then mischievous rumours will not find such wide credence, and the rumour monger's occupation would be gone.

How can the Sarkar's justice and beneficence be brought home to the masses? In the first place if the people can have sufficient food, in the second place if the can be made as healthy as other countries in the third place, if the people be freed from harassment and oppression by police, railway and other underlings, and in order that all these results may be brought about, in the fourth place, if the people of all villages and towns be given at least elementary education and agricultural and other in industrial and technical education.

Rumour and a Gagged Press

It is a curious though not inexplicable

psychological phenomenon that the same people who have practically prevented the indigenous Punjab Press from publishing any news or comments on the recent occurrences in that province, should also make it a grievance that there should be so many rumours. But nature abhors a vacuum. If there be not a sufficiency of true news to satisfy the people's craving for information, Dame Rumour may naturally be expected to be busy with her concoctions of fact and fiction. And is it so very unnatural for people to infer, though it is possible that they may be in the wrong, that the reason why the Press has been gagged is that there is something to conceal? And in such circumstances, is it any wonder that even parts of what is true in the published accounts should be disbelieved?

Open Rebellion in the Punjab and Its Probable Causes

It is said that there has been open rebellion in the Punjab. The rebellions that we have read of in history had military commanders as leaders, had big or small armies and had arms, and their object was to overthrow an existing government or governments and substitute others in their place. *The Civil and Military Gazette* has not yet published details of the Punjab rebellion on these points. Nor has it told us the causes of the rebellion in a province which its "strong" ruler certified very recently as the most loyal in India.

Among the many reasons given in the Rowlatt Committee's Report why 'legislation' of a drastic character may be 'required,' one is that "there will, especially in the Punjab be a large number of disbanded soldiers, among whom it may be possible to stir up discontent." We do not know what led the Rowlatt Committee to anticipate the possibility of stirring up discontent among disbanded soldiers. Were there any causes of discontent in the methods of recruitment of these soldiers or in the conditions of their active service, or in the treatment they received while on active service or after being wounded or disabled or after demobilisation? But these questions are like groping in the dark. The public will never know what materials before them led the Rowlatt Committee to apprehend discontent. When the Committee wrote its

report, there was no Rowlett Act, no agitation against it, and no Satyagraha. It is probable therefore, that the disturbances in the Punjab owe their origin to causes more remote than the above recent events, and it is only the Government of India which can find out these causes.

Soul force and Physical force

When at the request of the Viceroy Mr. M. K. Gandhi saw His Excellency and had a talk with him about the Rowlett bill and Satyagraha a report appeared in the press that one of the questions discussed was whether British rule in India rested on soul force or physical force and that no unanimous conclusion was arrived at. We cannot say on what sort of force British rule rests. Perhaps it does not rest on only one kind of force.

For governments, like private individuals, require both soul force and physical force. Physical force ought no doubt to be under the control and guidance of soul force, but physical force is also necessary. Physical force should be used by governments, when it cannot be dispensed with only from righteous motives and in a humane manner and only as much of it should be applied as is strictly necessary.

Love and Frightfulness

When those who have strength and power assert that the power of love is greater than the power of frightfulness and when from this conviction they are just and do only what is good there is no doubt left of the sincerity of their conviction. For they could also have followed the policy of terrorism and frightfulness. But when the weak and the powerless pray for or demand (it does not matter which) a conciliatory policy, the origin of the cry may be considered to be only or in part timidity and terror.

Love and forgiveness are the privilege of the strong and, therefore, only strong who can love and forgive.

Satyagraha and the Disturbances

There is no causal connection between Satyagraha and the disturbances, though many persons have taken advantage of the declaration of Satyagraha to create disturbances and do evil deeds, and among them may be some least thought or spoken of in this connection. Satyagrahis have everywhere tried to

pacify the people, and succeeded to a remarkable extent.

Mr. M. K. Gandhi has very properly kept Satyagraha in abeyance for the present. But we do not agree with those who urge him to give up Satyagraha once for all. The essence of Satyagraha lies in neither injuring anybody in any way nor accepting any condition of life which is derogatory to human nature. True Satyagraha is therefore the only self-respecting and dignified ideal for us. As to who can be Satyagrahis and whether there ought to be a wide spread movement of Satyagraha &c., we adhere to what we wrote in our last issue. We have only to add that after further reflection we have come to the conclusion that laws which are otherwise unobjectionable should not be disobeyed even though Government may enact a law really injurious to individual and notional liberty and well being — when we wrote last we had not come to any definite conclusion. It is only laws in this way really injurious which may be civilly disobeyed and that by only those whose minds are free from passion and resentment.

Government have made two obvious and great mistakes. They ought not to have passed the Rowlett Act in the teeth of unanimous Indian opposition. According to the officials themselves the Punjab was recently in a state of rebellion. But the existing laws and martial law were quite sufficient to cope with the situation. True the Defence of India Act has been made use of against some persons, and six months after the conclusion of peace the Rowlett Act is to take its place. But these persons could have been dealt with equally "effectively" under the Deportation Regulations or under Martial Law. Therefore as it is not likely that in future within four years a worse situation will arise the Rowlett Act is an entirely superfluous piece of legislation.

The other great mistake was the prevention of Mr. Gandhi from going to Delhi and the Punjab. His presence in any place makes for peace and order. If the Delhi Administration, the Punjab Government and the Government of India had allowed him to visit Delhi, Lahore, Amritsar &c. the recent history of India would have been different from what it has been.

Mr. M K Gandhi

The sensitive conscience of Mr Gandhi and the innate chivalry of his heroic soul have led him to take upon himself the blame for deeds for which he was not responsible and which did not follow even indirectly from his teachings and example. And, like the hero and saint that he is, he has also done penance for these misdeeds of others. It was only to be expected that, as soon as he was so convicted, he would honestly declare that he had underrated the forces of evil and overcalculated the chances of Satyagraha being understood by the masses. But his faith in Satyagraha rightly remains unshaken. As he says in one of his letters to the Satyagraha Sabha:

It is not without sorrow that I feel compelled to advise the temporary suspension of civil disobedience. I give this advice not because I have less faith now in its efficacy but because I have it possibly greater faith than before. It is my perception of the law of Satyagraha which impels me to suggest suspension. I am sorry that when I embarked upon a mass movement I underrated the forces of evil and I must now pause and consider how best to meet the situation. But whilst doing so I wish to say that from a careful examination of the tragedy at Ahmedabad and Viramgam, I am convinced that Satyagraha had nothing to do with the violence of the mob. Had the Government in an unwise manner not prevented me from entering Dhu and so compelled me to disobey their orders, I feel certain that Ahmedabad and Viramgam would have remained free from the horrors of the last week. It is other words Satyagraha has nothing to do in the cause nor the occasion of the upheaval. If anything the presence of Satyagraha has acted as a check ever so slight, upon the previously existing lawless elements. As regards the events in the Punjab it is admitted that they are unconnected with the Satyagraha movement.

A SOUTH AFRICAN REMINISCENCE

In the course of the Satyagraha struggle in South Africa several thousands of indentured Indians had struck work. This was a Satyagraha strike and therefore entirely peaceful and voluntary. Whilst the strike was going on the strike of the Indian open miners and railway employees etc. was a direct. Overtures were made to me to make a common cause with the European strikers. As a Satyagrahi I did not require a moment's consideration to decide to do so. I went further and for fear of our strike being classed with the strike of the Europeans in which methods of violence and the use of arms and a prominent place, ours was suggested and Satyagraha from that moment ceased to be recognised by the Europeans of South Africa, as an honest and honest movement, and in the words of General Smuts a constitutional movement. I can do no less at the present critical moment. I would be untrue to Satyagraha if I allowed by any action of mine to be used as an excuse for lending violence for embittering the relations between the English and the

Indians. Our Satyagraha must, therefore, now consist in ceaselessly helping the authorities in all the ways available to us as Satyagrahis to restore order and to curb lawlessness. We can turn the tragedies going on before us to good account, if we could but succeed in gaining the adherence of the masses to the fundamental principles of Satyagraha.

MASS SATYAGRAHA

Satyagraha is like a banana tree with innumerable branches. Civil disobedience is one such branch. Satya (truth) and Ahimsa (non violence) together make the parent trunk from which all the innumerable branches shoot out. We have found by bitter experience that whilst in an atmosphere of lawlessness civil disobedience found ready acceptance. Satya (truth) and Ahimsa (non violence) from which alone civil disobedience can worthily spring have commanded little or no respect. Ours then is a Herculean task but we may not shrink. We must fearlessly spread the doctrine of Satya and Ahimsa and then and not till then shall we be able to order take mass Satyagraha. My attitude towards the Rowlett legislation remains unchanged. Indeed I do feel that the Rowlett legislation is one of the many causes of the present unrest. But in a surcharged atmosphere I must refrain from examining these causes. The main and only purpose of this letter is to advise all Satyagrahis to temporarily suspend civil disobedience, to give the Government effective co-operation in restoring order and by preaching and practising to gain adherence to the fundamental principles mentioned above.

Famine in Bankura

The Indian Messenger, the organ of the Sadharan Brahmo Samaj, writes —

Babu Bipul Chandra Ghosh B.A. and Babu Narendra Nath Nandi have gone to Bankura in connection with the famine relief work of the Sadharan Brahmo Samaj. Babu Bipul Chandra Ghosh writes that people are starving and are naked. Women hide themselves under bushes at the sight of men as they have no clothes on them. A consignment of cloth has already been forwarded to Bankura but a considerably larger quantity will be required to meet the demand. We hope with the help of the generous public it will be possible to send a sufficient quantity of rice and cloth at an early date.

We have also learnt from an independent and trustworthy source that the condition of the people is very serious indeed.

Contributions are to be sent to Dr. P. K. Acharya, Secretary, Sadharan Brahmo Samaj, 211, Corowall Street, Calcutta.

Sir Rabindranath Tagore's Letter to a Friend

We are permitted to print the following letter written by Sir Rabindranath Tagore to a friend:

Dear Friend, I believe our outcry against the wrongs inflicted upon us by our governing power is becoming more vehem-

audience and that audience realizing that the reus are not being handled get out of hand and become not an audience but a mob. Most university men will recall cases of this type and will remember the clars of the first magnitude who have obviously been unable to communicate knowledge or stimulate thought in the presence of a class which out of sheer boredom has become either hostile or indifferent. The question of discipline does not really arise. A University teacher must either govern his great class by his personal magnetism or must abandon his task. Discipline in the ordinary sense of the term that is to say the securing of attention by fear of penalties is out of the question in dealing with adults or adolescents. Even the shadow of a great name will not retain a lecture room of bored under graduates.

The question of the size of classes in schools is next dealt with.

When we come to apply some of these ideas to school life we are met by some new factors. The children though not the minds of the children are susceptible to discipline. If they are to be bored they are to be bored and there is an end to the matter. They cannot stay away they cannot riot, they can be made to sit still. There is authority enough to secure this. But if the teacher or lecturer is a bore, is incapable of dealing effectively with large classes, the children use the method of protection afforded by the abounding mercies of nature. Their minds become like the sheet of blank paper with which some educationists tell us that they set out in their career of life and the teacher writes nothing on it. On the other hand if the teacher has the peculiar magic of touching the imagination of children of securing their affectionate interest, then a large class of children can be dealt with very effectively, perhaps more effectively than a small class at any rate in certain subjects and the desire for knowledge is permanently aroused. Our elementary system of training which has had to grapple with the difficulty of large classes has striven and with remarkable success to produce teachers who can deal with large numbers of children in this way and secure by some natural aptitude enlarged by special training the attention and the interest of children without recourse to disciplinary methods. Since large classes must for a long time be the fate of our schools whether such classes are good or bad educationally, it is plain that great efforts should be made to secure the teacher who possesses the natural gifts which can make a large class at any rate not an educational evil.

Why Britain does not Intervene in Russia

On April 16th, in the course of the lengthy speech on peace which Mr. Lloyd George made in the House of Commons, he explained the reasons for not intervening in the affairs of Russia. Said he—

"I am sorry the proposal favouring military intervention the other day said it was a very sound fundamental principle of our foreign policy that we never interfered in the internal affairs of other countries, however badly governed and notwithstanding the state of British feeling the practical result of a general military interference into Russia would be to see Russia fall into the hands of the Bolsheviks."

ed but had never been conquered by a foreign foe. Even if conquest were possible, political and practical difficulties remained. He was horrified at Bolshevik teaching. He would rather leave Russia Bolshevik until she saw what Bolshevism was doing than see Britain made bankrupt by costly military intervention because that would be the surest road to spread Bolshevism in Britain (Cheers). He was convinced that to attempt military intervention in Russia would be the greatest stupidity.

The British Cabinet have decided wisely. One reason why we are pleased with their decision is that if the British Empire were involved in a big war with Russia, India would have to send a large army and incur heavy military expenditure.

As for Mr. George's reasons one would like to ask, since when Britain has been following the "very sound fundamental principle of our foreign policy that we never interfered in the internal affairs of other countries, however badly governed?" This principle is unquestionably right. But British historians of India have told us repeatedly that it was because India was badly governed that the British annexed the country in order to put an end to anarchy, and the reason which is given for the continuation of British rule here is that otherwise the country would be very badly governed. The gradual annexation of different parts of India on the ground of indigenous misgovernment, shows that the principle enunciated by Mr. George is either of recent evolution or that it does not operate outside Europe. Was not Burma annexed because "King Theebaw was still drinking" and misgoverning his country?

The other reasons given are both true and sound, particularly when the Premier said that he did not like to "see Britain made bankrupt by costly military intervention." If Russia could be conquered and annexed with the help of Russian men and money and if the continued occupation of Russia were considered a paying job it would be a different matter. But Russia is not India.

Japan and the Colour Bar

We have received the following for publication—

Tokio February 11th 1919

To the Editor of the "Modern Review"

Dear Sir,

We representatives of thirty seven Societies in Japan—political religious press army and navy

veterans' associations, etc.—held a meeting in Tokio on the 5th of February, 1919, concerning the question of racial discriminatory treatment, at which the enclosed Declaration was passed.

We should be very grateful if you could give your support to this Declaration which has been cabled to the Peace Conference, by making it further known through the columns of your paper.

Thanking you in advance

Yours truly
TAKESHI SUGITA,

*Member of the House of Peers as president
of the House of Representatives, Chairman of
the Japanese Conference for race equal ty*

DECLARATION.

The Allied Nations now assembled at the Peace Conference are endeavouring to establish a League of Nations and found the permanent peace of the world.

We Japanese whole heartedly approve of this effort and anxiously await its realization.

But seeing that the racial discriminatory treatment in international intercourse which statesmen is against all principles of liberty and equality and forms a constant root of conflict between peoples,

That so long as this remains unchanged all peace conferences, leagues and agreements will be as a house built on the sand, and that no true peace can be hoped for,

We, representatives of thirty seven large Japanese associations, call upon the nations of the world to found permanent peace on justice and humanity, and to this end,

DECLARE.

The Japanese Nation expects of the Peace Conference the final abolition of all racial discrimination and disqualification.

We heartily support this declaration.

Reuter's telegram dated Paris April 21, says that the Japanese amendment calling for the insertion in the preamble to the League of Nations Covenant of a clause recording the equality of all nations will certainly come up, creating certain liveliness at the conference at the last moment.

Islamic "News" from the Antipodes

The Harvard Theological Review is a very respectable and high class quarterly issued by the Faculty of Divinity in Harvard University. The place of honour in the January number of that review is occupied by no article on "The effect of the war on Protestant Missions" by James L. Barton, D.D., LL.D. The following sentences are extracted from it.

"The Mohammedans of India, Egypt, and, in fact, nearly all parts of the world, have either tacitly or officially repudiated the Sultan of Turkey as the Caliph of Islam, a position which he has held for four centuries or more."

"To the present time no Mohammedan country or Mohammedan leader has come forward as the

defender of the Sultan or his claim upon the Caliphate." Page 16

So far as Indian Moslems are concerned, the true facts are exactly the opposite of what they are stated to be in the sentences quoted above. They all insist that the Sultan is and must be recognised as their Caliph and they certainly unanimously and openly defend his claim upon the Caliphate.

Probably censorship has prevented the transmission of correct news to America. Or can there be any other reasonable explanation?

Press Censorship in the Punjab.

A Press Communique issued by the Punjab Government says in part that in its issue of 16th April last the Madras paper "New India," asserted that the Punjab Government had passed an order that the papers owned by Indians, should publish no reports of the recent disturbances unless they have been passed by the Censor. The statement that this order applied only to Indian-owned newspapers is altogether untrue. The order of Press censorship was passed on all newspapers in the province without distinction.

This contradiction comes very late. And, it does not much matter. For, whatever the cause may be, the fact is that the *Civil and Military Gazette* alone did or could publish reports of the recent disturbances.

Continuation of Sir M. O'Dwyer's Service.

The Indian Daily News writes—

The continuation of Sir Michael O'Dwyer's service in the Punjab seems to be hailed with great pleasure by our [Anglo-Indian] contemporaries. We think they are entirely mistaken, and we look on the appointment with profound misgiving.

We think the Punjab Satrap's administration has been worse than a dismal failure, as he leaves the province intensely irritated and deeply discontented. Whatever view may be taken of the extension of Sir Michael's service, it is undoubtedly a left-handed compliment to the officer who was appointed to be his successor, but who must now be "on special duty" until the time comes when a "strong" man may not be required and a "weak" man may do as well.

The Indian Daily News says that "many people, indeed, think that even forty years

of Martial Law will fail to conciliate a Province like the Punjab" That is true. And, in fact, martial law, however long continued, can never really *conciliate* any province

Flogging in Lahore

The same paper commends the following well known lines for the consideration of "the gentleman at Lahore, who apparently thinks people should be flogged for not opening their shops, and has issued an order to that effect"

It is excellent

To have a giant's strength but it is tyrannous
To use it like a giant but man proud man,
Drest in a little brief authority,
Most ignorant of what he's most assured
Plays such fantastic tricks before high heaven,
As make the angels weep

It has been said in extenuation of the flogging in the streets of Lahore that it was only petty shopkeepers of the menial and coolie class who were flogged! As if these humble individuals do not feel the disgrace, more painful than death, of being publicly whipped. When civilised opinion condemns flogging even for heinous offences, because of its brutalising effect and other causes, it is very discreditable that it should have been made use of so lightly against men who had committed only slight technical offences against "Martial Law," which Morley describes as the negation of all law.

The Panchamas of South Kanara

We have read the following in *The Panchama* with sorrow —

In the Madras Presidency the small corner district of South Kanara is generally known as the place where the condition of the Panchama Classes is extremely bad. Out of the total population of nearly 12 lakhs, as many as 140,775 are Panchamas. Not one amongst this enormous number can be said to be a landlord paying an assessment of even Rs 200 a year. Their standard of comfort is extremely low and they do not possess any property beyond bare necessities of life. — Sir Harold Sturt in the *District Manual*, Volume II

There are several sects among them, who on the whole can be classified under two heads viz the *Mulada Holeys* and the *Salada Holeys*. The *Mulada Holeys* are hereditary serfs who could be sold or pledged by the landlord at his pleasure like his chattel. When a landlord sells his land to another, the *Mulada Holeys* families living under him, also pass to the vendee as a custom but express mention of such a transfer of human beings is not now a days made in deeds of conveyance through fear of law. Slavery indeed has been legally abolished but custom dies hard. So says the Hon'ble Mr

Sturrock in the *District Manual* vide Volume I, page 198

The *Salada Hol-ya* or as the term means, the indebted Panchama is as good a slave as his *Mulada* brother by reason of his being bound to his master by debt. Every Panchama youth is compelled by custom to spend at least Rs 50 for his marriage which he cannot but borrow from his landlord. This debt once borrowed is never repaid to the creditor who gets however interest on his loan at an exorbitant rate. The borrowing Panchama is always a day labourer who generally gets his daily wages in kind—paddy or rice and one fourth his daily earnings goes to the creditor in interest. This system of levying interest is locally known as *Bar badda*. A *Salada Holeya* is thus in no better position than his *Mulada* brother. Both are equally bound to their master as slaves. Vide *District Manual*, page 198, Volume I

Our Panchama brethren in our District have very curious names. Such as Tade (flat fish), Balde (big fish) Karyote (beetle), Nakke (earth worm) Tabure (red ant) Kappe (frog), Berante (centipede), Poche (cat), Bogra (barking dog) Bogga (wild dog) Kajoya (sweepings), Bujin (lantern), Pergude (big rat), Bogel (hitch), Guje (unripe jack fruit), Gubbi (sparrow), and so forth

Twenty three years ago, Panchama children bore names of this kind in our School registers. At the suggestion of an Educational Officer, we introduced an innovation by giving every pupil a second name resembling that of a higher caste man as an alter native—with no *alias* between. Thus Flatfish became Tade *alias* Sankara, Red ant became Tabure *alias* Renu and Big rat became Pergude *alias* Lakshmana. We gradually dropped the old names and continued the new, and the *alias* vanished. This innovation met with enthusiastic approval of the parents who remarked, that no man of higher caste however unsympathetic and cruel, would ill-treat children for bearing better names given by School teachers. This change in names became very popular among the Panchamas so much so, that except in rural parts, it is difficult now a days to come across a Panchama youth bearing the names of beasts of the wood or fowls of the air. Grown up Panchama youths, who apprehend injury to their limbs in assuming names of higher caste people, adopt a middle course. They mention the day on which they are born, as their name like Aithra (Mr Sunday) Thomee (Miss Monday) and so forth

A Panchama meeting a higher caste man for business cannot say 'Namaskar or Ramram' but shall shout instead 'Lord, I fall this side', as equivalent to Good Morning Sir. When he takes leave of him he shall say 'Lord, I fall that side' and not 'Good bye Sir'. He cannot say 'my wife' but 'she Pariah'. Husband is the Pariah even children are not children but young ones. His wife can not be in a family way but carrying

Immorality in India.

Dr Lyach's letter printed in the article on "Indian Labour in Fiji" contains many statements which are open to criticism. For example, as regards diseases, whatever else may be true, it is not true that venereal diseases are as prevalent among the rural population of India from whom coolies are recruited as they are among

indentured Indian laborers in Fiji. For the greater prevalence of these diseases in Fiji the planters are responsible. As regards immorality Dr Lynch writes —

Immorality—Is there none in India?—Does not all India literature teem with it? Indians do not learn immorality in Fiji; they are saturated with it before they leave India. Look at a standard Indian Dictionary and you will find with difficulty a page in which there is not at least one obscene word for translation.

This paragraph is a string of falsehoods. The level of sexual morality in India is at least as high as it is in any other country. As regards a standard Indian dictionary, as there are many languages in India the doctor ought to have said what language or languages he was thinking of and named at least one dictionary to enable the reader to verify his statement.

A Cause of Famine

In his article on the Causes of Frequent Famines in Bankura Babu Motiwar Sen shows that one cause is the diminution in the area under cultivation owing to arable land being taken up by railways. As this cause may exist in other tracts also students of the causes of famines should bear this fact in mind and ascertain from official publications to what extent if any this cause has been at work in any particular tract.

An Album of New Pictures

The *Modern Review* office has up to the present published five albums containing for the most part pictures which have already appeared in the *Review* with the occasional addition of a few unpublished ones. Our readers may be interested to learn that *Album No. 6* which is in the press will consist entirely of pictures which have not yet been published in the *Modern Review*. It will contain the following pictures:

1. *Iskra's Queen and the Bodhi Tree* by Abanindranath Tagore
2. *Sati* by Nandalal Bose
3. *On Evil Days Fallen* by Asit Kumar Hallar
4. *Shooting Star* by Abanindranath Tagore
5. *Butterfly Messenger* by Ardhendu prasad Banerji
6. *Night in a Cemetery* by Niranjan Sen
7. *The Town* by Srimati Pratima Devi

8. *The Angry Waves* by Sarada Charan Ukil
9. *A new picture* by Samarendranath Gupta
10. *A Daughter of the Panjab* by M. A. R. Chughtai
11. *After the Days Work* by Debiprasad Ray Chowdhuri
12. *A Blind Beggar* by B. Joykumar Basu
13. *Playing High* by Mukul Chandra De
14. *Music* by Babbanji
- 15 and 16. Two other new pictures.

Orders are now being registered. If at least 2,000 copies of this album are purchased by the public we shall in future publish other albums containing only unpublished pictures.

The Moderate Party on the Rowlatt Act

Mr. Montagu ought now to be satisfied as the Moderate Party has passed the following resolution at the recent meeting of the Committee of the All India Moderate Conference:

The passing of the Rowlatt Act in the face of the unanimous opposition of the Indian public was an unwelcome step and the Committee appeal to the Secretary of State to advise His Majesty to dissolve it.

Uncovenanted Service Pensioners

In the House of Commons on March 31st Mr. Beckett pointed out that the present scale of pensions of Uncovenanted Services in India was fixed in 1855. He recalled that the recommendation of the Public Services Commission in this connection had been confirmed in the Report on the Indian Constitutional Reforms Part I Chapters X and XI para 320 page 203 and affirmed that much hardship was known to exist owing to the inadequacy of present pensions to meet the enhanced cost of living. He urged the Secretary of State to take an early opportunity of redressing this acknowledged grievance. Mr. Fisher in reply said that Mr. Montagu expected to have definite proposals from the Government of India in this connection very shortly and would deal with them without loss of time. This is all very good. It is only to be hoped however that when dealing with this important question the hard cases of the Indian pensioners will not be quite lost sight of.

State versus Company Management of Indian Railways.

In the House of Commons in reply to Sir John Rees, Mr. Fisher stated on April 1, that Mr. Montagu had proposed that as soon as convenient after the war there would be an enquiry in India regarding the desirability or otherwise on administrative and financial grounds of modifying the present management of railways in India which were owned by the State but worked by companies domiciled in England by incorporating these lines in existing State-worked systems or converting them into separate State-worked lines or handing them over to companies domiciled in India. As usual the authorities choose to talk riddles when dealing with this very important question of the management of Railways in India. It is not quite intelligible to us why this should be the case and on what grounds the present contract with the East Indian Railway Company, which would have ended by December 31, 1918, has just been renewed for another five years. The statement of approximate gross earnings of Indian railways published in the Gazette of India of April 19th gives details of the railway working for the whole financial year from 1st April, 1918, to 31st March, 1919. The total earnings

amount to Rs. 75,78,80,000. It will be remembered that Sir William Meyer in his Budget speech for the year 1918-19 estimated the total earnings at £47 million pounds or Rs. 70,50,08,000, so that they actually are better by Rs. 5,28,72,000 than the Budget estimate, while they are Rs. 6,77,63,605 better than the total earnings of the previous financial year. Only two of the State Railways, viz., the Jodhpur-Hyderabad and the Jorhat Railways, show diminished earnings, as compared with the corresponding period of 1917-18, all the other systems exhibiting a greater or less increase. In the case of the East Indian Railway the increase amounts to Rs. 170½ lakhs; of the Great Indian Peninsula to Rs. 123¾ lakhs; of the Bombay Baroda to Rs. 74¾ lakhs; of the Bombay Baroda broad gauge to Rs. 66½ lakhs; and of the Bengal Nagpur to Rs. 48¾ lakhs. Compared with the pre-war year of 1913-14, the total earnings of the year under review are better by Rs. 1,934¾ lakhs. Thus it will be observed that Railways in India are not on unimportant concern to the Government or for the matter of that to its people, and this is why we write again and again persisting on bringing the Railways completely under the control and management of the State.

ERRATA

JUNE, 1919

WHOLE
No. 150

MOTHER'S PRAYER

By SIR RABINDRANATH TAGORE

TRANSLATED BY THE AUTHOR FROM HIS BENGALI ORIGINAL,
COMPOSED 22 YEARS AGO

King Dhritarashtra —The blind Kaurava King

Prince Duryodhana —He is now who has just won in a game of chance by which his
• Pandava cousins have lost the kingdom and accepted banishment

Queen Gandhari —The mother of Duryodhana.

N.B.—The italic *s*'s in the proper names are to be pronounced long as *a n* for

Dhritarashtra

You have attained what you sought

Duryodhana

I have attained success

Dhritarashtra

Are you happy?

Duryodhana

I am victorious

Dhritarashtra

I ask you again what happiness had you in gain
ing an undivided kingdom

Duryodhana

Sire a Kshatriya's thirst is not for happiness, but
for victory —the fiery wine victory brewed from seething
jealousy. Wretchedly happy we were when we lived in
peace under the friendly dominance of our cousins, like in
glorious strains lying idle on the breast of the moon, while
these Pandavas would milk the world of its wealth and
allow us to share it with them in brotherly tolerance. But
now, when they own defeat and are ready for banishment,
I am no longer happy,—but I am exultant

Dhritarashtra

Wretch, you forget that the Pandavas and
Kauravas have the same forefathers

Duryodhana.

It was difficult to forget that, and therefore our inequalities rankled all the more in my heart. The moon of the midnight is never jealous of the sun of the noon. But the struggle to share the horizon by both the orbs can not last forever. Thank heaven, that struggle is over and we have attained at last the solitude of glory.

Dhritarashtra.

I be mean jealousy !

Duryodhana.

Jealousy is never mean,—it is in the nature of the great. Only grass can grow in crowded amity, not the giant trees. Stars live in clusters, but the sun and moon are lonely in their splendour. The pale moon of the Pandavas sets behind the forest shadows leaving the new-risen sun of the Kauravas to rejoice.

Dhritarashtra.

But what is right has been defeated.

Duryodhana.

What is right for the rulers of men is not what is right for the people. The people thrive in comradeship, but for a king those men are enemies who are his equals. They are obstacles when in front, they are a terror when behind. There is no place for brothers or friends in a king's polity ; its one solid foundation is conquest.

Dhritarashtra.

I refuse to call it conquest deceitfully to win in gambling.

Duryodhana.

It is no shame for a man not to challenge a tiger to fight on equal terms with teeth and nails. Our weapons are those which lead us to success and not to suicide. Father, I am proud of the end we have achieved and disdain feebly to regret the means.

Dhritarashtra.

But justice—

Duryodhana.

Only fools dream of justice before success is attained, but those who are born to be kings rely upon their power, merciless and unburdened by scruples.

Dhritarashtra.

Your success has brought down upon you a flood of calumny, loud and angry.

Duryodhana

It will take amazingly little time before the people shall know that Duryodhana is their king and has the power to crush calumny under foot

Dhritarashtra

Calumny dies weary, dancing on the tongue-tips
Do not drive it into the secret shelter of the heart to grow in strength

Duryodhana

Unuttered defaming does not touch a king's dignity I care not if love is refused us, but insolence shall not be borne Giving of love depends upon the wish of the giver, and the poorest of the poor can indulge in such generosity Let them squander it upon their pet cats and their tame dogs, and our good cousins the Pandavas, I shall never envy them But fear is the tribute I claim for my royal throne Father, only too leniently did you lend your ears to those who slander your sons,—but if you still allow these pious friends of yours to continue in their revels of shrill denunciation at the cost of your own children, then let us exchange our kingdom for the exile of our cousins, and go to the wilderness where happily friends are never cheap

Dhritarashtra

If my friends' pious warnings could lessen my love for my sons then we might be saved But I have dipped my hands in the mire of your infamy and lost my sense of the good I have heedlessly set fire for your sake to this ancient forest of our royal lineage—so fearful is my love With you clasped to my breast, we, like a double meteor, are plunging into a blind down'fall Therefore, doubt not in my father's love, relax not your embracing arms till we reach the brink of annihilation Beat your drums of victory, lift your banner of triumph In this mad riot of exultant evil, brothers and friends will disperse and there will remain only the doomed father and the doomed son and God's curse and nothing besides

Enters Attendant

Sire, Queen Gandhari asks for audience

Dhritarashtra

I shall wait for her

Duryodhana

Let me take my leave (Exit)

Dhritarashtra

Fly away! For you cannot hear the fire of your mother's presence.

Enters Queen Gandhari, the mother of Duryodhana.

Gandhari.

I have a prayer at your feet.

Dhritarashtra.

The utterance of your wish carries fulfilment.

Gandhari.

The time has come to renounce him.

Dhritarashtra.

Whom, my queen ?

Gandhari.

Duryodhana.

Dhritarashtra.

Our own son, Duryodhana ?

Gandhari.

Yes !

Dhritarashtra.

Terrible is this prayer from you, Mother of kings.

Gandhari.

This prayer is not only mine, it comes from the fathers of the Kauravas, who are in paradise.

Dhritarashtra.

The Divine Judge will punish him who has broken his laws. But I am his father.

Gandhari.

And am I not his mother ? Have I not borne him under my throbbing heart ? Yet I ask of you, renounce Duryodhana the unrighteous.

Dhritarashtra.

And what will remain to us after that ?

Gandhari.

God's blessing.

Dhritarashtra.

And what will that bring to us ?

Gandhari.

New afflictions. How can we bear in our breast the double thorns of the pleasure of our son's presence and the pride of our freshly acquired kingdom bought at the price of wrong ? The Pandavas will never accept back from our hands the land which they have given up. Therefore, it is only meet for us to take upon our head some great sorrow which will rob the wrong of its reward.

Dhritarashtra

Queen, you are inflicting fresh pain upon the heart already rent

Gandhari

Sire the punishment imposed upon our son will be more ours than his. When the judge is callous of the pain that he inflicts he has not the right to judge. And if you withdraw judgment from your own son to save yourself pain then all the culprits ever punished at your hands will cry for vengeance against you at God's throne—for had not they also their fathers?

Dhritarashtra

No more of this Queen I pray you. Our son is renounced by God and that is why I cannot renounce him. To save him is no longer in my power and therefore my consolation is to share his guilt and to go down the path of destruction with him—his solitary companion. What has been done is done and what must follow let follow.

(Exit)

Gandhari

Be calm my heart and patiently wait for God's judgment. The oblivious night wears on the morning of reckoning comes and time wakes up to mend its rents. The thundering roar of its chariot I can hear. Woman bow your head down to the dust and for your sacrifice fling on its way your heart to be trampled under its wheels. And then the darkness will shroud the sky the earth will tremble and a wailing will rend the air. And then will come the end silent and cruel the terrible peace and a great forgetting the awful extinction of hatred the supreme deliverance rising from the fire of death.

LESSONS FROM THE CAREER OF SHIVAJI

§ 1 SHIVAJI'S POLICY HOW FAR TRADITIONAL

SHIVAJI'S state policy like his administrative system was not very new. From time immemorial it had been the aim of the typical Hindu king to set out early every autumn* to extend his king-

dom at the expense of his neighbours. Indeed the Sanskrit law books lay down such a course as the necessary accomplishment of a true Kshatriya chief. In more recent times it had also been the practice of the Muhammadan sovereigns in North India and the Deccan alike. But these conquerors justified their territorial aggrandisement by religious motives. Ac-

According to the Quranic law, there cannot be peace between a Muhammadan king and his neighbouring "infidel" States. The latter are *dar ul harb* or legitimate seats of war, and it is the Muslim king's duty to slay and plunder so them till they accept the true faith and become *dar ul islām*, after which they will become entitled to his protection.

The coincidence between Shivaji's foreign policy and that of a Quranic sovereign is so complete that both the history of Shivaji by his courtier Krishnaji Anant and the Persian official history of *Bijapur* use exactly the same word, *mulk giri*, to describe such raids into neighbouring countries as a regular political ideal. The only difference was that in theory at least, an orthodox Muslim king was bound to spare the other Muslim States in his path and not to spoil or shed the blood of true believers while Shivaji (as well as the Peshwas after him) carried on his *mulk giri* into all neighbouring States, Hindu no less than Islamic, and squeezed rich Hindus as mercilessly as he did Muhammadans. Then again, the orthodox Islamic king, in theory at least, aimed at the annexation and conversion of the other States, so that after the short sharp agony of conquest was over the latter enjoyed peace like the regular parts of his dominion. But the object of Shivaji's military enterprises, unless his court historian Sahasrabudh has misrepresented it, was not annexation but mere plunder, or to quote his very words, "The Maratha forces should feed themselves at the expense of foreign countries for eight months every year, and levy blackmail" (p. 29).

Thus, Shivaji's power was exactly similar in origin and theory to the power of the Muslim States in India and elsewhere, and he only differed from them in the use of that power. Universal toleration and equal justice and protection were the distinctive features of the permanently occupied portion of his *saraj*, as we have shown elsewhere.

§ 2 CAUSES OF SHIVAJI'S FAILURE TO BUILD AN ENDURING STATE

Why did Shivaji fail to create an enduring State? Why did the Maratha nation stop short of the final accomplishment of

their union and dissolve before they had consolidated into an absolutely compact political body?

An obvious cause was, no doubt, the shortness of his reign, barely ten years after the final rupture with the Mughals in 1670. But this does not furnish the true explanation of his failure. It is doubtful if with a very much longer time at his disposal he could have averted the ruin which befell the Maratha State under the Peshwas, for the same moral canker was at work among his people in the 17th century as in the 18th. The first danger of the new Hindu kingdom established by him in the Deccan lay in the fact that the national glory and prosperity resulting from the victories of Shivaji and Bajirao I created a reaction in favour of Hindu orthodoxy, it accentuated caste distinctions and ceremonial purity of daily rites, which ran counter to the homogeneity and simplicity of the poor and politically depressed early Maratha society. Thus, his political success sapped the main foundation of that success.

In the security, power and wealth engendered by their independence, the Marathas of the 18th century forgot the past record of Muslim persecution; the social grades turned against each other. The Brahmans living east of the Sahyadris despised those living west, the men of the hills despised their brethren of the plains, because they could now do so with impunity. The head of the State, though a Brahman, was despised by his other Brahma servants, because the first Peshwa's great-grandfather's great-grandfather had once been lower in society than the Pooja Brahmans' great-grandfathers' great-grandfathers. While Chitpavan Brahmans were waging social war with the Deshastha Brahmans, a bitter jealousy raged between the Brahman ministers and governors and the Prabhu Kayastha secretaries. We have unmistakable traces of it as early as the reign of Shivaji, though it never led to an open rupture in his Court like the Shun Sunni rivalry in the camp of Aurangzeb. "Caste grows by fission." It is antagonistic to national union. In proportion as Shivaji's ideal of a Hindu *saraj* was based on orthodoxy, it contained within itself the seed of its own death. As Rabindranath Tagore remarks:

"A temporary enthusiasm sweeps over

† For details of account and authority see *History of Marathas*, p. 23.

the country and we imagine that it has been united, but the rents and holes in our body social do their work secretly, we cannot retain any noble idea long.

"Shivaji aimed at preserving the rents, he wished to save from Mughal attack a Hindu society of which ceremonial distinctions and isolation of castes are the very breath of life. He wanted to make this heterogeneous society triumphant over all India! He wove ropes of sand, he attempted the impossible. It is beyond the power of any man, it is opposed to the divine law of the universe, to establish the sway of such a caste ridden, isolated, internally torn sect over a vast continent like India! "

There was no attempt at well thought out organised communal improvement, spread of education, or unification of the people, either under Shivaji or under the Peshwas. The cohesion of the peoples in the Maratha State was not organic but artificial, accidental, and therefore precarious. It was solely dependent on the ruler's extraordinary personality and disappeared when the country ceased to produce supermen.

A government of personal discretion is, by its very nature, uncertain. This uncertainty reacted fatally on the administration. However well planned the machinery and rules might be, the actual conduct of the administration was marred by inefficiency, sudden changes and official corruption, because nobody felt secure of his post or of the due appreciation of his merit. This has been the bane of all autocratic States in the East and the West alike, except where the autocrat has been a 'hero as king' or where a high level of education, civilisation and national spirit among the people has reduced the evil.

§ 3 NEGLIGENCE OF THE ECONOMIC FACTOR BY THE MARATHAS

The Maratha rulers neglected the economic development of the State. Some of them did, no doubt, try to save the peasantry from illegal exactions and to this extent they promoted agriculture. But commerce was subjected to frequent harassment by local officers and the traders could never be certain of freedom

of movement and security of their rights on mere payment of the legal rate of duty. The internal resources of a small province with no industry, little trade, a sterile soil, and an agriculture dependent upon scanty and precarious rainfall, could not possibly support the large army that Shivaji kept or the imperial position and world dominion to which the Peshwas aspired.

The necessary expenses of the State could be met, and all the parts of the body politic could be held together only by a constant flow of money from outside its own borders, i.e., by a regular succession of raids. As the late Mr G. K. Gokhale laughingly told me when describing the hardships of the present rigid land assessment in the Bombay Presidency, "You see the land revenue did not matter much under Maratha rule. In those old days, when the crop failed, our people used to sally forth with their horses and spears and bring back enough booty to feed them for the next two or three years. Now they have to starve on their own lands."

Thus, by the character of his State, the Marathas' hands were turned against everybody and everybody's hands were turned against him. It is the Nemesis of a *Kriegsstaat* to move in a vicious circle. It must wage war periodically if it is to get its food, but war, when waged as a normal method of supply, destroys industry and wealth in the invading and invaded countries alike, and ultimately defeats the very end of such wars. Peace is death to a *Kriegsstaat*, but peace is the very life breath of wealth. The *Kriegsstaat*, therefore, kills the goose that lays the golden eggs. To take an illustration, Shivaji's repeated plunder of Surat scared away trade and wealth from that city, and his second raid (in 1670) brought him much less booty than his first, and a few years later the constant dread of Maratha incursion entirely impoverished Surat and effectually dried up this source of supply. Thus, from the economic point of view, the Maratha State had no stable basis, no normal means of growth within itself.

§ 4 EXCESS OF FINESSE AND INTRIGUE

Lastly, the Marathas trusted too much to finesse. They did not realise that without a certain amount of fidelity to promises no society can hold together.

* From his *Rise and Fall of the Sikh Power* as translated by me in the *Modern Review*, April 1911.

Stratagem and falsehood may have been necessary at the birth of their State, but it was continued during the maturity of their power. No one could rely on the promise of a Maratha minister or the assurance of a Maratha general. Witness the long and finally fruitless negotiations of the English merchants with Shivaji for compensation for the loss of their Rajapur factory. The Maratha Government could not always be relied on to abide by their treaty obligations.

Shivaji, and to a lesser extent, Bajirao I, preserved an admirable balance between war and diplomacy. But the latter day Marathas lost this practical ability. They trusted too much to diplomatic trickery, as if empire were a pacific game of chess. Military efficiency was neglected, war at the right moment and in the right fashion was avoided, or, worse still, their forces were frittered away in unseasonable campaigns and raids conducted as a matter of routine, and the highest political wisdom was believed to consist in *raj karan* or diplomatic intrigue. Thus, while the Mughla spider was weaving his endless cobweb of hollow alliances and diplomatic counterplot, the mailed fist of Wellesley was thrust into his laboured but flimsy tissue of statecraft, and by a few swift and judicious strokes his defence and screen was torn away and his power left naked and helpless. In rapid succession the Nizam was disarmed, Tipu was crushed, and the Peshwa was enslaved. While Sindbia and Holkar were dreaming the dream of the overlordship of all India, they suddenly awoke to find that even their local independence was gone. The man of action, the soldier statesman, always triumphs over the mere scheming Machiavel.

§ 5 CHARACTER OF SHIVAJI
